Oct. 15, 1915.

Mr. Robert Ridgeway,
Olney, Illinois.
Route 1.

My dear Mr. Ridgeway:-

I have your letter of the 9th inst, together with receipt.

Relative to the color wheels, I certainly appreciate your advice and I shall get in touch with the parties you mentioned immediately. I do not anticipate that we will be able to use these wheels in connection with the standard colors, but I hope to be able to use them to determine grades of color in tinted eggs. We find that the standard colors which are given do not give us enough gradations to properly name our standard which has some ten tints between dark brown and light brown. Have you any suggestions to make along this line? If so, we certainly would be interested in knowing them.

If you are ever out this way, either you or Mrs. Ridgeway, we shall be glad to have you stop at New Brunswick and look over the work which we are doing, and you can possibly offer some good suggestions regarding the egg shells.

Thanking you again, I am,

Yours very truly,

H. R. Lewis
