UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF ENTOMOLOGY,
WASHINGTON, D. C.

November 8, 1920.

Prof. Longinos Navas,

Soc. Ent. de Espana,

Apartado 32-Zaragoza, Espana.

Dear Dr. Navas, -

I have your card of October 20 and am sorry you have found it necessary to give over for good your work on the Orthoptera. In my bibliogfaphy of your writings on this Order I have listed 27 papers, all of which are in my library excpet tow, which are as follows:

- "Sur quelques Neyropteres & Orthopteres de Belgique". (Rev. Soc. Ent. de Namur, p. (1-2)(1906).

- "Biologische Beobachtungen". (Ent. Mitteil., vol. ii, p. 81-87(1913).

I would much appreciate copies of the above, and any others you may have written since 1913, if there are any.

Relative to the use of the name Tettigonidae for the katydids instead of Phasgonuridae I would say that the genus Tettigonia is a Linnean genus established in 1758 while Phasgonura was erected in 1835 by Stevens. As a family name is usually based on the oldest included genus the name in this case should be Tettigonidae.

Dr. H. G. Dyar, owner and publisher of "Ins. Mens." says he does not care to exchange that journal for the Bull. Soc. Ent. Espan., as the latter comes regularly to the Library here. I am sorry, but I have nothing at all to do with that.

Very sincerely yours,

A. N. Caudell.

Assistant.
