Dear Prof: Innes

Accept my thanks for giving me notice of Willaczil's paper on Aphides - I have read the extract in the Quart: Journ: Mic: Sc: but if possible I must see the plates in the German form.

Whilst writing, let me express

I want to get my volume out of hand as soon as possible.

I shall be home again on Tuesday next, & perhaps shall have something from the printers to look to -

Believe me

Very truly yours.

G. B. Buckton

Entomologist

"Author of Britsh Aphides 4 v
" Cicadæ 2 v
Prof: R. Innes, F.R.S.
& others

my obligations to you
for overlooking my
proofs, Bot: Aphides -
Your suggestions have
been of value to me,
and they will be the more
acceptable when you scan
my observations, relating
to the appearance of these
insects in Geological time.

I congratulate you
and Prof. M. Duncan
on the successful termi-
nation of Lord Nat:
History - I have all the
previous volumes, but not
as yet the last.

I think the work is
a very good one, and
supplies the want, long
felt, of a good birds-eye
view of the Animal
Kingdom

Dear Prof Jones

I have drawn & examined microscopically the fir galls you kindly sent to me, and if not troublesome I should like to know a little more about them. from yourself, or your friend.

I can find nothing

now

alive with them, but
at their bases I find
several individuals of
a chermes (probably Ch:
picea) with a few eggs
surrounding them. I suppose
the pupae galls, which are
new to me, were made
last autumn. Still
they are quite juicy, &
I should like to know

if there be any connection
between them & the living
Chermes on their exterior.

If your friend would
kindly let me have a
few more, at the end
of April, and also decide
for me the species of
Pinus infested &c.
you will much oblige

Very truly yours
G. B. Buckton
