Prof. C. Hess

Würzburg, den 12-2-12

My dear Colleague.

Many thanks for your kind letter; I am very much interested in your excellent work and should be glad to discuss with you the subject. I am sending you some reprints which I hope may have some interest for you. In a few weeks there will appear a comparative physiology of vision, which I

have written in the last years.
Unhappily I have no more reprint of my papers on the vision of birds. In the reprints I send you will find the answer on your questions. The faradic current with Dubois apparatus is easy to apply. Nicotin I use as a rule in concentrations of 1/2 – 1 (2)%. I have only little experience on the effect of atropin on wild birds. I will send in a few days some sections of birds retinae. I remain with kindest regards

yours very faithfully

C. Hess.
