# Preface

Just a few months after offering Volume II (1960-1973) of this Directory to the public, I now warmly welcome Volume I which covers the years 1881 to 1959.

In the first half of this long period are the precious years in which the tradition for research and the design of graduate studies evolved in the University and became widely accepted within most of its Faculties. As the quality and size of these twin efforts were recognized, the Faculty of Graduate Studies and Research was established formally in 1922, and through its research supervisors and students it quickly became a major contributor to the character and reputation of the University. This book illustrates this happy development.

Several kinds of historical reflections on the contents of the Directory are suggested in the pleasing and interesting *Introduction* by Stanley B. Frost, a recent distinguished Dean of this Faculty, now deeply immersed in the study of rich historical material about McGill. Dr Frost suggests the pleasures readers can find in browsing through the list; more seriously indicates that the material justifies systematic analysis from several different viewpoints.

This book contains some 4,600 listings (as compared to the nearly six thousand entries of Volume II), made up chiefly of some 3,150 Master's and 1,400 Ph.D. theses. For the period covered by both volumes, 1881-1973, the McGill contribution is about 14% of the Canadian total of 74,000; in comparison by most measures of size McGill is close to 5% of the Canadian university scene.

In Volume II, I had occasion to express our gratitude to the Editors, Mrs. Elizabeth Silvester and Professor Frank Spitzer, for the skilled judgement and devotion they brought this project. Our appreciation is even more appropriate with regard to the present volume, which since it deals with older and less homogeneous data obviously presented more problems. Most of these have been solved, I believe, but we will be grateful to be told of inaccuracies which may have escaped us.

# Foreword

This volume covers the years 1881-1959 while Volume II, in a similar format, covers 1959 to 1973.

These volumes show the names of authors, titles of their theses, names of their departments and their thesis supervisors, together with other details. A number of indices are attached.

Although a great deal of care has gone into the preparation of this material, inevitable errors will have occurred. Readers are invited to send suggestions for improvements or criticisms of the current publication to:

The Thesis Office  
Faculty of Graduate Studies and Research  
Dawson Hall  
P.O. Box 6070, Station "A"  
Montreal, Quebec H3C 3G1

For the benefit of those interested in particular areas, all the material is kept in a computerized data base. This and the existence of suitable application programs enable us to supply on request listings of theses selected by "specific keywords from the thesis title," "specific departments or programmes" or "specific supervisors."

There are practical as well as intellectual benefits to be derived from these volumes. There has been from time to time uninformed criticism of university research, on the grounds that much of it is meretricious, that the money expended could have been better spent elsewhere or that the research interests of the professor have interfered with and distracted him from his first responsibility of teaching. The criticism is rightly called 'uninformed' for it has of necessity been based on vague impressions or isolated instances. Now the University's research record is in large measure (not wholly, for in some disciplines the professor's own research may be somewhat removed from that of his graduate students) laid out for all to see and judge. In research we are first creating the pieces and then fitting them together to form the ever-expanding jigsaw-puzzle of human understanding. No one ever knows which piece is going next to prove the critical one, but the backward look, now available to us through these volumes, enables us to see how the work in the University has contributed to the over-all growth of the macropattern of man's knowledge of himself and his environment. We venture to affirm, now that the evidence is laid out before us, that the University's achievement has been substantial, that it has over the years contributed to what have proved to be significant areas of research, and that it has been carried forward notably under the direction of just those professors who have gained high reputations as teachers both at the graduate and undergraduate levels.

Dictionaries, concordances, directories are made to be consulted rather than read, but they will always provide unlooked-for rewards to those who browse in them and the early years of the listing are rich in this respect. There were three doctoral degrees awarded before 1900, two in Divinity and one in Philosophy, but it was at the turn of the century that the Master's degree by thesis was made available, and it speedily became a hall-mark of academic excellence, and one which the University has proved well-able to maintain, despite tendencies elsewhere to allow its values to depreciate. It will surprise some that prior to the first World War, fully twenty percent of the successful candidates for post-graduate degrees were women, and this in a university which did not admit women to the Bachelor's degree until 1888. Pride of place goes to Harriet Brooks, for an M.A. in Physics conferred in 1901, and for which the thesis director was none other than Professor Ernest Rutherford. The first woman Ph.D. was Annie L. Macleod in Chemistry, in 1910, only one year after the University had conferred the degree for the first time. Miss Brooks went on to marry A.S. Eve, the distinguished Professor of Physics, who became Scientific Director of the Admiralty Experimental Research Station at Harwich during World War I, in succession to Sir William Bragg. Closely associated with Eve at that time was the recipient of the first McGill Ph.D., Robert W. Boyle. He played a notable role in the development of the submarine detection device which came to be known as "Asdic" and was later Director of the Division of Physics and Electrical Engineering, at the N.R.C. Laboratories in Ottawa. Eve had helped to direct Boyle's thesis in association with Howard Turner Barnes, who succeeded Rutherford as Macdonald Professor of Physics and who gained for himself and initiated for McGill an international reputation in ice-studies, an interest and a reputation which today flourishes as strongly as ever. Barnes' name occurs more often than anyone else's as thesis director in those early entries – fourteen times in the first twelve years – and among this students we note the names of Norman Shaw and Otto Maas. The McGill scientific tradition takes on a visible form as we read down these lists.

It is also salutary to discover that many of what we conceive to be the problems of our times have in fact been recognised as matters of great concern thirty, fifty even eighty years ago. In 1896, the first M.A. thesis of all concerned itself with "The Abolition of Capital Punishment according to the Hegelian Philosophy" In 1920, a thesis was presented on "The Status of Women in the Province of Quebec"; another in 1929 was a study of "The Negro in Canada" and this was followed in 1934 by "Transportation as a National Problem". Or we can watch the changing interests of departments and relate them to disciplinary developments, or to institutional or political events. This is illustrated by a

department like Psychology, which began its long series in 1907 with theses concerned with the personalist psychology of Freud and William James and moves steadily in later years to the more biological studies of experimental psychology; or like Geography, which recorded its first successful thesis in 1949 with a work on the polar north, thus indicating what was to be the dominating concern of the department down to the present. From the early sixties this has been varied by a succession of theses on the Caribbean and the humid tropics, interests arising from the opening of the University's Bellairs Research Institute in Barbados. On the other hand, the impact of events like the loosening of ties with Britain, the Quiet and not-so-Quiet Revolutions in Quebec, the out-pouring in the past decade of North American "protest" literature, appear to have exerted comparatively little influence in the determination of thesis subjects, but it is noticeable that the reaction of departments in the humanities and the social sciences to these influential events varies quite markedly. The subject almost qualifies as the theme of a Master's thesis.

Another less serendipitous form of browsing is to take the listings by thesis supervisor and seek out some of the great names in a discipline and observe how many and on what themes theses are directed by them. In some instances, popular reputations are left somewhat insubstantial, whereas in others a solid body of results accumulated year after year confirms the general approbation. And if it be added – as it should be – that in research it is always quality not quantity which is significant, there is the further criterion to be applied of observing the later careers of those who were the students of these teachers. This book is indeed a valuable record of a vast endeavour, and it will, I am persuaded, grow in usefulness and significance as the years pass.

Now that the early years have been compiled, it will be a comparatively simple task to keep the record up to date, but few can underestimate the immense amount of careful investigation and technological skill that have gone into the production of these first two volumes. The heavy burden of research has been undertaken by Elizabeth Silvester, Head of the Reference Department of the McLennan Library. Frank Spitzer, Associate Professor in the Department of Electrical Engineering has provided the technology which has made the organization and production of these volumes possible, and these two colleagues deserve our highest commendation, not only for their individual contributions but also for the way in which they have teamed together to produce these fascinating volumes. They also required the encouragement and resources provided by Vice-Principal Walter Hirschfeld, Dean of Graduate Studies and Research, without whose personal commitment to the project it would have never reached a successful conclusion.

All who seek to be aware of the wider implications of their own research, all who are concerned for the role of the University in Graduate Studies and all who have an interest in the intellectual history of McGill – and this is to say of our community and country, indeed of mankind – are greatly indebted to our colleagues for the recognition of a need and the splendid manner in which it has been met.

# Presentation of Data

The Annual Listing, the first section of this volume, contains in strict numerical order, corresponding approximately to alphabetical order, the theses accepted by the University each year, broken down by convocation and degree. A sample entry is given below:—

72-047 **MacLeod**, Stuart M. (*Toronto*) Ph.D. "Hepatic microsomal drug oxidation and electron transport in immature rats, rabbits, and humans." (Pharmacology & Therapeutics: Eade, N.)

The first two digits indicate the calendar year in which the degree was awarded, superscript numerals indicating the 19th century.

The three subsequent bold numbers are the thesis reference number which combines to form a five digit code used throughout the indices. Numbers have been allocated in the sequences 1 to 499 for Spring and from 500 onwards for Fall convocations, resulting in a gap before the number 500.

The name of the candidate is given in bold characters in the form that was applicable at the time the degree was awarded; any subsequent name change has been ignored.

The name of the university granting the first degree is listed enclosed in parentheses after the author's name. Where this university is in North America, the name of the country has not been included. Every attempt has however been made to ensure that the names used are both clear and unambiguous.

The degree awarded appears next, followed by the title of the thesis within quotation marks.

The last component of the entry, enclosed in parentheses, identifies the name of the department or programme in which the student was registered and the supervisor of the thesis. The department name is given here as it was at the time the thesis was written. If there were several thesis supervisors, their names are listed in the sequence shown in the thesis. Only the first initial of each supervisor is given except where ambiguity might thereby result.

Each year starts a new page of the Annual Listing.

The 19th century theses in the Annual Listing are not included in the various indices in the Directory.

# Indices

The indices described below follow the annual listing.

## 1. **Alphabetical List by Author**

The index lists the authors of theses listed alphabetically without regard to year, department or degree. The thesis number and the degree awarded follow the author's name. Where students have submitted both a Master's and a Doctoral thesis within the index period of 1881 to 1959 there will be two entries for the same author. The thesis number is the key to the Annual Listing which gives full details of the thesis. Asterisks in any of the data fields are indicative of the unavailability of this element of information.

## 2. **Alphabetical List by Department**

This index provides a primary alphabetical listing of the department or programme and within each listing an alphabetical sequence of authors as well as the thesis number and the degree awarded. For fuller comments regarding the use of department or programme name, please see the comments on this topic.

## 3. **Alphabetical List by Supervisor**

This index provides an alphabetical list of students under each supervisory Professor together with the degree awarded and the thesis number. An asterisk preceding the author's name indicates that more than one Supervisor was responsible for the thesis; the other Supervisors may be ascertained by reference to the Annual Listing through the use of the thesis number.

## 4. **List of Theses by Department**

This index prints thesis titles sequenced by thesis number, but sorted by department in order to help researchers scanning the thesis listings. As it has not been possible to classify the theses by subject this index provides a means by which the titles are grouped together by discipline to facilitate searching by topic. For further comments regarding the use of department or programme name, please see the comments on this topic.

### **Additional Lists**

The Faculty of Graduate Studies and Research maintains other indices in addition to those published here. These can be made available on demand.

# Departmental & Programme Nomenclature

The “Listing by Department” and the “Listing by Thesis Title” both provide access to thesis information arranged under the name of the department or programme in which the student was registered. The departmental names employed in the Directory have been taken from contemporary records. As departmental names have changed and varied over the years there are some inherent difficulties in employing them as headings for locating theses produced in a particular discipline. Hence, to facilitate the use of the indices, a list of all departmental and programme names used, grouped by related disciplines is provided here. It is essential to use this list in order to select the relevant headings for the names of authors in a particular field or for theses on a particular topic. Both specific and general headings should be checked – e.g. “Biology” should be scanned as well as “Botany” for Botany theses due to the recent amalgamation of the Botany, Genetics and Zoology Departments into the Biology Department. It may also be useful to check some of the related headings listed under *Agricultural Sciences* for some botanical topics, e.g. “Horticulture” or “Plant Pathology”. Similarly, synonymous terms should be examined, e.g. “Bacteriology”, “Bacteriology & Immunology” and “Microbiology” etc.

The Roman numerals which follow the names in the following lists refer to the volume number or numbers of the *McGill University Thesis Directory* in which the programme occurs.
