INTRODUCTION

McGILL UNIVERSITY

The Mossman Collection as the History of Science and of Ideas

I am truly honoured by the invitation to compose an introduction to this special catalogue of the Collection. My task is not confined upon McGill University whose generous supporters have so courageously adopted and are now intelligently developing the basic beliefs of the founders very successfully.

No one can claim to be truly educated if one remains ignorant of the basic principles of the logical soundness of its methods, a real appreciation of its spirit, and its intellectual significance. The advance mankind has so far achieved in the search for truth, its mind in the search and certainly attained the study of the History of Science.

That study of the History of Science and of Ideas is not barrenness if it were to exclude the climate of opinion of other disciplines existing during the period studied. Religious, philosophic, political beliefs and social attitudes have all frequently affected one another and there have been mutual influences between these and the progress of Science. It is intended, therefore, that the study of the History of Science shall encourage the inclusion of important events in the History of Ideas.

A SPECIAL COLLECTION HOUSED IN
THE PHYSICAL SCIENCES & ENGINEERING LIBRARY,
MACDONALD STEWART BUILDING

It has been the aim of the donor to develop as a special collection a series of books of which would be introduced to each and include volumes of special interest. Thus it would be a tempting invitation to each of these areas, an encouragement to scholars in other fields, and a broadening influence in scholarship.

INTRODUCTION

HISTORICAL NOTE

The Mossman Collection on the History of Science and of Ideas

The Mossman Collection on the History of Science and of Ideas
is the gift of Dr. Donald Mossman and Dorothea Mossman, A.M.

I am truly honoured by the invitation to compose an introduction to this, the original catalogue of the Collection. Much greater merit devolves upon McGill University whose responsible members have so courageously adopted and are now intelligently developing the basic beliefs of the founders very successfully.

No one can claim to be truly cultured if one remains ignorant of the basic aims of Science, the logical soundness of its methods, a real appreciation of its spirit, and its intellectual significance as the greatest advance mankind has so far achieved in the rational use of its mind in the search for truth. In our opinion, these desiderata are most readily and certainly attained by the study of the History of Science.

That study alone may suffer a degree of cultural barrenness if it were to exclude the climate of opinion of other disciplines existing during the period studied. Religious, philosophic, political beliefs and social attitudes have all frequently affected one another and there have been mutual influences between these and the progress of Science. It is intended, therefore, that the study of the History of Science shall encourage the inclusion of important events in the History of Ideas.

It has been my wish that the Collection develop as a miniature library in the main areas of thought, each of which would be introduced by an historical approach and include volumes of special importance in its growth. Thus it would be a tempting introduction to each of these areas, an encouragement to browse in other fields, and a broadening influence in scholarship.

This text was prepared for the Catalogue presented to Dr. Donald Mossman at the Annual Meeting of the Mossman Committee, October 23, 1986.

HISTORICAL NOTE

Dr. Donald B. Mossman

The Mossman Collection on the History of Science and of Ideas is the gift of Drs. Donald and Dorothea Mossman. Avid readers, the Mossmans collected a large personal library with emphasis on the history of science and of ideas. This collection was donated to McGill University in 1974, and it became available to scholars with the opening of the Physical Sciences & Engineering Library in 1982.

For many years, the Mossmans regularly contributed generous funds toward the development of the Mossman Collection. In 1982, an additional gift of \$ 100,000 established an endowment not only to perpetuate the development and care of the Collection but also to inaugurate a lecture series on the History of Science and of Ideas given by recognized scholars.

It is the hope of the donors that the Mossman Collection be used essentially as a miniature library, inviting users, most particularly students, to browse beyond their immediate fields and be led to an appreciation of the total landscape of science and the context in which it developed. To this end, the Collection is housed in the open stacks as an incentive to browsing and the books are available for circulation. An important adjunct to the book collection is the Landmarks of Science, a microform set of significant monographic and periodical literature in science.

This volume, the first printed catalogue of the Mossman Collection on the History of Science and of Ideas, is derived from the McGill University Libraries database, soon to be available online across campus. The catalogue is arranged in call number order; this sequence was selected as most appropriate because it echoes that of the books on the shelves. Thus, browsing through the catalogue will evoke the flavour of browsing in the stacks.

The first copy of the catalogue was presented to Dr. Donald Mossman at the Annual Meeting of the Mossman Committee, October 28, 1986.
