Madison, Wisconsin, June 12, 1926.

Professor Arthur Willey,
Mc Gill University,
Montreal.

Dear Professor Willey:-

Please accept my sincere thanks for copies of your interesting papers which have just been received. I am sure Dr. Monard will be pleased to receive the papers which you have sent him. He is interested particularly in the Harpacticids.

I am enclosing a copy of a reprint dealing with Senecella. I am curious to know how widely it is distributed in the Canadian lakes and I shall be greatly interested to see whether you find it in your future Copepod explorations. My notion is that it is probably generally distributed in the lower water of the deeper lakes in the Great Lakes-St. Lawrence Basin.

Very truly yours,

Chancey Juday.
