BLACKER
E. Hale

Yale College.
Feb: 21.

Dear Professor Jones.

Many thanks for the notices as also for the paper on the Inundation canon. I will take care of them & if necessary will return them but I see they are marked duplicates. I have put your heads of Lectures and hope to make great use of them.

I also return the paper for the

Zoological Society pitched up I hope fully enough, - and shall be really very much obliged to you if I am elected, and if not, for the trouble you take.

With Saturday week, the 9th. I should visit you for Reading - if we leave here by the 1 PM train, - the one you did.

I hope you found Mrs Jones better. Kate joins me in kind remembrances & believe me

Yours very truly

Edward Hale

BLACKER

I am working steadily at rock slices for the microscope. a most interesting & essential assistant & investigation.

GEOLOGICAL SURVEY OF IRELAND,

Office, 14, Hume-street, Dublin.

11 June 1872

My dear Prince Rupert—

Many thanks for your very kind note & invitation. I shall gratefully include my better half. Possibly I may be able to avail myself of the hospitality of the Association if convenient when then.

I shall retain the chalk slices till you return from the

wash out the foraminifera as can be done with that of S. Eng? &c. & slicing is the only way of observing the structure —

I see you are doing great service in reducing species. I am sure that in the case of Foraminifera this pruning process is much required —

I am glad to hear of the successful planting out of the young plants —

Ever yours sincerely

Edward Hull

Hull

Continent — and I hope the
trip will be beneficial to the
health of Mrs Jones —

Meanwhile I shall look up
the books you refer to. I don't think
Oswald Sheers work has yet been
added to our library — If not — I
will order it. —

Professor Haynes is now
looking at the slides & will say a
few words on the fossil forms they
contain — at our meeting tomorrow
evening — This need not forestall you.

Thanks for your paper — which
I shall make good use. I see
the R. I. of Ireland chalk is
not once referred to — though
there are notices of Cretaceous beds
over Europe & America! —

The fact is — the chalk of
Antrim is so hard — that I believe
it is next to impossible to
