

HENDON GROVE,

HENDON. N.W.

Oct. 12. 1856

Dear Prof. Jones,

Many thanks for kind
determining Dr. Luxmore; little
specimens. As he wishes all specimens
that they may like to keep, to be
deposited in the Natural History
Museum, the little trilobites
need not be returned to me.

He has sent a good many specimens
of other things from the same beds
& I will send these also on to
Dr. Woodward. I have only been
able to have a hurried
glance at them. I noticed an
Aglina in Harris' specimens from

Here he'd some years ago & mentioned
it in my appendix to his paper.

There is also "a small smooth
species" in the *Arenig* at Pt. Dore
described by me in *Trans. L. Soc. Lond.* 1875

Therefore Mr. Luxmoore's specimens
may belong to one of these.

It was very stupid of me
not to recognize them but
I had only a ^{very} hurried glance
at them in Mr. Luxmoore's
hand.

With many thanks &
apologies for troubling you
Believe me
Yours very truly
W. H. Richards
