BLACKER

15 March 1875

10, Old Burlington Street. W.

My dear Sir

I send you a
82. copies of the paper
about which you write,
thinking that perhaps
some of the naturalists
may like to have it
in a separate form as
well as in the notice in
the Manual you
are arranging.

N. with the object
of enabling the academy
to figure those described.
I believe N. was away
on his last voyage before
the specimens reached
Sweden & they were
not drawn - which on
his return he regretted
equally with myself.

Yours faithfully

J. D. Hooker

(FRS) Physiologist

the circumstances under which the Report was written unavoidably made it less complete than I could have wished. The fossils had been many months at Jermyn Street for Prof. Huxley; use & Nordenskjold at last growing impatient of the delay asked Mr Flower & he sent them & they came home. It was just before the autumn vacation & the work was done under pressure of that time. The numbers refer to labels which I attached to the specimens before they were returned to
