Grove Road E.
14 July 1878

Dear Prof. Jones

I found upon my table at the Museum on my return from Charmouth, the enclosed proof sheets of the "Geol of Essex", I am very much obliged to you for letting me see them, but I had not time to look over the pages until last evening; I have ventured to put a few pencil marks on the margins, if not too late; but you have two such good men to look over this division of the work that they are scarcely needed

from me. Their additions will be an improvement upon the first edition of the work.

Newton has left out *Tomognathus mordax* in the list; even if not a good species, it should be included as it is described in the text.

I shall not be at the Museum again until the 3rd of August.

With kind regards

From Yours Sincerely

W. Davies

Prof. R. Jones, F.R.S.

BLACKER

British Museum
Nov. 11/62.

Dear Sir

Aspius was a true fresh-water fish of the Cyprinoid family, and closely related to Leuciscus, differing from the latter genus in having a more compressed body and a more slender skeleton. The species are found in Miocene Tertiaries — as the freshwater limestone of Oeningen and the

Lignites of Menat &c. I
do not remember any more
recent species.

I remain
Yours Truly
Wm Davis

To Prof Rupert Jones
