The Abdomen in Dilatation of the¹⁷ 9
Stomach. 30 25

Two great groups I Acute, II Chronic 8

Acute Dilatation. . . more frequent than
is supposed. ^{Fagg} Campbell Thomson. ^{Micro} ^{the}

1st. Cases with no apparent cause.

Fagg case. . . Man at 30 admitted
Dec. 7th. . . read. Muller's case. red 21

2nd. Following ing. of large amounts of food
Case of W. Broadbent. Trump after 2
days fast. Large quantity of purg. abd.
Pain vomited for 2 days. Stomach reached
feet. 5 cases in Thomson list

3rd. Following Surg Operations, ^{Keegan's} 4 on abdomen
2 on kidneys, 6 on 4 branches. Several
cases followed blows on abdomen

4th. Following acute diseases - ~~St~~ Pneumonia
Read. Thomson's case. 20

5th. Associated with disease of stomach
itself. One of Fagg's cases. Cancer or
ulcer.

Signs are according to Fagge.

3

9

30

25

2

8

(1) Fagge case. Man at 30 ad. 1870, Dec. 7th, suspended
phlegm, Dec. 15th, sick. Laid all night
thought due to the cod-liver oil. Dec 17th, sickness
persisted, no urine passed, abd. distended
& catheter passed no urine obtained,
Dr Fagge saw him on 18th. No urine, pulse
feeble. Thought possibly the bladder.

2. Muller & Humby, Path Soc. Trans.

Miss M. at 45. March 6th vomiting,
all night, five hard - basins put, next day
faint & weak. Still slight weak less vomiting
on the 10th no vomiting, abd. distended
great exhaustion, restlessness & weak pulse
for this reason thought, des. stomach
large fluctuating tumour, filled the whole
abdomen. Death on the 17th.

Case in Leeds inf. misc. for a cyst & opened.

C. Thomson case ~~Feb~~ 24. ad. June 26th
1801 with pneumonia, not very ill. At 1
p.m. on 27th began to vomit, which continued
until 6³⁰ a.m. on 28th. Then ceased till
1.5 same day, when it began & continued
till death 2 a.m. June 29th. 36 hrs after the
vomiting began. Vomitus dark green.
Urine scanty.

The first...

Faint, illegible handwritten text, possibly bleed-through from the reverse side of the page.

Signs are accordy + Fagge.

3

9

25

30

1. Rapidly increasing distension of the abdomen left by, left umbilicus & hypogastric
2. A surface marking descending obliquely toward the umbilicus from the left hypochondrium corresponding to the lesser curvature
3. Presence of fluctuation in the lower part of the abdomen
4. The occurrence of splashing
5. The uniformly dulled by impaction note over the front of the abdomen when the patient is flat on his back
6. Peristalsis rare.

Symptoms, acute abdomen. - 1) Pain more or less intense, after noon.

(2) Vomiting, most characteristic, greenish fluid, often dark, enormous quantities. 8 pints were returned out in six to seven hours & the stomach immediately began to refill

3. Pulse feeble, respiration rapid, Thirst excessive.
4. Urine suppressed or scanty.

[Faint, illegible handwriting on aged paper, possibly bleed-through from the reverse side. The text is arranged in several horizontal lines across the page.]

Chronic dilatation

5

30

25

Elidoff, no satisfactory explanation

4

10

1. acute ^{Gastroplegia} paralytic dilatation of the crall.

Probably the case in the over dis. for food
or gas or liquid.

2. Excessive secretion - a gastro-succorhoea
Broadbent case in favor, but it may be
chiefly gas.

3. Spasm of the pylorus

4. Albrecht suggests that ⁱⁿ the dragging
down of the intestines the superior
mes. artery presses upon & obstructs
the 3rd portion of the duodenum.

[Faint, illegible handwriting, likely bleed-through from the reverse side of the page.]

III

Chronic Dilatation

Three groups

- 1 Spasm of the collets -
the pylorus - Cong
stenosis.
- 2 Narrowing of the pylorus
by tumour, or by contraction
of ulcer, or by peristalsis.
- 3 External causes - Pressure
of head of Pancreas, or of
glands, thick of duodenum
or the pylorus held up
in tubercle of liver

Examination of dilated Stomach

- (a) Inspection (1) Negative. (2) Prominent
lumen on left side & below navel.
How thick. Infl. peric
3 Peristalsis. ~~Form~~ forms of
movement in the dilated stomach
- (1) Local bulgings protrusions & not regular
 2. More or less rhythmic waves passing from
left to right - & causing prominent bulging
of the abd. wall
 - 3 Antiperistalsis.
 - 4 Spasm of the pylorus

Palpation

- 1 Walls resistant when wave
passes
- 2 Pylorus & the stomach a space
- 3 Gurgling of gas.

Nothing has given me greater pleasure than to find
that the ~~faith~~ in which these essays have been written
- a strong, enduring faith in the high purposes of our profession
has awakened an echoing response in the hearts of many
young readers, not from the pleasant things which kindly
reviewers have said, not from the flattering comments
of colleagues or friends do I judge of this, but from the
~~many~~ ^{many} ~~expressions~~ letters I have had from ~~without~~
correspondents, chiefly young men in active practice in
our large cities and in country places, to whom I would like
publicly to express my grateful thanks. That any words
of mine have lightened their burden of their loss and made
them feel that the struggle is not in vain, that ~~there is~~
~~any~~ ~~possibility~~ of business man ~~being~~ ~~to~~ ~~found~~ ~~on~~ ~~upon~~ ~~in~~ ~~the~~
right spirit, the pride of our profession in any and
every grade, there may be found opportunities of satisfying
the highest ideal of human life.

Angina pectoris ^{as an early symptom} in Aneurysm of the ¹⁴ aortic arch. 13

19
60 30

William Osler M.D. F.R.S.

Regius Professor of Medicine Oxford.
Pain in the chest is one of the most constant symptoms of aneurysm attacks with the characters of angina are comparatively rare. I wish to call attention to a group of cases ^{of aortic aneurysm} in which the paroxysms of pain precede for months ^{or years} the physical signs of aneurysm opening up. However divergent ^{the} ~~the~~ ^{the} ~~the~~ ^{the} nature of angina pectoris we are all agreed that so far as the anatomical changes are concerned there are two groups - the one with disease of the coronary arteries or of the root of the aorta, singly or combined, the other in which no

on England at war", the first of which appeared
in Jour. of Am. Med. Assoc. 1914, LXIII, pp. 2303-05]

Not a word, and the world, hell and like words
 modern the nations
 England is an extraordinary country. Here we are in the third month

of the greatest war in history, and everything goes on as usual -
 commerce, education, sports! based not for the newspapers
 and the men in Kabbie are the only evidence, on the surface, and
 just in ten weeks there has been a revolution, a change in
 the nation from war ~~with~~ to ~~some~~ peace, from peace
 without to war. With Sir Edward Grey memorable speech he
 would have closed, the lion & the lamb are lying down together
 in Ireland while here Asquith ceases to see Brown Law, and

sure than this, the children have ~~scrap~~ to
 the call, Canada, Australia, New Zealand

[Probably a quote (Quoted in England at home) published (that
 one in the New Dominion 1914)]

Part of a note on Thomas Young

The hieroglyphic inscriptions of Egypt
 has been an unsolved puzzle to
 students. Some of the characters were
 thought to represent sounds and those
 enclosed in an oval line were believed
 to represent proper names. In 1799
 the celebrated Rosetta stone was found
 inscribed with the hieroglyphic, Coptic
 and Greek characters. de Saoy inter-
 preted 3 proper names and Champollion
 and Champollion claimed to have
 made out ^{all} the ~~rest~~ of the hieroglyphic
 but in October 1814 when Young
 sent de Saoy a complete translation
 no one had published an interpre-
 tation.
 worked for several years at the Louvre
 & in 1818 wrote for the Brit. Encyclopaedia
 his celebrated article Egypt.

[1] An unfinished note on "Geophysics" is on the verso of the first leaf there is an outline, written in pencil, of the outline of arranging the Harvey letters of the Bibliotheca Publica of Sir William Harvey.

[2] Material for (notes and quotations) on outline "History of Science"

Perhaps

I suppose it is because he did so much. yet is
provocatively ^{so} irreducible that Thucydides has always had
a fascination for me. I look at ^{his} ~~the~~ ^{old} edition
principles & regret that Montaigne's plan of teaching

Greek was ~~not~~ never came into vogue, but and
then ^{I turn to my} ~~even~~ ^{own} Latin version it is ^{not even} ~~as~~ ^{helpless} ~~as~~ ^{begin}
the file & the dictionary. The truth is Thucydides

is a very difficult author - all the ^{modern} ~~modern~~ are
own thoughts to Sir Arthur Hoist ^{who has made the old} ~~for~~ ^{us can}
English version of the $\pi\epsilon\phi\lambda\ \kappa\upsilon\tau\omega\rho\ \iota\sigma\tau\omicron\pi\lambda\alpha\varsigma$

(Loeb's Classical Library)

to interrogate Nature - Why? I wonder why!
For the first time in the history of a people began

asked the Greek - and philosophy began.
~~was made~~ The birth of a primitive animism, out

of a polytheistic mythology the Greek emerged
with the clear determination to study nature as
she was. ~~The vast inaccessible powers were for~~

the most part ~~hostile~~ ^{hostile} against her vast ir-
resistible powers had ~~not~~ ^{not} altogether malign
to the machine, out the rain ^{he owed} ~~for~~ ^{for}

the bountiful fruits of the earth. ^{over} ~~It was~~ ^{for} a new
attitude of mind, a new way of looking at things

science took its origin. The Babylonians &
Egyptians ^{had great antiquities} ~~but~~ in their long winings had

accumulated a rich store of facts, many of
which the Greeks took over, but they were not
collected for any scientific purpose, and remained

sterile so far as influencing their outlook on the
world. From this ^{useless} ~~useless~~ ^{back-ground}

The scales fell from his eyes - he & nature
were one & both ^{were} to be studied in their mutual
relationship

Dr. Underwood

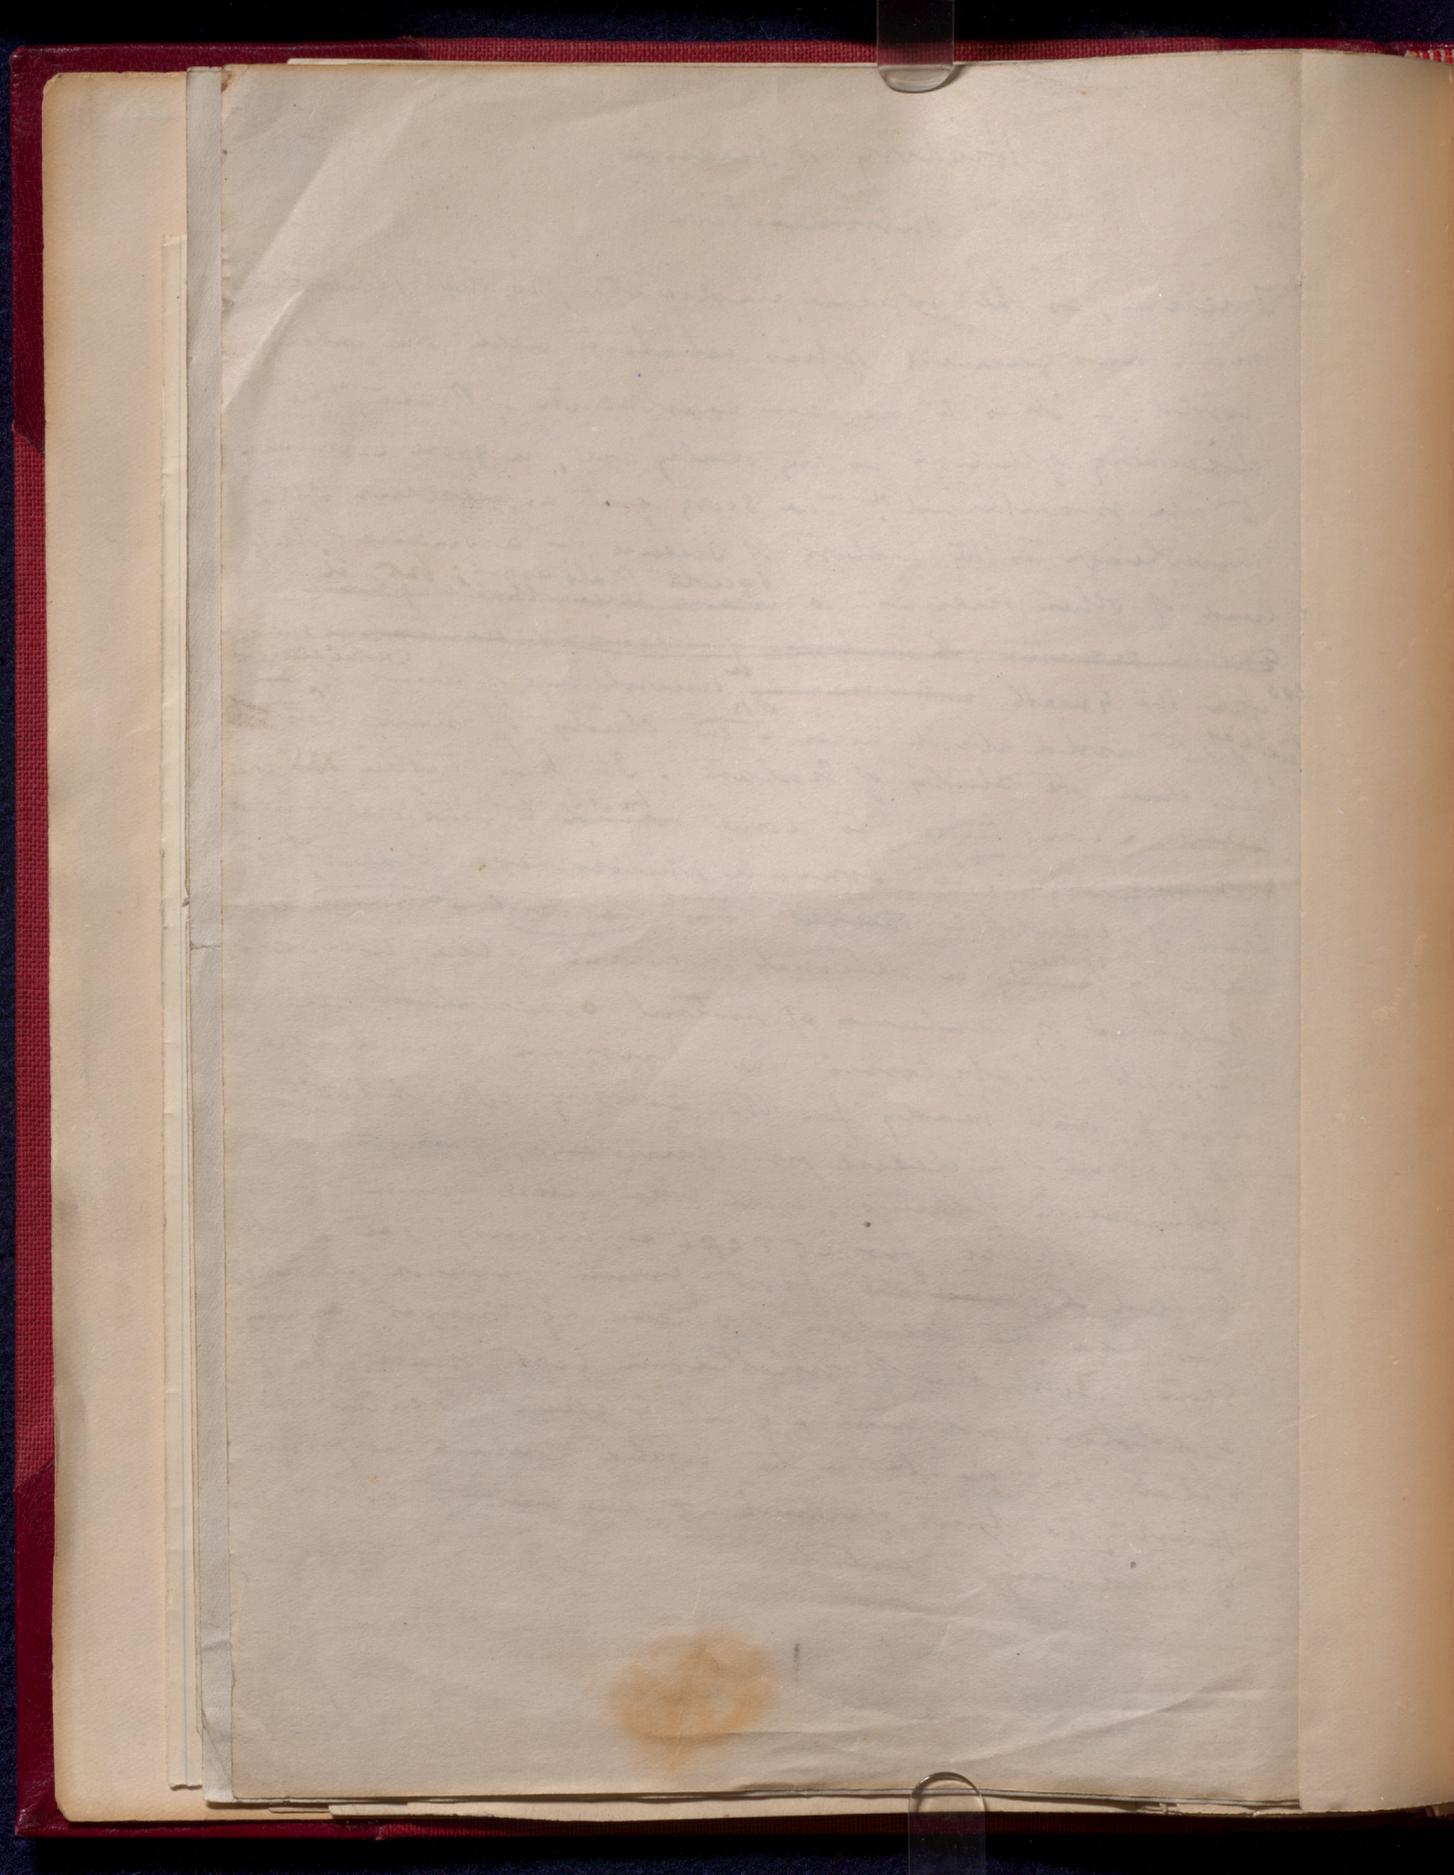

- 1) the world of man
- 2) Both in the animal & man
- 3) Elements: 1. Sensuous
2. Categorical
3. Symbolic
- 4) Higher with man

Science, as the name indicates, is ~~the story of the~~
 knowledge man has gained of his relation to the
 outside world. ~~The story of the acquisition of this~~
 knowledge is the history of science. It is to use
 an expression of Platos "the discovery of things as they
 really are, a good common to all mankind". The story
 of the acquisition of this knowledge is the history of science -
 "The Science of Sciences" to use another phrase of the same
 author

History of Science Introduction

Science, as the name indicates, is the knowledge man has gained of his relation with the outside world. - it is, to use an expression of Plato, "the discovery of things as they really are," a good common to all mankind: the story of the acquisition of this knowledge is the history of science. - "a science of itself and of other sciences" to ~~use a remarkable phrase~~ ^{quote Plato again, but it} ~~and his scientific knowledge of himself which meant~~ ^{as well as} ~~also of the Greek and~~ ^{the study of man not} ~~less than the study of nature.~~ ^{It has taken} ~~not only a long time to come~~ ^{back to this view} ~~but~~ ^{the} ~~seed of scientific thought~~ ^{and we owe to them} ~~the~~ ^{idea of} ~~seeking~~ ^{a rational account of the universe.} Prepared by centuries of patient observation in Egypt & Babylonia, the human mind, like a soil, was ready for the sowing, which took the form of a desire for knowledge, for an explanation of things, and even since man has had a thirst for $\epsilon\omicron\tau\rho\omicron\pi\lambda\alpha$, 'inquiry' (the Greeks called it, and the first fruits of such planting has been the creation of science of thought (diving-stone). With the Promethean gift man, the spectator of all & valiant, became the vital ferment in the world of which he formed part, the laws of which it has been his proud duty by studying to control.

The full scope of wh. could only be reached by a
Columbus

History of ideas -

- may be only a mental tendency - unable to present

For where you may be starting point of any discovery
the specialist, anaesthetics, and reflex, the germ theory,
the specialist will be able to find some anticipation
of the theory or a practical application of it. For example
the great pain-relieving gift to humanity was
granted on Oct. 16. 1846. in the operating room of
the Mass. General Hospital; but anaesthesia for
operative purposes was practiced by the ancient Greeks
who had a sponge *Sonchifera*, time out of mind even
have been made insensible by alcohol, for the same
purpose, Dury & many others had used Nitrous oxide
& even sulphuric ether has been given a plentiful
performance of . . . by King

The seeds of all our scientific ideas be hidden within
great reservoir of man's mind, ripen & burst at
intervals, irregular periods & meet a varying fate. Only if
fertilized by the spirit of some contemporary
which could be planned to us than the germ of the
science of evolution in the writings of . . . & Huxley.
While invention waits &

By way of ancient

The development of Science - that is correctible
and in the same way as in time or place.

The danger of small minded speculation about
the progress of science & science

1-57. "no longer appr. Since the Arab. in Med. thro. Arab
& Salen

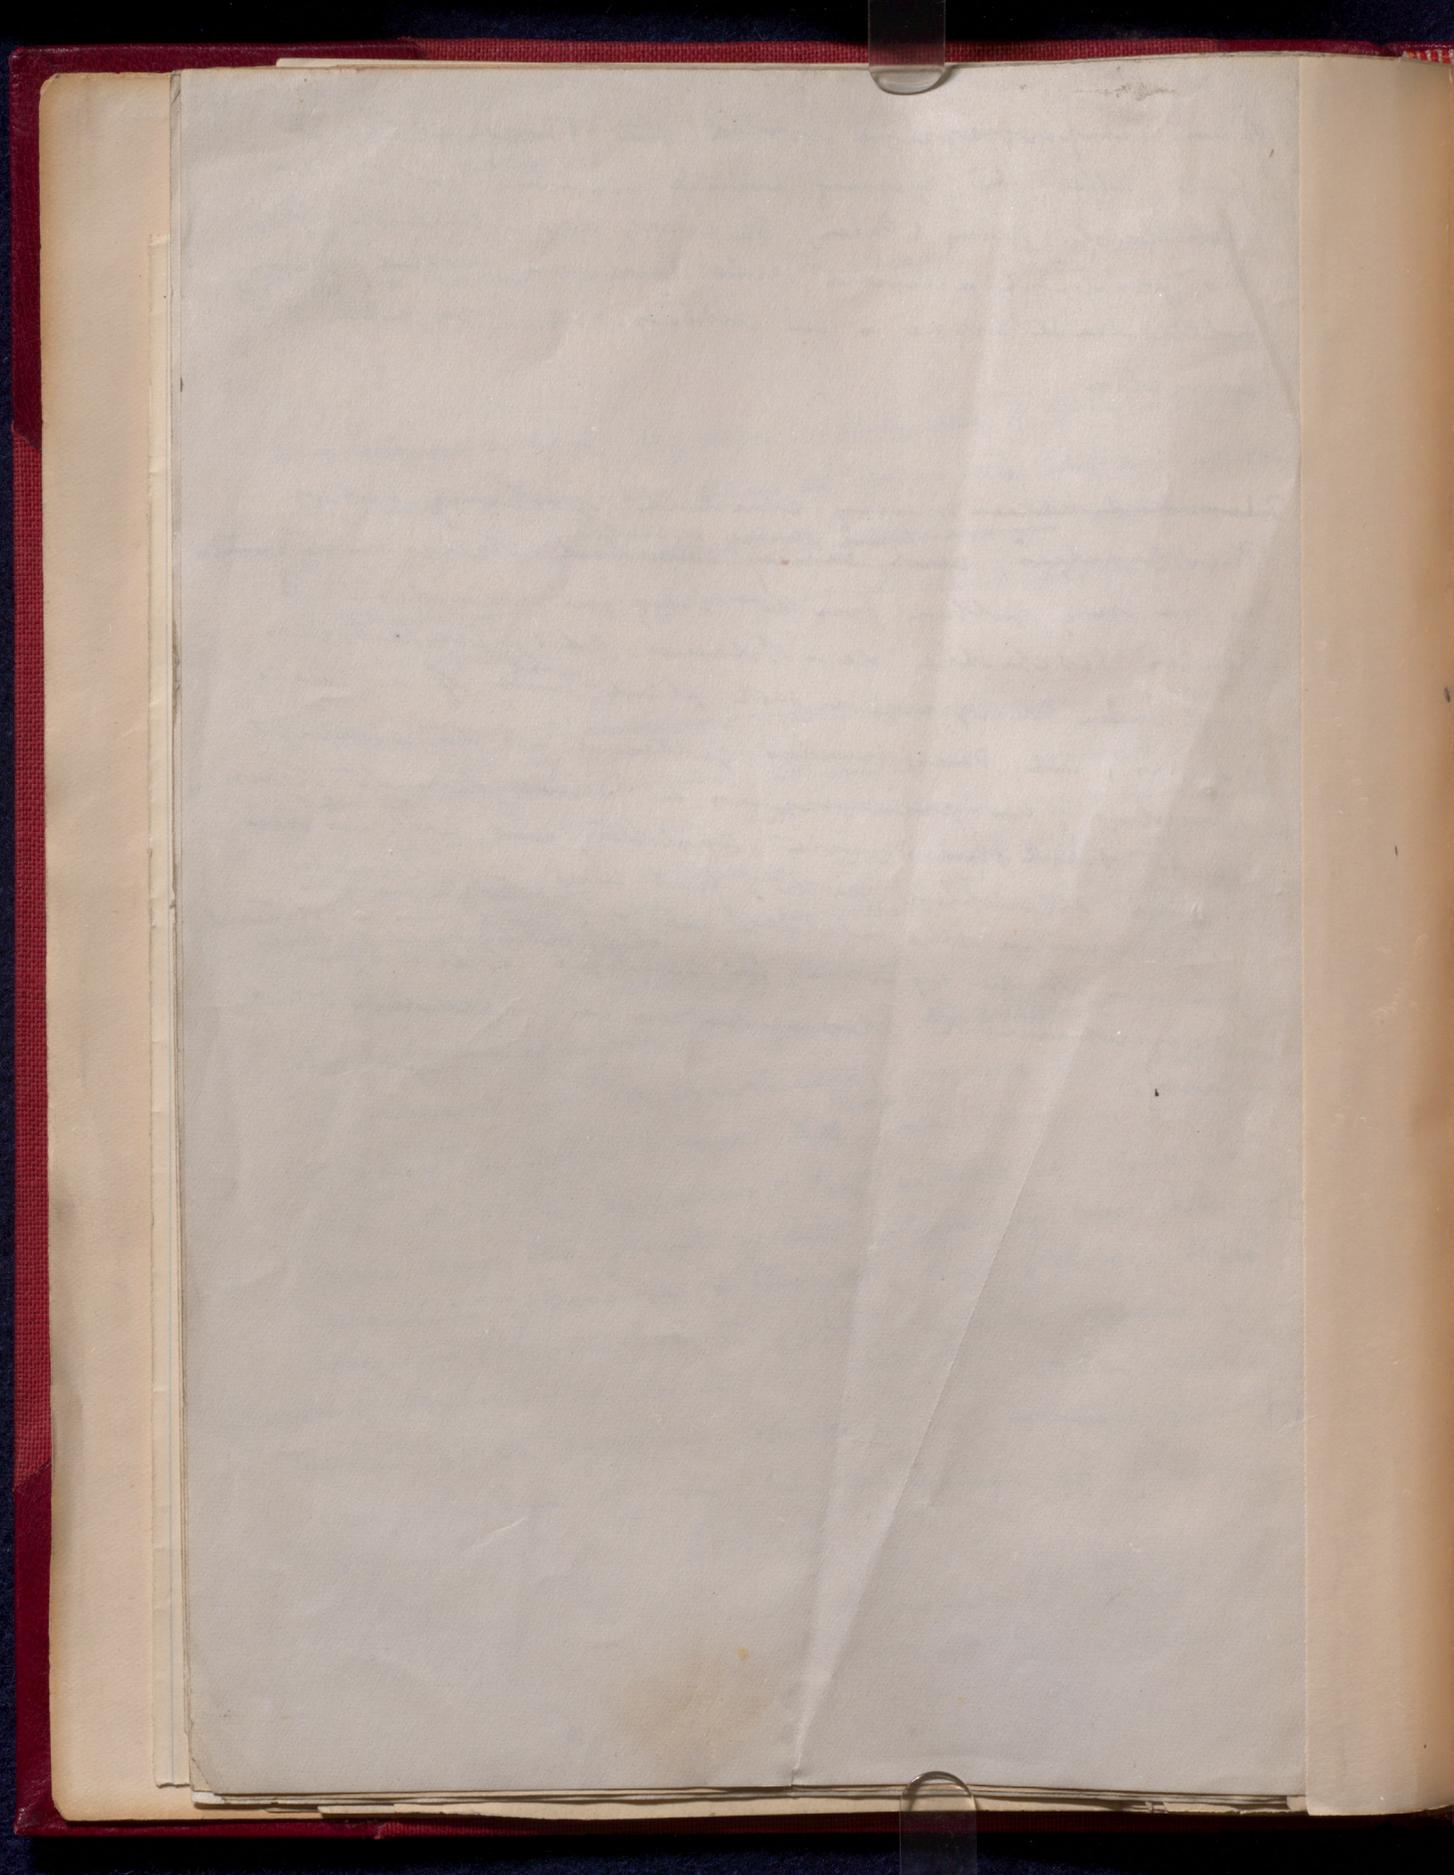

~~From the sign of a dry age when the Te. Salen light.~~
the part has ever been the sign of a dry age while
the study of origins as at the Renaissance has been
a characteristic of vigorous intellectual life as at the
Renaissance.

1-79 ~~the seeds of modern scientific thought were~~
~~planted by the Persian philosophers.~~ ^{not only did the} plant the seeds
of scientific thought but to them ^{not} came the
idea of giving a rational account of the universe
into the ^{human} mind of man ^{like a soil} had been prepared
3 centuries of patient preparation in Egypt &
Babylonia; when the Greeks scattered a seed.
a desire for knowledge ^{for an explanation}
of things & ever since ^{man} has had a thirst
for "isotopia; inquiry" they called it and the
moon and the fruit of this planting has been the
creation of science & thought (Livingstone) ^{which}
~~was~~ this Prometheus gift which made man
because "speculation of truth" ^{because} the vital ferment
in the great cosmos of which he formed part, the
laws of which it was his privilege to study
to control

Modes of thought & practice come into fashion & pass & come again
including the methods in the affairs of men as well as in nature

of an unprogressive world the Greeks stepped
forth like the young hero in the fable to
set things going (Pala) In every department of
the practical activities of the modern world our
intellectual home is in Athens. - Paragraph for
Linnæus.

There had been many students of botany before
Theophrastus, ^{had made valuable} ~~and many casual~~ observations made
as one may gather from the long introduction in
Meyers Encyclopedie de - Botanique. Pl. 1. Empedocles
had even recognized that plants ^{were} of different
kinds, but Theophrastus gathered up the scattered
knowledge of his predecessors, ~~the more definite~~ ^{the best of} observations
of the Greek philosopher Aristotle, and with his own
studies attempted for the first time ^{a systematic}
classification of the vegetable world. ^{the time in Greece} There was a botanical
Garden at the Lyceum, ^{which had been planted} ^{of Aristotle} ~~the scientific~~ ^{had}
accompanied Alexander in his expedition to the
East.

and notes on structure and
function of the vegetation system]

Yora.

it must be a second day operation. The critical period is after the 36th hour. The longer the delay the higher the mortality. after operation

The Geram figures show this conclusively, of 1344 caes

only .9% of those operated on in 1st 48 hrs died, 7.0% of those on 3rd day
Primary
2nd day features indicating operation = Primary pelvic, vesical, leucorrhoea
in case in the local, esophagopy, transiting, = Secondary, bubbling,
concretions.

Why the large mortality 2000 cases in C & W. we have not the data
in which to base an opinion. I wish a statistical enquiry - by how far the
every death investigated. (1) Day of death (2) whether operated on (3) day of operation
I predict we should find that of the 2000 cases more than half had had been operated
upon at all & of the other 1000 more than one half had been operated upon to
late. I estimate a great responsibility is upon us - The diagnosis extremely difficult
most gave confusion with few symptoms - severe symptoms with slight
lesion. Report of case. The greater the case the fewer the mistakes - the fewer
mistakes the fewer deaths & the reason the better were the accomplished
ment of Prof. Dunderkop's dictum no one should die of appendicitis

Mucositis d), with gastric and intestinal neurasthema,
(d), with uterine and tubal affections.

(3), Acute appendicitis. Two great groups, (a), Simple, a catarrhal process, which may pass on to superficial ulceration, may become chronic. Symptoms slight. Process confined to appendix
(b), Appendicitis complicata -- peritonium affected, (1), by extension, (2), by small perforations (3), by extensive sloughing
Dangers. (1), Diffuse peritonitis (2), Abscess formations
(3), Complications. -

IV. Great majority of all cases of appendicitis get well. Path.

evidence, 6th and 7th decades, three fourths to four fifths of all appendices show signs of a former attack, as common as tonsillitis.
Three groups.

(1)

I. The Problem. To operate or not to operate -- that is the question which I would like to ask about the 1969 cases of death from appendicitis in the year 1907; 12404 deaths since 1901. Peritonitis 697. P. now less than a third the rate as recently as 1899.

Dieulafoy's dictum 'no one should die of appendicitis'.)

II. Has appendicitis increased? undoubtedly, though not so great.

Personal experience, Federmann hat am ende ein bischen appendicitis
four fifths at least. *of persons at. 50-60*

III. What are the conditions to be considered.?

- (1), Large group of cases in which other conditions are mistaken for appendicitis, Pseudo-appendicitis chiefly the acute abdomen, internal strangulation, perforation of stomach or bowel, gall-bladder, nephritis, colic, abd. aneurism.
- (2), Appendicular colic; (a), in true appendicitis ((2)), with

often

- (1), Mild, corresponding to the simple catarrhal condition without ulceration or involvement of peritoneum. Very little fever, ^{but constant pain} not rapid, slight local tenderness, no tumor, recovery in two or three days or less. Tendency to recurrence and chronicity.
- (2), Cases of moderate severity. More definite onset, pain greater, fever, rapid pulse, local features more marked, ^{and no tumor} but no tumor or involvement of peritoneum. Anatomical, diffuse inflammation of the appendix with slight mucosa defects.
- (3), Severe Cases, ulceration with perforation or gangrene of the appendix, leading either to rapid diffuse septic peritonitis or to local abscess formation. Symptoms more severe. Sudden onset with pain. General features, fever, rapid pulse, patient looks ill. Local features, pain, tension, muscle spasm, tumour. Gastro-intestinal features, furred tongue, nausea, vomiting.

What case is suitable for medical treatment? Those under I and II which are uncomplicated and of slight duration.

Conditions calling for operation, in mild cases, (a), frequent recurrence, (b), Appendicular Neurasthenia, (c), Travailing Etc.

The form of medical treatment. Rest. As little food as possible. Ice bag to the part. Medicine? Laxative? Irrigation? *Opium?*

Results of the medical treatment. Swing of the pendulum. Recent

German statistics, 4800 cases, medical treatment from the first day

4.1 per cent fatally. Medically treated from second day 4.9%:

not under medical care till later stage 11.9% .

*but most long
penetrable results.*

Surgical treatment. Danger to life comes with involvement of the peritoneum, practically all cases in which in group III should be operated upon at as early a stage as possible, for good results

My first introduction to her. was an appeal about
how she could be of any service in helping ^{to organize}
the nursing service staff in the frightful
epidemic of small pox in Montreal. The desire upper
most in her mind was to help her sisters in
that hard struggle, to be ^{with them} there the stress was
great, the danger most extreme; and I
then recognized a great untempered with
selfishness and a devotion ^{which stamped her as a leader in the} to her profession

(Her loyalty to nursing as a profession)

I next saw her, in the typhoid epidemic at
Plymouth in this state where she organized the
relief hospital and superintended the care
of the scores of unfortunates in that remarkable
epidemic of typhoid fever. I shall never forget
the impression left in my mind after

Drafts of fictitious letters from past (and future!!) physicians to be read at the dinner given to Dr. Howard A. Kelly at the Mayland Club, June, 10th 1898, on the occasion of the publication of his Operative Gynaecology.

of.

Handwritten notes on the left edge of page 68:
Burlington
June 10th
1858

Material for an appreciation of
Dr. Walter Reed (1851-1902).

[unpublished?]

Faint, illegible handwriting, possibly bleed-through from the reverse side of the page.

unparalleled in the annals of the American army. Major Reed
the work was done in 1891, and as Major Reed he died
at the Washington Barracks in the morning of the 22nd. While
here was responsible of Congress and was pleased of the public
for the money spent. Great site spanned our work. It is interesting
to think that ~~to~~ in the recognition of the importance of the
work to those best able to judge of it and by the profession throughout
throughout the world or Reed felt amply repaid for it.
