STAZIONE SPERIMENTALE
PER LA LOTTA ANTIMALARICA

TEL. 51-164

CORSO VITTORIO EMANUELE 168
ROMA (16)

June 30, 1930.

Dear Dr. Wood.

Many thanks for your letter and the sad obituary notice of John. What a pity! He was the victim of persecution.

As far as I can tell, there is nothing in the proposed plan for malaria eradication in the Readers' Digest. A kind of clover (melilotus alteissima) has been cited in many lands as able to cure mosquitoes of the malaria infection, and of course it is a novel and engaging idea,

that, of treating the mosquito as well as man for malaria. Some experimental work has recently been done at Kasauli in India with "coumarin", the active principle of all clovers, but it seems to have no effect whatever on the mal. organism in the mosquito, and besides, we now know that intense malaria persists in many regions where this is the principal crop.

We are off to America this fall- Hazel in July & I in October. We shall be back in Rome on Feb. 1 and hope to find you here at that time. With regards & best wishes to you all,

Sincerely

C. W. Hackett
