A N C H O R .

I love to look on an Anchor. Like a good friend who helps you in trouble, it holds the ship steady in a storm. Its flukes sink deep into the bottom of the sea, or cling to the

rocks, and nothing but a great storm can separate it from the cable which is fastened to the vessel. Anchors are of solid iron and very heavy; and cables are made of hemp or of iron chain. Large ships have four anchors, small vessels two. Hope is called the anchor of the soul, because, as the ship is held by the anchor which lies in the sea, so the soul is supported by

Hope which is cast in
Heaven.

WIND-MILL.

The Wind-Mill has
sails fixed to very long
poles, and when the wind
blows strong, round go
the wings. As the wings
blow round, they carry

round a large stone inside the house; this stone rubs on top of another mill-stone, and corn is put between them, which is thus broken and ground into meal. We cannot eat corn till it is ground; but horses can. Some mill-stones are likewise carried round by a stream of running water, and some by the steam of boiling water. There are a number of water mills on the Mill-dam

which leads from Boston to Roxbury.

There is a wind-mill in Boston, which stands in Sea-street, near the new bridge to South-Boston.

There is a steam-mill next to the iron-works at South--Boston, which grinds corn and grain.

FLAG.

Here waves the Flag,
which all nations respect.
It is sometimes called
The Colours. In war,
the soldiers carry a Flag
waving over their heads,
to show, that, as long as
it is raised, they are not

beaten; and the soldiers look to it as a place or rallying point where they must all join if forced to separate. Flags are hoisted on a ship's mast to tell to what nation she belongs, and every nation has a different one. The American Flag has thirteen stripes, to show how many States first formed the United States, and it has as many stars as there are States at this time.

T E N T .

Did you ever see a tent? This sort of house is common in warm climates. The Israelites, of whom you read in the bible, lived in tents forty years. Soldiers live in tents, when they march from home;

and at night they take the canvass out of their waggons or baggage-carts, and pitch the tents in any convenient field. Four soldiers live in one tent, and lie upon clean straw, taking their knapsacks for pillows. Their guns and their swords are hung around overhead.

CANNON.

When the cannon is fired only for the purpose of noise, no ball is put in; nothing but powder and the wad. On Washington's birth-day, on the fourth day of July, and on some training days, cannon are used to make a noise, and the louder it is so much the better. Never be afraid

of the cannon noise when there is no ball to hurt you.

C L O C K .

You all know what a clock is, and how it strikes every hour. One, two, three, four, five, six, seven, eight, nine, ten, eleven, twelve. It then begins one again, and so

goes on, and has no end. In the middle of the day it strikes twelve, and in the middle of the night also. When it strikes five in summer mornings, then you must rise. When it strikes seven in winter mornings, then you must rise; at eight, eat breakfast; dine at two; and sup at five; go to bed at eight; sleep whilst the clock ticks all night, and wake in

the morning to hear it
strike again.

B A R G E .

A Barge is a large
boat driven along with
oars, and rowed by eight
or ten men, with one
man at the helm to steer
her course through the

sea. It belongs to a ship of war, or to a fort, and is used for the purpose of carrying officers to the shore. This barge has what is called a round house, on her quarter deck to keep off the hot sun or the rain. How sweet, in a calm day, to sail on the water, feeling

the soft wind blowing
health and cheerfulness
into our cheeks! But
many accidents happen
on the water through
carelessness.
