TOLICHI & HOTALSHARS

hidory of the nations of ann't fur of a is more intereding than that of the Tartars and Tongal ; his account to the

THE Duke de la ROCHEFOUCAULT LIANCOURT, a man, who, at all times, has been diffinguifhed as one of the moft amiable, the moft virtuous, and the beft informed of the French nobility, has made a journey for philofophical and commercial obfervation throughout a great part of North America, and has communicated the fubftance of his obfervations to the World, in the valuable Narrative which is here prefented to the Britifh Public.

Although no longer a dependency of the British Empire, the thirteen Provinces of the American Commonwealth are not regarded by Britons as a land of strangers. The mutual animolities of the war of the American revolution are already extinguished. Britons and Americans now think of each other only as brethren; a kindred defcent, a common language, congenial character, a strong alliance of institutions, arts, and manners, render them to one another reciprocally interesting, perhaps much more than, in strong infinitiant circumstances, any third nation would be to either. As the history of the Spaniards, who first entered South America, engages our curiofity more than that of the horses, the dogs,

a 2

or the fugar canes, which they carried with them; as the history of the nations of polished Europe is more interesting than that of the Tartars and Tongufi; as accounts of the fortunes of a fon, a father, a brother, a lover, in a diftant land, are more anxioufly expected, and more eagerly heard, than if it were but a cafual acquaintance to whom they related: fo, in the fame manner, and for the fame reafons, every new communication refpecting North America, and its inhabitants of British defcent, is naturally, in an extraordinary degree, attractive to the curiofity of the people of this country. M. de la Rochefoucault's details concerning colonial life and manners are, hence, adapted to imprefs a British imagination, as agreeably as if their subject were the rural œconomy of Wales, of Yorkshire, or of the Highlands of Scotland, and that, till now, though to nearly interefting, yet utterly unknown.

Befides fuch motives of affection and curiofity, there are reafons of a lefs refined nature, which engage the commercial people of England, to liften eagerly to all authentic accounts refpecting America. A great and increafing intercourfe of trade and emigration is carried on between thefe two countries. The lands and national debts of the American Republic are familiarly bought and fold in London. The produce of American plantations, the planks from American faw-mills, the fhips built in American dock-yards, are, in a large proportion, defined for the ufe of Britain. A very numerous emigration of induftrious, reftlefs, or enterprifing

iv

prifing perfons, is conftantly paffing from Britain to America. The transfer of property between the two countries is great and inceffant. It would be impoffible to manage the commercial bufinefs which thus arifes between the two countries with any adequate mercantile intelligence, if continual enquiries were not diligently made into all circumftances, that can influence produce, manufacture, and demand in the market, efpecially in America, where all things are yet much more uncertain, and more imperfectly known than in Britain. The political relations and correfpondence between Britain and America confpire to the fame effect; for there are many occafions, upon which a Britifh politician, inattentive to the progrefs of things in America, would be entirely incapable of providing for the true political interefts of the Britifh empire.

It is, however, to the philofophical enquirer, of whatever nation, that fuch details as the following volume contains, concerning the flate of life and manners in America, are likely to be the most acceptable and inftructive. The progrefs of colonization; the first diffusion of new inhabitants through unappropriated wastes; the fluggiss aukwardness of infant hufbandry; the relapse into barbarism of those outcasts from polished fociety, whom their fortune conducts into regions, where they can converse only with the wildness of rude nature, and where they are defitute of all the accommodations of the arts; the fimplicity of government and of life and manners, that is natural in countries where population

Contract Contract Contract

population is fcanty, and in which the fubdivisions of labour, and all the complex accommodations of fociety, are unknown; the curious contraft between colonial and favage manners, and the effects of the collifion between barbarifm and civility; topics interefting to philosophy, above almost all others in the history of human nature, and, of all, the most imperfectly known; are to be now, for the first time, fully elucidated, by a vigilant and unremitting obfervation of the phases of focial life in America. For the purpofes of afcertaining and illustrating the most important principles of general polity and jurifprudence, how often have philosophers in vain attempted to explore the forgotten and unrecorded beginnings of civil life! How often lamented, that the most interesting period in the progress of fociety, fhould thus be prior to the age of enlightened obfervation! How often and how ridiculoufly laboured to fupply the deficiency of records, by that fort of theory which has been pompoufly christened Conjectural History! The account of the first population, measurement, and tillage of the plains of Egypt, Affyria, Hindoftan, or China, is no longer to be recovered from oblivion : even the exact circumftances of the fettlement of the first Egyptian colonies in Greece; of the first Lydian, Greek, and Phrygian colonies in Italy; of our Teutonic anceftors in Germany and Britain must remain unknown. But a keen attention to what is now paffing in the back fettlements of North America, and to that inceffant emigration from Europe, and from

vi

from the more populous American provinces, by which those back fettlements are filled, will, at last, amply supply to philofophical enquiry, what had feemed to be irrecoverably loft, and will enable us to fill up an important chafm in the hiftory of the human fpecies. It is the vegetable unfolding itfelf from the feed; it is the opening mind, in the first months of infancy; it is the form of confummate ftrength or beauty, rifing under the artift's hand, from the fhapelefs block of marble; rather than the full-grown plant, the mature man, or the finished statue; that the most delightfully interefts the philosopher of refined penetration, and the man of tafte, who to foundness of reason unites a vivid delicacy of fentiment, and of imagination. Of all the pages, of philosophical history, none can deferve to be read with fuch earnest curiofity, as those which difplay the nafcent energies of focial life.

Of fuch inducements to attend to any information concerning the progrefs of induftry, wealth, and civil policy in North America, it is impoffible for any one to be infenfible in reading the following journal. M. de la ROCHEFOUCAULT LIANCOURT is a traveller of no ordinary difcernment and diligence in enquiry. As the friend, and, in fome fort, the agricultural pupil of that intelligent philofopher, Mr. Arthur Young, he travelled with views nearly fimilar to those by which Mr. Young was guided in fo many tours and peregrinations, and in the composition of fo many journals of hufbandry. The quality of the foil, the advantages for cultivation,

vii

tivation, the numbers, the industry, the intelligence of the hufbandmen; the advances which they have made in transforming the vaft forefts and favannahs of interior America into cornfields and meadows; their modes of clearing and culture; the quantity of produce which they obtain; their mills, and other means of manufacture for the market; the opportunities of profitable fale, have been marked and recorded by M. de la Rochefoucault Liancourt, in all those American provinces through which he travelled, with an accuracy and fullnefs of information, which feem to rival Mr. Young's tour through France and Italy, or even Sir John Sinclair's more elaborate statistical collections concerning Scotland. Commerce fhares his attention with rural œconomy; he vifited the lakes, the bays, the creeks, the points of the influx of the navigable rivers into the fea, and those beyond which navigation cannot afcend toward their fprings; he furveyed the ftore-houses; he marked the artifices of the traders; he entered the dwellings of the inhabitants of every different rank, partook of their fare, and flept or watched in their places for reft; he travelled without any thing of that encumbering apparatus of wealth or grandeur, which hides the realities of life from those it environs, even at those times when their refearches are the most diligent, and, as they think, the moft fuccefsful. He liftened, and enquired, and looked around him, even with all the bufy affiduity of Sterne's Inquifitive Traveller. He was not one of those who are willing to content themselves with gueffes

vin

gueffes and with general language ; but was, on every occafion, careful to obtain, if poffible, flatements admitting of the firicteft accuracy of number and calculation. lf unable to look around on those scenes of wild and majeftic nature, with the fublime and picturefque imagination of a poet; if unendowed with the skill of a scientific naturalist; M. de la Rochefoucault Liancourt cannot, however, fail to appear to every reader, to have been eminently qualified to make fuch observations as are best adapted for the instruction of the farmer, the merchant, the colonial emigrant, or the political œconomift : And it was precifely a traveller of this character who was wanted to give us the most defirable new information concerning the progreffive fettlement of America. With the account of trade and industry, he unavoidably combines Iketches, details, and flight cafual touches, refpecting the familiar life of the Americans, which every reader will find highly amufing and inftructive. He exhibits pictures of Indian manners, which, though mournful, and difgufting to tafte, are, yet, interefting to philosophy, in conjunction with his accounts of the fettlers before whom the Indian tribes are gradually vanishing from the earth. With his flatements refpecting the provinces of the American Republic, he prefents also a multiplicity of important details concerning the British colonial possessions of Canada. He tells all that he could learn, without being reftrained, even by confiderations of perfonal delicacy, or the fecrecy

)

of

IX

of honour, from making public feveral things, which, though acceptable to us, were certainly not intended to be thus proclaimed to all Europe, by thofe who communicated them to him. Concerning the intercourfe, the emulation, the mutual jealoufies, the dark projects reciprocally meditated, between the Americans and the Britifh colonifis and foldiery of Upper Canada, he gives a variety of information, which we fhould, otherwife, never have obtained.

The character and predominant opinions of M. de Rochefoucault Liancourt himfelf, are, in this volume, very frankly and amply difplayed. In his character, great native rectitude and benignity of difposition appear to be affociated with fome of the philosophical affectations of the new school, and with somewhat of that never-failing gallantry and politeness, which used to mark the manners of the old French nobility.

Although a victim to the Revolution, he ftill approves those principles of political reform, upon which the first movements toward it were made : Though an outcass from France, he ftill takes a warm patriotic interest in the glory of the French nation. Hence, he inclines, at times, to encourage the milder class of those political fentiments, which the fagacity of Government finds it prudent to discourage in Britain, as little adapted to promote the general welfare. And whenever the views, the interests, and the public fervants

X

vants of the British Government come to be mentioned, he usually speaks the language of a foreigner and a foe.\*

Throughout the whole of his American journies, there appears to have reigned in the mind of this illustrious exile a melancholy caft of imagination, with a peevifh irritability of feeling, fuch as it was very natural for misfortunes like his, to produce. Every scene of beneficent conduct from great landholders toward their dependents, brings to his remembrance his own endeavours to enlighten and blefs the peafantry upon those estates in France, which once were his own. He fhrinks in agony from the exultations with which British officers tell him of the ruin of the naval force of republican France. He complains of a dirty room, a hard bed, or a fcanty meal, as if it were a grievous misfortune. He has a peculiar quickness of eye at discovering floth, knavery, and mifchief, wherever he travels. The wounds which his fpirit had fuffered were still fresh or feftering; and were, therefore, liable to be grievoufly inflamed and irritated by the flighteft degree of new laceration. He, not unfrequently, breaks forth into expressions of keen anguish, or more fubdued and penfive forrow, which, being

\* In a very few places it has been found expedient to infert initials for proper names, and to fubfitute afterifks for fentiments. In one or two inflances where obvious fuppreffion would have infinuated more than the original paragraph, the original has been retained. The motives of the writer, in these places, are fo obvious, and his conclusions fo palpably unjust, that to have fostened or fuppreffed would have been a bad compliment to the understanding of the British reader.

b 2

the

XI

allow - and the second second second

XII

the voice of nature and of truth, must prove to every reader inexpressibly interesting.

It is, amidft all this, impoffible not to admire this amiable nobleman, for labouring to divert the tædium of his exile, by enquiries of a tendency fo beneficial, and for accommodating his mind, in fo confiderable a degree, to the hardfhips of his condition. Perhaps he could not have been more ufefully employed, in any conceiveable profperity of his fortunes. He appears to have been content to ride on horfeback, without a fervant, and to travel about without aught of the pomp of greatnefs, or the luxury of opulence, juft as if he had never been more than a plain farmer or manufacturer in France.

The ftyle is naturally fimple, and devoid of all affectation. The Tranflator has not, in his verfion, made any attempt to clothe the work in laboured elegances or ornaments, which it did not originally wear. Faithfulnefs, fimplicity, and correctnefs of Englifh phrafeology, are the chief qualities, by which he has afpired to diffinguifh his work. He leaves it to the reader, to judge, how far he may have been fuccefsful or otherwife.

The English Edition has been illustrated by a MAP, drawn on purpose, from the information contained in the work itself, and a close inspection will shew, that this Map not only corrects former Maps of America in many points, but exhibits in their proper places, for the first time, feveral new Towns and Settlements.

The

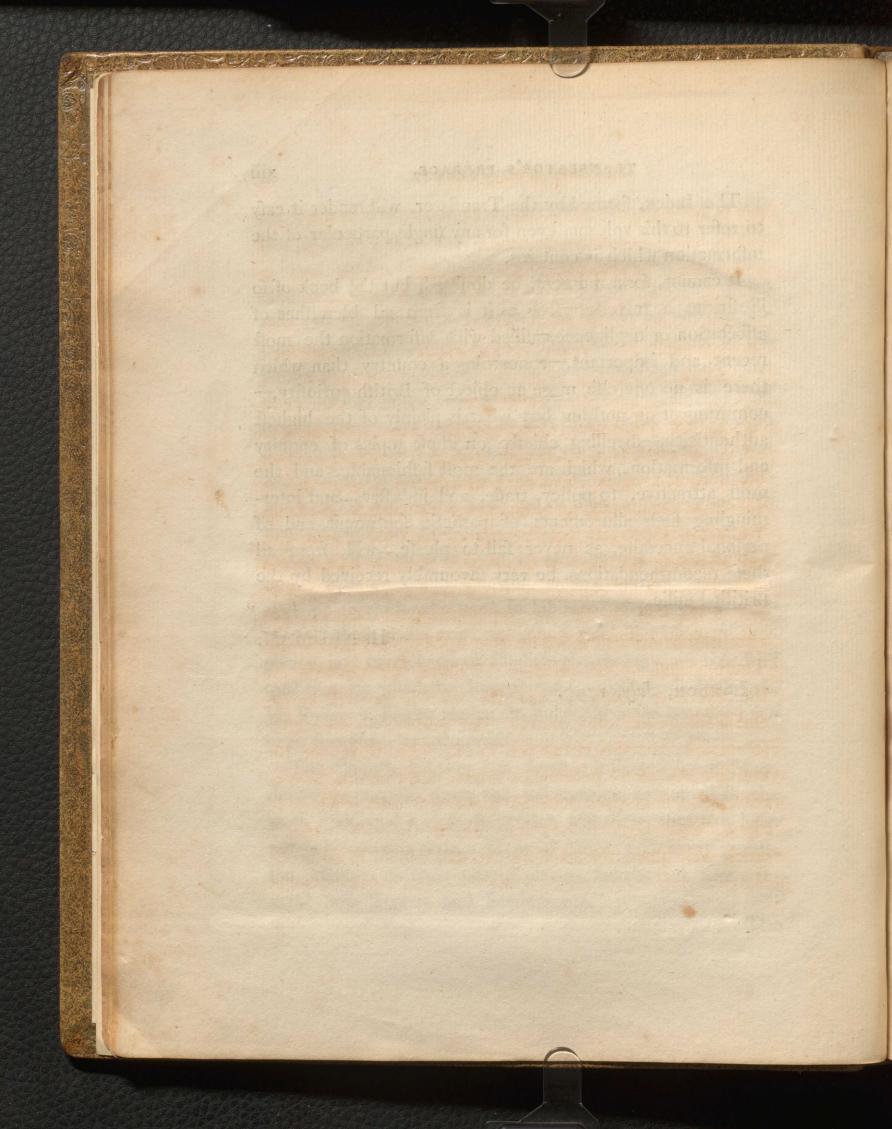

The Index, formed by the Tranflator, will render it eafy to refer to this volume; even for any fingle particular of the information which it contains.

It cannot, for a moment, be doubted, but the book of fo illuftrious a traveller—free as it is from all blemifhes of affectation or negligence,—filled with information the moft recent and important,—concerning a country than which there is no one elfe more an object of Britifh curiofity, communicating nothing but what is plainly of the higheft authenticity,—dwelling chiefly on those topics of enquiry and information, which are the most fashionable, and the most attractive, to policy, trade, and industry,—and intermingling fuch allurements of pathetic fentiment, and of perfonal anecdote, as never fail to please,—will, from all these recommendations, be very favourably received by the British Public.

H. NEUMAN.

LONDON, July, 1799.

## AUTHOR'S PREFACE

AND

THE

## DEDICATION.

004-00

TATHEN I began to write a journal of my Travels, it was my intention to confine it folely within the circle of my friends : but fome of them being of opinion that the publication of it would be of general advantage, I fubmitted to their advice, and refolved to publish it on my arrival in Europe. In chufing a patronefs for my book, it was natural for me to felect that perfon who claimed the largest share of my esteem and gratitude;-who has been endeared to me ftill more by her unparalleled misfortunes. There could be no occasion for calling to remembrance, the atrocious murder of a coufin; as it is too well known, and held in just abhorrence. But perhaps it is necessary to remark, that his virtue was fo exalted as to render him unfufpicious of fo nefarious a crime, and that his internal confciousness induced him to flight the advice which his friends gave both to him and me, at the time when an order was iffued for arrefting us; and which, in all probability,

## AUTHOR'S PREFACE.

bility, was not the only mandate concerning us from the fame quarter. He would not quit France, but I, who was lefs confident and lefs virtuous, fled from the poignard, while he fell by its ftroke!

On my arrival in Europe, and while I was employed in preparing this work for the public, I received an account of my aunt's death, which cut off all the fond hopes I had entertained of once more beholding her, even on her death-bed. It will readily be fuppofed, that the idea of withdrawing from her the dedication of my book, could not enter my afflicted mind I have ftill preferved it for her with a fympathetic regard. Although eftablished usage may hereby be violated, yet he who is fensible that neither friendship nor gratitude ends with death, will easily conceive the pleasure, melaneholy as it may be, which I receive from the performance of this last facred duty to a departed friend, who had fo many claims upon my warmeft affections.—

DEDICATION

# ( xvii )

## DEDICATION

TO

## CITIZENESS LA ROCHEFOUCAULT D'ENVILLE.

## " My dear and unfortunate Aunt,

CIVE me leave refpectfully to prefent you with na account of my Travels through the United States of America. It is an offering of fincere attachment and gratitude; and I am confident you will receive it kindly. How often have I, in the course of this work, lamented with painful anxiety, that I was not near you; that I was prevented, by dreadful circumflances, from taking a fhare with your amiable and lovely daughter, in affording you that attention and comfort of which your feeling and afflicted heart flood fo much in need! Undoubtedly my fervices could never have been equal to his, whofe fate we deplore: but I am bold to think, that in the tendernefs of my feelings, and in your own heart, you would in me have recognifed a fon. I have fometimes thought, that you miffed me; that after recollecting every thing which makes me indebted to your goodnefs, your advice, and example, you have not entirely removed me from your thoughts. You will eafily believe, that this was one of

C

the

the reflections which has given me the greateft degree of pleafure. The certainty of holding unalterably a place in the affection of an effected object, in fpite of misfortune and feparation, has a peculiar effect in animating the heart of that man who is free from felf reproach.

" The observations you will find in this work itself are not fo perfect as they might have been; but you know what difficulties a traveller, who wifhes to convey information, has to combat. He is always obliged to be fatisfied with the answers given to his questions : he does not often find a man at leifure or difpofed to give the information that is required: the perfon who is queftioned about the objects of his own bufinefs, frequently knows no more than is neceffary to carry it on, and is incapable of conveying his ideas to another even on the fubject of his own occupation. And it happens ftill more frequently that party-fpirit, felf-intereft, or prejudice, deprive those answers of all manner of truth and candour. The traveller himfelf is often deficient in making the proper enquiries; he often views things with a prejudice, imbibed from a certain fystem, and according to which he regulates all his queftions, and all the answers he receives. To these real difficulties are frequently added those which arife out of the perfonal fituation of the traveller, from the circumstances of the moment, or from fome opinions which he may have already formed, before he makes his inquiries. It is eafy therefore

xviii

and the second of the second sec

to

to conceive how difficult it is for a perfon who travels to acquire a full and accurate account of every thing.

" I do not fay, that in this tour I have had the good fortune to keep clear of the rocks against which fo many travellers have ftruck. But I may fay that I have done every thing in my power to infert nothing but what is authentic. As far as I poffibly could, I have made inquiries concerning the fame thing of feveral men, of different interefts and opinions. I have done my utmost endeavour to get rid of every partial opinion, I might have previoufly formed; in fhort, I have fought after truth by every means in my power. The idea of writing only for you, for my friends, and for myfelf, has made me ftill more frict and attentive with regard to the materials which I collected, and the accounts I afterwards made from them. I have likewife stated almost on every occasion, the fources from whence I drew them; in order to engage your approbation, or fhew where doubts ought to be entertained. I have not, knowingly, ftated any thing that was erroneous; but still I am far from supposing that I have escaped every kind of error. I have frequently in one place been unable to obtain an account of certain circumstances, concerning which I had in another place acquired very full information. Although some books of travels in America may contain fewer facts than I have collected; yet I do not the lefs, on this account, perceive the defects of my

C 2

tour.

xix

510 AS - 4-27 - 8-30 - 50 - 50

tour, which I might with more cunning, but with lefs fairnefs, have concealed from my friends.

"The territory of the United States is perhaps the only country in the world which it is most difficult to be made acquainted with, unlefs you have traverfed it yourfelf. It is a country altogether in a ftate of progreffive advancement. What is to-day a fact with regard to its population, its management, its value, and trade, will no longer be fo in fix months to come; and ftill lefs in fix months more. It is like a youth, who from the ftate of a boy is growing into manhood, and whofe features, after the expiration of a year, no longer refemble the original picture that had been drawn of him. The accounts given by travellers at prefent, and perhaps for many years to come, can only ferve as the means of enabling difant pofferity to form a comparison between the state which the country shall then be in, and what it formerly was. In this point of view it appears to me, that fuch accounts are far from being useles.

" Every day I travelled, I wrote down the accounts, juft as I received them. Whenever I remained for fome time in the fame place, I put together what information I had collected, and arranged it in a better order. I have been in many places oftener than once; confequently the obfervations made concerning them have been written at the different times I happened to be there. It would have been eafy

XX

eafy enough to have put them together into one article: but in that cafe I fhould not have written merely a *Journal* of my travels, which was what I had wifhed to do; that being perhaps the only kind of work which does not require greater talents than mine, and where truth can be the principal merit.

"I have fometimes made remarks which had properly no connection with my tour: it is a great fatisfaction to him who writes for his friends, that he is fure of their fympathifing affection, though he fhould give himfelf up to the fentiments and feelings of the moment.

"No doubt I ftand in need of forgiveness for having occasionally yielded to an imperious necessity, and for having been carried away by the force of impressions which were only of a personal nature. My friends will view these deviations with indulgence; and perhaps they will even experience favour with those readers to whom my present fituation may be known.

"With regard to the ftyle of this work; probably my endeavours to make it as perfpicuous as poffible, which has been my chief object, has been productive, in fome places, of tedious prolixity, and frequent tautology. To write with as much purity and correctness as we are capable of, we want more leifure than he can fpare, who binds himself to commit to paper every day the observations he has made, whatever may be his fituation.

" I have

xxi

"I have fometimes made use of English terms, and sometimes turned them into French; always taking pains, however, to translate them as correctly as possible : this I have done whenever I found it practicable, and never loft fight of the true meaning. Still there are fome words, which, when translated, do not perfectly convey the fignification that attached to them in English: for example-the word cleared fignifies a piece of land where fome great trees have been felled, and others have had an incifion cut round them in the bark, and the branches lopt off and burnt; in order that corn may be fown. This is not perfectly explained by the word eclairci, which only means that fome branches have been cut off; either for the purpose of forwarding the growth of those that remain, or of adding to a pleasant prospect. The term defrické always fignifies cultivated ground from which the roots have been taken away: but that land which in America is called *cleared*, is frequently not cultivated. The French translation of the term fore is magazin: but it is frequently expressed by the word boutique : and yet neither of these words conveys its meaning completely, according to the particular character, object and use of store in America; and efpecially in places thinly inhabited. The words magazin and boutique may be met with repeatedly in books of travels, but the reader will never be able from them to form an idea of the meaning which belongs to the word fore in America. A ftore is a fhop or place where all kinds

xxii

kinds of commodities intended for confumption are to be found, and fold by retail; nothing is excluded from it: here are candles and matches, as well as fuff and tape. The word *fettler* has never the fame meaning with *habitant*. the fettler, in general, is a man who repairs to a particular place, with an intention of fettling in it; but he is not always the inhabitant of it. A tract of land is faid to be fettled, when a fufficient number of inhabitants have fixed themfelves in it: but the meaning of this kind of fettlement can never be expressed by the words *habité*, *peuplé*, or *établi*. In order to express certain circumftances and fituations in a new ftate, it is no extraordinary thing to be obliged to adopt new terms. Therefore, my dear friend, you will, without doubt, forgive me for having attempted to introduce new words into our language.

"In a word, dear Aunt, whatever imperfections this work may poffers, I offer it to you with confidence; although to others it may be indifferent, I am certain, that to you it will be abundantly interefting."

Map of the UNITED STATES, CANADA &c. intended to illustrate the Travels of the Duke de la Rochefoucault Liancourt.

ublished as the Act directs, July 1st 1799 by R. Phillips, St. Pauls Church Yard.

## TRAVELS

THROUGH

The United States of North America, Canada, Sc. IN THE YEARS 1795, 1796, AND 1797.

RESIDENCE of five months in Philadelphia has afforded me a degree of previous information relative to the United States, from which I cannot fail to derive effential fervice in the course of my intended journey. I have had the good fortune to meet with an agreeable young Englishman, who is well informed, is a pleafant companion, and is uncommonly fond of travelling. His name is GUILLEMARD, and he is defcended from one of those French families, with which our unhappy differences in religious matters enriched England. He has been induced to visit this part of the world, folely by a wish to obtain accurate information relative to America, without any view whatever of pecuniary advantage from his expedition : a rare inftance of liberality of mind. With a fortune handfome, though not large, he deems himfelf fufficiently opulent; and the inquisitive turn of his mind, as well as his difinterested temper, difqualifies him for those purfuits, by which many perfons in this country rapidly enlarge their fortune. I am perfuaded he is the beft travelling companion I could have found, and I shall endeavour to impress him with a fimilar opinion of me before the close of the fummer.

### 5th of May, 1795.

We intended to have fet out at an early hour yesterday morning, but our departure was delayed till this day at noon; a triffing delay, however, confidering the length of the journey, on which we enter. We

have

#### TRAVELS IN NORTH AMERICA,

have left Philadelphia. Our party confifts of Guillemard, myfelf, his Englith fervant, our three horfes, a fourth to carry our luggage, and my faithful dog *Cartouche*, who has been my conftant companion thefe fix years. I left Philadelphia with pleafure; but I bear with me a ftrong feeling of gratitude towards a great number of its inhabitants, who have treated me with the utmost kindnefs. I am particularly impressed with sentiments of affection for the members of the respectable family of CHERO, who received me as one of their friends, and who must appear highly amiable even to those, who have not fo many reasons to praise them, as I have. They are good, estimable, and agreeable, in every point of view : my warmest thanks, my best wishes remain with them.

Notwithstanding the kind reception, which I met with in Philadelphia, I am glad I have left it. A poor foreigner, conftantly overwhelmed with civilities, which he is unable to return, must even at best lead an unpleafant life. He endures a state of constant dependence, fraught with melancholy reflections, which the apprehension of being burthensome generally infpires. He imagines himself indebted to pity for the kindness he experiences, which, did it actually spring from that source, would be cruelty. Often does he indulge such reflections with injustice, mistrust being the infeparable companion of the destitute, on whom what is called philosophy has but little influence.

Hitherto we have travelled in the fame road, through which we paffed about a fortnight ago. In this place I fhall infert the journal of that little tour, which, although it bears no proportion in length to the account that I propose to write of the remainder of my travels, will not, I trust, prove wholly uninteresting.

#### A TOUR TO AND FROM NORRIS TOWN.

ON the twentieth of April Mr. Guillemard, CALEB LOWNES, and myfelf, fet out on horfeback from Philadelphia, through Ridge Road, on our way to Norris Town. This road, like all the public roads

in

2

#### BY THE DUKE DE LA ROCHEFOUCAULT LIANCOURT.

in Pennfylvania, is very bad, for provision is brought to that city from all parts in large and heavy laden waggons. The conftant passage of these waggons destroys the roads, especially near the town, where several of them meet. Ridge Road is almost impassable.

The diffrict of the city extends about four or five miles north and fouth, and is bounded on the east by the Schuylkill. This extent was originally affigned to it by WILLIAM PENN, when he formed the plan of the city. He promifed to every fettler, who should purchase five thousand acres of land in the country, one hundred acres within the citydistrict, and two town-shares; a promise which was faithfully fulfilled by him and by his fucceffors, as long as any town-fhares and acres of land within the diffrict remained for diffribution. William Penn kept only five or fix thousand acres for himfelf. This land is in its foil of a very indifferent quality, but its vicinity to the town occasions it to be bought with great eagerness. It is covered with country-houses, which, in point of architecture, are very fimple; from their great number they however enliven and embellish the whole neighbourhood. Very few of them are without a fmall garden; but it is rare to obferve one, that has a grove adjoining, or that is furrounded with trees; it is the cuftom of the country to have no wood near the houfes. Cuftoms are fometimes founded in reason, but it is difficult to conjecture the defign of this practice in a country, where the heat in fummer is altogether intolerable, and where the structure of the houses is designedly adapted to exclude that exceffive heat.\*

Land in this neighbourhood is worth about eighty dollars an acre; three years ago it was worth only forty-two. Two miles from the city Ridge Road interfects the entrenchments, which the English constructed during the last war, for the purpose of covering Philadelphia, after they had penetrated into Pennfylvania through the Chefapeak. The re-

\* The reafon is, becaufe the country was univerfally wooded, when the building of thefe houfes was first begun; and in a country thus wooded, to clear the space round the dwelling-house was just as natural, as to plant round the house in a country otherwise bare of wood.—Translator.

mains

mains of thefe works are ftill visible. But the prefence of the English is more strongly testified by the ruins of many half burnt and half demolisted houses, fo many expressive monuments of that inveterate animofity, with which the war was carried on, and which was highly difgraceful to the generous fentiments of a people, who well know, that every evil inflicted on an enemy, even in time of war, without the plea of neceffity or advantage, is a crime. Alas! the evils of fuch a state, however alleviated, will still be far too numerous.

As the country on this fide of Philadelphia poffeffes more variety than on any other, it is here we difcover the moft agreeable profpects, fome of which are truly charming; and more fo, the nearer we approach the Schuylkill. The contraft between the rocks, which form the banks of this river, and the numerous meadows and adjacent corn fields, gives this profpect a mixture of romantic wildness, and cultivated beauty, which is really delightful.

The road we have entered does not join the Schuylkill, except near the falls. This name has been very improperly given to a flight inequality in the level of the stream, produced by pieces of rock of unequal fize in the bed of the river, which, as they accelerate the motion of the water with a certain noife, obstruct, no doubt, the navigation; yet fo far are they from forming any confiderable water-fall, that they are entirely covered at high water; and at that time fmall veffels, which ply along the right bank, pafs thefe falls, although not without danger. A fmall rivulet, which, a fhort diftance above thefe falls, runs into the Schuylkill, turns feveral tobacco, muftard, chocolate, paper, and other mills; none of which are confiderable buildings; but their great variety enlivens and beautifies the landscape. Above the falls, a Mr. NI-CHOLSON possefies large iron-works, a button manufactory, and a glasshoufe. But none of these works are yet completed. The buildings, however, which appear to be well conftructed, are nearly all finished. A particular building is affigned to every different branch of labour; and the largeft is defigned for the habitation of the workmen, of whom Mr. Nicholfon will be obliged to keep at leaft a hundred. These buildings

ings are on the right bank, and the warehoufe, which is to receive the manufactures, is on the opposite fide. The pieces of rock, which occafion the falls, form an eafy communication acrofs the river, and would greatly facilitate the construction of a bridge, were fuch a project to be carried into execution.

The fituation of this fettlement is extremely well chofen; for, on the very fpot where the navigation of the river is intercepted, all the materials neceffary can be procured from both fides of the water. The fand required for the glafs-houfe is brought from the banks of the Delaware; the caft-iron from the higher parts of the Schuylkill, and the pitcoal (which is fold in Philadelphia at two fhillings, or four fifteenths of a dollar per bufhel) from Virginia. The completion of the canal, which is to unite the Schuylkill with the Delaware, will greatly facilitate the fale of the manufactures. The want of thefe commodities, which have hitherto been drawn chiefly from Europe, enfures them a certain market; in fhort, every thing promifes fuccefs to this undertaking. All thefe natural advantages however muft vanifh, if ever there fhould arife a want of money, large and prompt fupplies of which are requifite to give activity to the whole; as well as judgment, induftry and economy.

There is in America a fcarcity of perfons capable of conducting a bufinefs of this kind. There are alfo but few good workmen, who are with difficulty obtained, and whofe wages are exorbitant. The conductors of Mr. Nicholfon's manufactories are faid to be very able men. But then a whole year may elapfe, before the workmen fall into a proper train of bufinefs, fo that Mr. Nicholfon's fituation does not afford the moft flattering profpects of fuccefs, if his returns be not rapid, as well as large.

The conductors of the manufactories being abfent, we were not able to obtain more ample information concerning this eftablishment, and for the fame reason we could not learn, whether it be intended to make use of the fame machines, which are used in the great iron-works in Europe. The whole road from Philadelphia to Roxborough is full of granite, and covered with a fort of mica, which is reducible to the finest dust.

About

About half a mile from Mr. Nicholfon's buildings, on the bank of the Schuylkill, is the houfe of one ROBERTSON, where we intended first to ftop.

Robertson, a quaker, and brother of Caleb Lownes's wife, is a miller and farmer on his own account. He poffesses an estate of two hundred and fifty acres, of which thirty only are covered with wood. The land is, on the whole, of very inferior quality in this diffrict. There is but little wheat cultivated here, the common grain being maize, called in America Indian corn, rye, and fome oats. An acre generally yields from twenty-five to thirty bufhels of maize, from eighteen to twenty bufhels of rye, and about ten bufhels of wheat. Mr. Robertfon manures his land; but it is a furprifing fact, that he fetches his dung from Philadelphia at the high price of three dollars a load, containing about five cubic feet, when he might eafily procure it in abundance on his own farm. Seven fuch loads are allowed to every acre, and his land is manured every three or four years. His meadows are fuperior to the reft of his grounds; in common with all other American farmers, he mixes plaster of Paris with his feed. Four oxen and two horfes are fufficient to do the work of this farm, a part of which is fo fteep, as to be incapable of cultivation. Day-labourers are procured here without much difficulty; they receive four shillings a day with board, or five shillings and nine pence without it. The price of Indian corn is five shillings a bushel, of wheat from nine to twelve, and of barley fix. Hay is generally fold at fixteen or eighteen dollars a tun, but at this time it is thirtythree. Common meadows yield about three tuns, but those in a good fituation, which are properly cultivated, and fown with clover or other grass, at times produce eight tuns. Mr. Robertson buys lean cattle, from the fattening of which he derives a profit of fixteen, twenty, or twenty-five dollars a head. Robertfon however afferts, that hay is the most lucrative produce arising from the meadows; at least it is that which, with equal profit, requires the least toil. I am aftonished at the shallow arguments the farmers of this country offer, to justify this fayourite fystem, of avoiding whatever requires labour. On this principle Mr.

Mr. Robertfon will not keep a dairy, or make either butter or cheefc, though, were he to try the experiment, he would foon experience its advantages. It appears, that this cuftom partly arifes from the fearcity and great expence of labourers, but ftill more from the prevailing indifference and indolence of the farmers, who prefer the indulgence of this difpofition to a fmall advantage. It is alfo, in fome meafure, to be attributed to the national character, in which indolence is a very ftriking feature. In point of agricultural knowledge, Robertfon is but little fuperior to the fervant, who conducts his bufinefs; he is filled with prejudices, and is even ignorant of many things, which in Europe are confidered as the A B c of hufbandry.\*

He appears, however, to be far more fkilful, as a miller. His mill, which is faid to be the first that was built in America, is worked by a rivulet, called Wiffahiccon, which turns twenty-five other mills, before it reaches Robertfon's. It has three water-courfes, and three feparate mills, two of which work for the manufactory, as they call it, and one for the public. The latter grinds all the corn which is brought hither, without the least alteration of the mill-ftones, in its paffing from the grain to the flour; which naturally renders the meal very indifferent: the miller's due is one tenth, according to the law of the land. Ro-BERTSON does not grind any Indian corn on his own account, nor has he any kiln to dry it. Meal from this corn is not bad, if fpeedily ufed; but it is not fit for being long kept, and yields but little.

The corn is brought hither in waggons, and the cranes, inftead of turning it out of the veffel, lift it up from the waggons into the granary, which is very fmall; and the corn lies in heaps, the feveral floors being low, dark and dirty.

Robertson grinds yearly from forty-five to about fifty thousand

\* This indifference to improvement, of which the Duke complains, is always to be observed while agriculture is in its infancy in a country, and while there is enough of land, but little accumulated flock. It is the characteristic of a particular flate of fociety; and does not originate from the accidental and peculiar causes, to which he ascribes it.—Translator.

bushels

8

bufhels of corn, which he procures from Virginia and New-York; and fome is even brought from the upper parts of Pennfylvania. There are, however, fo many mills along the Schuylkill, that he receives but little from that part of the country. The grain procured from the other fide of the bay comes by Philadelphia, from which it is brought to the mill, which is large enough to contain about ten thousand bushels. Six horses are conftantly employed in carrying the meal to Philadelphia, and bringing back corn in return. This journey is often performed twice a day. The water of the Wiffahiccon is never frozen, nor does the mill ever ceafe working, except in a cafe of the utmost necessity. Mr. Robertson employs about his mill five men, three of whom he pays; he gives one hundred and twenty dollars a year to the first, and eighty to each of the other two. The reft are apprentices, who receive nothing but victuals, clothes, &c. A barrel of flour is at this time \* worth ten dollars. Robertfon complains of the quality of the grain of last year, which, he fays, is not heavy, but in general hollow. I have, however, feen fome very good grain of last year. I heard him fay that grain, attacked by the Heffian fly, notwithstanding it becomes bad and hollow, yields flour, which, though fomewhat indigeftible, is not quite unwholefome. The banks of the Schuylkill were vifited laft year by great numbers of thefe flies.

The county-rates are the fame at Roxborough as in the whole diffrict of Philadelphia, of which this place forms a part, namely, from five to fix shillings per cent. upon all property. The other taxes have of late been reduced to little or nothing. A perfon in affluent circumftances pays but one or two shillings towards the repair of the highroads. Poor-rates are quite unknown, as there are feldom any poor in the country; and a fmall fum has been laid up in the bank for the fupport of the poor,-if there should be any; which stock yields annually about forty or forty-two dollars, and thefe are added to the capital. There is also a moderate tax of fix or feven shillings on every hundred pounds a man is worth, which he pays as an offering towards the public fervice of

\* Twentieth of April, 1795.

the

the flate, that he may remain undifturbed in the enjoyment of his property. And this is fix miles from Philadelphia—furely this must be a happy country.\*

The Wiffahiccon flows between hills, which are high and covered with wood. A fine water-fall of about feven or eight feet, and as broad as the bed of the rivulet, fupplies Robertfon with more water than would be required for turning many more mills. The banks of the rivulet bear a wild and romantic appearance, and the brook, winding in the moft beautiful meanders through the woods and rocks, forms a grand, yet gloomy, profpect, which catches and detains the eye, and difpofes the mind to penfive reflection. The various fituations of this fublunary life prefent to us the fame objects in very different points of view. How different are the imprefions I now feel, from the pleafing fenfations with which memory and hope once enlivened my fancy—but I will depart, and be happy, that I may not enhance my misfortunes by painful reflections.

From Roxborough we proceeded on to Springmill. After having left the banks of the Schuylkill, we travelled through a tract of country interfected by a regularly alternate fucceffion of hills and vallies. We found here feveral badly watered meadows, which are capable of great improvements. The farms here are very clofe to one another; all the land is cultivated; very little wood is to be feen, at leaft, without going to a diftance from the highway. As we proceed, the country becomes extremely beautiful. The corn-fields are now green, the leaves begin to fprout forth, and the fruit-trees are covered with bloffoms; all nature revives, her face glows with life and beauty; and my temper has not yet attained fo great a degree of apathy, as to render me infenfible to the charms of this feafon, which always captivated me with irrefiftible power.

\* It is the proportion between, on the one hand, what may be gained in every fituation, with the diverfity of fuch fituations—and, on the other hand, what is to be paid for public protection, with the degree of fecurity and comfort fuch protection may give; —which is the fole and precife point upon which an estimation like that which the Duke here makes.—Translator.

C

Yet the uninterrupted and high fences of dry wood greatly disfigure the landfcape, and produce a tedious famenefs. Thefe might be eafily replaced by trees which endure the froft, as thorns are fuppofed here (I think without any juft ground) to be unfuitable to the climate. Some of the fields along the road are bordered with *thaga* or cedar, but thefe experiments are rare; and, in general, the land is inclofed with double fences of wood. The country is covered with neat houfes, furrounded with painted railings; which indicate profperity, without reminding us of thofe European effates, which are either enriched by a refined agriculture, or ornamented with coftly and elegant country-feats.

Near Springmill we again faw the Schuylkill. Springmill confifts of eighteen or twenty habitations, which lie clofe to each other, and are moftly either farms or mills; it is fituated in a valley, far more extensive and fpacious than any we have hitherto paffed; and the foil is alfo fuperior. The greateft part is grafs land, extending as far as the river; while the opposite bank, fleep, woody, and even fomewhat rocky, forms a beautiful contrast with the charming plains of Springmill. The profpect up and down the river is extensive, and ftrikingly variegated by green meadows and dark mountains.

Springmill is the place, where is fituated the farm, mentioned by BRISsor in his travels, as being cultivated by a Frenchman, whofe fkill and philofophy he highly praifes. This Frenchman, of whofe name Briffot gives only the initial, is Mr. LEGAUX. His farm has been fold on account of his inability to pay the fecond inftallment of the purchafe-money. He now actually rents fifteen acres, which he has converted into a vineyard. But the prefent moment is by no means the time, in which vineyards appear to the greateft advantage; the vine fearcely begins to bud, and is almoft without life. The foil is very good, and, as far as we were able to judge, well chofen, both on account of its funny fituation and interior quality; and the cleanlinefs, as well as fkill, with which the ground is managed, is very remarkable. No kitchen-garden can be in better order; the vine-props are already fixed in the ground. The fifteen acres give employment to fix labourers, whom Mr. Legaux procures without

without much trouble; he pays them three fhillings and nine pence, and provides them victuals. His dwelling is a fmall ftone cottage, one ftory high, about twenty feet in breadth and ten feet deep; a very indifferent, dirty kitchen, feparated by a wainfcot partition from a real alcove, which contains a miferable bed, conflitutes all the apartments of this cottage. In the fmall room were jumbled together in one confused heap, books, furniture, papers, glaffes, bottles, and philosophical inftruments. The fight of a man of liberal education reduced to fuch penury, excites a painful fensation.

Mr. Legaux was not at home on our arrival; we were informed that he was in Philadelphia, as, no doubt, we were fufpected as unwelcome vifitors. He was, however, at a neighbour's; and we had no fooner left his houfe to remount our horfes, than we were called back, and he haftened up to us. To an unfortunate man, reduced to fuch a ftate of retirement, the vifit of three ftrangers is an occurrence not to be flighted. He knew that one of the three ftrangers was a Frenchman, for I had left my card. The view of a countryman at fo great a diftance from our native land, is far more pleafing than that of any other perfon. It is fo at leaft to me, though the pleafing fenfation I feel on fuch occafions, is frequently embittered by the thought, that at this unfortunate period of the revolution a Frenchman is fometimes the very worft company which a Frenchman can meet.

Mr. Legaux accofted us with a countenance which apparently befpoke content. His drefs perfectly corresponded with the reft of his establishment. A long coarse flannel waistcoat, black breeches, and flockings full of holes, and a dirty night-cap, formed his whole attire. He is a man of about fifty or fifty-five years of age; his eyes are very lively, and his whole physiognomy indicates cunning rather than goodness of heart. In the course of the flort conversation we had with him, he told us, that the cruel and rigorous conduct of the person of whom he had bought the estate, which he posses of the time of poor Briss visit (this was his expression), had compelled him to fell it again, and to rent the finall vineyard which he was now cultivating. He considers the C 2

fuccefs of this enterprize as certain, and thinks that it will prove very lucrative to him. He affured us that his wines are already very good, though the oldeft of them had not yet been in the cellar more than two years. They are Medot vines; and one vine of the Cape of Good Hope, for which he paid forty guineas, has already produced nearly two hundred layers. He faid that his wine is of a peculiar flavour, yet more like the " vin de Grave" than any other wine. He pays a rent of fixty-two dollars for his fifteen acres. This is, in few words, the fubftance of all we could learn concerning his plantation. On our afking him why he fettled in America nine years fince ? he acquainted us that he was an advocate in the parliament of Metz, but left his fituation and his country to affift his friend, Mr. FOULQUIER, in his functions, as intendant of Guadaloupe, and that this intendant having been ftrongly fufpected of mal-administration in the colonics, had exculpated himself by throwing all the blame on him, Legaux, whofe purity of fentiments had ever been equal to his zeal for his ungrateful friend. None of his expressions befpoke that tranquillity and peace of mind, which a man might be fuppofed to enjoy who thus withdraws from the world to lead a fequeftered life, and cultivate the ground. He even appeared diffatisfied with every one, especially with the Americans, of whom he repeated twenty times that we could never entertain too much fufpicion. Although this man received us kindly, and spoke many handsome things of my family as well as of myfelf, affuring me that he had heard a great deal about me previoufly to my leaving France, yet I was difpleafed with him, and he excited in me rather difapprobation of what he termed his misfortunes, than compassion for his prefent fituation, though my frame of mind was much in favour of the latter. What I heard concerning him, on my return to Philadelphia, has confirmed me in my opinion. He is a worthlefs, litigious man, who, during the nine years he has refided in America, has been engaged in upwards of two hundred law-fuits, not one of which he has gained. However ftrong may be our prepofieffion against America, it is highly improbable that justice should fo obstinately be denied to a foreigner. On the contrary, it is much more likely that a man who has entered

.12

tered or defended two hundred actions, must have been actuated folely by a litigious difposition, and that none of his claims were well grounded; especially if he himself conducted the fuit, which is extremely probable, as he was formerly a lawyer. Mr. Legaux's reputation at Philadelphia is not of the best complexion, and I verily believe that if an enquiry were made into the affairs of Guadaloupe, the result would not prove favourable to this fage, this philanthropist, this philosopher, (on whom *poor* Briffot pass fo high an eulogium,) who cannot live in peace with his neighbours, but quarrels with every one about him.

We left the Schuylkill by Springmill, to ftrike to the fhorteft road to Norris Town: the land is of the fame defcription with that which we had just passed. On the road from Roxborough to Norris Town we had now and then a view of the river, and at times also of a more distant range of fmall hills, rising in the form of an amphitheatre; this is a branch of the Valley-hills, which form a part of the Blue Mountains.

Norris Town is the chief town of the county of Montgomery, about feven miles from Philadelphia. This chief town of the county confifts of ten buildings, in one of which the feffions are held; in another the judges refide when they come to hold the affizes; a third is the county jail; three others are inns; the reft are farm houfes, fhops, or habitations of labourers. All the houfes are ftrongly built of ftone. Norris Town, fituated on an eminence, about a quarter of a mile from the Schuylkill, enjoys a grand and very extensive prospect; and forms itself, even viewed at a diftance, a very ftriking and confpicuous object. The quarterfeffions are held here regularly, but the circuit-courts only once a year, and at times only every two or three years, when there are no caufes. The jail was built about two or three years ago, after that of Philadelphia. But, thanks to the penal code of Pennfylvania, it is feldom inhabited by any other perfon than the keeper. When we vifited it, a Frenchman was confined there on ftrong fufpicion of having forged a bank note: he is to remain in this prifon until the next quarter-feffions, when he will be either acquitted or removed to Philadelphia, unlefs the circuit fhould happen to be held in that town. The prifon-gate was open,

open, and the prifoner might have effected his efcape without any difficulty, had he been the least inclined to do fo. But he did not escape, either from a reliance on his innocence, which I with may be the cafe, or from the rifk of being taken again. It is no eafy matter to difcover the neceffity, nay, the utility of fuch confidence as this, which is more nearly allied to indolence than humanity. It is just as difficult to affign a reason why a Frenchman, who is a villain, or at least a man of so bad a character as this prifoner, who in France would have attempted twenty times to escape from prison, yet remains quietly in Norris Town, where the doors stand open to him. Pretenders to philosophy, and Briffot for one, will fay, that the certitude of impartial justice being administered to him, retains the prifoner more effectually in his prifon than fetters; that in a republic every one confiders himfelf as the guardian of the law, even against himself, &c. All this may fatisfy those who are contented with words, but is not fufficient to explain this extraordinary fact to him who prefers found argument to unphilosophical jargon. It may perhaps best be accounted for from the circumstance that this man would find it impoffible to fubfift any where elfe but in prifon.

The foil about Norris Town is very good, which is here fomewhat more the object of culture than near Roxborough, yet is not even produced here in great quantity. The fyftem of agriculture is much the fame, and the average produce nearly the fame, perhaps fomewhat greater. The beft land is worth from forty-eight to fifty-two dollars; the inferior fort from twenty-fix to thirty. Labour is cheaper here than at Roxborough and Springmill. The price of provisions is lower than in Philadelphia, though not much; there being no nearer market than that town, all the produce of this country is carried thither. Beef is fold at, from fix to feven pence a pound, bacon at one fhilling a pound, and flour five one-half dollars the hundred weight.

The county-rates of Montgomery amount to no more than about three shillings for every hundred pounds, and one shilling towards the repairs of the roads; thus a per centage of four shillings on all taxable property is the total amount of the public taxes. Poor-rates are feldom neceffary.

ceffary, though this place is not poffeffed of the fame refource of a fund, eftablifhed for that purpofe, as Roxborough. There are at prefent no paupers here; and when there are, a rate of one fhilling is fully fufficient for their maintenance. Each pauper is boarded in fome family or other, and his board and lodging are paid for by the parifh. It is the duty of the overfeers to take care that the pauper be well treated, and that the parifh be not impofed upon by improper charges. All the poor confift of perfons afflicted by ficknefs, or rendered incapable of labour by old age.

The canal, intended to join the Schuylkill with the Delaware, begins at Norris Town, and half a mile of it on this fide is completely finished. Its bed, which was parallel to the river, is about eighteen or twenty feet in breadth, and three feet deep. The canal is opened about three miles farther. Here marble rocks are to be cut through, which flope down to the river. This is a laborious, as well as very expensive, undertaking; as every cubic toife of rough ftone cofts nine fhillings, and fifty workmen only are employed in this work. The canal, when finished, will be of great advantage to Philadelphia ; but when will it be finished ! It is begun near the town on a very bad plan; in fome places it is filled up with fand that has been washed together to the height of ten feet, which can never keep water. It is reported, that Mr. WATSON, an English engineer, who fuperintends the conftruction of this canal, very particularly recommended that it might be dug on the oppofite bank of the Schuylkill, as it would be much more folid there; but as it was much to the interest of the directors of the company, that the canal should pass through their estates, they were deaf to every other proposal, and the canal is now executed on the most difficult and most circuitous plan, with little prospect of fuccess. The money for constructing the canal, began already to fall fhort of the fum required, and feveral fubfcribers kept back their fubscriptions beyond the limited time of payment, even at the hazard of forfeiting the fum already paid, as well as all claims to the advantages refulting from the completion of the canal, rather than they would incur the rifk of finking a further fum, when the legiflative power, apprifed of the obstacles which obstructed the completion of the work,

work, granted a lottery to raife a fum of four hundred thousand dollars, intended for the execution of all practicable plans of inland navigation, one hundred and thirty-three thousand dollars of which are to be appropriated to the completion of the Schuylkill canal. If the measure of a state lottery can ever be justified by the vast utility of the object to which the money it produces is applied, it certainly is so in the prefent instance. But among a corrupt people, crimes and vices are generally encreased by the institution of a lottery; and can the legislature of Pennfylvania flatter itself, that it will not confiderably add to the corruption and immorality of the inhabitants by an establishment for extremely dangerous, and of which a very immoderate use has already been made in America?

After having viewed the canal, as far as it is at prefent finished, we vifited the quarries which yield the marble, of which nearly all the chimney-pieces in Philadelphia, as well as the ornaments of many ftreetdoors, steps before the houses, and windows are formed. This marble is black and white, and very hard. It is found in great abundance in the quarries, which have hitherto only been opened in these places, and not to any great extent. It is, however, true, that we faw the principal quarry only, and that many others have been opened in the neighbourhood. We were even told of a quarry where the marble is all white, but it was at too great a diftance to be vifited by us. That which we faw is in the district of Plymouth, where there is also a mill with two faws for cutting marble, which lies on the rivulet Plymouth. The mill contains nothing worthy of notice, but its fituation is extremely picturefque and pleafant. The whole tract of country from Norris Town to within one or two miles from Roxborough, is covered with lime-ftone, more or lefs perfect. The ftrata are mostly inclined, forming an angle of forty-five degrees, and in fome places interfperfed with hard quarry-ftone, and even with flints. We found in the road a great quantity of hard ftone; a quarry, or variety of the granite-ftones, which contain about three or four cubic feet, feem to be washed up by the water. Between Roxborough and Philadelphia granite is again found, and the earth is covered with mica.

16

We

We are again in the fame inn, at which we put up before. The landlord is making a well, and the ground, where they are digging it, being very loofe, he lines it with a large wooden cylinder, five feet in diameter, and within the cylinder conftructs a wall eighteen inches thick.

## May the 6th, 1795.

From Norris Town to Trap the country is much varied, very hilly, highly cultivated, with little wood-land, many orchards and meadows, water in abundance, brooks, fprings, and creeks of every fize; two of the latter, which are by no means fmall, we forded, namely, the Shipack, eleven miles from Norris Town, and the Pachiomming, two miles farther on; they were both fomewhat deep. The roads are very bad, and no attempts are made to repair them; we cannot, therefore, be furprized at hearing, that fo many ftage-coaches are overturned.

Trap is a village in the diffrict of Providence, which is the largeft and moft affluent in the whole county. The foil, which is very good, is cultivated in the fame manner as in other places; more land lies in grafs here, than we have feen any where fince we left Philadelphia. There are four different churches in this diffrict, where, as in all the other flates, the minifter is paid by those only who belong to his fect. The speakers among the people called Quakers are the only ones who preach gratis. The manner of paying for divine fervice is the fame as in Philadelphia; people pay for their feats in the church.

The provision produced in the diffrict of Providence is fold in the market of Philadelphia. The taxes in this diffrict, as well as in the county, amount to about eighteen pence for every hundred pounds of taxable property, with the exception of the poor-rates. The poor are rather numerous in this diffrict, and fix hundred and forty dollars are raifed yearly for their fupport. The common price of labour is three fhillings and fix-pence a day, with board; and the price of land fluctuates between thirty-two and forty-feven dollars per acre, in proportion to the ftate of its inclofures, cultivation, and buildings. Bread made of rye or

D

Indian

Indian corn is the common food of the labourer, who, in addition to this, has meat three times a day.

We arrived at Trap, and intended to dine at Pottfgrove; but we were under the neceffity of returning by the fame road we had come. The fervant, who fhould have joined us an hour before, did not arrive; and as we knew this delay must have been occasioned by fome accident, we were determined to learn what it was. We met him about a mile from Trap, leading both his horfes by the bridle, but without the baggage, which had fallen off four miles farther back, and our poor Joseph being unable to procure any affiftance, and fuppofing that we fhould be uneafy on his account, had left it in the care of a woman, and had proceeded thus far to inform us of his misfortune. We therefore returned the other four miles, and placed the baggage again on the horfe, but in fo indifferent a manner, that after we had travelled two miles, it was again likely to fall off. Mr. Guillemard, taking every thing into confideration, convinced us, that the horfe was too heavily, as well as unfkilfully laden, and we therefore refolved to procure a waggon, to convey our baggage to the inn.

During our flay at the inn, to which we returned, we learned, in the courfe of converfation with a furgeon, that the number of gentlemen of his profeffion is pretty confiderable in this diffrict; that one is to be met with every fix or feven miles; that their fee for a vifit at the diffance of two miles, is one fhilling, and every additional mile adds one fhilling more, befides the charge for medicines; that inoculation of children for the fmallpox is very common; that the fee for this operation amounts to two dollars; that the moft a phyfician of known abilities can make, in this part of the country, is one thoufand three hundred dollars a year, but that very few make fo much, in confequence of which, all medical men, with few exceptions, follow fome other employment befides their profeffion, and become either farmers or fhop-keepers, to increafe their income.

Although the inn, at which we put up, was not that which had been pointed.

pointed out to us, and was, in fact, no better than a fmall, miferable alehoufe lately opened; yet we met with very good accommodation. We had tea and coffee for breakfaft; bacon, tongue, and eggs for dinner, and every thing tolerably clean. Whilft we were contriving the means of fending our baggage to Reading, the ftage-coach happened to pafs, and took charge of it: we then continued our journey to Pottfgrove.

The road thither is exactly of the fame defcription with that between Norris Town and Trap. The ground where it confifts of fand, is good, but extremely bad where the foil is rich, having been entirely foaked through by the rain, which fell the day before yesterday; the foil confifts, in general, of a ferruginous earth, particularly near Pottfgrove. The landscape is beautiful along this road, abounding with a great variety of fine views, wonderfully enlivened by the verdure of the corn-fields and meadows. We paffed through fome parts of the country, where the grafs was fine, ftrong, and thick, in fhort, as good as it could poffibly be. If agriculture were better underftood in these parts; if the fields were well mowed and well fenced; and if fome trees had been left ftanding in the middle or on the borders of the meadows, the most beautiful parts of Europe could not be more pleafing. But these eternal fences of dead wood, thefe dry maize-ftubbles of last year, thefe decayed trees, which are left ftanding until they are rotten, and the abfolute want of verdant trees in the corn-fields and meadows, greatly impair the beauty of the landscape, but without being able entirely to deftroy its variety and charms.

The country about Pottfgrove is ftill more pleafant; the plain, in which this fmall market-town is fituate, is more extensive than any we have hitherto feen, and, at the fame time, is in the higheft degree of cultivation. The *foreft-mountains*, which are in fight on the left and in the front, form beautiful borders to this landfcape.

In the neighbourhood of Pottfgrove we again difcovered the Schuylkill, which we had left near Norris Town. Along its whole courfe its banks are delightful, and all the land, through which it paffes, is good. I

D 2

10

do

do not know a finer river in point of water and views. If European tafte and magnificence adorned the banks of the Schuylkill with countryfeats, it would not be excelled either by the Seine or the Thames.

Pottfgrove is a market town, and originally laid out by a quaker-family, of the name of Porr. About forty years ago they purchafed land of the flate at a very low price, and fold it afterwards at a confiderable profit, according as it was more or lefs fought after. It is now worth thirty dollars in the town, and from thirty to thirty-feven in the adjacent country. The family of Pott have eftablifhed confiderable iron forges, and by means of thefe much increafed the fortune, which they acquired by the fale of the lands. They are generally fuppofed to be very rich. *Pottfgrove* confifts at prefent of about thirty well built houfes, and belongs to the diffrict of *Douglas*, which forms a part of the county of *Montgomery*. The poor-rates are very inconfiderable, and all neceffaries of life are cheaper here by nearly half than at Philadelphia.

As I alighted from my horfe, I difcovered a Frenchman, among the feveral perfons who were ftanding at the door of the inn, by a certain characteriftic deportment, which is eafily difcernible in individuals of all nations, but more particularly fo in a Frenchman. An involuntary movement, fome natural feeling, drew me towards him. His name is GER-BIER; he is a nephew of the celebrated advocate of Paris, by whom he was brought up, and the fon of a famous advocate at Rennes, of whom he has received no intelligence during thefe laft ten months. In St. Domingo, where he refided formerly as a merchant, he married a Creole, a friend and fchool companion of Madame de MONTULÉ, with whom he lives in one of the houfes of this borough.

It is impoffible to meet with a Frenchman in these times, without being called upon to listen to the history of his losses, his missfortunes, and to his refertments naturally refulting from them. Mr. Gerbier's account of his missfortunes, however, was very short, though they appear to me very great. As to his resentment, he expressed himself on this point as a man of fense, who wishes not to entertain any. He seemed melancholy

choly and dejected, yet posseffing a ftrong mind. Misfortunes, borne with patience and refignation, are ever fure to excite compaffion : I heartily fympathife in those, which have fallen to his lot. He possefies a small portion of land in Afylum, whither he intends to remove, as foon as his wife has recovered from her lying-in. He fpoke with much praife of M. de BLAcons, of the excellent Mr. KEATING, of M. DE MONTULÉ, and of DU PETIT THOUARS. He appeared to me a mild and worthy man, but rather too much depressed by misfortune ; for, at his age, and with his abilities, he might find numerous refources in this country. After he had left me, he received a letter from his mother, a lady turned of feventy. She informed him, that fhe and his father were both well; that they had fortunately escaped the dreadful guillotine, the drownings and shootings, which would ever difgrace the French revolution ; that they could not fend him any money at that time, but that they would pay any fum, for which he chofe to draw on them. This wife and fenfible letter was written, however, in the language of liberty. The poor young man was happy to perceive, that I participated in his joy ; and yet this glimpfe of fun-fhine was not able to difperfe the profound melancholy which clouded his mind. I must observe, that Mr. Gerbier's mother, in the description which the gave of the fituation of France, fpoke of great diffrefs, and efpecially of the depreciation of affignats, which was fo great, that a fowl cost two hundred livres in paper money, and three livres in fpecie.

The inn at Pottfgrove is very good ; it is kept by a German. The inhabitants of this borough are moftly Germans. Here we found the ftagecoach, by which we had fent our luggage; but the letter-cafe, which contained Mr. Guillemard's money, had been left behind in Trap. Endeavouring to think of every thing, my travelling companion thinks, in fact, of nothing. Thus we are obliged to fend back to Trap, to fetch the letter-cafe, even if it be not ftolen, a point which we fhall learn tomorrow at Reading.

On

# On Thurfday, the 7th,

We ftopped at the White Horfe, four miles from Pottfgrove. This inn is kept by a Frenchman, a native of Lorrain, who has married an American woman, the daughter of a native of Avignon, by a woman from Franche-Comté. The whole family fpeak bad Englifh and bad French, but probably good German. They pay a rent of eighty-fix dollars for fifty acres of land and the houfe; their owner lives very near, and keeps a fhop. The houfe and the land, which is of very good quality, would have been worth fixty dollars more, had it been let to a private family. But the fhopkeeper had very juftly calculated, that a good tavern fo near his houfe was of more value to him than fixty dollars, and that a well frequented inn could not but procure cuftomers to his fhop, from whom he would be likely to derive advantages far exceeding the fum which he thus facrificed.

The good people of the inn enquired with much eagerness for news from France. My friend told them, that it would be obliged to fuftain another and more dreadful campaign. "How ! a ftill more dreadful one than the preceding campaign," they exclaimed, " notwithftanding the English were beaten last year ?" "There are many other enemies," replied my friend, " Ruffians, Auftrians." " Aye, aye," faid the good people, " all those who do not like liberty; but the French will neverthelefs triumph, if it pleafe God, over all the f-----." Thefe are the fentiments, and fuch is the language of most Americans; and indeed this must be the opinion of all, who are not acquainted with the crimes attending our revolution; and even they who are fo, very justly impute them to the various factions, and carefully diftinguish and feparate them from the caufe of liberty. The principles and conduct of the coalefced powers are treated with the fame degree of indignation as those of the terrorifts. The lefs informed clafs of men confider the matter in this light, and, in fact, in this light it fhould be confidered by all, who are able to lay afide for a moment their grief and their misfortunes, and to contemplate

contemplate the true nature of the cafe with a calm, unbiaffed mind. Liberty is now ftruggling with defpotifm. If the caufe of liberty prove triumphant, it will be able to organize itfelf, and to acquire regularity and order; it will ceafe to be anarchy, and become true national freedom: If defpotifm triumph, it will organize itfelf for no other purpofe, but to enflave the world.

The fituation of this borough, and likewife of all other places on the road from Pottfgrove to Reading, is delightful. Indeed the country appears to become more lively and populous, the nearer we approach the latter town. Corn and faw mills are numerous here; and there are many creeks with ftrong currents, which turn the wheels of fome ironforges. The mountains, which rife on the banks of the Schuylkill, and feparate Reading from the other part of the county, begin to form a ridge, which at first stretches along under the name of Oley Hills, and afterwards takes that of Lehi-hill. Those marks of the increasing improvement of the country, which are obfervable as far as Bethlem and the Delaware, are also perceivable here. Log-houses, constructed of trunks of trees, laid one upon another, the interftices of which are filled up with clay, are feen no longer, having been replaced by framed houfes, confifting however of balks, properly hewn and fhaped, and covered with boards; and even buildings of a still better construction are already to be feen in fome parts. They now build only with ftone and brick, and no woodland remains to be converted into arable ground. The wood that is ftanding is left for confumption. Oak fells at three dollars and half, and hickory at four dollars and half a fathom. A few miles from Reading the price of land is from twenty-five to thirty dollars, if covered with wood; and from one hundred and ten to one hundred and thirty dollars if grafs-land. Day labourers receive three shillings, carpenters and masons four shillings a day.

We overtook the ftage-coach again at the White Horfe, where the paffengers breakfafted. It appears fomewhat ftrange to Europeans, to fee the coachman eat at the fame table with the paffengers; but it would feem equally ftrange to Americans, to fee the coachman cating by himfelf:

Ite

It is futile to argue against the customs of a country; we must submit. Equality, pretended equality, which widely differs from true freedom, is the foundation of this cuitom, which, in fact, injures nobody; it is for the fame reafon, that the fervants, who wait at dinner or breakfaft, are feated, except while they are ferving you, and that the landlord attends you with his hat on his head. A man may be allowed to diflike this cuftom, without poffeffing any extravagant fhare of weak pride. An inn-keeper, a fhoe-maker, a taylor, are naturally at liberty to wait on people, or to let it alone; but if they choose to wait on others, they fhould keep at a proper diftance, and obferve the refpect, which becomes their fituation. It must be observed, however, that many an inn-keeper in America is a captain or a major; nay, I have feen drivers of ftagecoaches, who were colonels : fuch things are very common in America. There is much greater propriety in the cuftom that prevails in England, where the tradefman is treated with politeness and respect by his employers, whilst he, in return, obferves the due decorum of his fituation, without meanly facrificing that noble principle of liberty, which every Englishman cherishes with confcious pride: it will foon be the fame in France.

Reading, the chief town of the county of Berks, which contains about thirty thoufand inhabitants, is fituate on the banks of the Schuylkill. The building of the first houses commenced in 1752. The family of Penn repurchased the land, which they had originally disposed of, for the purpose of building on this spot the chief town of the county. It confists at prefent of about five hundred houses; a few of those which were first built are still standing; they are loghouses, and the interflices between the trunks of the trees are filled up with stone or plaster. In confequence of the flight manner in which they were finished, several of them have tumbled down; vanity has pulled down others; but all those built within these few last years are of stone or brick, and have a neat appearance. The town is improving in point of buildings; the ftreets are broad and straight, and the footpaths are shaded by trees, planted in front of the houses.

Little

This town has little or no trade, and fcarcely any manufactures. There is one, at which a confiderable number of coarfe hats are fabricated of wool, procured from Philadelphia, to which place the hats are fent for fale; with a few tan-yards, which prepare leather for the confumption of the town and neighbouring country. The population of Reading is eftimated at about two thousand five hundred souls, confisting chiefly of lawyers and inn-keepers. Some new houses were built in the course of last year ; but no increase of the number of inhabitants has been observed for feveral years. They are all either Germans, or of German defcent; great numbers of the inhabitants of the town and neighbouring country do not understand a word of English, and yet all the public acts, and all the judicial proceedings are drawn up and conducted in the Englifh language. Hence it often happens, in the course of law-fuits, that the judges understand no German, and the parties, witnesses, and jurymen, no English, which renders the constant attendance of interpreters neceffary, to repeat to the judges the deposition of the witneffes, and to the jurymen the fumming-up of the judges. The administration of justice is therefore extremely imperfect. Many lawfuits, however, having no other object than to fatisfy the hatred and paffion of the moment, by dragging an adversary before the judge, both parties are frequently fatisfied with the fentence, of whatever complexion it may be. How many differences might be fettled on amicable terms, but for this revengeful difposition to proceed to extremities, which prevails in all countries, and enfures to lawyers a certain fubfistence; or rather how many law-fuits might be accommodated, but for the great number of lawyers and courts of justice ! Law-fuits are very frequent in Reading, and originate chiefly in debts, quarrels, and affaults.

There is a printer in Reading, who publishes a German gazette weekly; the price is a dollar a year. The fale extends as far as Pittfburg, and does not exceed one thousand one hundred copies. Every one here, as well as in all other parts of America, takes an interest in state affairs, is extremely eager to learn the news of the day, and difcuffes politics as well as he is able.

There

25

E

There are three churches in Reading; one for the people called Quakers, another for Roman Catholics, and the third for Lutherans. The two last are much frequented by Germans, in whose native language the fermons are delivered. Every one pays for the fupport of that form of worship, which he has chosen for himself, frequently without attending it, which is to his tafte, to which he is, accustomed, or which some whim or other moves him to prefer. Generally speaking, few men go to church, at least few of the first class. Religious worship is left chiefly to the women, who, forming the leaft bufy class of mankind, are the most affiduous frequenters of the theatres and the churches. The Lutheran church is much reforted to in the morning, and the Roman Catholic fervice in the evening. The ministers, who are paid by subscription, receive about four hundred dollars per annum. Being without political importance, and confined to their ecclefiaftical functions, they are religious, humane, and tolerant. If their conduct were otherwife, their parishioners would change them just as readily as withdraw their employment from a fhoe-maker, who fhould make bad fhoes. They live in perfect harmony with one another. The fermons delivered in the different churches are chiefly of a moral caft. Lutherans, Roman Catholics, and Quakers intermarry with each other. Mr. READ, the gentleman to whom we had a letter of introduction, has ten children, two of whom only have been baptized; the reft are left to choose their religion for themfelves, if they think proper, when they arrive at years of diferetion.

The fortunes of thofe, who are accounted people of property in Reading, are in general moderate. An income of eighteen hundred or two thousand dollars a year is deemed large; and at least a part of fuch incomes is always earned by fome useful employment. Here are indeed fome gentlemen possified of large property, but then this has been generally obtained by commerce, or elfe accumulated in the town itself by difficult means, namely, by buying up, at a low price, demands against poor small proprietors, and driving them from their possifiers by judicial proceedings. The number of people, who

who have made fortunes in this manner, is not great; yet there certainly are about three of them in the town, who poffers capitals amounting to two hundred and fifty or three hundred thousand dollars.

The fentiments of the inhabitants of this town and the neighbouring country are very good, and breathe a warm attachment to the federal government. There is no democratic fociety. Reading fent about eighty volunteers on the expedition against Pittsburg, forty of whom were equipped to ferve as cavalry. They all belonged to rich families, and were engaged in bufinefs; but either their own zeal, or the influence of their relations, impelled them to devote themfelves to the public good. In confequence of this public fpirit, a fociety has been formed at Reading, called the FIRE SOCIETY,\* the members of which enter into an obligation to keep at their common expence two fire engines, and each at his own expence two buckets, a basket, and a fack, and to attend at the first alarm of fire. This fociety, which refembles that of Philadelphia, and many others of the fame defcription, which are very common all over America, spares government an expence, which otherwife it would be obliged to incur, and enfures a more fpeedy affiftance to fufferers, than any public inftitution could poffibly afford. It will perhaps be faid, that this fociety originated from the perfonal interest of every individual member or fubscriber: be it fo; for what else is public spirit, but private interest properly understood ?

Some public buildings, fuch as a large house for the different officers of the county, and the archives, a prison, and a seffions house, have been very lately built at the expence of the county. The taxes are very small. Of three lawyers, with whom we passed the greatest part of our time at Reading, not one could inform me of the exact total amount of the taxes, but they all agreed, that they are very inconfiderable, or next to nothing. The county-taxes and poor-rates, taken all together, may perhaps amount to about fixpence in the pound, or a fortieth part of the yearly income. On particular occasions, or when public build-

E 2

ings

<sup>\*</sup> The eftablishment of a company for infurance from loss by fire, may be expected to follow next, in the progress of improvements at Reading.—*Translator*.

ings are to be erected, they are doubtlefs higher, but never fo high as to take from a rich man more than twelve dollars a year.

There are weekly two market days in Reading, and the market is well fupplied with provision. In fuch diffricts as lie near the market, the price of building-ground, two hundred feet in depth, is twentyfive dollars per foot; in lefs populous parts of the town only ten dollars. The rent for large convenient houses, at fome diffance from the town, amounts to one hundred and fifty dollars. The price of land is about twenty-two dollars an acre, and near the town from thirty-two to thirty-fix dollars. Meadows near the town cost one hundred and fifty dollars. A great number of them belong to the family of Penn in right of purchase; for it is well known, that all lands and tenements, which this family held in fee, were redeemed by the flate, on granting indemnification more or lefs adequate to their value.

The Schuylkill does not flow through the town, but at a diftance of about five thoufand paces. A project is formed for extending the town to the bank of the river, and it will certainly be carried into effect, as foon as the canal, which is to join the Schuylkill with the Sufquehannah, fhall be finifhed, a part of which is already completed. Reading will then become a confiderable ftaple for inland traffic. A tolerably extenfive corn-trade is already carried on here. In winter, when the navigation is obftructed by ice, the neighbouring farmers, who happen to be in want of money, bring their corn to town. The wealthy inhabitants buy it at a low price, lay it up in granaries, and fend it to Philadelphia as foon as the river is navigable, as it is, in general, for veffels of one hundred or two hundred tons burthen, except when it is frozen.

The banks of the Schuylkill are exquifitely beautiful near Reading, indeed more fo than in any other part of its courfe. On the fide oppofite to the town arifes a range of richly cultivated hills, covered with as many houfes as can be expected in this country. Beyond thefe heights are mountains of more confiderable elevation: and beyond thefe are feen the lofty fummits of the Blue Mountains. The whole form a profpect

profpect at once pleafing and fublime. A great number of brooks run into the Schuylkill, and turn many paper, faw, plafter, and oil-mills in the vicinity of Reading. The inhabitants of the town are temperate, induftrious and prudent people. A tradefman clears as much money in a few years, as enables him to buy a plantation in the back country, where he either fettles himfelf, or fends one of his children. Perfons who quit Reading and its vicinity generally retire to the country around Sunbury and Northumberland. Some poor Germans from time to time arrive here from Europe, get rich, purchafe a plantation, and retire.

They marry here very young. Few women remain unmarried beyond the age of twenty years: and marriages are very fruitful. The mortality among children is, upon an average, much lefs here than in Philadelphia. The country is healthful. Perfons grey with age are numerous, and epidemical difeafes rarely break out. Living is cheaper here, by one half, than in Philadelphia.

We had letters to Meffrs. Read and BRIDLE, and cannot fpeak with fufficient praise of the handsome reception we experienced from these gentlemen. They answered all our questions with a degree of patience as obliging on their part, as it was advantageous to us. The day we ftopped at Reading was fpent at Mr. Bridle's, where we found Mr. Read, Judge Rush, brother to Doctor Rush of Philadelphia, and Prefident of the diffrict, General ROVER, who, during the laft war, ferved conftantly under La FAYETTE, and holds now the place of Registrar, Mr. ECKARD, an actuary, and Mr. EVANS, who is a lawyer as well as Meffrs. Read and Bridle. The conversation was pleafant enough. It conftantly turned upon the political fituation of Europe, of which every one will talk, and which is rightly underflood by none. But it is the topic of the day, to the discuffion of which we must submit. Excellent principles of government, a warm attachment to France, abhorrence of the crimes which have been committed, and fervent wifhes for her welfare, formed the prominent features of the conversation. Several very acute and judicious observations on the fubject of England were

were made, which did not befpeak great partiality for that country. The gentlemen fpoke with enthufiafm of WASHINGTON, with gratitude and efteem of La Fayette, and, in fhort, difplayed the moft laudable feelings. During a walk we met fome ladies, who, to judge from the manner in which their attendants conducted themfelves, muft be of very little importance in fociety. Mr. Bridle, who, without faying a word, gave us tea in the evening, feemed fcarcely to have eaten his dinner.

The civility of our friends in Reading was not confined to a kind reception; they alfo offered us letters to gentlemen at Lancaster, and in other places on our road, which, though we were already provided with a tolerable number, we accepted with the fame fatisfaction as they were offered.

One of these letters procured me an introduction into the farm of Angelico. I was defirous of being more accurately acquainted with the state of agriculture and husbandry about Reading, which, in Philadelphia, had been pointed out to me as the most perfect in all Pennfylvania, and I therefore wished to converse with one of the best informed farmers; Mr. EVANS had been named to me as fuch. He fuperintends and manages the farm of Angelico for Mr. NICHOLSON in Philadelphia, who bought it three years ago of Governor MIFFLIN. This farm, which lies three miles from Reading on the way to Lancaster, confifts of nine hundred acres, four hundred only of which have hitherto been cultivated, and fifty of these lie in pasture. From fixty to feventy acres confift of the finest meadows, some of which are sown with clover. They are watered at pleafure, partly by the Angelico, a fmall brook from which the place takes its name, and partly by a very copious fpring, which waters fuch parts as are not within reach of the Angelico. The grafs is fine, ftrong, and bufhy, and the only care taken of it confifts in a flight irrigation. The reft of the land is under the plough, and produces wheat, rye, buck-wheat, oats, and Indian corn, but without any fixed rotation of crops. The land is of the beft quality, being a rich clay, from twenty-four to twenty-eight inches deep. Some places are

are frony. More or lefs manure is laid upon the foil every three years. From four to five [cart-loads of dung, about fifteen hundred weight each, are generally allotted to an acre; but the dung is far from being in a flate to answer the intended purpose. The produce of the first year, after the ground has been cleared, is twenty-five bufhels of wheat, forty bufhels of rye, forty bufhels of barley, eighty bufhels of oats, twenty-five bufhels of Indian corn, per acre. It would produce confiderably more, if the wood were felled in a more careful manner, and the ground fomewhat deeper tilled. It is the cuftom, and confequently the general opinion, that the ground muft not be ploughed deeper than four or five inches. I have converfed with Mr. Evans on this fubject, who could not help allowing, that the above opinion is erroneous. He was entirely of my way of thinking; but it is the cuftom, and that has more weight than the cleareft reafoning. Newly cleared land fometimes produces better crops after the fecond and the third year's tillage, than at the first; and this generally happens when the ground has not been cleared with fufficient care. The ufual produce of this land is ten bushels of wheat, twenty of rye, twenty of barley, forty of oats, and eighty of Indian corn. This diffrict has not fuffered from certain infects, called lice, which occasion fometimes confiderable mifchief to the crops; nor had the Heffian fly much damaged the corn here. The plough-fhare is of iron; it has but one broad fide bent towards the right. It is ill contrived, and turns up the ground very imperfectly. Two horfes are able to draw the plough in a pretty ftrong foil. The work of the farm is performed by five men, fix horfes, and twelve oxen. Mr. Evans's wife and children manage the business of the house, of a pretty confiderable dairy, and of the poultry-yard, which is much better flocked with fowls than American farms ufually are. The butter which is not confumed in the houfe, is fent in winter to Philadelphia; but in fummer they make good cheefe, which is fold for tenpence a pound. The corn is either fold in Philadelphia or Reading. Mr. Evans fattens fome oxen, but their number does not exceed eighteen, though he poffeffes feventy acres of meadow land; thefe oxen, togethen

together with his twelve cows and fix horfes, confume almost all his hay, for he fells very little. He keeps it in barns, and fometimes in ftacks made after the English manner, but fo very badly, that they generally tumble down. Every acre of meadow, if mowed twice a year, yields from three to four tuns of hay, and the price of this article was last year fourteen dollars a tun.

Mr. Evans keeps no more than forty or fifty fheep. This fmall number affords an additional proof of the prejudices, which prevail in this country; "to keep many of them," Mr. Evans obferved, "would be the certain means of lofing them all." On my mentioning to him the example of England, he faid, "I know all this, but it is the cuftom here, and a wife cuftom it is; for our neighbour, Mr. MORGAN, who would keep more, and had a good fhepherd from Europe, loft them all. We do not wifh for more than are neceffary to fupply us with wool for our own cloathing, and that of our people, and on that account keep no more."

The state of agriculture is here exactly the same as in the remotest provinces of France. Prejudices, maxims handed down from father to fon, ufages, ignorance, and confequently obstinacy, govern every thing. The sheep are tolerably good, and yield excellent wool. Before I faw them, I asked the shepherd, whether the wool was short or long? he anfwered, " that it grew longer towards the time of fhearing it." I explained to him the meaning of the terms, long and short wool, the difference between the sheep which produce it, the different purposes they are fit for in the manufactories, and, confequently, the reafons why, in different parts of England, one fort of theep is kept in preference to another. He listened to me, and replied, " of all this we know nothing here." It is the cuftom not to keep a ram upon the farm; they enquire where a good one may be found, and either hire him or fend the ewes to him. Mr. Evans fattens his oxen with hay, and flour of Indian corn, of which he allots to each, twice a day, fix quarts, or fix-fixteenths of a bufhel: his oxen are tolerably good, but not remarkably fo. In my prefence he fold feventeen, which were all he

he had at that time, and among which was an old bull and a fine cow. For thefe he received nine hundred and fix dollars; the cow alone cost forty-two; fhe was three years old, large fized, of a good fort, and was bought for breeding in another part of the country.

Turnips for feeding cattle are cultivated only in gardens like potherbs, to the extent of a quarter or half an acre. The cultivation of cabbages and turnips in the fields is unknown. Potatoes are planted in great abundance. The art of getting good dung is as little known here as all other branches of agriculture, which require the leaft judgment. There is no hole in the farm-yard to collect the dung; nothing is done to improve it by the urine from the different flables, or to prevent the rain from wafhing away its flrength; it lies in the farmyard in large heaps, does not rot, but is entirely dried up.

In other refpects this is one of the fineft effates that can be defired. The foil, the fituation, and every thing confidered, leave nothing to wifh for but a more fkilful cultivation, of which it is as capable as any other fpot in the world. In point of profpect and picturefque effect, its fituation is charming, being in a large, delightful valley, which is well watered, and furrounded by a multitude of the moft pleafant hills, partly cultivated, and partly covered with wood.

A faw-mill forms a part of this effate; it is conftantly employed either for the ufe of the effate, for the poffeffor, or the public. The price of labour is three fhillings for one hundred feet of plank. The mill has but one faw, though there is a fufficient quantity of water for at leaft three. This water, which can be difpofed of at pleafure, might very conveniently turn feveral other mills, and thus encreafe both the value of the effate, and the induftry of the country; as the produce is fure to meet with a ready fale either in Philadelphia or Reading. The fences and farm-buildings, which Governor Mifflin left in very bad condition, are now repairing, and will foon be in very good order.

Mr. Nicholfon pays Mr. Evans, who accounts to him for the outgoings and expenditure, but who has not yet remitted him any money. He intends, undoubtedly, by this management, to put the eftate into a F good

good condition, and to raife its value beyond that which landed property has hitherto acquired in America. At this time a bufhel of wheat fells for fifteen fhillings, Indian corn for three fhillings, and oats for five fhillings. Labourers are eafily procured here in fufficient number for all the purpofes of agriculture. From the account I have given of this eftate, it is evident, that its value would be very confiderable, if it were better managed.

The five hundred acres, which lie uncultivated, fupply the neceffary timber for repairing the houfe and out-buildings, and alfo wood for fuel; which, as I have already mentioned, is fold at Reading from three and a half, to four and a half dollars per cord, according to the quality of the wood. The expence for felling, cutting it, and carrying it to Reading, amounts to one dollar two-thirds. Mr. Evans is of opinion, that this tract of land thould neither be cultivated, nor the wood fold for fuel, becaufe the trees, if fuffered to grow, encreafe the value of the land far beyond what it can be worth, if applied to any other ufe. I know not how far he may be right. To form a correct opinion on this fubject, it would be neceffary to traverfe the wood, to be acquainted with the wants and cuftoms of the country; and befides, it is well known, that in France, where the management of woods is fingularly well underftood, the rearing of trees is deemed one of the moft difficult arts.

My friend, Mr. Guillemard, who is more fond of his bed, and lefs partial to farms, than I am, fuffered me to leave Reading fome hours before him; he overtook me at Angelico, and thence we entered upon our journey to Lancafter. There is no public conveyance yet eftablifhed by the ftate between Lancafter and Reading, though thefe are both confiderable towns. The ftage-coach goes from Reading to Harrifburg, fituate on the Sufquehannah, and on the road to Pittfburg. Another ftage-coach goes from Harrifburg to Lancafter, which forms a circuit of eighty miles; though, by the direct road, the diftance is only thirty-one miles. There is, indeed, a poft, which goes twice a week from Bethlem to Lancafter, and paffes through Reading, but is of

of no use to travellers. This post, which makes a journey of eighty miles, frequently arrives without bringing one single letter; every thing evinces, that the country is yet in an infant state, but shews, at the same time, that it is proceeding, by large and rapid strides, to a state of confiderable strength.

The country between Reading and Lancafter abounds with mountains and vallies. The former are not high, but run in ranges. The vallies are chearful, well watered, abound with fine meadows, and are tolerably well inhabited. Almost all the inhabitants are Germans, or, at leaft, of German defcent. The greatest part speak no other language than German. The houses are small, and kept in very bad order; the barns are large, and in very good repair. The general appearance of the country, which is very rich and pleasant, refembles that near the Voghesian Mountains, except that here the mountains are not so high. We continually meet with brooks or creeks, with numerous mills and a luxuriant verdure. The road is tolerable, except in some places, where it is miry, or rough with stores. Four miles from Lancaster the hills decrease in height, and two miles from the town they terminate in a plain.

On our way we ftopped at Ephrata, where we visited the DUNKERS, a fort of monks well known in America by the folitary life they lead, though their number is but small. We had a letter to Father MILLER, the Dean of the fociety. The house, which is built of a very indifferent fort of stone, and badly roosed with laths, is the residence of several hermits, the remains of fixty, who formed the society about forty years ago. A few yards from this house stands the nunnery of the order, which contains ten or twelve nuns, subject to the same rules.

The venerable Father Miller is an old man, not far from eighty years of age. His eyes ftill fparkle with a degree of fire, and his imagination is ftill lively. Our curiofity led us to enquire after the inftitution of the houfe, and the doctrines of the order. Father Miller fatisfied this curiofity in a manner the most tediously diffuse, by giving us a minute account of every point, however trifling, of the doctrine and hif-

tory

F 2

tory of the Dunkers. This hiftory is a tiffue of abfurdities, like that of all monks. A ridiculous compound of ambition, and of the defire of infulating themselves apart from the state, is common to them all. The Dunkers were inftituted in the fame place where they at prefent refide, by one CONRAD PEYSEL, a German, who, however, foon perceived, as well as themfeves, that the life of an anchorite is neither the most pleafant, nor the most useful in the world. He collected them into a fociety, and conducted them to Pittfburg, which, at that time, was a wild, uninhabited place. The prior, who fucceeded Peyfel, intended, according to fome, to subject his monks to a stricter discipline; but, by the account of others, he proposed to accustom them to a wandering life ; diffenfions arole among them, and they paffed fome years in a flate of continual difagreement; they then difperfed, and afterwards united again in the fame place where they were first established. The old monk told us, that they obferve a ftrict rule, and live with the utmost frugality; and that a communion of property is observed among them without the leaft fupremacy, or any other diffinction whatever; he told us, that he goes himfelf to church regularly at midnight. They have made the vow of poverty and chaftity; there are, however, some, who marry, in which cafe they quit the house, and live with their wives elfewhere in the country. Others leave the house without marrying ; but thefe, Father Miller observed, violate, by so doing, the oath they have taken; yet they cannot be profecuted for want of a law to that effect. They wear a long gown made of grey cloth for the winter, and of white linen for the fummer, tied round the waift with a ftrap of leather. They let the beard grow, and fleep on a bench, " until," faid Father Miller, " they fleep in the grave." This was his expression. The fpirit of the prefent age, and the country they inhabit, being equally averfe to a monastic life, Father Miller perceives, with as much certainty as concern, the impending diffolution of his order, which has fome other establishments in one or two counties of Pennsylvania. As to the doctrines of the order, they are a medley of the most absurd tenets of the Anabaptifts, Universalists, Calvinists, Lutherans, Jews, Methodists, and Roman

Roman Catholics. They lament the fall of our first parent, who would rather have for his wife a carnal being, Eve, than let the celestial Sophia, a being thoroughly divine, bear a child. She would have communicated only with the spiritual nature of Adam; and thus a race would have been engendered all pure, and without the least corporeal ingredient. They lament the indulgence, which God shewed in regard to this defire of Adam, who acted on this occasion as brutes might do. However, God, according to their doctrine, has merely deferred the period of this state of perfection; it is certainly to arrive, and the Dunkers forefee the time, when, after the general refurrection, the divine Sophia will defeend into every one of us. All this is to their fancy as evident and clear as the Song of Solomon. We wasted nearly two hours in listening to the idle prate of the old monk, who was happy to entertain us on this fubject, and particularly enraptured at the idea, that the Sophia would defeend into him.

Another monk of the fame order, whom we met with, feemed to be less impressed with this hope. He was a printer, a man of thirty years of age, who had lived thirteen years in this houfe. He told us, that the discipline of the order is by no means so ftrict, as the old monk pretended; that they divide their earnings only if they choose; that they live just as they pleafe, and drink coffee and tea. He did not appear fo enthusiastic a friend to the vow of chastity as Father Miller; and to our questions, whether many brothers married, and whether they were fupposed to offend by fo doing, answered, " that many did, and that, in his opinion, they acted rightly ; " for," faid he, " are not women truly charming ?" Before we left Father Miller, whofe accounts the information of the young monk already fhewed to have greatly exaggerated every thing, we had an opportunity of convincing ourfelves, that he had misstated even the particulars of their way of living; for we found in a room, contiguous to his, a nice feather-bed, in which, he could not help confeffing, he flept fometimes, and in which, by the affertion of the young Dunker, he fleeps every night. In the church

wa

we found a place as much diftinguished from the reft, as that of any prior of a convent of benedictine monks can be. Monks are every where the fame men, and live by deceiving others; they are every where impostors: in Europe, and in America, men are the fame, when placed in the fame fituation. In point of furniture and outward appearance the house bears a near refemblance to a capuchin convent, difplaying every where an oftentatious poverty by half-hidden beds of down. We did not visit the nunnery, as we should have met there only the fame follies, and the fame naufeous filth; besides, the nuns, being old, could not in the least interest our curiosity, and we knew already enough of these Dunkers. They are a good-natured fort of people, they live upon the produce of an effate of three hundred acres, injure nobody, are laughed at in the country, and yet tolerably well beloved.

The foil between Reading and Lancaster is full of small lime-stones, and flates, which are frequently found of a very large fize. Near Lancaster the quantity of lime-stone encreases: the whole country abounds with iron-mines; and the iron-works, which are very numerous between Bethlem and Reading, become more strikingly fo between Reading and Lancaster, though many of them do not stand near the road. We intended to visit the iron-work of Mr. COLMAN, one of the most considerable in the whole district; but finding that it was too much out of our road, we relinquished the defign. All we could learn was, that the workmen receive from eight to ten dollars a month, besides board and lodging. The founder has five shillings per tun. The price of cast-iron is thirty stillings, and of iron in bars forty shillings a tun. The high price of grain in this place is faid to have much lessend the profits arising from founderies.

We had left the fervant, with the baggage horfe, at Reading, on account of his back being fore. My friend Guillemard intended at first to make the tour from Lancaster to Harrisburg without the fervant, and to fend him by the straight road to Northumberland, but Joseph wished

38

to

to fee Lancaster. Mr. Guillemard's kindness could not refuse him this fmall favour; he accordingly fet out for Lancaster fome hours after us, and brought the horse thither; we had leffened his burthen, at least by eighty pounds, and had fent feveral of Mr. Guillemard's effects to Philadelphia. The pack-faddle had been mended, and yet the poor horse's back was worse than before. This is an accident truly disagreeable, and by no means unimportant; for the disposition of my fellow traveller does not allow us to hope aspeedy end to our sufferings. We must have patience, a virtue of material use in all fituations, while on the contrary impatience never ferves any good purpose.

#### Lancaster, the 11th of May.

We reached Lancafter at nine o'clock at night, the ufual fuppertime. The groom arrived the next morning with the difabled horfe. A delay in Lancaster, while the cure of the horse was effected, proved the more unpleafant, as out of the twelve gentlemen, to whom we had letters of introduction, three only were in town. General HAND, who lives a mile from Lancaster, happened to be there. We accordingly paid him a vifit, and faw him, as well as his lady and children. But, by not returning our visit, he gave us a pretty clear proof, that he was not very defirous of our repeating it. Mr. Bridle, though in town, was indifpofed ; and Mr. MONTGOMERY, to whom we had a letter from Mr. Bridle, of Reading, was not at home, when we called at his houfe. This concurrence of unpleafant circumstances led us to the firm determination of removing at once the obstacles, which, fince our departure from Philadelphia, had obstructed the execution of our plan. In occurrences of a more ferious complexion than this incident, experience has convinced me, that the fuccours of the moment, with which irrefolute and indolent people are fo well pleafed, far from actually clearing the way of difficulties, merely places them at a greater diffance, but, in fact, encreases them. I was also fensible, that it is by far the beft and eafieft way, in all fimilar fituations, to do without every thing, which may prove troublefome. My friend Guillemard is determined,

to act upon the fame principle; and we have refolved to reduce our baggage to what our three horfes can conveniently carry, and to fend the reft back to Philadelphia. Thus relieved from all uneafinefs, our minds will be more capable of receiving the new knowledge, which we fhall ufe every opportunity to collect. Here we gathered our information from the landlord's family at the inn, where we had put up.

This inn, the Swan, has been kept by Mr. SLow thefe thirty years. He was a man of very confiderable property, but, fome time back, was much reduced by misfortunes; having engaged in iron-works, and other bufinefs, he was defrauded, and nearly ruined, and found himfelf under the neceffity of felling all the property he had acquired. Grief undermined his constitution ; but his wife, possessed of more fortitude, (as women generally are) roufed his dejected spirits. His honesty had never been impeached, and his fituation in life, as innkeeper and member of the affembly of Pennfylvania, had made him known, and had obtained him friends, who affifted him with money, and procured him credit. One of them purchased fifteen hundred acres of land, which he poffeffed near Wilksbarre, on the Sufquehannah, and, when the bargain was ftruck, told him, that he fhould only confider himfelf as his truftee, and return the land for the fame money. His circumftances improved; he has not only repaid the money for the lands near Wilkfbarre, which are again in his poffession, but has also purchased others near Northumberland, married one of his daughters, obtained commiffions in the army for two of his fons, and thus recovered his former profperity. We had letters to him : he happened to be in Philadelphia; but his wife and two of his fons were at home, who furnished us with, perhaps; as much information, as we might have been able to procure, had we met with all the other perfons to whom we had letters of recommendation.

Lancaster is the largest inland town on the continent of America. It fiands twenty miles from the Susquehannah, and half a mile from the Conawango, a large stream, stocked with fish, but not navigable. This district was prefented to the family of Mr. WILLIAM HAMIL-TON

TON, by the Penns, their relations. The town began to be built in 1731, with a view of its being the chief of the county. The land is not fold by the Hamiltons, but leafed out for a ground-rent, which they have raifed in proportion to the encreafed demands, and the rifing price of land in every place. As W. Hamilton has ftill a great quantity of land left about the town, he difpofes of it in the fame manner; and his yearly income, compofed of unredeemable rents, amounts at prefent to four thousand dollars. During the war the payment of these rents was collected with difficulty; Mr. Hamilton, as well as the family of Penn, belonging to the Tory party.

The population of Lancafter confifts of about fix or feven thousand fouls. Instead of increasing, it rather decreases at prefent, in confequence of the continual emigration of fuch inhabitants, as by their industry have acquired a fufficient fortune, to purchase lands in the less inhabited districts of Pennfylvania, or in the most distant part of Maryland, and whom the high price of land, in the county of Lancaster, prevents from fettling here.

Near the town, and even at fome diffance from it, the price of land is at prefent from fifty to eighty dollars per acre. Within thefe laft three years, it has been more than doubled. General Hand bought, five years ago, the effate on which he refides, two miles from the town, for twenty-five dollars per acre, and has lately refufed one hundred, which were offered him. Mr. Scott, fon-in-law of Mr. Slow, bought lately an effate, for which he paid one hundred dollars per acre. The price of land has rifen nearly in the fame proportion throughout America, at leaft in all its cultivated parts. Mr. Slow, about five years ago, purchafed an effate near Northumberland for forty fhillings per acre, and laft year fold it again for fifty-four fhillings. With the profits he purchafed a pretty little effate, fituate half a mile from Lancafter, between the road and the creek.

This eftate, which contains one hundred and ten acres, is now in a fine ftate of cultivation. About eighteen or twenty acres lie in grafs, and form the most beautiful meadows; twenty-five are covered with

G

wood,

wood, and the reft are under the plough. He lays from twelve to fourteen tuns of dung on each acre: no land lies fallow; but he entertains the fame prejudices as the reft of the farmers in favour of flat ridges, and againft fheep. His fon, in whofe company I furveyed the eftate, confeffed, that the theory and practice which prevail in Europe do not agree with the hufbandry of the Americans, but he is neverthelefs zealoufly wedded to their prejudices, and caufes them to be clofely followed, not only on his father's eftate, of which he has the management, but alfo on his own near Northumberland.

The land, in the environs of Lancaster, exceeds in fertility that in the neighbourhood of Reading. An acre yields, upon an average, fifteen bushels of wheat, and other grain in proportion.

Everything is much dearer in Lancaster than in Reading. Day labourers are paid four shillings per day, and are easily procured. The inhabitants are the fame good natured kind of people as at Reading, and equally laborious. In the town, as well as the neighbouring country, are a great number of tan-yards, and many mills, from which the flour is fent to Philadelphia in waggons. Returning, thefe waggons commonly bring merchandize, which is expedited from this place to every part of the back country. The road has hitherto been very bad; a turnpikeroad, which is about to be made, and which will probably be completed this autumn, will doubtless much facilitate and promote the communication. The mealmen feem already to familiarize themfelves with the idea of paying an additional toll of two or three dollars, and of providing larger wheels for their waggons. If the Sufquehannah shall be made navigable as far as Wright, an event that cannot be far distant; the meal-trade will grow still more considerable in this district, at least until the projected plan of rendering the Suatara and the Delaware navigable, by means of the Schuylkill, shall be carried into effect.

In a recently fettled and free country, it is feldom poffible to come at any certain refults of calculations, relative to trade and commerce. Thus the number of waggons, which are fent from Philadelphia to Lancafter and the neighbouring country, with flour and other provifion,

fion, is not exactly known; yet it is certain, that frequently from feventy to eighty waggons pass through Lancaster in a day, and it is generally believed, that Mr. WITHINS, who fome years back, at his own expence, built a bridge on the road to Philadelphia, a mile from Lancafter, on condition of his being entitled to take a toll or pontage, clears that way every year one thousand fix hundred and fifty dollars, the whole amount of the fum he laid out in conftructing the bridge. A perfon on horfeback pays him two pence, and a waggon eleven pence, though he has a right to take eighteen pence for the latter. The gentlemen who have contracted for the construction of the turnpike-road, are authorized by government to redeem the above toll or pontage, as foon as the road shall be completed.

Though the number of houses does not encrease at Lancaster, yet the town gains much in outward appearance. The houses in general are larger than in Reading, and constructed either of brick or stone. Rent is much the fame as at Reading. There are numerous quarries in the vicinity of the town, which yield a quartzofe schift, that is very hard, yet eafily cut, but cannot be obtained in pieces of any large fize. This ftone is fold by the rod, containing fixteen feet in length, eighteen inches high, and eighteen wide; the price is one dollar, delivered in town, free from expence, and a quarter of a dollar to take it out of the quarry. The turnpike-road has confiderably encreafed its fale.

The difpofition of the generality of the inhabitants of Lancaster is of the fame good caft as that of the inhabitants of Reading. There exifts here, however, a democratic fociety, but it confifts only of twelve members, not five of whom ever attend the meetings. The enterprife against Pittsburg, which no American mentions without confcious pride, especially in these parts, where the militia bore a share in it, has ruined the Jacobin clubs and focieties. The difapprobation of the Senate, the enquiry fet on foot by the reprefentatives of the people, (notwithstanding the proposal of the committee, that they be reprimanded, was not carried) and especially the circumstance, that the Prefident, who is generally effected and respected, nay, revered to a G 2 degree

degree of enthusias in America, personally reprobated them, have completed their destruction.

The city of Lancaster is surrounded with meadows, which are well watered. It gave me much fatisfaction to fee a wheel, purpofely defigned to raife the water neceffary for that purpose. The town itself is rather dull. It has more the appearance of a city than Reading; the houses stand nearer each other, and are more numerous; broad stone pavements, run in front of the houses, and the freets that are not paved, are at leaft covered with gravel, and kept clean. The feffions-house is a good building, neat and elegant. There are two or three well built churches in the town. The number of places of worship amounts, in the whole, to feven. The Swan inn is undoubtedly better than any inn in Philadelphia; lefs magnificent than the excellent English inns, yet of very similar design; none, at least, can be more eleanly. A great number of fervants are kept, and the family of the landlord, whofe manners befpeak a liberal education, are generally refpected, and enjoy that confideration, which in all countries should be bestowed on honest men, whatever their occupations, if not contrary to morality. Innkeepers are here men of the first rank. How many Europeans would shake their heads, were it so in their own countries! It is a general cuftom in America, to dine with the innkeeper and his family. and to conform to the dinner hour which he fixes. This cuftom, which, at times, proves extremely difagreeable, is, on the contrary, very pleafant in this house, for it is impossible to meet with a family in all America of fuperior breeding, or which forms a more agreeable fociety, than that of Mr. Slow.

One of the two fons, who holds a commiffion in the army, was at home. He ferves in one of the regiments, which, under the orders of General Wayne, act against the Indians, and was wounded in an engagement last autumn, in which those people were repulsed by the Americans. The particulars of this war are by no means interesting. The Americans speak of the ignorance of the Indians, in point of tactics, with the same contempt that the English express for American

rican tactics, and the Pruffians, Austrians, and French for the tactical knowledge of the English. All that I have been able to learn of these Indians interests me in their favour. The Americans are waging war against them, in order to drive them out of a country, which belongs to them; and the Americans, who inhabit the frontiers, are greater robbers, and more cruel than the Indians, against whom it is alleged as a crime, that they exercise the right of retaliation. They are, moreover, incited by the English against the Americans, and become thus, in their untutored state, victims of the ambition and difcord of these two civilized nations. Captain Slow affured me, that, among the Indians flain on the field of battle, many white people have been found, who were Englishmen ; that many active officers on horfeback have been feen at the head of the Indians, who were alfo Englishmen, and that the Indian army is fupported by the English garrifons. Thefe affertions, however, tend merely to prove the fupineness of the Americans, both in regard to the English and Indians. Captain Slow affured me, that even in Kentucky, he never met with any land, which, in point of richnefs, can be compared with the foil of those parts, especially in the country, on the river Miami; that the ftratum of vegetative earth is from twenty to twenty-five feet thick; and that the fields, in which the Indians have fown maize and beans, befpeak a very careful cultivation, and promife the richeft crops, that ever came within his obfervation.

Before I conclude the article of Lancaster, I must not omit to mention two Frenchmen, who have fettled here from the French colonies in the West Indies. The one is a miniature painter, who fells his coarfe pictures for three guineas each, and contrives to vend many ; the other is a very indifferent musician, who charges three guineas a month for his leffons, and has feveral pupils. At every ftep we take in America, either in towns or in the country, it becomes more and more evident, that any one may make his fortune, who will take the pains ; and nothing can afford a fironger proof of the truth of this remark, than a perfonal acquaintance with the crowd of foreigners, who enjoy the reputation

putation of being exceedingly *clever*, and who are amaffing fortunes under the aufpices of this frequently usurped title.

In the inn, at Lancaster, I met with Mr. Brown, member of the congress for Kentucky; he was on his way to Philadelphia, where the congress meets next month. I fifted him a little respecting the present state of Kentucky. The result of the information I obtained is, that the foil is every where excellent, and frequently yields, for the first harvest, from one hundred to one hundred and ten busses of Indian corn, and from fifty to fifty-five busses of wheat an acre; that the price of land is fix dollars per acre, of flour eleven dollars per barrel, and of Indian corn, one-fixth of a dollar per busses, amounts at present to one hundred and fifty thousand; that, in the course of last year, twentyfive thousand perfons fettled there; that the Indians attempt no longer any inroads in that part of the United States, which, though occupied the last of all, advances more rapidly towards a state of prosperity than any other district in America.

From Lancaster we proceeded to May Town. The road from Lancafter to this place lies chiefly through a woody tract of country, which affumes a wilder appearance than we have hitherto feen. Cultivated land appears more rarely as we proceed, except a few vallies, which still lie in grafs, or are fown with Indian corn. In proportion as the diftance from Lancaster encreases, houses of brick or stone are less frequently feen. We met with fcarcely any but log-houfes; every where we observe German farms, small houses, and large barns. Cows and oxen, which feemed tolerably good, we found grazing in the woods and near the road; and alfo faw, at times, sheep, but never more than eight or ten of them together. From their thicknefs, you would fuppofe the woods to be no more than thirty years old : and yet it is highly improbable, that new plantations should have been made at a time when wood-lands were every where converted into tillage-ground. Thefe woods, as well as those which feem older, confist of oak, hickory, black ash, acacia, chefnut, cherry and apple-trees, a few fpindle-trees, fome cedars.

47

dars, and Weymouth-pines. Were it not for the known partiality of man for whatever it is difficult to procure, it would be impoffible to account for the introduction of the Italian poplar into America, which abounds in fo great a variety of beautiful trees, as may well excite the envy of Europe. Great numbers of these poplars, which serve for not one useful purpose, have been planted in America. They border all the ftreets in Philadelphia, and all the roads about the town.

All the cultivated land between Lancafter and May Town is inclofed with fences of dry wood, which fpoil the landscape, and confume vaft quantities of timber, though it already begins to grow dear. Sooner or later this useles wafte will certainly be regretted.

May Town is a fmall village, fixteen miles from Lancafter, built on a fpot entirely without water, where either chance, or the intereft of a few individuals, threw together a dozen houfes, the number of which has not been encreafed fince the origin of the eftablifhment, and, to all appearance, never will be. This little village is inhabited entirely by Germans, who have ftill remained fuch. Land in this neighbourhood cofts twelve or thirteen dollars an acre, and is in a tolerable ftate of cultivation.

The road from May Town to Middle Town becomes more dreary and unpleafant as we proceed; fix miles from the former place we fell in with the fuperb river Sufquehannah, on a fpot where the rapids proceeding from the Conawango render it unnavigable, or, at leaft, the navigation fo extremely dangerous, that it is attempted but by very few veffels. In order to free this navigation from all danger, which is of the utmost importance both to the prefent and the future wealth and prosperity of the country, a canal has been begun, which will run half a mile above and below these rapids, and thus keeps the navigation open at all times for veffels to work up or drop down the river. This canal, the undertaking of a private gentleman, to whom the flate of Pennfylvania has advanced thirteen thousand three hundred and thirty-three dollars, and also granted leave to establish a toll, is nearly completed. Nothing remains to be constructed but the locks, yet a difference

ference of opinion exifts as to the time of its completion. We intended to view the canal; but my fellow-traveller being a little indifpofed, we were the more ready to give up this project, as from a view of the canal we could not have derived any additional, or more exact information, than we had already obtained.

The road from this place to Middle Town affumes a wilder and more romantic appearance at every flep we advance. The forefts and rocks reach down to the Sufquehannah. A great number of trees, wafhed loofe by the water a long time ago, lie, half rotten, along the banks of the river; others lie rooted up, broken, or felled in the midft of the wood, without its having occurred to any one, to ufe them for any beneficial purpofe; and they have been fuffered to lie here, to be taken poffeffion of by the firft comer. The oppofite bank is likewife covered with wood, and bounded by mountains of no confiderable height. From time to time we faw, through viftas naturally opening among them, the Blue Mountains. The river is, in general, from two to three thoufand fathoms broad, full of confiderable iflets, which are of an irregular level at the furface, and encreafe the width of its bed. It is full three miles broad, exclusive of an iflet in it, at the fpot where the Suatara falls into it.

Middle Town is feated on the latter, about half a mile diftant from its confluence with the Sufquehannah. From the above-mentioned rapids of the Conawango ufually interrupting the navigation on this large river, Middle Town becomes the ftorehoufe of all the grain, which is produced in the country fituate along its upper courfe, and not confumed there. From one hundred and fixty to one hundred and eighty thoufand bufhels of wheat are yearly bought up by the corn-dealers, on the fpot where it grows, conveyed to Middle Town, and depofited in granaries there. The millers of the furrounding country ufually buy it here, grind it into flour, and fend it to Philadelphia. The grand project of inland navigation, for the execution of which the government of Pennfylvania has granted a lottery, is defigned to join the Suatara with the Schuylkill, by means of a canal of about fixty miles in length, a third of which is already completed. In regard to that part,

18

出现。在学校介持有

part, indeed, it does not appear that the common welfare has been chiefly attended to by those, who were entrusted with the management of this important concern. When this canal shall be finished, the flour, which is now carried to Philadelphia by land-conveyance, will be transported thither by water, with much less trouble and expense. The carriage amounts, at present, from fourteen and a half to fifteen shillings per barrel.

The completion of the canal is much wished for at Middle Town, as the inhabitants hope to derive from it advantages, which must encrease in proportion as the districts, that fend their grain thither, shall become more populous, and confequently attain a higher state of cultivation. The banks of the Suatara, as far as we have feen them, are truly delightful. This river, though called here but a creek, is as broad as the Seine near Rouen. On the northern bank, from its mouth up to Middle Town, stand fome alehouses and warehouses to receive the grain, as it arrives. A little farther up stands the mill of Mr. FREY, a German, advanced in years, who fettled here as a miller, about ten years ago. This mill, which has four courses, is of a happy and fimple construction ; all the operations upon the corn, as well as the meal, are effected by machines, with the fole exception of the bolting, which is done nearly as in London, and at the Perriers', in Paris. The management of this operation is confided to a lad, who receives the meal craned up in tubs, spreads it out on the loft, and distributes it among the different meal bags. " Mr. Frey," he faid, " is no friend of Evans's machine; he does not like the conftruction." This was the only motive I could learn. The mill grinds for Mr. Frey himfelf about thirty thousand bushels of wheat a year; he fends the flour as far as Newport. Four journeymen and one apprentice do the bufinefs about the mill; they are all Germans; their wages are from feven to ten dollars per month ; they feem fenfible and active people. Mr. Frey keeps, independent of the mill, which also grinds corn for the public, a shop in the city, which is about a quarter of a mile distant. His aluodace of country, feparated fills Lancafter, into a diffiace equaty,

house is the only stone building in the town, which contains about thirty houses built with wood.

From its fituation and trade, Middle Town fhould be the chief town of the county; but, in this cafe, Mr. Frey would have been obliged to facrifice about three or four ground fhares for the erection of public buildings, which he did not choofe to do, though he poffeffes a great many fhares. Harrifburg is therefore become the chief town of the county. The inhabitants of Middle Town and the neighbouring country, we may eafily conceive, are highly difpleafed with old Mr. Frey, for having thus neglected the interefts of the town; but he laughs at them, becaufe he is rich, and grows daily richer, by felling them his decayed flores.

The price of land is here from twenty-feven to thirty dollars. A day labourer gets three fhillings and nine pence per day, and beef fells at five pence per pound. The inn, where we took up our quarters, is good; but on our going to reft, a ftranger entered our bed-room, according to American cuftom, to go to bed, and we were told, that we might think ourfelves extremely fortunate, that we were not obliged to fhare one of our beds with him.

Middle Town is diftant twenty-feven miles from Lancafter. Three. Frenchmen have fettled in this fmall place. One is a goldfmith and watchmaker, and is faid to have much bufinefs; another is a phyfician, and earns likewife his fubfiftence; the calling of the third I have not been able to learn; he probably affifts the other two in confuming their earnings. We have experienced here a fcorching heat, and frequently two thunder-florms in one day; the falling of rain always encreafes the heat.

# Wednefday, the 13th of May.

Mr. HARRIS, lord of the manor on which Harrifburg flands, availed himfelf of Mr. Frey's error, to procure his town the advantages, that the former neglected. No fooner was it in contemplation, to form the tract of country, feparated from Lancaster, into a distinct county, than.

51

to

than he offered to the government of Pennfylvania, to facrifice not only a toll on the Sufquehannah, of which he was poffeffed, and the profits of which he lawfully enjoyed, but also feveral thousand acres of land, in and about the town, referving to himfelf only twenty ground fhares. This offer induced the government of Pennfylvania, to make this the chief town of the county, though it has neither an anchoring place for the ships, that fail up and down the river, nor can afford them the fmallest shelter. The new county obtained the name of Dauphin. The first houses were built here in 1785; and their number at prefent amounts to three hundred. The formation of this town being of a more recent date than that of any other, the buildings were, from the very first, of a better construction than any where elfe; and fuch as were not originally good houses, have fince been rebuilt. Very few log-houfes are, therefore, to be found in Harrifburg : but, on the contrary, many fubstantial and handfome edifices; and though this town is fmaller, and of later eftablishment than Reading and many other places, yet it is more compact, and has a much better appearance. A malignant epidemic fever has made the fame havoc in Harrifburg, as the yellow fever did in Philadelphia, and for a whole twelvemonth checked the progrefs of building. As the fever did not return last year, however, building is again going on ; but the prejudice of the town being infalubrious still remains, whether it be really fo, or, as the inhabitants affirm, merely a scandalous report, propagated by the jealousy of the neighbouring towns. The unhealthinefs of the place being imputed to the flagnation of fome water, which was made to turn a mill, it was proposed to the miller, to throw down the dam, and an indemnification was offered him. He demanded, last year, four thousand dollars; but this sum not having been raifed foon enough, in his opinion, he this year raifed his demand in proportion to the encreafed defire of deftroying his dam, and infifted on the payment of eleven thousand dollars. The inhabifants, enraged at this exorbitant demand, and, at the fame time, earneftly withing for the demolition of the dam, unanimoufly refolved to deftroy it, and appointed a commiffion, to award a just indemnification

H 2

to the miller, which has been determined at the fum he first demanded. All the inhabitants feem to have concurred in this proceeding, which, though not to be applauded, is lefs cenfurable, on account of the miller's enormous rapacity. The unanimity, with which this transaction was accomplished, enfures its impunity; and the miller will be cautious of entering upon a profecution, as the grand jury would certainly throw out his bill. He has no one to blame but himfelf for the destruction of his dam; and the public opinion, which, by a more prudent conduct, he might last year have engaged in his favour, is now decidedly against him. Yet with many of the demolishers themselves it remains a matter of doubt, whether the demolishers themselves it remains a matter of falubrity of the place.

A prifon and a feffions-houfe have been built at Harrifburg, and a plan is in agitation to form an anchorage for ships. The inhabitants exert their utmost efforts, to procure to this place all the advantages of which it is fusceptible, and even indulge a hope, that the feat of the government of the state will be removed to their town. They form a central point, at least for the population of Pennfylvania; and are lefsdiftant from the remote western parts than any other county on this fide the Sufquehannah, and on these local advantages they ground their hopes. It is, however, to be wished, that their notion, of determining the feat of the legiflature by a pair of compafies, may be confined to men who cannot influence the decifion ; and that it may be rightly understood, how much better it is for the deputies to travel one hundred miles further, than to remove the feat of government from Philadelphia, which is the most populous city, and the only trading town in Pennfylvania, and which confequently forms that point, where the best information is in unifon with the most important interests.

The public expenditure, neceffary in this newly formed county, caufes the taxes to be fomewhat higher than in the counties of Lancafter and Berks; the difference may be a fhilling in the pound. Unlefs you chance to meet with a commissioner of taxes, the exact proportion is not to be afcertained, as a general ignorance on the fubject every

5%

53

every where prevails. The taxes, however, are generally deemed very light, even by those who pay them, which is undoubtedly the strongest proof that they are so.

The majority of the inhabitants of Harrifburg confifts of Germans and Irifhmen, firmly attached to government, fenfible, and industrious. The number of inns in America is out of all proportion to that in Europe. This place contains no lefs than thirty-eight. It has twenty-five or thirty fhops, where may be found all forts of merchandize, procured from Philadelphia on twelve or eighteen months credit, and of which the fhop-keepers rapidly difpose at double or treble their prime cost.

The price of ground-fhares in the town of Harrifburg is from one hundred and fifty to two hundred dollars. The land in the furrounding country is good; its price is from thirty-two to forty-eight dollars an acre; day-labourers are paid here three fhillings and fix-pence a day with their board, or five fhillings without it.

The Sufquehannah near Harrifburg is about three quarters of a mile in breadth : in fummer it is frequently fordable. The navigation is extremely dangerous for feveral months, in confequence of fome rapid currents, and never fafe except in fpring and autumn, when the water is fufficiently high to cover the rocks, which become more numerous at the point where the Juniata falls into the Sufguehannah, nine miles above Harrifburg, and greatly encrease the dangers of the navigation. The government of Pennfylvania has offered eight hundred thousand dollars for clearing the river of thefe rocks from the above point down. to Middle Town; but hitherto no one has ventured upon this enterprize. I entertain no doubt, however, but that this vaft undertaking will fhortly be accomplified, though the fum hitherto offered may not be fufficient, but must probably be increased. The industry and prosperity of Pennsylvania will, in time, overcome this, as well as many other difadvantages, which have heretofore been deemed infuperable. A Frenchman refides at prefent at Harrifburg, who was born in France, but came hither from Martinico. He is a Phyfician, and though he **ipeaks** 

fpeaks but little English, and has refided here only a few months, enjoys already confiderable practice.

We had a letter to General HANNAH; and as we intended to ftop here but a few hours, we delivered it as foon as we alighted from our horfes. General Hannah is a man of about thirty-fix or thirty-eight years of age, and Brigadier General of the Militia. He was a member of the Senate for Pennfylvania, but went out by rotation last autumn. Before he was engaged in the fervice of the state, he was a lawyer; but he has fince relinquished that profession, and has commenced farmer. He has married a daughter of old Mr. HARRIS, the founder of the town, and appears to be an upright, worthy character. Not being prepared to give us a dinner, as we came unexpectedly, he offered to attend us to our evening quarters, feven miles from this town, as fome token of respect for the letter of introduction which we brought him. As our horfes wanted fhoeing, we were obliged to make him wait fome time, which we paffed in the true American ftyle, quaffing a bottle of Madeira and fmoaking fegars. The general is not fond of them, but prefers chewing tobacco; yet, from motives of politenefs, he fmoaked with us. Being at our lodgings we proposed as a toast, " the PRESIDENT," upon which he immediately gave, " LA FAYETTE." I notice this triffing circumftance, to introduce once more the remark, that La Fayette is confantly toafled next to the Prefident, which, in my judgment, reflects honour on America.

We took up our quarters at MAC ALISTER'S. General Hannah is acquainted with him, and being informed of my wifh to collect authentic agricultural information, he was defirous of introducing me to one of thefe gentlemen, who are most able to impart it. Mac Alister is a farmer, and, at the fame time, proprietor of a corn-mill, a faw-mill, a diftillery, and an inn. He is the fame on whom COOPER, in his "Account of America," bestows fo much praise. Mac Alister is an active, enterprizing, industrious, and intelligent man. About eleven years ago he bought the ground, on which he has formed the feveral different establishments of his industry. These are all in a thriving way. His estate confists of

54

Here and a state of the second

of about three hundred acres, which are partly hemmed in between the blue and fecond mountains; but, for the most part, are fituate on the blue mountains. The cultivated ground amounts in the whole to one hundred and twenty acres, fifty of which are laid out in artificial meadows, and thirty-fix in orchards for apple and peach-trees. The meadows are beautiful, and the fields in good order. He extols them far above all other fields in America, but we have met with fome, even. in the vicinity of Reading, and in the county of Lancaster, which are beyond comparison better than his. He affured us, that he never lays dung on any part of his land but meadows, which he alfo waters; and that his only manure for land, which he fows with corn or clover, confifts in fowing it with clover three years fucceffively, and plowing down. the clover whilft it is in bloffom. By his affertion his land yields generally fixty bushels an acre of maize, or thirty bushels of wheat, but it has not the appearance of producing fuch confiderable crops. He fows a larger proportion of grain than is usual in this country; but this. is not always a certain method of obtaining a rich harveft. His orchards. are uncommonly fine; he makes as good cyder as I have ever tafted in America. He finds labourers in abundance, and pays them at prefent. three shillings a day; because, from the present high value of corn, the price of day-labour has rifen one shilling.

The price of the neighbouring lands is eight dollars an acre if covered with wood, and fifty dollars if they be cleared, and in any degree cultivated. He keeps no fheep, at leaft not above twenty; becaufe, as he told us, they do not yield him fo much profit as his meadows, which produce two tuns and half of hay per acre, worth twentyfive dollars. For the fame reafon he fattens no cattle. His ridges are as flat as those of other farmers, and his dung is badly managed, though he uses a great deal on the land; he lays fometimes twenty loads or thirty tuns of dung on an acre. His mill is a very indifferent one indeed; but he affures me, that he means foon to build a new one, which will greatly excel that of Mr. Frey, in Middle Town. The prefent mill has two courses, which generally grind corn of his own, but are

ace

at times employed for the public, and are frequently fet to pulverize plaster of Paris, which he mixes with his feed. He informed us, that he grinds fifteen thousand bushels of wheat a year on his own account; but, on comparing his mill with that of Frey, which grinds no more in proportion without ever ftopping, I feel inclined to doubt the veracity of his affertion. He fends his meal in waggons to Philadelphia, the carriage of which amounts, at times, to feventeen shillings per barrel. His faw-mill is almost constantly going. The logs are floated down the river from the upper country when the water is high; and he cuts them into planks, which he fells on the fpot; deals at fix fhillings per hundred, and other planks at eight shillings. These prices are the fame as at Harrifburg. His whifky alfo is fold on the fpot; and the grain for the diffillery he receives likewife from the upper country. A bushel of rye yields about three gallons of whisky; and he diffils yearly four thousand gallons. He makes spirit from his cyder too; but, fuch is the power of habit, that cyder-whifky, which, in Jerfey, fells at five fhillings per gallon, while corn-whifky is worth only four and fixpence, cofts, in the county of Dauphin, only three shillings and fixpence, and corn-whilky five shillings.

This important fettlement ftands on a wild, romantic fpot, at the entrance of a narrow vale, covered with wood, and fituate on a rapid creek, that dafhes along over rocks, where decayed trees, either felled by the hand of man, or rooted up by the wind, are fcattered in every direction. The various buildings, of which the fettlement confifts, are of wood; they are all, with the fingle exception of the inn, loghoufes, more or lefs rudely formed. The houfes of the labourers ftand on the Sufquehannah, and in the precincts of Fort Hunter, which was erected a long time ago by the Englifh for defence againft the inroads of the Indians. Mac Alifter intends greatly to embellifh his buildings, and confiderably to improve his effate, particularly by the culture of the vine. From what he has already done, it may be fairly inferred, that he will alfo fucceed in his future undertakings. He is a man of an acute, well-informed mind, fuch as we fhould hardly expect to find

in

in an American farmer, flut up in mountainous wilds. Yet his felf-love and vanity keep pace with his merits, and frequently detract from the latter, by exaggerating them. For the fame reafon his affertions are not to be received as abfolutely certain, nor are we to wonder at being occafionally deceived by a man, who is conftantly deceiving himfelf.

# Thursday, the 14th of May.

Five or fix ranges of heights run in parallel directions, more or lefs diftant, from Harrifburg to Sunbury; round feveral of thefe the road winds, particularly the Blue Mountains and Second Mountains, making an undulation along the banks of the river, while it rifes over others. These Blue Mountains, which catch the eye, on opening any defeription whatever of America, are like all the others, with which they are connected, a mere ridge of high hills, through which the Sufquehannah feems to have worked out his bed. Their fummits have not that rife and fall, which is common to the generality of chains of mountains, but form one uninterrupted line, without the leaft variety, in point of elevation. The trees, with which they are all uniformly covered, may probably contribute, in fome meafure, to give them this monotonous appearance. The Blue Mountains are not the higheft, over which the road leads; the Peter's and Mahangoning Mountains far exceed them in height, though they are much lower than the Voghefian Mountains. You pass them by a road, which, though very ftony, is yet tolerably good; its declivity, with the exception of a few places, is not very fteep. These mountains are covered with wood; where this has been cut down, a view of the Sufquehannah opens at times, or the eye reposes on fome cultivated spots. The whole road lies through one uninterrupted foreft. Another road, which does not lead over the mountains, runs parallel to the course of the river; and though the latter road be more pleafant, affording a profpect of the confluence of the Juniata and Sufquehannah, yet we preferred the former, from the more frequent opportunities which it affords of obtaining a knowledge of the country.

1

At

At no great diftance from Mac Alister's habitation, pines are the prevaling trees; and a great many flowers and herbs grow in this forest, which are unknown in Europe.

Honeyfuckles are found in almost every wood. The bloffoms are longer than in our gardens, but they have the fame fhape, and nearly the fame fragrance. The fhrubs, on which they grow, are much lower than those reared by art; they have longer indented leaves than the latter; and though I have frequently found them near large trees, yet I never faw the plants leaning for fupport towards the trunk of the tree. Trees, rooted up by the wind, which in their fall have often brought others to the ground, continue on the fame fpot until they are rotten: they frequently obstruct the passage, but the traveller makes a new path, by going round them, and this becomes the common road.

In the progrefs of this long journey through forefts, we faw the country in its first stage of cultivation. We found a few straggling houses, one or two miles distant from each other; the greatest number are yet. unfinished. They are log-houses, with the interffices between the trunks filled up with earth. Some have been ftanding there feveral years, and are rather more covered. Maize is the general produce. The habitations stand chiefly in vallies, on a brook or creek. The new fettlers begin their operations by building a house, by felling trees, or paring off the bark all around the tree, about five or fix inches in breadth, by breaking up the ground, on which they ftand, to fow a little corn, and by fencing the ground, thus cleared, with a part of the felled trees. The land first cleared is generally laid out as an orchard, one being annexed to every habitation. Most of the houses have a mean appearance; the inhabitants are badly clothed, but every thing around them is their own property. Land, recently cleared, is every where good; and the two or three acres, which have been first broken up, afford crops fufficiently rich to fupply the inhabitants till further cultivation takes place. This confideration fomewhat relieves the mind, depreffed by the view of these melancholy mansions. The roads are, in general, better than might be expected ; here and there ftony, and rather fteep,

50

girls,

fteep, but by no means dangerous. In this mountainous country we have even met with good roads feveral miles in length, formed by the hand of nature, and which remain undamaged by the tracks of large waggons. There are places where the road appears to encroach upon the Sufquehannah itfelf; being formed of trees thrown down with their branches on, and the interffices filled up with fragments of ftone from the rocks; againft which the road is made. The views here are far lefs picturefque, and all the roads much lefs bold, and lefs pleafingly awful, than thofe which we find in fome parts of Switzerland, the fublime grandeur of which is above all comparifon.

Inns are by no means numerous on the road we have lately travelled. Formerly there were inns at this place; but as a certain fum is annually paid to the ftate for a licence, and as the profits are not equal to their expence, few perfons undertake fo unprofitable an employment. We paffed one about twelve miles from Mac Alifter's habitation, which is the only one on this road, in a tract of country twenty-two miles in extent. All the intermediate inns have been flut up in the courfe of this year.

At length we arrived at an old German's, who, after having ferved in Canada in the war of 1758, as a private foldier, in an English regiment, fettled, at the conclusion of peace, on the spot where he still refides; the government of Pennfylvania having granted him the land, which forms his estate. Here he lived unmolested until the beginning of the war of the revolution; when the Indians, at that time stimulated and paid by England, drove him from his plantation. When peace was established, he returned hither, and now enjoys the produce of fifty acres of cultivated land, forty of which are his own property. Land in these parts is very good; its price is seven or eight dollars per acre uncleared, and the value of fuch as is partly cleared, is proportionate to the quality of the land, and the quantity of wood remaining. The highest price is from eighteen to twenty dollars per acre. Good stabling and good oats were sufficient to reconcile us to the dirty hole, into which we were used and where we fat down to a very bad dinner. Four or five

I 2

girls, who are either daughters or fervants of the old foldier, perform the bufinefs of the inn, which confifts of one room, where thefe people fleep altogether. The uncleanlinefs, flupidity, and rudenefs of the whole family, can hardly be conceived. The old foldier, in common with the generality of old warriors, difplays in his behaviour a franknefs and good nature, which are ever fure to pleafe. The poor fellow can neither write nor read; he prefents to every traveller a flate and pencil to write down his bills, as he dictates to them; for there is not a fingle perfon in the houfe able to diffinguifh one letter from another. He complained of being frequently cheated by travellers, in their fumming up the articles, for which they were to pay.

We met two travellers at this inn, who, as well as ourfelves, intended to go to Sunbury, but they wished to proceed on the journey that very. evening. One was a hatter, whom we had feen the night before at Mac. Alifter's; and the other an elderly man, whom the landlord ftyled Colo-NEL, and who arrived, and left the inn, leading a mare, followed by a foal. The conversation, during our flay at the inn, turned on the political flate of Europe. The prevailing fentiment was hatred against England, and fervent wifhes for the welfare of France : even the old foldier, who now and then put in an observation, expressed the same feelings. " This campaign will flow," faid the hatter, " what the French are able to do." "I am perfuaded," obferved the colonel, "that if the French are in arms, they will prove victorious, and conquer the whole globe ; and, it has been foretold long ago, that this conquest must precede the arrival, of Antichrift, and announce the end of the world." " The end of the, world? Is it then fo near at hand, pray?" afked the old foldier. " Most affuredly; before fifteen years are elapfed." "That's my opinion too," rejoined the hatter. Having drunk their gill of whifkey, thefe, politicians separated.

From DEBLERFF's, which is the name of the old foldier, we proceeded twelve miles farther to WHITE's, where we intended to pass the night. The road leads over woody mountains, but is, all the way, better than

WC

we expected to find it, from the defeription that was given us. This road runs for a confiderable extent, in a parallel direction with the Sufquehannah, which is here confined between two ranges of mountains, rarely, interrupted by vallies, and by none of any confiderable extent. This fide of the county of Northumberland (for we left the county of Dauphin fifteen miles from Mac Alifter's habitation) difplays rather more cultivation than the adjacent fide of the county of Cumberland, where only once in every four or five miles a fmall dwelling is feen, furrounded with narrow tracts of cultivated land. The river forms a great number of ifles, which, according to law, belong to that county, from which they are feparated by the narroweft arm of the ftream. Thefe iflands have, in general, a good foil, for which reafon, the progrefs of cultivation is more rapid on them than any where elfe...

White is a farmer, who came hither from Ireland about thirty years ago, and poffeffes at this time an effate of one thoufand one hundred acres, only one hundred and ten of which have hitherto been cleared. He has refided here about feventeen years, and has found means to raife money enough to purchase an isle, at twenty-fix dollars per acre, fituate oppofite to his house, which stands between the mountains and the river. This fituation affords a wild profpect, but without one pleafing feature. White annually clears feveral acres, the expence of which, fencing included, amounts to eight dollars per acre. The price of land, in its natural state, is, in this neighbourhood, fix dollars per acre; but in fuch tracts, as are eleared of wood, particularly in the illets, it is frequently fold at forty dollars per acre. This plantation of White's has no communication with any market town. The river is the only channel by which he can receive goods, or forward his commodities, and this is a. very uncertain channel of conveyance, at leaft fome part of the year, on . account of its dangerous navigation. Mr. White would eafily procure. labourers, as all his neighbours are poor Irifhmen, did not the conftruc-tion of the canal, and the opening of the road near Lancaster, afford. them fo much employment, and at prefent render them fcarce. Mr. White.

White has already been twice a member of the legiflature of the ftate of Pennfylvania. He feems a worthy, fenfible man, and a friend of order; but at the fame time very open to the arts of defigning men. He continues his inn, as he fays, "to oblige travellers," yet his bills fhew, that he ferves them for money, and that too at a higher rate than is ufual; and as he has put up no fign, the reception of travellers affumes the garb of hofpitality, which naturally precludes all enquiry into the unreafonablenefs of his charges.

We did not fup with his family; for what reafon, I know not. His daughter brought us our coffee as ufual. This is always taken at fupper, which confifts of fmoked beef, falt-meat, or fifh. At thefe inns you feldom meet with any thing but meat, falt-fifh, eggs, and butter; and this fare is certainly fufficient to fatisfy a hungry ftomach. We were afked every where, whether we travelled with a view to buy lands. There is hardly a perfon in America, who has the leaft idea of gentlemen travelling with any other defign; and when we told them, that we travelled for no other purpofe than to gratify our curiofity, they thought we were fools, or, at beft, liars. All, even our Dunkers in Ephrata, put that queftion; and, notwithftanding their own fanctity, thefe holy folks would hardly believe us, when we informed them of the object of our tour.

## Friday, the 15th of May.

The road from White's to Sunbury continues much the fame, as from Mac Alifter's to White's. We met, however, at times, with more cultivated vallies, efpecially along the creek Tulpehocken, and with houfes better conftructed and ftanding on picturefque fituations, which, with the appearance of fome retired rocks, form landfcapes not unworthy of comparison with Switzerland. Several other tracts are now cleared of wood; but from the want of labourers, and undoubtedly of money alfo, the trees are more frequently barked and burnt than felled, which renders the prospect dull and gloomy. The mountains, in this part of the country, are high and rocky, yet bear no comparison with the

the Alps or Pyrenees. Impudent and artful men are certain in America, as indeed they are in all other parts of the globe, to live upon the ftupidity and ignorance of others. Of this we found a remarkable inftance in the hiftory of a German, who arrived from Franckfort, three years ago, without a fhilling in his pocket, and who fince that time has travelled the country between Lancaster, Reading, and Northumberland, particularly the leaft inhabited parts of these counties, with a collection of fmall phials, deceiving the people into a belief, that he is a phyfician; he vends medicines, bleeds, draws teeth, or fells ballads to fuch as do not choose to buy his drugs. The profits of this artful trade have already enabled him to purchase a horse, which carries him, his commodities, and his dog; he ftays with the farmers as long as they are willing to keep him; and feveral of them are glad to entertain him, on account of his knowledge and abilities. He makes himfelf happy every where, is merry, fings a good fong, and appears, upon the whole, to be a fly, crafty fellow, who began his career as a player. I am aware, that the various anecdotes, with which I prefent my readers, are not all equally interefting; yet they are all requisite to give a just notion of my tour, and to complete the delineation of the cuftoms and manners of the country.

The mountains, over which the road from Harrifburg to Sunbury leads, are all of granite, more or lefs perfect, which in fome places is very fine and beautiful. All the fpecies of maple, cornel-tree, called here dog-tree, fumach, Weymouth pine, feveral fpecies of afh, and numberlefs pfeudo-acacias, grow in the furrounding woods, and are here of remarkable fize and beauty.

At fome diftance from White's habitation we miftook our way, and ftruck into the old road, inftead of keeping the new one, which is fhorter by feven miles, and lies along the banks of the Sufquehannah. In confequence we croffed the mountain Mahonoy, to reach the plain, in which Sunbury ftands. This town, which is not fo large as Harrifburg, and in its buildings lefs elegant and compact, is feated on the left bank of the Sufquehannah, about half a mile below the fpot, where its

its two arms join. The profpect of the town, on defcending the mountain, is neither grand nor pleafing; in point of fize the houfes, viewed from the heights, refemble a camp, rather than a town. The finall furrounding plain is but indifferently cultivated, and without trees. The oppofite bank of the river is bounded by high mountains, the profpect of which is darkened by numerous pines, growing on the rocks, and confequently not likely to be cut down, to make way for cultivation. The river Sufquehannah is beautiful in every point of view, broad, with lofty majeftic mountains, rifing in gradual elevation from its banks; yet it is here lefs pleafing, except where the great variety of ifles, which it forms, and which are planted with trees, foften and enliven the prevailing gloom by the light that gleams through their branches. The Sufquehannah, near Sunbury, is more than a mile in breadth.

By the most correct information, which we were able to obtain, the inhabitants of all the counties, we have hitherto traverfed, are honeft, industrious people, attached to the federal government, and to the laws of the state. Criminal offences are rare, fome thefts excepted, which are generally committed by people, lately arrived from Europe, brought up in ignorance and penury, and whofe morals generally improve as they acquire a fmall property of their own. The different counties, through which we have paffed, have for thefe many years formed integral parts of the ftate of Pennfylvania. The limits of the lands are, therefore, more exactly afcertained here, than in other counties; and confequently law-fuits, arifing from the confusion of land-marks, are less frequent. These give occasion to about a twelfth part of the causes which are tried here: outftanding debts are the chief fubjects of legal profecutions. The manners of the people difplay great fimplicity, frequently bordering on rudeness. I have heard it afferted, that this apparent fimplicity is merely a cloak for deceit and artifice, but I have made no difcoveries of that kind by my own experience. Among the Americans of every rank and description, there prevails less of apparent civility and politeness than in France, or even in England, where I have found

found both, though in a different guife : yet we have experienced much good-natured, free, and engaging kindnefs, even from perfons to whom we had no letters of introduction, and an universal readiness to resolve our queftions, whenever they, to whom they were addreffed, were able to gratify our requeft. Ignorance, and confequently prejudices, are frequently met with, even among the higher orders of fociety: there are indeed fome exceptions, but thefe are few. Opinions on things and perfons are delivered in a manner positive rather than argumentative, and confequently all means of free difcuffion are generally excluded. Political opinions tend in general towards liberty, and are commonly offered with a franknefs, a boldnefs, and independence, which are truly pleafing. The general bent of the public opinion is in favour of France, and against her prefent enemies. It is by no means an uncommon thing, to hear farmers, unconnected with the higher circles, call Robefpierre, and all those who shared with him the supreme power, the banditti of France. The exafperation against England is great, spreads through all ranks of fociety, and has been much increased by the unjust proceedings against America, with which she was charged last year. In my opinion, Mr. JAY's negociation will hardly be able to fmother the glowing fpark. The public opinion is chiefly guided by the universal defire of amaffing property, which, if merely difplayed in industrious purfuits, and exertions to cultivate and improve the land, deferves much praife. In towns, indeed, it is lefs nice, both in the manner in which it flews itfelf, and the means it employs to attain its end. Many of my European countrymen are apt to cenfure this national bent, which precludes all the finer and nobler emotions of the foul. To this cenfure I cannot give my unqualified affent; and though I readily allow, that an immoderate love of money hardens the heart, and renders it callous to humanity, to civility, nay to justice itself, yet it does not follow, that it should be utterly incapable of a good and noble action. We have inftances of this in Europe, where love of money is as univerfally prevalent as in this country, though it conceals itfelf more than here; either becaufe it is more criminally refined, or meets with lefs convenient opportunities of K being

being practifed. Similar inftances occur in America. Again, if we confider this propenfity in a political point of view, we shall find, that it is the natural refult of its present infant state; of the variegated composition of its inhabitants, who are emigrants from every corner of the globe, full of the prejudices and partialities of the country whence they came; of the immenfe variety of eafy fpeculations, which croud around the monied men; and laftly, of the diffinction enjoyed here by wealth, which exceeds that derived from it in other countries: for, a few eminent flations excepted, which are occupied but a fhort time, and meritorious fervices rendered, which are foon forgotten by the people, there exifts in this country no perfonal diffinction. In fine, this way of thinking in private individuals is the most certain means of rendering the country itself more prosperous and important. And is not this the highest advantage derived from the universal interest, which unites and fupports fociety, that, with the exception of a few cafes, no member can enrich himfelf, without promoting at the fame time the profperity of others? Though this observation more generally applies to agriculture, yet there exifts hardly one defcription of profperity, nay of individual luxury, where it does not hold good. The people of America live well; the foil produces all the neceffaries of life, even in a very fuperficial ftate of cultivation : there are few perfons, who do not poffefs more than they need for their own maintenance. Hence arifes the indolence of a great number of the inhabitants, who, having by four days labour earned a whole week's fubfiftence, idle away the remaining three days; hence their lazinefs, relative to agricultural improvements, which would require fums of money, and other facrifices, of the neceffity of which they are not convinced, being infenfible of the advantages to be derived from them. Improvements, fimilar to those which have already been made in regard to the political organization of fociety, to commercial relations, navigation, and roads, will certainly be effected in agriculture in the process of time. But, before they can take place, the land-owners must be more forcibly impressed with the necessity of roufing from their indolence, and abandoning their prejudices; and the population

67

tiply

pulation muft be increafed beyond its prefent amount ; which will certainly be done. Though all this muft happen in the ufual courfe of nature, yet men of abilities, and learned focieties, fhould endeavour to diffufe ufeful lights by good books, by collections of inftructive extracts from European works of acknowledged merit, and by all other means of inftruction. For, undoubtedly, they may thus accelerate the period, when the neceffity of the above improvements will be more fentibly felt. In a country like this, literary focieties may prove eminently ufeful, if they do not affume too learned an appearance, but are animated and guided by the true public fpirit, which fpeaks a fimple and perfpicuous language, and readily repeats its inftructions, untinctured with the vaim felfifhnefs, which generally dictates the profeffions of private individuals.

The increase of the price of land is uncommonly great, it having been more than doubled within the last three or four years. Though the price of labour, from the high value of ground, which, within thefe laft twelve months, has experienced an extraordinary rife, is higher than ufual; yet it feems still the most profitable speculation for monied men in this country, to lay out their money in land, which they may have cleared and cultivated under their own eyes. Notwithstanding this uncommon rife of the price of land, inftances of its being difpofed of at the fame price, which prevailed fome years fince, are not unfrequent. The circumstances, under which this happens, are, it is true, rather of a peculiar complexion, yet pretty common. If, for inftance, a perfon, four years ago, bought eight hundred acres of land, and bound himfelf to pay a fourth of the purchase-money at the expiration of four years, but was either too indolent to raife within the time a handfome fortune by his labours, or fpent the proceeds of his eftate, which he fhould have laid by to pay his debt; he must raife money as well as he can, and must fell his land at any price, without being able to infift on that which the adjacent lands fetch at this time.

The numerous banks, which have lately been eftablished, feem to have contributed not a little to the uncommon rife of the price of land; for in proportion as they increase the quantity of money, they also mul-

K 2

tiply and facilitate the means of fubfiftence. It is by quickening the activity of internal commerce, and increasing the means of converting property into money, that *banks* raife the value of lands in fale.

A relaxation is observable among all orders of fociety. Drunkennefs is the prevailing vice, and, with few exceptions, the fource of all other evils. A fpirit, or rather habit of equality, is diffufed among this people, as far as it poffibly can go. In feveral inns, efpecially fuch as are fituate on lefs frequented roads, the circumftance of our fervant not dining with us at the fame table excited general aftonifhment, without its befpeaking any bad intention on the part of those who manifested it. The inhabitants exhibit to ftrangers ftriking inftances both of the utmost cleanliness and exceffive nastiness. They are much furprised at a tefufal, to fleep with one or two other men in the fame bed, or between dirty sheets, or to drink after ten other persons out of the fame dirty glafs; and they wonder no lefs, when they fee ftrangers neglect to wafh their hands and face every morning. Whifky mixed with water is the common drink in the country. There is no fettler, however poor, whofe family do not drink coffee and chocolate, and eat falt meat at breakfaft. At dinner comes falt meat again, or falt fish and eggs; and at fupper, once more falt meat and coffee. This is also the general rule in inns. An American fits down at the table of his landlord, and lies down in the ted, which he finds empty, or occupied but by one perfon, without in the leaft enquiring, in the latter of thefe cafes, who that perfon may be. We have hitherto fortunately efcaped a perfonal trial of this last American custom, but were very near experiencing it at White's.

The roads are good, where the foil is fo, the road by Lancaster excepted; art has hitherto but little meddled with the roads in Pennfylvania. Such spots, as are bad and muddy, are filled up with trees, placed near each other; when these fink into the ground, others are laid upon them. Over small brooks, bridges are thrown, which consist of boards, placed on two beams, laid along the banks of the brook. These boards frequently rot, and remain in this condition for months together, without its entering into any one's head, to replace them with others. We have

have paffed feveral fuch bridges, with great danger to our horfes, from the bad condition of the boards. All this will be better in time; yet I mean to defcribe things just as they are now. Creeks are generally forded. Acrofs fome, which are very deep, wooden bridges are thrown; which, however, are not fuch as they should be: the boards, or small trees, with which they are covered, are neither fo good, nor fo close to each other, as might be wished.

This is a brief fketch of the phyfical and moral flate of the country, which we have hitherto traverfed, drawn after those observations, which the fhortness of the time allowed us to make. I shall occasionally correct, what on more exact information I find to be erroneous, and supply what may be deficient.

# Sunday, the 17th of May.

On the opposite fide of the river, a mile above Sunbury, at the extreme point of the Ifthmus, formed by the two arms of the Sufquehanna, stands Northumberland. Sunbury is the chief town of the county. But the fmall number of public buildings, which are neceffary for the administration of justice, constitute its only advantages over Northumberland; that, on the other hand, enjoys all the benefits of a fine fituation, which, in fact, is as delightful as may be conceived. The two arms of the river forming a right angle at the point of their confluence; the country expands behind it in a femi-circular form, rifing in gentle fwells of a fruitful foil, and connected with vallies and opening plains of still richer ground. The banks of both arms of the river are fusceptible of cultivation to a wide extent, on the fide where Northumberland stands. Both arms are navigable, without interruption, to a diftance of three hundred miles, and water a foil, which courts cultivation. The number of houfes is at this time, perhaps, a fixth greater at Sunbury than at Northumberland, where it amounts to about one hundred. The first houses were built in 1775; yet the inhabitants were driven from them in the war of the revolution, and their habitations destroyed. The town was not rebuilt till the year 1785. It is undoubtedly

undoubtedly the worft built town we have hitherto fcen. All the houfes are of wood, chiefly log-houfes; two only are built with ftone. There is no market-place here; the town contains no inns, but three or four whifky-houfes. We put up in that which is the beft of them; and yet it rains on our beds, as well as on our horfes in the ftable. Methinks there is hardly any place fituate more favourably for its becoming a large city, than Northumberland. The flow progrefs, hitherto made by the town, I have heard imputed to the untoward character and little fenfe of the gentleman, who poffeffed three-fourths of the ground on which the town ftands. He is lately dead; but had he lived longer, his exiftence would have proved no impediment, that might not eafily have been removed by the concurrence of favourable circumftances.

The price of land about Northumberland is, at prefent, from twenty to twenty-four dollars per acre, near the river; that fituate on the northern arm is ftill dearer, on account of the better quality of the foil, and becaufe a greater part of the ground is already cleared there, than on the eaftern arm. Farther up the river, land is fold from four to fix dollars an acre. The quality of the foil, the vicinity of a creek, and longer or fhorter inftalments, produce here the fame variety in the price of land as in other parts. The value, which I point out, is the medium price. Ground-fhares in the town are, at this time, fold at fortyeight or fifty dollars.

The inhabitants of Northumberland, as well as of the county at large, confift, for the moft part, of Dutchmen. There are fome Germans, and a few natives; but moft of the inhabitants are foreigners. The Irifh are, with a few exceptions, the worft of them all. Being lefs induftrious than the reft, they are confequently poorer; and the property of an Irifhman is conftantly at the fervice of fuch as wifh to have it. The Germans are more tenacious of theirs; and, for this reafon, in Sunbury, and the adjacent country, where they refide in confiderable numbers, eftates are dearer than in Northumberland, though the foil is of an inferior quality.

The ftate of agriculture in Northumberland, and the adjacent coun-

try,

try, is much the fame as in all other parts of America; but the proportion of cleared land is fmaller than in other counties we have traverfed. Labourers are eafily found; they are paid fix fhillings a day without victuals, or three fhillings and nine-pence with their entertainment. In the country, where they hire themfelves by the month, they have eight dollars, for which they are obliged to work twenty-fix days. Bricklayers' and carpenters' wages are, in town, one dollar per day. The price of tiles is four dollars per thoufand; and very good bricks coft, in Northumberland, two fhillings and fix-pence, delivered free of expence.

The price of lime is from nine to ten-pence per bufhel, of deal-boards five fhillings per hundred feet, and of other boards fix fhillings and fixpence.

As there is no market, either in Northumberland or Sunbury, the inhabitants live, for the greater part of the year, upon falted meat, unlefs they keep fowls. The farmers kill, at times, a cow; but fince an epidemic difeafe has carried off almost all the horfes, they have been obliged to replace these by oxen for the purposes of agriculture, and confequently use lefs beef than before. Cow-beef is at this time fold from five-pence to five-pence halfpenny per pound. The highest houserent in Northumberland is eighty dollars; and there is but one house in the whole town for which so much is paid. It is of brick, large and convenient, and was but lately fold for five thousand two hundred dollars. Every thing is somewhat dearer at Sunbury, but the difference is not a full fixth.

The land about Northumberland yields generally fifteen bufhels of wheat per acre, when it has attained what the farmers call a full flate of cultivation. The proportion of other crops is the fame as in other places. Indian corn is produced in large quantities, which fhews the ignorance and indolence of the farmers, for it exhaufts the foil; and though it fupplies all the houfehold wants of a family, yet not a bufhel is ever exported from the place where it grows. A great advantage, which might be derived from it, by mixing its flaks with the dung, is entirely neglected by the farmers. The fheep are rather long-legged and meagre; yet

yet the wool is good, and is fold for two fhillings and fix-pence per pound. But very little is fold; for in this vale of Pennfylvania, as every where elfe, the farmers would be very forry indeed, if they were obliged to keep many fheep.

I obferved before, that the clearing of lands in certain well-chofen districts is, in my judgment, the most profitable speculation monied men can enter upon in this country. The information I collected in Northumberland affords an additional proof of the truth of this remark. The expence for clearing and fencing an acre, amounts, upon an average, to thirteen dollars; and this is pretty high. The first crops yield generally twenty bufhels of wheat, if the ground be well cleared, the trees, which ftood in the middle, cut down, and the largeft well barked. Wheat is fold at this time for ten shillings per bushel. The agreement entered upon with a farmer, relative to a piece of ground which has been cleared of wood, generally purports, that he is to have half the produce, but must also find the feed. The land-owner nets therefore the first harvest five pounds, the value of ten bushels of wheat at ten shillings, and confequently more than the expence for clearing and fencing. If we fuppofe the medium price of wheat to be only five shillings and nine-pence per bushel, the land-owner obtains, even in this case, the first year, twenty-five per cent on the capital laid out; and yet there are many cafes where the former effimate falls fhort of the real proceeds, as there. are others where the latter is beyond them.

The prices rife as fast in the vicinity of Northumberland, as in other parts; but this country, which is uncommonly extensive, is but thinly inhabited, even in fuch diffricts as are fituate nearest to Philadelphia; the present number of inhabitants does not exceed seventeen thousand. The population encreases, however, yearly, through emigration from the Jerseys, from New-England, and a part of Pennsylvania. One hundred and thirty families, emigrants from the Jerseys, have very lately fettled on the branches of the Susquehannah. But the landmarks of the purchased ground are not always sufficiently known, nor the right of the fellers perfectly clear; for which reason actions, concerning

72

910 St. 2720.

cerning difputed limits, conftitute nearly three-fourths of the caufes, which are tried in the courts of law at Sunbury.

The political fentiments of the inhabitants of Northumberland are lefs virtuous and fleady, than of the inhabitants of the lefs remote counties. Several of them took, laft year, an active part in the revolt at Pittfburg, and still remain in confinement, on account of that affair. A definitive judgment being now daily expected in this bufinefs, every traveller, efpecially if he be fuppofed to come from Philadelphia, is afked by the interested inhabitants, as foon as he arrives, whether he brings any news refpecting that judgment. We were afked, like all other travellers; and the queftions, put to us on this fubject, were conceived in terms, which by no means befpoke good and loyal fentiments.

Near to Northumberland, on the northern arm of the Sufquehannah, and close to the point of confluence of the two arms of that river, lies an ifle, which contains about two hundred and fifty acres of the richeft foil, from fifty of which the largest trees have been cut down. The land is fit for all the purpofes of agriculture; and might be cultivated with equal profit and fatisfaction by an industrious owner. It is the most pleasant little estate, which can possibly be bought by any person defirous of fettling in Northumberland. At prefent it is the property of a man, much advanced in years, who lives on it, in a fmall log-houfe. He bought it about feven years ago for one thousand fix hundred dollars, and very lately refused three thousand three hundred, which were offered for this island.

Northumberland is the refidence of Dr. PRIESFLEY. They, who know with what relentless fury the \* \* \* \* \* \* \* \* \* \* \* exerted all its influence to procure him to be harraffed by the mob, his houfe in Birmingham to be burnt down to the ground, and himfelf to be infulted and made uneafy wherever he went, will, undoubtedly, feel for the fate of this gentleman, who has defervedly obtained fo much fame in the literary world, and whofe perfecution, were he even guilty of the groffeft political mifconduct, which is by no means the cafe, cannot but deeply interest in his favour every feeling mind. This unwarrantable extension L

pomie lo

73

of

of influence must excite universal indignation, and it needs no gift of divination to forefee, that the English mob, thus fet upon their supposed enemies by the \* \* \* \* \* \* \* \* \* \* \* may poffibly turn, fooner or later, against the instigators. However this may be, the perfecution experienced by Dr. Prieftley would hardly have driven him fo foon to quit England, had he not expected to enjoy in America that high celebrity and diffinction, which were promifed him by fome flattering friends. His celebrity was, however, of no long duration; the Americans are too little fenfible of the value of that knowledge, by which he has acquired fo diftinguished a rank among the literati of the age. They concern themfelves but very little about dogmatical difcuffions of the Bible, and the tenets of the Unitarians; and would readily give up all the experiments on air for one good and profitable speculation ! The persecuted from various countries have, in these late years, fought an afylum among the Americans; fuch arrivals are, therefore, no uncommon fight to this people; and they have not much time to lofe in vain civilities. Under thefe circumstances, the respect shewn to Dr. Priestley, who is a profound philosopher, an admired writer, a celebrated chemist, and a victim of the English ministry, did not last long. A few dinners, given to him at New York, where he landed, and at Philadelphia, to which place he afterwards proceeded, formed the whole train of honours which graced his reception. His fon, who arrived in America fome time before him, had bought lands, where all the Unitarians, and all the perfecuted of Old England, were to join and rally under the Doctor's banner. This fettlement was to enjoy a diffinguished protection on the part of the American Government; and to fecure to the Doctor a name, as chief of the fect, and founder of the colony. But thefe hopes have already vanished. No Englishmen have arrived to purchase his lands; and the Government of the United States, even that of Pennfylvania, did not confider the project of the Doctor's fettlement as more important than that of any other individual. The conftant praife of his uncommon merits as a natural philosopher induced his friends at Philadelphia, to folicit for him the professorship of chemistry in the college, which they obtained;

74

de la seración

obtained; but this place was far beneath the expectation of the Doctor, as well as of his family; and it became neceffary, even for the prefervation of his celebrity in Europe, to withdraw from a fcene, where his attempt of attracting universal attention had completely failed.

He therefore removed to Northumberland. The lands, purchased by his fon, were situate in that county, though he had actually resolved to relinquish the idea of founding a colony, which would have had no colonists but his own family; yet his removal to Northumberland, at least had not the appearance of an intention to abandon, in so abrupt a manner, a project which had already been announced to the world.

As Mr. Guillemard was flightly acquainted with Young PRIESTLEY, and more particularly with Mr. COOPER, who has also fettled in Northumberland, we were induced to prefer halting at that town, rather than at Sunbury, though both lay on our road; that I might gratify the wifh, which I entertained, to be introduced to a man fo juftly celebrated. The project of forming the intended fettlement in the country is entirely relinquished; Mr. Morris has generously taken back the greater part of the lands, which young Priestley bought of him last year, with all the formalities prefcribed by law. He has also found means to difpose of the rest, and has bought some land near the town, which he is now clearing and preparing for cultivation. The Doctor has built a house, to which he intends removing about the end of the fummer. His modes of life and drefs are nearly the fame as in England, the wig excepted, which he has laid afide. He frequently laughs at the world, but in a manner which clearly appears not to be from his heart. He spoke with great moderation of the political affairs of Europe, and in very mild expressions of England. He is now busied in the institution of a college, for which fix thoufand dollars have already been fubfcribed, and feven thousand acres have been affigned him, as a free gift. In this establishment, of which he has drawn up a prospectus, there is a prefident's place, doubtless intended for himfelf. JOSEPH PRIESTLEY, the eldeft fon, feems at prefent to be more engaged in industrious purfuits, than in political difcuffions. He has married a young English L 2 lady.

lady, apparently of a mild and amiable difpofition, but who fpeaks very little in company. She, as well as her mother-in-law, feem lefs to accommodate themfelves to American manners than their hufbands. Mr. Cooper has purchased fome hundred acres of land, which he is at present clearing of wood, and preparing for cultivation. He is undoubtedly a man of parts, of a reftless mind, ill adapted to find happiness in a retired rural life. In the account he wrote of America, it was certainly his defign, to perfuade colonists to join Dr. Priestley. In his manners, he affects at prefent a ftrong predilection for American cuftoms; and fays, that he prefers his prefent mode of living to any other. He is fufpected here of aiming at a feat in Congress. In point of abilities at least, he would hold no mean rank among its members. Some Englishmen, who lately arrived in America, intended to fettle in the vicinity of Northumberland. It appears, however, that they have abandoned that intention, difgufted with the fort of precedence claimed by Dr. Prieftley and his family, and with the aufterity of their manners; though unqueftionably the Doctor's acquaintance and library would prove a very great accommodation to new fettlers; and his misfortunes and perfecutions cannot fail to intereft every one in his favour. As a companion of Mr. Guillemard I was received by thefe families, with as much politenefs as their cold and gloomy tempers ever difplay.

In one of our water excursions with young Prieftley, in the vicinity of Northumberland, we landed near a wooden house, built against the tide of a high mountain, which is covered with wood and fragments of rocks, and separated from the river by a track of land, about four and twenty yards wide. An English lady inhabits this small house, which would prove a highly interesting spot, if the were young and handsome, and awake to the pleasures or the forrows of love. But, alas! such the is not. She has three daughters, the youngest of whom, the only one that refides with her, is twenty years old. This lady left England in confequence of her husband's becoming a bankrupt; to avoid the difgrace; attending an event of that nature, which, however innocent the bankrupt may be, must wound his own feelings, as well as those of his family;

family ; and to prepare an afylum for her hufband, after he fhall have fettled his accounts with his creditors. Her name is DASH : her hufband was a banker of Bath, Colonel of the militia of his county, and enjoys the reputation of an honeft man. It is abfolutely impoffible, to difplay more fpirit and perfeverance, than this lady has done, ever fince fhe fettled on this effate, not an inch of which was cultivated at the time fhe purchased it. It contains about one hundred acres; on which, fix months ago, not a hut was to be feen, and where not a tree was felled. All these obstacles she has furmounted. She is now building a stone houfe, and will, therefore, be able, within a twelvemonth, to receive her hufband in a retired and humble, yet decent habitation. The fituation and misfortunes of this poor lady have in fome degree injured her brain. But, this circumstance, while it increases her loquacity, does not prevent her from purfuing that direct line of conduct, which the has marked out for herfelf. Two of her daughters have been well married, fince their arrival in America. With a fort of enthusiasm, I listened to the other, who is at home, whilft fhe played on the pianoforte. She performs very well, is young, pretty, unfortunate, modest, possesses no property on earth, and, in a wooden hut, plays upon one of the fineft inftruments, that ever came from Longman's shop. The strange contrast of all these circumstances might easily obtain a young lover for Miss Sarah Dafh; and this I most fincerely wished her, at my departure; but, young lovers are not fo eafily to be won, in this country.

I had here another proof how profitable a fpeculation it is in this country to purchafe wood-land, clear the ground, and render it fit for cultivation. Mrs. Dafh bought one hundred acres for two hundred and fixtyfive dollars, twenty of which fhe has cleared, and fown with wheat; including the fpot on which her houfe ftands, and a finall garden. The expence for clearing the land, and building her wooden houfe and a stable, amounted in the whole to one thousand and fixty-five dollars. Her twenty acres yielded each twenty bufhels of wheat, the price of which, this year, is ten fhillings per bufhel. She employs no farmer, becaufe the is herfelf on the fpot; and confequently the produce of the first vear's

year's haveft from twenty acres amount to two hundred pounds, or five hundred and thirty-three dollars, the moiety of the amount total of her expence, the purchase money excluded.\*

We paffed the Saturday and Sunday in Northumberland, and proceeded on Monday to Wilkfbarre.

# Monday, the 18th of May.

The road from Northumberland to Berwick, which we had been told was dreadful, we found in a much better condition, than any we have hitherto paffed. The road is dreary, without the leaft variety of profpect, runs conftantly, or at leaft generally, through woods, though it lies parallel to the river, upon which, however, a view only opens now and then, and the bed of which, to the fouthward, is continually hedged in between mountains covered with fir.<sup>†</sup>

We halted at Mr. MONTGOMERY's, twelve miles from Northumberland. The creek, on which his faw-mill is fituate, is the only one we have hitherto feen. The land, which mostly flopes towards the river, feems good. Few or no rocks are to be feen. Mr. Montgomery is a furveyor; he does not keep an inn, but fupplies both men and horfes with food and provender for money. From him we learned, that the price of the beft land in his neighbourhood, on the banks of the river, is from twenty-three to twenty-eight dollars an acre; but that when whole estates, for instance, four hundred acres of good foil, are fold, the tenth part of which is cleared, the price of land amounts to eight dollars per acre; that land, which lies yet in wood, fetches from two to five dollars per acre; that the price of labour is three fhillings per day; that it is no eafy matter to procure labourers, becaufe the number of inhabitants in the neighbourhood is inconfiderable; that the colonifts confift chiefly of Dutchmen, or their children; and, laftly, that this diffrict has suffered much from an epidemical difease, which, two years ago, de-

\* The original fays, the purchase-money included, but this is either an error of the prefs, or an overlight of the author.—Translator.

+ With the exception of two or three large bafins, formed by the river.

ftroyed

75

ftroyed nearly all the horfes. To judge from the fymptoms, pointed out by Mr. Montgomery, I never heard of any fimilar diftemper in France. By his defeription, it is a weaknefs, which deftroys a horfe in the courfe of two months. The liver is blown up by a fwelling, which extends into the legs, and the whole mafs of blood is entirely difcoloured. This diftemper is called here the *yellow water*.

The road to Berwick leads, for its whole length, conftantly through woods, and confequently affords no profpect. There are few habitations here, and thefe have a mean appearance. At fome diffance from the houfes, we faw a few ftraggling cows and fheep.

We halted in the diffrict of Fishing Creek, at one ABRAHAM MIL-LER's, who is a farmer, and keeps an inn and a fhop. His eftate confifts of three hundred acres, feventy of which are cleared. He clears annually about twelve or fifteen acres more, but not without confiderable trouble, as labourers are very fcarce in this diffrict; they are paid three shillings and fixpence per day, and have befides their board, which is eftimated at about one shilling and fix pence. Here, as well as in all the other places through which we have hitherto paffed, three dollars per acre are generally paid for hoeing up the roots of bushes, on fuch ground as is defined for cultivation; or if day-labourers be employed in this work, they are paid five shillings a day, befides their victuals. This was the first place, where we used maple fugar, which we found excellent. Abraham Miller fells yearly about five or fix barrels of this fugar. He buys it at thirteen pence per pound, and fells it at fifteen; the brown moift fugar of the colonies he fells at fourteen pence. He procures all the goods, fold in his fhop, from Philadelphia; they are brought in waggons as far as Cataweffy, where they are fhipped on the Sufquehannah, and thence conveyed to Fifhing Creek. The aggregate amount of freight and carriage was, formerly, one dollar per tun, but fince last fpring it has rifen to one dollar and a half.

The price of land in the neighbourhood is from eight to ten dollars per acre, if in any degree cleared of wood, and from two to three dollars, if ftill covered with trees. Habitations are fcarce and ftraggling, but

but increase in number nearer to Berwick. This is the chief town of the diffrict: it stands on the banks of the river. The fituation is sufficiently agreeable, and more open than that of other places, through which we have lately passed. This small village confists of twenty miferable houses, in which we could not find an egg for our supper, but we procured fome milk. The beds were clean, the stabling good, oats and hay excellent; and travellers on horseback are usually contented themfelves with fcanty fare, if their horses be well provided for. The innkeeper and his wife are a young couple, who have but very lately fettled here. Their house is of wood, and only half finished; they posses, at prefent, eighty acres, ten of which are cleared and cultivated. The price of land at Berwick is twelve dollars, if the ground be already fomewhat cleared, and from one dollar and a half to two, if the wood be not yet cut down.

The inhabitants of Berwick, as well as of the huts, we faw on this day's journey, are a medley of Englishmen, Frenchmen, Germans, Flemings, and Scots. Most of the colonists, who have lately arrived, come from the Jerseys. They feem all poor, and are badly cloathed, yet their ftrong and healthy appearance shews, that they are well fed, and soothes the mind, which sympathizes in their poverty. The number of children is, in proportion to the habitations, very great indeed. Near Ovens we faw a school for young girls, which, from the stallness of the hut, and the number of children who ran out to see us pass, had the appearance of an ant-hill. Two miles below Berwick are those rapid currents, known by the name of Nescopeck, which greatly impede the navigation of the river, especially at low water.

# Tuesday, the 19th of May.

This day proved rather unfortunate to us. We left Berwick at fix o'clock in the morning, and were unfortunately addreffed to one 'SQUIRE BEACH, who lives feven miles from it, and who was to point out to us the the beft road to Wilkfbarre. Our ill-luck would have it, that this 'Squire Beach is a maker of roads, and had but very lately conftructed

30

New Marker Street

structed a new one, which is fome miles shorter than the old road. He advifed us to take the former, which he affured us was the best. Relying on his affurance, we followed his advice, but were on the very outfet at confiderable pains, to find the place where we were to be ferried acrofs the river, to reach the new road. The ferry-boat, which was rowed by a man turned of feventy, was too fmall to contain our four horfes; we therefore caufed our baggage to be carried over first; and this arrived fafe on the oppofite bank. The fervant was ordered not to wait for us, but to proceed. On the return of the ferry-boat, Mr. Guillemard and I embarked. His mare, who is always very fpirited, and whofe mettle was perhaps heightened by the fight of the other horfes on fhore, began to ftir in the fmall boat, which was rather low at the fides; and in the midst of our passage put one of her hind-legs into the water, which brought her whole hinder part down. The boat heeled to that fide, was filled with water, and would have been inftantly overfet, but for Mr. Guillemard's prefence of mind. He pushed the horfe into the river, and thus faved us in the most imminent danger of being drowned; a danger to which travellers must be frequently exposed in this country, from the bad construction of the ferry-boats, as well as from the imprudence and unfkilfulnefs of the ferry-men. The mare, Mr. Guillemard holding her fast by the bridle, fasely reached the fhore; and thus far every thing was well. But this incident was the harbinger of accidents still more unpleasant. We could not difcover any road; fome trees, which had been felled, fhewed an intention, it is true, to make one; but we faw even few of thefe. No beaten road was to be found; ten times already we had miffed our way. We had to travel eighteen miles over felled trees, deep moraffes, rocks, and loofe Itones. The girth of the baggage-horfe broke two or three times; Mr. Guillemard's mare, who was badly faddled, twice loft her faddle on a fteep road, and threw her rider. She ran away and fcattered part of her load; a brace of piftols was loft; our horfes were exhaufted with fatigue; we were tired, faint with hunger, and unable to difcover any human habitation on the road. A few houfes standing at some distance

M

from.

from it, which we vifited, could not fupply our wants; and, to encreafe our misfortunes, it rained all day long. At length we found fome oats at an honeft German's, whofe wife procured us alfo milk and eggs. Thus refrefhed, we purfued our journey, not without feveral new accidents befalling our baggage; and at laft reached Wilkfbarre. My friend's horfe was lame, the faddle was broken to pieces by the accident in the ferry-boat, and our cloaths were torn; but at Dr. Cowell's we found a good fire, a good ftable, good eggs, falt meat (frefh meat is entirely out of the queftion) and thus, as we fmoaked our fegars, indulged the pleafant thought of having efcaped all thefe misfortunes.

Wilksbarre stands on a wide and fertile plain. The prospect, on defcending the mountains by the creek of Nantikoke, is one of the richest, most extensive, and most delightful, we have yet seen. The land is in a high state of cultivation. We were not able to obtain any new information, that deferves to be mentioned.

Wilkfbarre is the chief town of the county of Luzerne. It is a fmall place, containing about a hundred wooden houfes, of a much better appearance than those in Northumberland. The town is feated on the Sufquehannah, and must in time become confiderable, if the country, which lies higher up, shall be more generally cultivated. It is even now of fome importance, and has about two hundred and fifty inhabitants. The population of the whole county is estimated at five thoufand fouls.

## Wednesday, the 20th of May.

Mr. Guillemard's mare being lamed by our misfortunes of yefterday, he refolved to leave her at Wilkfbarre, under the care of his fervant. We accordingly fet out by ourfelves. A new road was proposed to us, which shortens the journey twenty miles, but is untrodden. However, having yesterday had enough of new roads, we preferred the old, though it was bad, and twenty miles longer. At the end of our first day's journey, we reached Huntsferry. The road was bad, and we were feveral times obliged to travel in foot-paths, which were hardly passable.

82

46 2 37 23, 20 310

able. We frequently met with quarries of mill-ftone, and with fpots, where a path, only eighteen inches in breadth, was cut through the rock, or where the road was supported by trunks of trees, narrowed by falls of earth, obstructed by fallen trees, and led along the edges of a precipice. We often passed over declivities, rendered more dangerous by the ground being ftrewed with loofe ftones, or fragments of rock. Fortunately it fo happened, that we never got more than a few yards out of our road; but we were obliged to enquire the way of every one we met, to avoid more confiderable deviation. The dwellinghouses in this diffrict are most of them fo new, that the inhabitants are often ignorant of the names of places, which are fearce two miles diftant; nor are they able to point out the direction and diftance, fo that their information beyond the next farm-house is not to be depended upon. There is not one inn on the whole road, but fome private individuals are in the habit of felling oats to travellers. They live at certain diftances, and, being known, travellers conftantly put up at their houses. The first day we halted at the house of one HARRIS, twelve miles from Wilksbarre, and afterwards at HARDING's, fifteen miles farther on. Both are farmers; the former, a captain of the militia, is richer, and has been established much longer than the latter. They are both very bad hufbandmen; they cultivate nothing but Indian corn and potatoes, in a foil, which is, for the most part, poor, and, with few exceptions, produces nothing but fpruce fir and the common birch. All the cultivated fields are inclosed with fences, which confift of poles of wood, once fplit, and and laid zig-zag upon one another without any ftakes; a manner of fencing, general in all parts of America, at the first clearing of the ground. The expence of clearing ground amounts, in this district, to seven or eight dollars an acre.

Five miles beyond Harding's habitation, we croffed the river in a very bad ferry-boat, and arrived at HUNT's, an Irifhman, who fettled here ten years ago. We found in his houfe Indian corn for our horfes, but neither oats nor hay, and no milk for ourfelves, nor even an egg. The houfe confifts of one room on the ground-floor, and of a corn-loft over

M 2

it. Beds were not to be had. Hunt took an old paillaffe from his own bed, and lent it me for the night; and on this, with my faddlecloth, I refled comfortably. By Hunt's account, the fpot, which he inhabits, is very unwholefome; and fo, he fays, are the banks of the river in general for fome way, higher up, or lower down. His young and handfome wife has laboured under a hectic fever, for thefe eight months.

# Thursday, the 21st of May.

In the morning we halted at one Mr. GAYLOR's, eleven miles from our laft night's quarters. All the dwelling-houfes are of the fame fort. We purfued our journey to Afylum by Wyalufing. The latter is a confiderable village, feated on a creek, from which it takes its name. The road is the fame as yefterday, at times even and good, often recently cut through the wood, or interrupted by new fettlements, the fences of which occafion a circuit of near a furlong, at the end of which it is difficult to find the road again.

Nearly all the plantations, which we have hitherto traverfed in this district, have been more or lefs recently formed by families, who derive their titles from Connecticut. The right of property claimed by that flate, in regard to thefe lands, has been declared to be unfounded, first by arbitrators in Trenton, three or four years ago, and fince that by the judges of affize, who hold their fittings in Philadelphia. The laft fentence has excited general difcontent in these parts; and, in truth, should it be confirmed by the supreme court of justice, the natural confequence must be a general disposseffing of all the cultivators, who have fettled here by right of purchase, or gift from the state of Connecticut, and who have spent feveral years labour on a foil, on which they eftablished themselves in the most legal form. Several of these settlers were, during the laft war, driven from their polleffions by the Indians, who deftroyed all the buildings, and burnt the woods, as far as they were able, on their retreat. These are indeed fufficient reasons for difcontent; and the state of Pennsylvania, fatisfied with being reinstated

in.

84

10 - 1 - 1 - 10 - 11

in its right to thefe lands, will undoubtedly leave them in the poffeffion of thofe families, who, *bona fide*, obtained them either for money, or by their labour. If Pennfylvania had fold the fame lands, the fupreme court of judicature would doubtlefs award an indemnification in money. But in the United States, whofe confliction is, and muft be founded on the rights of man, and modelled by juffice, peaceful and induffrious inhabitants will never be driven from their poffeffions, or expelled from their homes. The foldiers, ordered to carry fuch a fentence into execution, would be too deeply affected; their own feelings would contradict the oath of allegiance they have taken, and humanity would forbid them, to co-operate in the execution of the law. The flate of Pennfylvania is too wife, and too juft, not to embrace, in thefe circumftances, a refolution, which is dictated by the very principles it profeffes.

The inhabitants, who derive their titles from Connecticut, form, we were told, two diftinct claffes, whole rights are of a widely different complexion. One class fettled here long before any public difcuffion of the claims of the two states took place; and most of these had to rebuild their houfes, which, as has already been mentioned, were deftroyed during the war. The other class formed their fettlements after the above award, folicited by both states, had been isfued, and therefore were not, or, at least, should not have been ignorant of the hazard, to which they exposed themselves. Several perfons in Connecticut have proceeded in this bufinefs in a manner extremely blameable, especially one Colonel FRANKLIN, who, two years ago, decoyed feveral families into this country, notwithftanding the opposition of the state of Pennfylvania, and of all the friends of order, who discouraged thefe unfair proceedings, and foretold to the new fettlers, that they would foon be dispossessed of their estates. Most of the families lately arrived here are poor. They obtained the land gratis, and are the lefs disturbed in their prefent momentary enjoyments, by apprehensions of fome future disposseffion, as the character of many among them is not of the fairest complexion. The colonel acted on the principle, that an increase

increafe of the number of colonifts would increafe the force of refiftance against the fentence of a judicial dispose fifther, in which, being himfelf a proprietor, he is perfonally concerned. This difference, in point of the period of possible fifther, and of the species of property, renders it far more easy to accommodate matters, than it might otherwise have proved; fince the difference being fettled with the landholders of the former class, the execution of any vigorous measure, which it may be neceffary to adopt against those of the latter, will be greatly facilitated.

Afylum stands on the right bank of the Sufquehannah, which must be croffed, in order to reach this fettlement. It has been only fifteen years established. Messrs. TALON and De NOAILLES, who arrived here from England, richer in hopes than in cash, fancied they should be able to purchase, cultivate, and people two hundred thousand acres of land. They interested in their project some planters of St. Domingo, who escaped from the ruins of that colony, and who had prudence enough carefully to preferve the remains of their fortune. Meffrs. Morris and Nicholfon, who poffefs immenfe tracks of land in the United States, were willing and ready to meet their views. Lands were chosen on the northern banks of the Sufquehannah; the price and inftalments were regulated, and the first trees felled \* on the spot, which was selected for the town. Mr. de Noailles took upon himfelf the management of the concerns of the company in Philadelphia. Mr. Talon caufed the first log-houfes to be erected here, and the land to be prepared for the reception of the new inhabitants. But they foon difcovered, that they fhould be difappointed of all the money, which they had hoped to receive. Meffrs. Morris and Nicholfon readily releafed them from this first difficulty, and the contract was refeinded. From exclusive proprietors of these lands, the above gentlemen became affociates and partners in trade with Meffrs. Morris and Nicholfon, in all the profits arifing from their fale, and the quantity was enlarged to a million of acres. Each of them kept about fix thousand acres, as his private property, the

\* In December, 1793.

price

86

Strain 23, 20 - 11

price of which was fomewhat raifed ; but more diftant periods of payment were fixed. Mr. Talon was appointed agent for the company, with a falary of three thousand dollars. The buildings, as well as all other expences, were, with the confent of Meffrs. Morris and Nicholfon, placed to the account of the company. The use of the most confiderable houfe, built by Mr. Talon, was affigned to himfelf as agent. Ignorance of the language of the country, want of practice in bufinefs of this kind, avocations of a different nature, and the embarraffments of the company, have deprived Mr. Talon of the most exquisite happinefs, an emigrated Frenchman can poffibly enjoy, to open a peaceful and comfortable afylum for his unfortunate countrymen, to affift them in the first moments of their settlement, and thus to become the founder of a colony, which would have proved as honourable to the name of a Frenchman, as useful to the unfortunate fufferers, whom it would have received. An enormous expence, partly incurred without a mature confideration of the plan, occafioned deficiencies. The company was not able to fulfil its engagements. The exertions of Mr. Talon and his affociates were not equal to the removal of these difficulties; and it becoming evident, that the colony could not attain profperity fo quickly as Mr. Talon had expected, he refigned his fituation as agent to Mr. Nicholfon, and fold him his fhare in the property of the company, who, having fix months before bought that of Mr. de Noailles alfo, is now become fole proprietor of the land.

This is a brief fketch of the hiftory of Afylum. There cannot remain a doubt, but that this eftablifhment, the plan of which is certainly the work of much deliberation, would have proved more fuccefsful, had it been formed by degrees, and with a fufficient fupply of ready money. For notwithftanding the errors committed in the execution of the plan, and the adverfe incidents it has met with, Afylum has already attained an uncommon degree of perfection, confidering its. infant ftate. Thirty houfes, built in this town, are inhabited by families from St. Domingo, and from France, by French artizans, and even by Americans. Some inns and two fhops have been eftablifhed, the

the bufinefs of which is confiderable. Several town-fhares have been put into very good condition; and the fields and gardens begin to be productive. A confiderable quantity of ground has been cleared, on the creek Loyalfock; where the company has allotted twenty-five thoufand acres of land, in part of a hundred thoufand acres, which the inhabitants of Afylum have purchafed by fubfcription. Similar agricultural operations, which take place in almost every town-fhare, are intended to enliven, at once, all the different parts of this large tract of ground. The town-fhares confist each of four hundred acres, from ten to twenty of which are cleared. The owner can therefore either fettle there himfelf, at the end of the year, or entrust it to a farmer. The clearing of the town-fhares is, at prefent, effected by fubfcription, on this principle; that for every acre belonging to a fubfcriber, who has cleared ten acres, five of which only are enclosed with fences, nine dollars are paid.

Mr. de MONTULÉ, one of the inhabitants of Afylum, directs this clearing of the ground; the plan of which he conceived for the welfare of the colony. The fentiments of the colonists are good. Every one follows his bufinefs, the cultivator as well as the inn-keeper and tradefman, with as much zeal and exertion, as if he had been brought up to it. The foil is tolerably good, the climate healthful. Almost all the ingredients of a thriving colony concur in Afylum, and afford room to hope, that these great natural advantages will, in time, be improved, for the benefit and profperity of the colonists. A new trading company has fuperfeded the former; at leaft the firm and management of the company's concerns have been altered. Mr. Robert Morris has entirely left it, and Mr. Nicholfon, being now the only proprietor, has formed a bank of his million of acres, divided into five thousand shares, containing each two hundred acres, the price of which, at two doldollars and half per acre, is five hundred dollars. They bear fix per cent interest, which increases in proportion to the state of the land; and at the expiration of fifteen years, the period at which the company is to be diffolved, all the benefits and advantages accruing to the bank are

88

10 - 20 20, 20 11

are to be divided among the holders of fhares. An office has been eftablifhed by the latter, for the direction and management of the concerns of the bank.

This new company, taught by the errors of the former, will no doubt make it their principal bufinefs, to promote the profperity of Afylum; which, alone, can, in any confiderable manner, increase the value of the land. Yet fome previous facrifices will alfo be required for that purpose. It will be neceffary to construct new roads, and repair the old ones. Encouragement must also be given to the families, which already inhabit Afylum; and advantageous offers must be held out to fuch, as may be disposed to fettle there. If these things be done, Afylum will foon be peopled. Motives arising from French manners and opinions have hitherto prevented even French families from fettling here. Thefe are now, however, in great measure removed, and if the company shall proceed with judgment and prudence, as it is to be hoped they will, there can hardly remain a doubt, but that Afylum will fpeedily become a place of importance. Its fituation on the Sufquehannah, two hundred miles from its fource, fits it in a peculiar manner for an emporium of the inland trade. French activity, fupported with money, will certainly accelerate its growth; and this will doubtlefs in time convince the world, that the enterprife and affiduity of Frenchmen are equally confpicuous in profperous and adverfe circumftances.

The following families have either already fettled, or intend to fettle, at Afylum, viz. 1. Mr. de BLACONS, deputy for Dauphiné, in the conflituent affembly. Since his quitting France, he has married Mademoifelle de MAULDE, late canonefs of the chapter of Bonbourg. They keep a haberdafher's fhop. Their partner is Mr. COLIN, formerly Abbé de Sevigny, arch-deacon of Tours, and *confeiller au grand confeil*. 2. Mr. de MONTULÉ, late captain of a troop of horfe, married to a lady of St. Domingo, who refides at prefent at Pottfgrove. 3. Madame de SYBERT, coufin to Mr. de Montulé, and relict of a rich planter of St. Domingo. 4. Mr. BECDELIERRE, formerly a canon, now a fhopkeeper; his partners are the two Meffrs. de la Roue, one of whom

89

was

1 37 23

was formerly a petit gens-d'arme, and the other a captain of infantry. The latter has married a fifter of Madame SYBERT, Mademoifelle de BERCY, who intends to establish an inn on the road from Afylum to Loyalfock, eight miles from the former place, whither she is on the point of removing with her husband. 6. Mr. BEAULIEU, formerly a captain of infantry in the French fervice, who ferved in America, during the laft war, in the legion of Potofky. He has remained ever fince in this country, has married an English lady, and now keeps an inn. 7. Mr. BUZARD, a planter of St. Domingo, and phyfician in that colony, who has fettled at Afylum with his wife, daughter, and fon, and some negroes, the remains of his fortune. 8. Mr. de NOAILLES, a planter of St. Domingo. 9. Mr. DANDELOT, of Franchecomté, late an officer of infantry, who left France on account of the revolution, and arrived here deftitute of property, but was kindly received by Mr. Talon, and is now engaged in agricultural purfuits with fpirit and fuccefs. 10. Mr. du PETIT THOUARS, an officer of the navy, who, encouraged by the conftituent affembly, and affifted by a fubscription, embarked in an expedition in quest of Mr. de la Pérouse. He was detained on the coast of Brafil by the governor of the colony, Fernando de Noriguez, and fent with his crew to Portugal, where he was very ill treated by the Portuguese government, ftripped of all his property, and only escaped farther perfecution by fleeing to America, where he lives free and happy, without property, yet without want. He is employed in clearing about two or three hundred acres of land, which have been prefented to him. His fociable, mild, yet truly original temper and character, are fet off by a noble fimplicity of manners \*. 11. Mr. Nores, a young gentleman, who embarked with Mr. du Petit Thouars, and escaped with him to this country. He formerly wore the petit collet +, was a pupil of Mr. de la Chapelle, possessor of a small priory, and now earns his

\* Du Petit Thouars returned afterwards to France, obtained the command of a fhip of the line, and was killed in the unfortunate battle off the mouth of the Nile.—Tranfl. + The petit collet (little band) was formerly a diffinguifhing mark of the fecular elergy in France.—Tranfl.

fubfistence.

fubfistence by cultivating the ground. 12. Mr. KEATING, an Irishman, and late captain of the regiment of Welfh. At the beginning of the revolution he was in St. Domingo, where he possessed the confidence of all parties, but refused the most tempting offers of the commissioners of the affembly, though his fentiments were truly democratic. It was his choice and determination, to retire to America without a fhilling in his pocket, rather than to acquire power and opulence in St. Domingo by violating his first oath. He is a man of uncommon merit, diftinguished abilities, extraordinary virtue, and invincible difinterestedness. His deportment is grave, yet affable. His advice and prudence have proved extremely ferviceable to Mr. Talon in every department of his bufinefs. It was he who negociated the late arrangements between Meffrs. Morris and Nicholfon; and it may be justly faid, that the confidence, which his uncommon abilities and virtue infpire, enables him to adjust matters of dispute with much greater facility than most other perfons. 12. Mr. RENAUD and family. He is a rich merchant of St. Domingo, who has just arrived with very confiderable property, preferved from the wreck of an immense fortune. 14. Mr. CARLES, a priest and canon of Guernfey, who retired to America with a fmall fortune, and who has now fettled at Afylum; he is an industrious and much-respected farmer. 15. Mr. PREVOST, a citizen of Paris, celebrated there for his benevolence; he was a member of all benevolent focieties, treasurer of the philanthropic fociety, and retired to America with fome property, a confiderable part of which he expended on a fettlement, which he attempted to establish on the banks of the Susquehannah, but which did not eventually fucceed. He now cultivates his lot of ground on the Loyalfock, as if his whole life had been devoted to the fame purfuit; and the cheerful ferenity of a gentle, candid, philofophical mind, still attends him in his laborious retreat. His wife and fifter-in-law, who have alfo fettled here, fhare in his tranquillity and his happinefs. 16. Madame d'AUTREMONT, with her three children. She is the widow of a steward at Paris. Two of her fons are grown up: one was a notary, and the other a watch-maker; but they have N 2 now

now become hewers of wood, and tillers of the ground, and fecure by their zeal, fpirit, politenefs, and unblemifhed character, the fympathy and refpect of every feeling mind.

Some families of artifans are alfo eftablished at Afylum; and such as conduct themselves properly earn great wages. This cannot be faid of the greatest part of them. They are, in general, very indifferent workmen, and much addicted to drunkenness. In time they will be superfeded by more valuable men; and American families, of a better description, will settle here: for those, who reside at present at Afylum, are scarcely worth keeping.

One of the greatest impediments to the prosperity of this fettlement will probably arife from the prejudices of fome Frenchmen against the Americans, unlefs felf-interest and reason should prove the means of removing them. These are frequently manifested with that inconfiderate levity, with which Frenchmen, in general, decide on things and perfons of the greatest moment; fome of them vauntingly declare, that they will never learn the language of the country, or enter into conversation with an American. Whether particular facts and occurrences can justify this prejudice, in regard to individuals, I will not affirm ; but certain it is, that they can never justify it in the latitude of a general opinion. A conduct founded on fuch prejudices would prove extremely hurtful to the interests of the colony; the progress of which has been already retarded by fo many unavoidable obstacles, that there certainly is no occafion to create new ones, by purpofely exciting the animofity of a people, among whom the colony has been formed, and who, in the judgment of every impartial man, must be confidered as in a flate of lefs degeneracy than many European nations.

The real farmers, who refide at Afylum, live, upon the whole, on very good terms with each other; being duly fenfible, that harmony is requifite, to render their fituation comfortable and happy. They poffers no confiderable property, and their way of life is fimple. Mr. Talon lives in a manner fomewhat more fplendid, as he is obliged to maintain a number of perfons, to whom his affiftance was indifpenfable.

It

It is to be wifhed and hoped, that the whole fettlement may prove ultimately fuccefsful. A more convenient fpot might, doubtlefs, have been chofen. But not to mention, that all *ex post facto* judgments are unfair, the prefent fituation of the colony appears fo advantageous, as to warrant the most fanguine hopes of fuccefs. Industrious families, however, without whom no fettlement can prosper, must be invited to it; for it must be confidered, that, however polished its prefent inhabitants may be, the gentleman cannot fo easily dispense with the affistance of the artiss and the husbandman, as these can with that of the gentleman.

A fpeedy adjustment of the prefent differences between Connecticut and Pennfylvania, with refpect to the eftates contiguous to the lands of Afylum, would also prove a defirable and fortunate circumstance for this colony. None but perfons of indifferent character are willing to fettle on ground, the title to which remains a matter of difpute. Even the fmall number of colonifts we found between Wilksbarre and Tioga are by no means praifeworthy in their morals; and they are poor, lazy, drunken, quarrelfome, and extremely negligent in the culture of their lands. The valuable emigrants from New-England, from the eastern branch of the Susquehannah, who should be encouraged to fettle here, will certainly not make their appearance, till they can be fure of cultivating their land without opposition, and of retaining the undifturbed poffession of their estates. It is therefore of the greatest importance to the company of Afylum, that this weighty bufinefs fhould be fpeedily and finally adjusted. When that is accomplished, the company will doubtlefs embrace the earlieft opportunity of advertifing the whole million of acres; they will endeavour to combine feparate estates with each other, by purchasing the intervening lands; they will make public their right of property, purfue a well concerted general plan, execute it with the requifite care and dispatch, and make the neceffary facrifices. They will perceive how advantageous and important it is, to place Afylum, as it were, in full activity, by constructing the roads already projected and commenced, by eftablishing a fchool, by inviting industrious fettlers, and by endeavouring to meliorate

liorate thebreeds of horfes and cattle : in fhort, by encouraging ufeful establishments of every kind. A few hundreds of dollars, laid out here properly, would produce the most confiderable and lasting improvements. In fuch cafes, however, it is requifite to calculate well, that we may expend judicioufly. By prudent and liberal measures, the prosperity of this French colony, and confequently of the company, would be effentially infured and promoted. And when this fettlement shall have once ripened into a flourishing state, it will ferve to connect the country, which is already cultivated along the banks of the river, above and below Afylum, and thus prove a fource of animation to this interesting part of Pennfylvania. But unlefs active and judicious measures be purfued, Afylum will inevitably fuffer from the partial inconveniences, which attend its fituation, and from the errors committed in the first formation of this colony; and inftead of attaining to the wifhed for profperity, it must, on the contrary, find its decline, if not downfal, in the very nature of its establishment.

Every thing in this fettlement, at prefent, appears in a precarious condition. The price of provision depends on a variety of fluctuating circumstances. By the activity and prudence of certain individuals the town is abundantly fupplied with grain and meat, and this honess the nomy keeps provision at a moderate price. But men of a lefs liberal way of thinking have it also in their power to occasion fearcity of the first neceffaries of life, and raife their price to a rate beyond all proportion to that of other commodities. The information, which I have been able to collect, relative to the state of agriculture, however accurate at the prefent moment, can hardly be thought fufficient for the direction of a planter, who should incline to state here; I shall, however, lay it before my readers, fuch as it is.

The land behind the town is tolerably good; but that on the banks of the river confifts of excellent meadows, laid out by families, who fettled here, before the prefent colonifts, producing very good hay, pretty confiderable in quantity, and they are capable of ftill farther improvement. The foil of Loyalfock is, in general, excellent. Many trees grow

grow there, which evince its goodnefs, fuch as, the white Virginian walnut-tree, white oak, plane-tree, fugar-maple and hemlock-fir. It is a circumstance worthy of notice, that half-way between Loyalfock and Afylum, common oak, which in the fields about the latter place is found in abundance, becomes at once fo fcarce, that not two hundred oak trees grow in the whole diffrict of Loyalfock, which contains two thoufand five hundred acres. The price of the company's land is at prefent two dollars and half per acre; very little however is fold. That of the town of Afylum fetches little more; although there is little doubt, that the price will rife gradually to ten dollars. The land contiguous to Afylum, which does not belong to the company, being at prefent in an unfettled state with respect to the right of property, this circumstance renders it a very undefirable possession for fuch fettlers, as do not with to expose themselves to the danger of subsequent litigations, and conquently to being difpoffeffed of their purchases. Hitherto the grain appears to have fuffered but little from the Heffian fly and from blights. The winter lasts here from four months and half to five months. Agriculture however has hitherto advanced fo flowly, that the cattle fuffer much during that feafon from want of fodder. They are, for the most part, fed with turnips, gourds, and straw of Indian corn. Both oxen and cows are of a very indifferent fort, as little attention has been paid to the breed of cattle brought hither by the fettlers. Both feed-time and harvest take place here about a fortnight later than in the vicinity of Philadelphia. The land yields about fifteen or twenty bufhels of wheat, fixty bushels of Indian corn, and three tuns of hay per acre. The foil feems naturally better adapted for meadows than for corn land; but from the little trouble attending the driving of the cattle into the foreft, the produce in corn is rather apparently great than fo in fact. In ploughing they generally employ oxen, which, it fhould be observed, are not fubject to any particular difeafe. They are at times driven to Philadelphia; and the country people frequently act here with fo little judgment, as even to fend them two hundred miles off, when they might obtain much better prices, and even ready money, in the neighbourhood.

bourhood. The bullocks, which are confumed in Afylum, are generally brought from the back fettlements, but it is frequently found neceffary, to fend thither for them. They are generally plentiful: the uncommon duration of the laft winter, however, proved fo defiructive to the cattle, that few are now to be feen, and a great fcarcity of beef prevails at Afylum, as well as in various other parts of America.

The grain, which is not confumed in Afylum, finds a market in Wilksbarre, and is transported thither on the river. In the fame manner all kinds of merchandize are conveyed from Philadelphia to Afylum. They are carried in waggons as far as Harrifburg, and thence fent in barges up the river. The freight amounts, in the whole, to two dollars per cwt. The falt comes from the falt-houfes at Geneffee, on the lake of Ontario. Flax is produced in the country about Afylum; and the foil is very fit for producing crops of that commodity. Maple-fugar is made here in great abundance. Each tree is computed to yield, upon an average, from two pounds and half to three a year. Melaffes and vinegar are also prepared here. I have feen Meffrs. De VILAINE and DANDELOT make fugar in this place, which much furpaffes any of the fame kind, that has hitherto come under my obfervation. A confiderable quantity of tar is also made, and fold for four dollars per barrel, containing thirty-two gallons. Day-labourers are paid at the rate of five shillings a day. Mr. de Montulé employs workmen from the eastern branch of the river, to clear his land; to these he pays half a dollar a day, befides allowing them their victuals; the overfeer receives a dollar and a third per day; thefe people turn out to be very good workmen. They are eafily procured, when employment is enfured to them for any length of time; but otherwife, it is very difficult to obtain them. The manufacture of potashes has also been commenced at Afylum; and it is in contemplation to attempt the brewing of malt-liquor. A corn-mill and a faw-mill are building on the Loyalfock.

The foregoing is a brief sketch of the present state of this interesting fettlement,

fettlement, which, even a twelvemonth hence, will no longer retain its prefent features. To judge from the actual condition of the probable progrefs and duration of this infant colony, it must either rife or fall rapidly. It is to be hoped, that the want of fimilarity to the original in my defcription, which may be obfervable next year in the colony, will arife from its rapid progrefs towards maturity; and this hope is grounded on probable appearances.

he chimated at one thoufand three hundred

## os anomataci el cloic w Tuesday, the 2d of June. Moult own other sladw

On our arrival at Afylum, it was not our intention to have flopped more than four days in that place. But the pleafure of meeting with Mr. and Madame de Blacons, a defire to obtain a thorough knowledge of the prefent state of the colony, as well as of its prospects of future improvement; and the cordial reception we experienced from all its inhabitants, induced us to add four days to our ftay; and, in the whole, we ftopped twelve days. On Tuesday, the 2d of June, we at length took our departure. Meffrs. De Blacons and Du Petit Thouars joined our caravan; the latter, who travelled on foot, had let out the preceding evening. The road from Afylum to Tioga leads, like the reft, through continued woods. We preferred that on the right bank ; as we should then be obliged to cross the river only once. The road is in some places exceffively miry and ftony, although in others it is very good. On the whole it may be called tolerable, yet it is often difficult to be found. It affords but few striking prospects. The Susquehannah, which we met with but once, during our whole journey, flows conftantly between two chains of mountains, which feem to encroach upon its channel, but from time to time open into vallies more or lefs deep, but never very extensive strung of eldcalls, and choing of eld

We ftopped at SOLOMON TEASY's, to reft our horfes. This planter occupies an eftate of five hundred acres, only thirty of which are yet cleared, and which belongs to the village of Old Shefhequen. Its owner arrived here about five years ago, from the county of Orange, in the ftate of New York; but he now intends to fettle in Geneffee;

0

and

and, confequently, wifhes to dispose of his plantation, which he holds from the state of Connecticut; the price he demands is five thousand three hundred and ninety dollars, that is to fay, about ten dollars and threefourths per acre. Another landholder, at whole house we stopped to procure directions about the road, intimated to us a fimilar defign, as he mistook us for land-jobbers. His plantation confisted of three hundred acres, fixty of which were cleared, with a corn and a faw-mill; which he effimated at one thousand three hundred dollars. He asked for the whole estate two thousand fix hundred dollars, which is tantamount to eight dollars and half per acre. The state of agriculture is no better here than in the other parts of Pennfylvania, and even worfe than in many of them, all the plantations being yet in that infant state, where the foil yields rich crops without cultivation. The fettlers too are doubtful whether their rights to their poffessions will be confirmed, have much bufinefs upon their hands, and are in general little able to advance money for the improvement of their lands, fo that they hardly give themfelves the trouble even to plough up the ground. For this purpose they make use of oxen, the medium price of a yoke of which is feventy dollars. Wheat commonly fells for one dollar a bufhel, rye for four shillings, and oats from two shillings and fix-pence to three fhillings. There are two fchools in the neighbouring country, which are both kept by women, who teach needle-work and reading. To learn to read is, therefore, the only inftruction, which boys can obtain here. These schools are maintained folely by the see of five shillings a quarter paid by each scholar. They are evidently infufficient, yet they are schools; and these are yet very rare in Pennsylvania.

No place has been hitherto fet apart here for religious worfhip. They, who defire to perform this, affemble in private houfes, and engage a preacher for a yearly falary, which, however, is very fmall. Families of methodifts conflitute the principal part of the inhabitants.

On the other fide of the river ftands New Shefhequen, a fmall neat town, containing about twelve houfes, which are built either of rough logs or boards. It is feated in a very pleafant plain. The juffice

justice of the peace, the furgeon, and the pastor of the neighbouring country, refide in this place. It contains shops, in short all those things which are found only in a principal town.

The road from Old Shefhequen to Tioga, which had been reprefented to us as a very bad one, proved, on the contrary, very good. Here the farm-houfes lie clofer to each other. Near Tioga, the river of the fame name discharges itself into the Susquehannah. The fite of the town, or rather of the eight or ten houses which are fo called, is about two miles diftant from the confluence of the two rivers, and very pleafant. The mountains, which form the banks of the Sufquehannah, do not lie fo clofe together, as in any other part of its courfe that we have yet feen. The country behind Tioga defcends into a plain of upwards of three miles in extent. The foil is good; and, from the fituation of the town, it is likely to acquire fome importance in time, when the land on both fides of the river shall become cultivated and populous. There is not one fpring, however, to be found either on the fpot where the town stands, or in its vicinity, fo that the inhabitants are obliged either to fink wells, or to fetch water from the river; and, in either cafe, the water is far from being good. The price of land, in the neighbourhood of the town, is eight dollars per acre, when, out of three hundred acres, to the proportion of fifty or fixty are already cleared of wood. The town-fhares are fixteen yards in breadth by fifty in depth, and cost twenty dollars. The price of wheat is feven shillings and fix-pence per bushel, rye fells for fix shillings a bufhel, and oats from three to four fhillings. Some venifon excepted, which at times comes to market, no fresh meat has been seen at Tioga fince last autumn. The merchants of the place carry on an inconfiderable trade in hemp, which they get from the upper parts of the river, and fend to Philadelphia by Middle Town. We were informed, that the fhops at Afylum prove very hurtful to the trade of Tioga, a complaint which gave our fellow-traveller, who keeps a fhop in Afylum, no fmall fatisfaction.

Laft year there were three inns in Tioga, but, at this time, it con-O 2 tains

# TRAVELS IN NORTH AMERICA, A HIT YE

tains but one; we found it crowded with travellers from the Jerfeys, Pennfylvania, and New York, who intended to fettle on the lakes. After a fcanty fupper, we were all obliged to take up with two beds; more were not to be obtained on any terms. The fheets, which had already ferved three or four other travellers, were, according to the landlady's account, very clean; and fo indeed they are called, in all the American inns, when they are in fact totally unfit for ufc. Yet, on the other hand, we enjoyed the fpecial favour of being permitted to lie down in boots, as those of our party really did, who, like myfelf, preferred taking their repose on the ground, wrapped up in a blanket.

# Wednesday, the 3d of June.

Our company confifted, as I have already mentioned, of four perfons, one of whom (Mr. du Petit Thouars) travelled on foot, but whom we had promifed to relieve occafionally by walking in rotation part of the way.

Near Tioga we turned from the river Sufquehannah, along the banks of which we had travelled near two hundred and fifty miles, and yet the fource of that branch which we quitted is diftant two hundred miles still farther inland; it rifes near the Mohawk's river. The Sufquehannah, throughout its courfe, ferves to open up an extensive country of rich fertile foil, and which is likely to acquire an increasing importance from its navigation, that extends as far as to the Chefapeak. It is an unfavourable circumstance, however, that its course is fo frequently broken by rapids, which, even at high water, cannot be paffed without danger by fmall veffels. It is in fuch fmall veffels, or on rafts, constructed of trunks of trees covered with boards. that cargoes of provision, &c., are at prefent transported. These rafts, which draw but little water in proportion to the breadth and extent of their furface, are mostly laden with provision for the lower country. The navigation of these rafts and vessels is fometimes impeded by obftacles infurmountable; they are many times thattered from being dashed on the banks or shallows, and often beaten entirely to pieces. The

The number of men, and especially of veffels, thus wrecked and lost, is very confiderable.

At the diffance of four miles from Tioga, the flate of Pennfylvania borders upon New York, and here begins a new flandard of coinage. A dollar, which in Pennfylvania is worth only feven fhillings and fixpence, is here, with greater convenience and propriety, divided into eight fhillings.

Near the confines of Pennfylvania a mountain rifes from the bank of the river Tioga, in the fhape of a fugar-loaf, upon which are feen the remains of fome entrenchments; thefe the inhabitants call the *Spanifh rampart*, but I rather judge them to have been thrown up against the Indians in the times of Mr. de Nouville. One perpendicular breaft-work is yet remaining, which, though covered over with grafs and buffnes, plainly indicates, that a parapet and a ditch have been conftructed here.

We flypped to breakfaft about ten miles from Tioga, at the houfe of one Mr. WARREN, a landbolder, who fettled here four years ago. His eftate along the river confifts of three hundred and feventy acres of land, fifty of which only are cleared; the reft are flony, hilly, and poor. The price of wheat is one dollar, oats three fhillings and fix pence, and rye five fhillings per bufhel. The cultivated land lies moftly in grafs. Thefe meadows, which are four with timothy-grafs, and white clover, are ufed as fuch for three or four years. They are then broken up, fown with wheat, and ufed again as grafs land. Mr. Warren, it feems, never fows oats among the clover. His flock appeared to be in very good order; the fheep were tolerably good; at the fhearing time the wool weighs from four to five pounds a fleece; its medium price is four fhillings per pound. This planter, only three years ago, paid nine hundred dollars for this eftate, and he now afks two thoufand five hundred dollars for it.

There is no school kept in the neighbouring country, except in the winter months, when every scholar pays a dollar per quarter.

The road from Tioga to Painted Post lies for the most part along the

the bank of the river Tioga, which is here about as broad as the mouth of the Oife. Its water is very clear. The fiream is rapid, and the country in general, through which it flows, is more open and pleafant than that watered by the Sufquehannah.

We dined at New Town, which has not been built more than feven years, and is fituate on the banks of the Tioga. Before the building of this town the Indians were in poffeffion of the territory. This place is, at prefent, the chief town of the county of Tioga. The diffrict of New Town contains twenty thoufand acres of land, fold originally for eighteen pence the acre, which now fells for five or fix dollars, and in fome places from twenty-four to twenty-fix dollars. The foil near the river is remarkably good. The plain in which New Town ftands is large, and covered with meadows. In the other parts of the twenty thoufand acres but very little wood has hitherto been cut down, although we were affured, that new fettlers are continually pouring in. The whole town confifts of about fifteen houfes, moft of them being either inns or fhops.

In New Town we met with Colonel STARRET, and we accompanied him to his own house, which is eight miles distant from the town. He is an Irishman by birth, but has been for many years a refident of America; he has a plantation of about thirteen hundred acres, only one hundred of which have been hitherto rendered fit for cultivation. Six hundred were cleared of wood by the Indians, who quitted this part of the country only five years ago. He has lived here feven years, during two of which he was entirely furrounded with Indians; he affured us, however, that he had no reason to complain of them as neighbours. The Indians burn the trees down to the flumps, when they clear any ground; but although the former are thereby deftroyed, the ftumps which remain must be rooted out, before the foil can be cultivated. The Colonel's eftate is apparently under good management. He affured us, that his land is much fuperior to any in the neighbourhood; that it yields forty bushels of wheat, and as much Indian corn annually; and that his meadows produce two tuns of hay per acre. He

102

119 50 21 2 2

He ploughs with oxen, which are of a very good fort. According to his account, he ploughs deeper than we have obferved any where elfe in America, making ufe of ploughs of various conftructions. He keeps no fheep, on account of the wolves, which are faid to be very numerous in this part of the country, it having been but lately cleared. He has a beautiful breed of cows, and a fine looking young bull, produced from a cow, which he bought of 'Squire WALLIS, on the eaftern arm of the Sufquehannah; it is of the Englifh breed. The cow, big with calf, coft him thirty-two dollars; he rears his calves, and does not fell them. The winter commonly lafts here fix months; during which time his cows and oxen are kept in the ftable. He depofits his turnips, which he gathers in autumn, under ground, and feeds his cattle with them, as well as with Indian corn and hay.

The price of wheat in this part of the country is one dollar, rye five shillings, and oats three shillings per bushel. It is difficult to procure workmen hereabouts. Mr. Starret pays them after the rate of one dollar per day, exclusive of victuals. He has two distilleries, one upon the eftate, and another in New Town; in both together he diftils about two thousand gallons of whifky in a year. Mr. Starret affured us, that a bushel of rye yields, in his distilleries, only from two to two gallons and a half of whifky; and that the fpirit is not good, if a larger quantity be diffilled from a bushel. He fells his whisky for one dollar per gallon, while, according to the best information we have hitherto been able to collect, whifky, three gallons of which are obtained from a bushel, costs but five shillings. From what we have fince heard of this planter, it is probable, that his account is greatly exaggerated, for the purpose of obtaining a higher price for his whitky. The workmen, employed in his diffilleries, receive one hundred and ninety dollars per annum. The Colonel told us, that he proposed to fell his eftate; that he has refused ten thousand dollars for it, and that he means to refide for the future in New Town ; he hinted, at the fame time, that he is very rich. The fame evening we learned from 'Squire MAC CORNICK, that this pretended Colonel is an impostor; that he purchased

purchafed his eftate, which he told us he had bought from the ftate of New York for eighteen pence per acre, of a private gentleman, at the rate of two dollars per acre; that he has not yet paid the purchafe money; and that he will probably be compelled to quit the eftate, unlefs he finds means to difcharge the debt within the fhort time ftill allowed him. This man, who to all appearance was fo free-hearted and kind, is, at the bottom, a mere fwindler; or, at leaft, he fuppofed we had a defign to purchafe land, and wifhed to fell us fome at an exorbitant price.

'Squire Mac Cornick, with whom we took up our quarters for the night, is a farmer, and keeps, at the fame time, an inn, but one of that defcription, which affords neither hay for horfes, nor food for travellers, and fcarcely even a bed. The horfes were turned out on the grafs. Our fupper confifted of rufty bacon and coffee ; and we were all four obliged to fleep in two beds, which belonged to the family. The fheets had already ferved them fome time, and it appears were to ferve them ftill longer. Mr. de Blacons and myfelf took poffeffion of that of the landlord. Though completely dreffed, we could not lie down without extreme reluctance ; our wearinefs, however, overcame our double averfion to fleep together, and between fuch fheets.

Supper-time was, as ufual, fpent in mutual enquiries. We learned, that 'Squire Mac Cornick purchafed his effate, four years ago, of Meffrs. PHILIP and GORUM for ten fhillings and fixpence per acre; that he would not fell it now for three dollars; that he poffeffes about three thoufand acres, one hundred and fifty of which are cultivated, exclusive of forty others, which have been cleared by the Indians. His land yields about thirty bufhels of wheat, fifty bufhels of Indian corn, and four hundred bufhels of potatoes, per acre. He keeps about forty or fifty fheep, of a middling fort, and but common wool. He appears duly fenfible of the advantages to be derived from a good flock, and accordingly he values them higher, than any American that has hitherto fallen within my obfervation. He keeps twenty-three cows, which look tolerably well, a bull of a very indifferent breed, and two yokes of very fine oxen;

oxen; he has refused one hundred dollars for a yoke. The wolves have already deftroyed fome of his theep. To prevent a repetition of fuch accidents, he now keeps feveral large bull-dogs, and caufes the flock to be folded every night; neither is he deterred, by the damage he has fuftained, from increasing the number of his sheep. 'Squire Mac-Cornick has lived here for fo fhort a time, that, though a very intelligent man, he could not fate with any degree of accuracy the usual expences of house-keeping. His father was an Irishman; but he himfelf was born in Pennfylvania, and has travelled in England, Ireland, Scotland, France, and Switzerland. He held, at least according to his own account, a commission in the English fervice; but he did not name the regiment in which he ferved. He is an entertaining man, who appears to understand thoroughly what he is about; is very converfable, civil, and modeft, and expresses himself with judgment, and often indeed with elegance. He feems well acquainted with the laws and interests of his country, and is the father of a numerous family, from whofe affistance in his labours he is now beginning to reap fome advantage.

The price of every thing, except corn, is much higher here, than at Afylum, Tioga, or even Newtown, chiefly from the expensiveness of carriage. This was at least the reason affigned by 'Squire Mac-Cornick for the high amount of his bill, which seemed to bear no kind of proportion to the compulsory frugality of our entertainment.

The flate of New York impofes no taxes, to defray the expences of its government : property is taxed only to pay the expences of the county and diftrict. Neither the land, which is flill covered with wood, nor that which has lately been cleared, is required to pay any. It is only the land, that has been cultivated for a confiderable time, that is liable to taxation. The county taxes are raifed upon horfes, oxen, in fhort, upon the whole live flock of the farm. All thefe different fpecies of property are valued by overfeers, and taxed by affeffors, in proportion to the pecuniary demands of the county. Thefe taxes, of which I fhall have an opportunity hereafter to give a more particular account, are all P

laid very low. 'Squire Mac-Cornick paid for the whole of his taxes laft year only four dollars and a half.

The laws of the flate of New York have eftablished poor-rates for fuch districts as contain paupers; but there are very few of that defeription to be found in this new country. The habitation of 'Squire Mac-Cornick appertains to the county of Ontario; and here this tax is raifed, but not in the county of Tioga. The expence of building prifons, feffions-houses, &c. is defrayed by the subfeription of individuals. The schools lie at confiderable distances from one another, and are kept only in winter; their charge is one dollar a quarter for each scholar. Reading and writing are taught in the schools, but in these thinly inhabited forefts the inftructors are, in general, ignorant, and extremely indolent. No church has yet been built here; people of all religious persuafions live in this country, and all feem to be little folicitous about religious matters, whatever be the particular fect to which they belong.

On our way from Newtown, efpecially between Starret's and Mac-Cornick's habitations, the foil is good; and, where it is not yet cleared, is covered with oaks and fine pines. A great part however has been cleared by the Indians, and produces excellent grafs.

From Mac-Cornick's house to Painted Post the foil continues the fame; but the dwellings are so thinly feattered, that you may travel twelve miles through the forest, without finding a single house. The country, being flat, is exposed to inundation, whenever the creeks and the river Tioga overflow. In the month of December, last year (1794), the water rose to an unprecedented height, namely, from fisteen to nineteen set above the usual level. Captain STARBER, who keeps an inn at Painted Post, reported this circumstance to me as an unquestionable fact. He could easily measure the rising of the water in his well. 'This extraordinary inundation swept away a great number of fences.

## Thursday, the 4th of June.

We breakfasted at Painted Post, fix miles from the place at which we had passed the night. It is the principal town of the district, and derives

106

destants from the

rives its name from a post, hewn and painted by the Indians, the flump of which is yet left flanding. The first inhabitants fettled here only four years ago. The whole town at prefent confifts of ten or twelve fmall houfes. The land here has alfo been parcelled out and fold by the ftate of New York. The foil is good, especially near the town, where from fifteen to eighteen dollars are the common price for an acre. The woods are full of rofe-bushes, apple and plumb trees, and bilberries. There are however but few fugar-maple trees. The price of this fugar at the beginning of last fpring was one shilling per pound. Wheat fells for feven shillings a bushel; Indian corn for four; oats. three; rye for eleven shillings and fix-pence; and hay for three pounds a tun; although very little of this laft article is fold, and that only in the depth of winter. A cow cofts from eighteen to twenty-five dollars; a yoke of oxen feventy-five dollars; fheep from fixteen to twenty shillings, and wool four shillings a pound. Labourers' wages are from four to fix shillings a day, and ten dollars a month without victuals. Maid fervants earn about fix shillings a week. The quantity of uncultivated land is very confiderable in this part of the country, though numbers of emigrants, as we were told, are conftantly coming from all parts to fettle here. On our journey from Painted Post to Bath we met several families, who had guitted their former habitations in quest of new ones. These transmigrations are generally removals from an old into a new country. The attachment to local property is yet but little known among the Americans. The foil, on which they were born, nay that which they have themfelves rendered fit for cultivation, is valued by them little more than any other. Every where they live in a fimple and frugal manner; their friendly connections also are mostly confined to their own families, which move about with them. Every where they can procure whilky and falt pork. They even experience a real pleafure in clearing the ground and rendering it fit for cultivation, independently of the profits they make when they leave their effates, either altogether in a flate of cultivation, or at least partly fo, to purchase another, yet covered with wood, and fome hundred miles farther inland. Among the many emi-

grants

# TRAVELS IN NORTH AMERICA, C THE TE

108

grants we met this day, there were a great number of perfons who came from Niagara, fituate in the English dominions, and were travelling to South Carolina. They were originally Pennfylvanians, from the neighbourhood of Pittsburg, who, allured by the promife of Governor SIMCOE, that they should have lands gratis, belonging to the King of England, and also be affissed for fome time in their labours, quitted their former places of refidence, but did not find their new fituation fo comfortable as they had been led to expect.\* Being also visited by the fever, they forfook their fettlements, apparently much exasperated at the expence and labour they had uselessly bestowed on them.

The road from Painted Poft to Bath, leads, like that we have paffed, through the midft of forefts, up and down hill, particularly after paffing the creek of Connesteon, which flows into the river Tioga, near Painted Post. This road, as it is called, which was made by Captain WILLIAMSON, with a defign to open a communication between his eftate and the eaftern arm of the Sufquehannah, is in fact nothing but a ftraight line cut through the wood. The felled trees are, indeed, for the most part removed, but the roots remain, and make the road very bad, miry, and deep; fo that in the middle of June, the drieft feafon of the year, a horse cannot travel it without difficulty. At the diftance of a mile and a half from Bath is a fmall lake about two miles in circumference. The lake itfelf lies within the foreft, but clofe behind it are the marshes, which reach as far as Bath, the chief place of the fettlement of Captain Williamfon (of whom I shall have occasion prefently to fpeak) and where he generally refides. The Captain was abfent in Canandaqua, where he prefided as a judge at the feffions, but was expected to return hither in two days time. To make an acquaintance with this gentleman, was an important object to us; we accordingly arranged our plan in fuch a manner, as to prevent his efcaping us. We, therefore, refolved to make an excursion to the fmall lakes, and to return to Bath in three days, when we should be fure to find the Captain at home.

\* By the treaty of 1794 Niagara was to be ceded to the flate of New York, which it was in 1796. Hence, probably, we may account for the difappointment of the fettlers. *Tranflator*.

Friday,

# Friday, the 5th of June.

We fet out without any baggage, as Mr. Guillemard hit upon the benevolent idea of leaving his fervant at Bath, that he might lend his horfe to Mr. Dupetitthouars. Nothing remarkable occurred during the whole day's journey of thirty-five miles, which we made through continued woods. All this way we have met with but fix habitations, which stand within the forest. From Boys' inn to Friendsmill, that is to fay, in a space of eighteen miles, there is not a fingle house to be feen. About eight miles from Bath is Crooked Lake, on which ftands Boys' inn, as it is called, but where we could procure neither eggs, butter, hay, nor oats. Crooked Lake takes its name, as might be fupposed, from its form; it flows from north to fouth with a gentle current, in the midst of mountains, which are not very high; but which, in point of external form, bear a ftriking refemblance to each other; this uniform appearance is encreafed by the wood, with which they are covered. I never faw a country abounding more in water, than that through which we paffed from Boys' inn to Friendsmill. Most of the brooks, on account of the feafon, contained, comparatively, but little water; though we continually met with tracks of torrents, which, to judge from the ground they had washed away, and the large ftones and trees they had fwept along, must have been very violent and rapid. The road, which runs by the river fide, is nothing but a foot-path, which it is frequently difficult to diffinguish. It paffes between rocks, felled trees, and bushes, and is one of the most unpleafant to traverfe that can be conceived. The woods, however, are extremely beautiful, and shew that the foil is, perhaps, the richest we have yet feen.

The mountains flope toward the lake, and terminate in inconfiderable hills. Their fhape announced to us, that we were approaching those vaft favannahs, which divide the enormous mass of water, that irrigates America. The plain expands, and the country on a fudden assure a different aspect, although its decorations are still the same. All the land,

land, which we have hitherto traverfed, belongs to captain Williamfon, who is very generally beloved and effeemed.

At length, about night-fall, we arrived at Friendfmill, after a very tedious journey, which, on account of the fondnefs of one of our companions for his bed, we did not begin till late in the day, and which was afterwards delayed by the fall of another; this laft accident, however, was not attended with any difaftrous confequence. The inn, which contained but two rooms, we found already full; fome perfons, who intended to buy land near the Great Sodus, and Captain Williamfon's agent, who was to fell it to them, had taken poffeffion of it a little before our arrival. After an American fupper, confifting of coffee and boiled ham, we all lay down to reft in the fame room. There were only *two* beds for *ten* perfons; in confequence, thefe two beds were occupied by four of us, and the others lay down in their clothes upon ftraw, which, though I enjoyed here the privilege of fharing in one of the beds, appears to me the beft method of taking repofe, when you cannot have a bed to yourfelf.

#### Saturday, the 6th of June.

Friendfmill is a place, confifting of feveral houfes, which takes its name from its being fettled or founded by the Friends or Quakers. It lies in the center of the diftrict, which is called the Friends fettlement.

One JEMIMA WILKINSON, a Quaker, and a native of Rhode Ifland, manifefted fo fervent a zeal in her religion, that at the age of twenty fhe was admitted to all the meetings of the fociety, which were held weekly, monthly, and quarterly, for fettling the general concerns and watching over the conduct of the brethren. She at length fancied, that fhe was called to act fome great and extraordinary part, and in this perfuation formed the project of becoming the leader of a fect. In the courfe of a long and dangerous illnefs, fhe was fuddenly feized, or gave it out that fhe was feized with a lethargy, fo that to her friends fhe appeared as really dead. She continued, feveral hours, in this fituation; and preparations were actually making for her interment, when fhe fuddenly

denly started up, called for her cloaths, declaring " that the had rifen from the dead, and that fhe had caft off all her material fubftance, and retained only the fpiritual." She went, accordingly, to the next meeting, as if with the authority of fome celeftial being, fpoke there as one infpired, and gained fome followers. She, ere long, expressed her difpleafure at fome religious observances of the Quakers ; and was, on this account, reprimanded by the meeting; which appears to have been preeifely the thing fhe wished for and expected. In the opinion of others, fhe met with this reproof, becaufe at the beginning of the revolutionary war, fhe had been much attached to the Tories, and favoured the Englifh party by declaiming against the war, according to the principles of the doctrine fhe profeffed. She continued preaching and proceeding in this manner, till fhe was excluded from the meetings, which indeed all along appeared to be her particular wifh. Being now a perfecuted perfon, at leaft by her own account, fhe began to gain fome partizans. She preached publicly on the neceffity of the abolition of all meetings convened to cenfure, of a reform of the church-eftablishment, of granting to the Friends univerfal liberty to preach, what they pleafed, without first asking leave to do fo, &c. She foon made fome profelytes, and at the fame time drew on herfelf the difpleafure of all, who adhered to the old forms of the religion of the Quakers. She experienced, therefore, a very unfavourable reception for herfelf and her doctrines, both in Philadelphia and New York. Wherever fhe came, every Quaker turned away from her with abhorrence, as the enemy of his religion; and all other perfons deemed her a fool or an enthusiaft. This disposition of the public she again called a perfecution, it being favourable to her ultimate views. The number of her followers was now daily increasing; and as she confidently trusted it would become ftill more confiderable, fhe thought they might perhaps be willing to follow her. Accordingly the proposed to a number of them, to flee from these regions of intolerance, and to settle in a place where they might worfhip God undifturbed, and free from that bitter fpirit.

D. CEGTI

fpirit of perfecution, which men had introduced in opposition to the divine will.

Soon after the country about Lake Seneca and Crooked Lake was fixed upon as the place of their fettlement. The company of New York, which had purchafed this land from the Indians, entered into a treaty for the fale of it with thefe reformed Quakers. They were promifed three tracts of land, containing each fix thoufand fquare acres, which were to form three diffricts, and to which Jemima inftantly gave the name of Jerufalem. Thirty families removed hither with her; but fhe had confidently expected three or four hundred more, of whom, however, not above twenty at laft arrived. This fociety foon fpread over the three diffricts, which it was to occupy; but was not fufficiently numerous to replenish the fourth part of each. The enchantment, however, had already been broken by Jemima's abfence, and with it had alfo vanished their zeal for peopling this new land of promise.

We faw Jemima, and attended her meeting, which is held in her own houfe. We found there about thirty perfons, men, women, and children. Jemima stood at the door of her bed-chamber on a carpet, with an arm-chair behind her. She had on a white morning gown, and waiftcoat, fuch as men wear, and a petticoat of the fame colour. Her black hair was cut fhort, carefully combed, and divided behind into three ringlets; fhe wore a ftock, and a white filk cravat, which was tied about her neck with affected negligence. In point of delivery, fhe preached with more eafe, than any other Quaker, I have yet heard; but the fubject matter of her difcourfe was an eternal repetition of the fame topics, death, fin, and repentance. She is faid to be about forty years of age, but she did not appear to be more than thirty. She is of middle stature, well made, of a florid countenance, and has fine teeth, and beautiful eyes. Her action is ftudied; fhe aims at fimplicity, but there is fomewhat of pedantic in her manner. In her chamber we found her friend, RACHEL MILLER, a young woman of about twenty-eight or thirty years of age, her follower and admirer, who is entirely devoted to her. All the land which Jemima poffeffes is purchased in the name

112

name of Rachel Miller, an advantage which fhe owes to her influence over her adherents, and to her dexterity in captivating their affections.

Jemima, or the Friend (as fhe is called by way of eminence) inculcates, as her leading tenet, poverty, and refignation of all earthly poffeffions. If you talk to her of her house, the always calls it "the house, which I inhabit." This house, however, though built only of the trunks of trees, is extremely pretty and commodious. Her room is exquifitely neat; and refembles more the boudoir of a fine lady, than the cell of a nun. It contains a looking-glafs, a clock, an arm-chair, a good bed, a warming-pan, and a filver faucer. Her garden is kept in good order; her fpring-house \* is full of milk, cheefe, butter, butcher'smeat and game. Her hypocrify may be traced in all her difcourfes, actions, and conduct, and even in the very manner in which fhe manages her countenance. She feldom fpeaks, without quoting the Bible, or introducing a ferious fentence about death, and the neceffity of making our peace with God. Whatever does not belong to her own fect is with her an object of diftaste and stedfast aversion. She fows differtion in families, to deprive the lawful heir of his right of inheritance, in order to appropriate it to herfelf; and all this fhe does under the name and by the agency of her companion, who receives all the prefents brought by the faithful, and preferves them for her reverend friend, who, being wholly abforbed in her communion with Chrift, whofe propheters fhe is, would abfolutely forget the fupply of her bodily wants, if the were not well taken care of. The number of her votaries has, of late, much decreafed. Many of the families, who followed her to Jerufalem, are no longer the dupes of her felf-interefted policy. Some still keep up the outward appearance of attachment to her; while others have openly difclaimed their connexion with Jemima. Such however as still continue her adherents, appear to be entirely devoted to her. With these she passes for

Q

a pro-

<sup>\*</sup> These are small offices or detached houses in America, in which butter, milk, and fresh meat are generally kept. They are called *fpring-houses*, because a stream of fresh water is always running through them.

a prophetefs, an indefcribable being; fhe is not Jemima Wilkinfon, but a fpirit of a peculiar name, which remains a profound fecret to all, who are not true believers; fhe is the *Friend*, the *All-friend*. Six or feven girls of different ages, but all young and handfome, wait upon her, with furprifing emulation, to enjoy the peculiar fatisfaction of being permitted to approach this celeftial being. Her fields, and her garden, are ploughed and dug by the Friends, who neglect their own bufinefs, to take care of her's; and the *All-friend* is fo condefcending, as not to refufe their fervices; fhe comforts them with a kind word now and then, makes enquiries after and provides for their health and welfare, and has the art of effectually captivating their affections, the more perhaps becaufe fhe knows how to keep her votaries at a refpectful diftance.

When the fervice was over, Jemima invited us to dinner. The hope of watching her more narrowly induced us to accept the invitation; but we did not then know, that it forms a part of the character fhe acts, never to eat with any one, She foon left us; and locking herfelf up with her female friend, fat down, without other company, to an excellent dinner; we did not get ours, till after fhe had dined. When our dinner was over, and also another, which was ferved up after ours, the fanctuary opened again. And now Jemima appeared once more at the door of her room, and converfed with us, feated in an arm-chair. When ftrangers are with her, fhe never comes over the threshold of her bedroom; and when by herfelf, the is constantly engaged in deliberation how to improve the demefne of her friend. The houfe was, this day, very full. Our company confifted of exactly ten perfons; after us dined another company of the fame number; and as many dined in the kitchen. Our plates, as well as the table-linen, were perfectly clean and neat; our repart, although frugal, was yet better in quality than any, of which we had partaken, fince our departure from Philadelphia; it confifted of good fresh meat, with pudding, an excellent fallad, and a beverage of a peculiar yet charming flavour, with which we were plentifully fupplied out of Jemima's apartment, where it was prepared. The devout guests observed, all this while, a profound filence; they either cast down their

114

their eyes, or lifted them up to heaven with a rapturous figh; to me they appeared, not unlike a party of the faithful, in the primitive ages, dining in a church.

The All-friend had by this time exchanged her former drefs for that of a fine Indian lady, which, however, was cut out in the fame fashion as the former. Her hair and eye-brows had again been combed. She did not utter a fyllable refpecting our dinner; nor did she offer to make any apology for her absence. Constantly engaged in personating the part she has affumed, she descanted in a fanctimonious, mystic tone, on death, and on the happinefs of having been an ufeful inftrument to others in the way of their falvation. She afterwards gave us a rhapfody of prophecies to read, afcribed to one Dr. Love, who was beheaded in CROM-WELL's time; wherein fhe clearly difcerned, according to her accounts, the French Revolution, the decline and downfall of Popery, and the impending end of the world. Finding, however, that this conversation was but ill adapted to engage our attention, fhe cut fhort her harangue at once. We had indeed already feen more than enough, to estimate the character of this bad actrefs, whofe pretended fanctity only infpired us with contempt and difguft, and who is altogether incapable of impofing upon any perfon of common understanding, unless those of the most fimple minds, or downright enthusiafts. Her fpeeches are fo strongly contradicted by the tenor of her actions; her whole conduct, her expence, compared with that of other families, within a circumference of fifty miles, her way of living, and her drefs, form fuch a ftriking contraft with her harangues on the fubject of contemning earthly enjoyments; and the extreme affiduity, with which fhe is continually endeavouring to induce children, over whom fhe has any influence, to leave their parents, and form a part of her community; all those particulars fo ftrongly militate against the doctrine of peace and universal love, which the is inceffantly preaching, that we were actually ftruck with abhorrence of her duplicity and hypocrify, as foon as the first emotions of our curiofity fubfided.

Her

Her fraudulent conduct, indeed, has been difcovered by fo many perfons, and fo much has been faid against it, that it is difficult to account for her having had any adherents at all, even for a fhort time. And yet fhe will probably retain a fufficient number, to encrease still further her fortune, which is already confiderable for the country in which fhe refides, and fully adequate to the only end which fhe now feems anxious to atttain; namely, to live independent, in a decent, plentiful, and even elegant manner. There are fo many weak-minded religionists, and Jemima is fo particularly careful to felect her difciples among perfons who are either very old or very young, that her imposture, however gross and palpable to the difcerning, may yet be carried on for fome time with fuccefs, fufficient to answer her ultimate purpose. If her credit should fink too low, fhe would find herfelf conftrained to transplant her holinefs to fome other region ; and, in fact, she had, last year, harboured the defign of removing her family and establishment, and of settling in Carlton Island, on the Lake of Ontario, where she would enjoy the fatisfaction of living under the English Government, which, by her account, has proffered her a grant of land.

If we may believe common rumour, fhe diffuades the young women generally from marrying. In regard to those about her, this advice originates from motives of perfonal interest. I have little doubt, but that the pious devotion of these girls is fervent enough, to submit to all the caprices of the *All-friend* (which in their belief are inspirations). Another report is also handed about, that she has met with a male being, whom she fancies sufficiently purified, to unite occasionally with her own exalted fociety and converse. On this head a story prevails, which, though somewhat ludicrous, may yet properly find a place in a work of the gravest complexion, especially as it affords an additional proof of the endless muliplicity of pious deceptions.

Among other votaries of Jemima was one 'Squire PARKER, who fettled in her neighbourhood, and ftill refides near Friendsmill. Though a jolly fellow, ever gay and jocund, he espoused very zealously the cause and interest of the prophetes. This Parker, who was constantly in Jemima's

ma's retinue, gave himfelf out to be the Prophet Elijah, and very rightly conceived, that, by affuming a peculiar drefs, he should give a more imposing character to his impostures. He wore accordingly a white gown with large fleeves, and a girdle ; in fhort, whatever he fancied might belong to the coftume of the ancient prophets. This was the being, who was honoured with the high privilege of living with the All-friend on terms of the greateft intimacy. One evening the 'Squire, during a colloquy, inftituted by the divine and holy friend for the edification of her flock, ftole into the celeftial bed, which happened to be already occupied by a young girl of only fourteen. This girl, who had frequently heard the All-friend fay, that the Meffiah fometimes appeared to her in her bed under different forms, and that fhe then converfed with him, fancied herfelf chofen by heaven to enjoy the felicity of being a witness of one of these apparitions, and retired piously to the edge of the bed, where with awful refpect and in profound filence fhe liftened to the repeated raptures, with which the pretended Meffiah bleffed the Allfriend. The next morning the poor girl could not refrain from indulging her vanity by acquainting all her friends, that in the bed of her friend fhe had feen Chrift, but who greatly refembled, fhe faid, the Prophet Elijah. Her curious and enraptured friends enquired into all the particulars of this apparition, of which the gave the most fatisfactory and circumftantial account in her power. It will hardly be doubted, that this religious trick not a little ftrengthened the credulity of the female friends in the All-friend, and infpired Jemima with affurance, frequently to enjoy fimilar apparitions.

A juffice of the peace in the country, fpeaking of Jemima, affured us alfo, that one of the girls, who lived with her, has judicially depofed, that, one day, fhe heard the cry of a new-born infant, which Jemima's negro-woman, as is conjectured, was in the act of fmothering between two mattreffes. That this deposition exists is undeniable; but the fact itfelf is fo atrocious, that it would feem incredible with respect to any other perfon except a propheters. Whether this child were the result of a flip of one of the maids of honour, or the fruit of her own intercourse with

with the apparitions, is not known. If, from the little regard that has been paid to this flory, its veracity flould appear doubtful, let it be obferved, that in this new country juffice is but feldom duly administered; that, often, it is difficult to obtain it at all; and that no one deems himfelf interested in fubstantiating the truth of the depofition, which, after all, it would be no eafy matter to do. Dervifes, pontiffs, and priefts of most religious perfuasions throughout the world, fuch at least as would render religion fubservient to worldly purpose, are either impostors or enthuliasts. Alas! alas! much the greater number, I fear, belong with Jemima to the former class!

The first fettlers, who thoughtlessly followed their divinity to this place, not being able to purchase the lands, which composed the three diftricts, the remainder has been reftored to the company, who have again disposed of it, and are still felling it to all, who are defirous of becoming fettlers. Accordingly, numbers of Methodists, Anabaptists, and members of the Church of England, are now to be seen here; yet the colony retains its original name of *The Friends' Settlement*. Two meetings have been built here for the Quakers; one for the Methodists, and one for the Anabaptists. The foil in these parts appears to be of prime quality. The land, occupied by families of Quakers, amounts to about five hundred acres, more or less cleared, which produce excellent crops.

The effate, which we viewed with most attention, is that of BENE-DICT ROBINSON, fituate between Lake Seneca and Friendsmill. This Robinson is one of the Quakers, who arrived here in the retinue of the *All-friend*, being then one of her most zealous disciples. He now speaks on this subject with evident embarrassement, in terms which still evince his attachment, yet without enthusiass, and without extolling her or placing implicit confidence in her divine mission and oracular effusions. In thort, he expresses himself in a manner, which sufficiently indicates, that he has been imposed upon by her in a higher degree, than he is willing to acknowledge. Knowing that he still professed an attachment to her, and perceiving the embarrasses with which he delivered himfelf on this subject, we thought proper to discontinue our enquiries. This

118

Mr. S. A. M. A. M. M. M.

This Benedict Robinson is a fensible, mild, and well behaved man; he refides on an eftate of five hundred acres, about one hundred and fifty of which are cleared. Eighty have been laid out as meadows, and on thefe are fown timothy-grafs, and white clover. He purchased his demesne from the New York company for five shillings an acre, and it is now worth, at leaft, three or four dollars. His prefent flock amounts to about thirty-five head of cattle; but he intends to rear more, and to make this the chief branch of his farming bufinefs, on a plan which appears well adapted to the nature of the ground. Mr. Robinfon, who has refided here only three years, has not yet been able to acquire any important information on the different departments of agriculture, and on the productions best adapted to the foil; and besides he appears to labour under prejudices, which he entertains in common with the great majority of American farmers. He does not plough his land, but contents himfelf with breaking it up with a harrow of iron teeth, which tears up the ground about four inches deep. After this fimple operation, he fows his wheat, yet never until he has reaped two crops of potatoes or oats from the land, on which the wheat is fown. The foil is fo ftrong, that, if rye were fown immediately after clearing the ground, the ears would run up fo high, and grow fo heavy, that they would fall on one fide, and be damaged by rotting. I This fact, as he affured us, is evident from the general experience of the other farmers of this diffrict. Wheat, fown after the first harrowing, produces from twenty to twenty-five bushels, and Indian corn about fixty bushels. Wheat is fown for feveral years fucceffively, after harrowing, without the leaft affifance from the plough, and the crops continue conftantly the fame. Several farmers, who have fown wheat in this manner for thefe last fix years, blave still obtained good crops. Ryc yields also from twenty to twenty-five buffiels, and oats thirtyfive. But I must once more observe, that neither wheat nor ryce is ever fown for the first crop. Mr. Robinson told us, that, in compliance with the wifh of a friend, he ploughed half an acre, on which he fowed wheat, but that the other half, which was not ploughed, turned out more productive than the former. This affertion, however, is for contradictory to itt all

all theory, as well as to the univerfal experience of agriculturifts, who ufe the plough, that it feemed to us very problematical, and founded on prejudice, rather than on mature reflection and observation. Mr. Robinfon is also of opinion, that barked trees, which are left standing on the cleared land, far from leffening the produce, rather increase it, by shading the land, and thus preventing the foil from being too rapidly penetrated by the rays of the fun; the immediate contact of which having never experienced before, it should be accustomed to it by degrees. But this opinion is rather the offspring of prejudice than found reafon; and, according to a general practice observable in all countries and climates, feems rather intended to reconcile us to the impoffibility of proceeding otherwife, than to establish itself as a new agricultural truth. It cannot be denied, that the number of the sheaves, and compactness of the ears, which we meet with on lands, where two hundred barked trees have been left standing on an acre, is in itself really furprising. But then thefe two hundred trees, reckoning only eighteen fquare inches for each tree, must engross a confiderable space, which might produce a proportionate quantity of grain.

In this part of Genefice the winter lafts from four to five months. The cattle are fed with hay and ftraw, but remain always in the open air. Mr. Robinfon fed his cattle at first in the stall ; but the experience of the laft two years has convinced him, that they thrive better in the open air, where they also confume less fodder : his cattle are, therefore, now fed in the farm-yard. The produce of the eftate confifts in grain, cheefe, and butter. The hay is mostly confumed on the farm. The average produce is one tun and a half per acre, befide the grafs, which is confumed by the cattle as it grows. As the extent of his meadows shall be gradually enlarged, he proposes to increase his stock, which he intends to make a principal article of his trade. The produce of his eftate is tranfported on the lakes, either to Canandaqua, Geneva, or Bath. Laft year he fold one thousand pounds weight of cheese, at the rate of a shilling a pound. He keeps about forty theep, and hopes to increase his flock, without being apprehenfive of the wolves, which, though very numerous in

120

in the furrounding forefts, do but little harm. His wool is fine, and fells for four shillings a pound, without regard to its quality; for in this country, which is yet too young to poffefs manufactories, every farmer manufactures, in his own family, all the cloth he wants : the fale of wool is therefore very inconfiderable; a circumstance, which tends not a little to confirm the farmers in their prejudices against rearing sheep. Wheat fells here from fix to feven shillings, Indian corn four, and rye five shillings per bushel; the price of flour is two dollars and a half per hundred weight; falt beef ten pence per pound, and fresh beef from four pence to five pence. Hemp fells at one penny a pound; a pair of tolerably good oxen will fetch from fixty to feventy dollars, and a cow from twenty-five to thirty. Servants earn from five to fix shillings wages a week. A few negroes excepted, maid-fervants do all the work about the farm as well as the houfe. Day labourers, as in most other parts of America, are not easily procured; their pay is four shillings a day, or from nine to ten dollars a month.

In the whole adjoining diffrict there is but one fchool, and that is kept by the Quakers, who, however, admit all children without diffinction, on their paying four shillings per quarter. None of the medical faculty have yet fettled here. The fettlement, however, upon the whole, is advancing to profperity with rapid ftrides. It is furrounded by the immenfe tract of land, which belongs to Captain Williamfon, and confequently enjoys all the advantages and improvements, which his extensive eftablishment commands. Mr. Robinson's eftate, which he purchased from the company in New York, appears to be actually within the precincts of Captain Williamfon's demefne; as the latter, who bought his lands from the ftate of Maffachufetts, learned from the report of his furveyors, that the boundaries of New York lay farther out. Accordingly these boundaries were marked out, and a line drawn, forming a triangle with the old line, the point of which touches the line of Pennfylvania, below the river Tioga, while the bafe, which stretches along the Lake of Ontario, is from three to four miles in breadth; this has enlarged Captain Williamfon's demesne, which he holds from the state of Massachu-R fetts,

fetts, one hundred and twenty thoufand acres. Robinfon's eftate lies within this new line. Under fome apprehenfion for the confequences, with which this change of property might be attended, he has not, at prefent, made all the improvements, which he had in view. He is affured, however, that he will be well ufed, and that the ftate of New York, equally weighing the juffice of Captain Williamfon's claim, and the legality of poffeffion of the lands fince parcelled out to the fettlers, will indemnify the former by grants of an equal quantity of uncleared ground, and thus prevent the latter from being molefted in the quiet poffeffion of the lands, which they hold from the company in New York. Robinfon is now building a good wooden houfe, and he propofes to clear a great additional number of acres.

The expence of felling and barking the trees, and inclofing the ground, amounts, at prefent, to fix dollars per acre. Two years ago it did not exceed four. The owner of the land provides the oxen neceffary for removing the largeft trunks.

I must not forget, however, to observe, that according to an agreement, concluded many years ago, between the states of New York and Massachusetts, all the lands fold by and belonging to the latter, are to be subjected to the territorial supremacy of New York.

The lands hereabouts are frequently vifited, as they were this year, by a fpecies of locufts, which fix chiefly on the trees, and deftroy the leaves. They are fo extremely numerous, that every attempt to deftroy or remove them muft apparently prove fruitlefs. Flies likewife are very troublefome here, being found in fuch prodigious fwarms, efpecially about noon, that the farmers are obliged to keep large fires burning near their houfes, where the cattle find fhelter from thefe tormenting infects, until the cool of the evening, when the latter difappear, and retire into the woods.

Lake Seneca is about two miles and a half diftant from Mr. Robinfon's eftate. By the Indians it was called Canada Saga. Its prefent name is doubtlefs derived from the circumstance of its difcharging itself into the river Seneca, which, after being joined by fix or feven fmaller

122

finaller lakes, at length empties itfelf into the immenfe lake of Ontario. It is remarkable, that all the other waters, even up to this degree of latitude, flow in a foutherly direction. Lake Seneca is about forty miles in length, by three, four, and five miles in breadth. It is faid to abound in fifh of a very fine flavour, as do all the other American lakes, and yet fifh is as fearce here as in any other part. The inhabitants of the banks are fo few, and have fo much other bufinefs upon their hands, that they can feldom or ever find time to go a fifhing. To render this branch of induftry flourifhing, the population and wealth of a country muft have reached to a certain height, from which America, in its prefent flate, feems far removed. In the towns every inhabitant is engaged in bufinefs, either as a merchant or a tradefinan; and in the country every planter and farmer either keeps an inn or a ftore. All other occupations are, and will yet, for fome time, be out of the queftion.

The point, where we arrived at the banks of Lake Seneca, contains a fettlement of about three or four houses, among which that of Mr. NORRIS is the most confpicuous; it is a small, neat log-house, handfome in its appearance, and connected with another, in which he keeps a ftore. It is no eafy matter to conceive why this perfon, who is poffeffed of an immense quantity of land on the opposite bank of the lake, fhould erect these two houses here, on a spot which does not belong to him, but which, according to a verbal promife of the company at New York, which claimed the property of the ground, was to be fold to him, if he chose to have it, a contract which the company is now unable to fulfil; as by the late afcertainment of the boundaries, this fpot is included within the demefne of Captain Williamfon, of whom, for want of a written agreement, he has no right to demand an indemnification. Yet Captain Williamfon will himfelf, no doubt, perform that promife, if it shall appear to have been made actually and bona fide. Independently of the benevolent fentiments, which are generally afcribed to this gentleman, he poffeffes fufficient difcernment to perceive, that his intereft is greatly promoted by a just conduct and civil demeanor.

A pot and pearl-afh work forms no inconfiderable part of this finall R 2 fettlement,

fettlement. The navigation on the lake not only facilitates the home conveyance of the afhes, which are made on both banks of the lake, whenever the ground is cleared, but alfo the exportation of those articles to Geneva or Catherine's Town; which places are fituate at the two extremities of the lake. By means of his ftore, Mr. Norris can procure his afhes at a very reafonable rate, as he pays for them in commodities, which he receives at New York, and the carriage for which amounts to only three dollars per cent.

Our two travelling companions, who had laft year passed over this part of our journey, introduced us on the fame day to Mr. POTTER, a rich land-owner, who poffeffes about twenty-five thousand acres, and refides eight miles from Friendfmill. About one hundred and fifty acres of his eftate are already reduced under tillage; and he gave us nearly the fame information, relative to the flate and agricultural productions of thefe parts, as Mr. Robinfon. Mr. Potter and his whole family were formerly among the feveral zealous adherents of Jemima, but his attachment is now converted into contempt, and even detestation. He has not only renounced all communion with her, but, at the fame time, all the peculiar habits and tenets of the Quakers. He lives on his eftate in a more elegant and gentleman-like manner, than any other land-holder in this neighbourhood. He keeps feveral fervants, and rather fuperintends the management of his eftate by others, than attends actively to it himfelf. He poffeffes a good corn-mill, and a faw-mill, which are both worked for him, by a miller whom he employs. His corn-mill has yet ground folely for the public; and, for this reafon, it has only one courfe, although the quantity of water is fully fufficient to fupply two. He intends to add another courfe, as foon as the country shall be fufficiently populous to keep it in employment. The faw-mill may alfo be enlarged, as occafion requires. The usual price for the fawing of timber is either fix dollars in money for every thousand feet, or half the boards cut. We were very civilly received by Mr. Potter and his family, yet rather with exterior palitenefs than true urbanity. Mr. Potter fpeaks little, yet expresses himfelf on most fubjects with great propriety. Whether from bashfulness, or affectation,

124

10 - 31 P.M.

125

is

affectation, he has about him an air of referve, which is not a little difagreeable to a traveller, and proves unfavourable to his defire of information—the great motive which brought us hither. It muft, however, be admitted, that to anfwer the endlefs queftions of ftrangers muft, at beft, prove an irkfome tafk to a land-holder—a confeffion, which includes our moft grateful acknowledgments to thofe, who have been polite enough to gratify our curiofity.

The whole country abounds in fugar-maple trees \*, and very confiderable quantities of this fugar are made here. The following is the fubftance of the information, which we were able to procure on this head :

1. The medium produce of a tree, ftanding in the midft of a wood, is three pounds of fugar.

2. The average produce of trees, flanding on ground which has been cleared of all other wood, is from fix to feven pounds per tree.

3. A barrel of the first juice, which comes from the maple-tree, will yield feven pounds of fugar, if the tree stand single, and four, if it stand in the midst of other wood. This sugar is fold at one shilling per pound.

4. A barrel of the fecond juice will yield three gallons and a half of treacle.

5. Four or five barrels of the third juice will yield one barrel of a good and pleafant vinegar.

6. The vinegar is found to be better, in proportion as it is more concentrated. This is the cafe with Robinfon's vinegar, who, from ten barrels of the third juice, brews but one barrel of vinegar.

7. To clarify the vinegar, it must be boiled with leaven.

8. The third juice, which is not used for vinegar, yields cyder of an excellent flavour, when mixed with an equal quantity of water.

9. The longer the first juice is boiled, the better and finer the fugar wilk become.

10. In order that the trees may continue productive, they require to be tapped with extraordinary care; i. e. the fiftures must be neither too deep, nor too wide, fo that no water may fettle in them, after the juice

\* Acer faccharinum, Lin. called by the Indians Ozeketa.-Trans.

is extracted, and that the wood may clofe again in the fpace of a twelvemonth.

11. During the time the juice is flowing out, which lafts about fix weeks, and generally begins on the 1ft of February, all the days on which it freezes or rains are loft, fo that the number of days on which the bufinefs can be purfued to advantage is frequently, from thefe circumftances, much diminifhed.

12. Maple fugar, however, is already obtained in fufficient quantities, to form a refpectable article of trade, as during the above time two perfons can frequently make from five to fix hundred pounds of it, and this quantity will be increased in proportion to the number of workmen employed. As the maple-tree, wherever it grows, multiplies with aftonishing rapidity, we found, almost every where on our journey, no want of excellent fugar. At Robinfon's it was better and finer than we had met with any where elfe; although in general it is not fo white here as at Afylum, where Meffrs. de VILLAINE and D'ANDLAU refine it with the yolks of eggs. At honeft Robinfon's we also partook of an excellent liqueur, or dram, which he called cherry-rum, and which confifts of the juice of wild cherries, mixed up with a fmall quantity of rum. We learned, on this occasion, that the cherry-tree never produces fruit in a foreft, but only when it ftands fingle; from which it fhould feem, that the neighbouring trees injure and impede its vegetation. We were indebted chiefly to Mr. Robinfon for the information we obtained on this fubject, but the truth of it was equally confirmed from other quarters.

Our rambles in this neighbourhood led us, at length, to Friendfmill, where we found Captain Williamfon. The refolution of making this additional excursion, in lieu of waiting for him at Bath, feemed the most proper we could adopt. I think it right here to take fome notice of our worthy landlady at Friendsmill. She is a young woman, born and married at New York, whom the speculating propensity of her husband has brought into this country to keep an inn. She arrived here about two months ago; the elegance of her manners, and the propriety of her conduct, diftinguish her very advantageously, even from many American

126

Control Contro

American ladies, who move in a higher fphere than that of inn-keepers. Her hufband, engaged in his fpeculations, has been abfent almost all the time fince her arrival here. This young and elegant perfon, highly amiable in every point of view, derives additional charms from her delicate state of health, which seems to indicate, that she was not defigned by nature for the drudgery of an inn-keeper's wife in America. She is, moreover, without the affiftance of any fervant, and is, confequently, obliged to perform every menial work herfelf in her new fituation; and this fhe does with a degree of industry, and a mien fo noble and graceful, as at once to command our fympathy, refpect, and love. We found ourfelves interefted in her, fhe attracted all our efteem, and gained our warmest admiration. On our departure we testified our wish that her husband might foon return, and bring with him the fervants she stands fo much in need of; and, without whose affistance her health would be irretrievably injured, by the inceffant toils requisite in her prefent fituation. On the whole, we observed, that the women are handfomer here than in any other parts of the Continent we have hitherto traversed.

## Monday, the 8th of June.

Our friend Blacons, who had not yet completely recovered from his fall, and was apprehenfive of a fimilar accident on our way back, propofed to wait for us in Canandaqua, in order to avoid the fatigue of travelling eighty miles with us in a difficult country. We fhould value our friends not for the pleafure they afford us, but on their own account. This truifm, which in general is confidered as mere theory, was here reduced by us to practice. We felt and teftified our regret at parting with Blacons, but left this matter to his own option; fearful, only, that he fhould mifs his way, though fhort and plain enough. He would not have taken this refolution, probably, could he have forefeen that M. Dupetitthouars and myfelf, miffing our way at the very outfet, would be neceffitated to ftrike into the upper road, which is very good, and thus avoid the impediments, which occafioned his fall, and juftified his apprehenfions.

On our way back to Bath we met with nothing remarkable, except an Indian intoxicated with whifky, and who demanded of us more of that liquor. He belonged to a troop, which was hunting in the foreft, and had his child with him, though no Indian habitation was to be found within the fpace of two or three hundred miles. Nothing, however, is more common than thefe hunting-rambles, even at fuch a great diftance from all habitations. The produce of the chafe they fell to any inhabitants they meet for a dollar or a bottle of whifky, and behave, on most occasions, in a very orderly manner. Few or no complaints are made of them ; a circumstance the more easily accounted for, as an intoxicated perfon is here by no means an uncommon appearance.

## Wednesday, the 10th of June.

At Bath we were led by a train of reflections to obferve how much the fuccefs of a fettlement depends on the activity, judicious management, inceffant application, and fteady profecution of a well-concerted plan; fuccefs, indeed, muft neceffarily crown not only this fort of undertaking, but all others, when thus planned and executed. Whether Captain Williamfon be the fole proprietor of the lands in Geneffee, or co-owner thereof; or, which appears to me the moft probable, is merely the agent of the wealthy Sir WILLIAM PULTENEY of London, the real poffeffor of thefe lands, all things relative to the fettlement of them are transacted in the Captain's name, he being confidered as the fole creator, director, and main fpring, of every act of purchase and fale which is made or negociated.

The land in Geneffee, or rather that part of it which belongs to the State of Maffachufetts, and was not then fold, was, in 1791, purchafed in London of Mr. Morris for one fhilling per acre; he had bought it of Mr. PHELPS for five-pence per acre. The contract was concluded on the fuppofition, that this tract of land contained a million of acres; and on condition, that the fifty thousand pounds sterling, which were to be paid immediately, should be returned by Mr. Morris, provided

128

vided that Captain Williamfon, who was to view the lands, should not find them answerable to the description given by the vender. Captain Williamfon was highly fatisfied with the lands ; and, of courfe, the agreement was definitively fettled. It reflects no little credit on Mr. Morris, that, when on furveying the lands a furplus of one hundred and twenty thousand acres was discovered, he made no difficulty in transferring them, together with the reft, to Captain Williamson, without the least remuneration, becaufe, as he observed, it had been his intention bona fide to fell the whole without any refervation whatever. But for this generous mode of proceeding, the difcovery of fuch a confiderable furplus might have furnished ample matter for litigation. It is much to be wifhed, that fo difinterefted and liberal a character may find means, to extricate himfelf from the difficulties, in which he is now involved. This diftrict of Captain Williamfon's, bounded on one fide by Lake Ontario, and on the other by the river. Genefice, extends eighty miles in length by thirty or forty in breadth. Though this diffrict comprehends a quantity of land, which was fold antecedent to Captain Williamfon's contract, yet its continuity is not thereby interrupted. Captain Williamfon has purchased fome other land, which he has annexed to that bought of Mr. Morris, fo that he is now the poprietor of a tract confifting of not lefs than one million five hundred thousand acres. After having fpent fix months in vifiting and furveying this extensive diftrict, he at length came to a determination, to found at once feveral large establishments, rather than one capital colony. He accordingly fixed upon the most eligible spots for building towns, which were to ferve as central points to his whole fystem of fettlements; these were, Bath, on the creek of Conhoctoon; Williamsburg, on the river Genefice; Geneva, at the extremity of Lake Seneca; and Great Sodus, on Lake Ontario. He has divided his whole territory into fquares of fix miles, more or lefs, varying a little according to local circumftances. Each of these sections is to form what he calls a district.

The captain very justly observed, that this excellent land, for it is in general of the best quality, would soon find purchasers, when its

S

fertility

130

fertility should come to be properly known. He made it therefore his first bufinefs, to establish a mode of communication between Philadelphia and this new tract. Formerly perfons travelling to these parts were obliged to proceed hither by the way of Albany and New York; which caufed a circuit of five hundred miles or more, that part of the road included which leads from Northumberland to Loyalfock, on the eastern arm of the Sufquehannah. Captain Williamfon has fhortened this way by at leaft three hundred miles. The new road likewife, which leads from Bath by Painted Poft, is now continued as far as Williamsburg, while a by-road runs from Bath to Canandaqua, another from Bath to Geneva, and a third from Canandaqua to Great Sodus. In addition to thefe, feveral others have been made, which, though yet not much frequented, will in time become of great importance. For the use of this vast territory, the Captain has already crected ten mills, namely, three corn and feven faw-mills, together with a great number of houfes; and he has begun, in feveral places, to clear the wood-lands. The confiderable fums, which, being fufficiently rich for that purpofe, he was under the neceffity of advancing, before he could fell an inch of ground, he juftly confiders as money laid out to the greatest possible advantage.

He moreover put himfelf to the heavy expence of transporting eighty families hither from Germany; which should have been felected from among the inhabitants of Saxony; but which his agent at Hamburgh chofe from among the crouds of foreigners, whom poverty, idlenes, and neceffities of every kind, induce to refort to that mercantile city, with a view to emigration. These families, which on their arrival here were placed on small farms, have not however cleared the land allotted to them. Being maintained from the first out of Captain Williamson's ftores, they did not fo much as work on the roads, which they were to finish; and their leader, the very agent, who had felected and brought them over, after having rioted for some time in idlenes, drunkennes, and debauchery, at length ran away, with the whole fet, to Canada; being gained over, if we may believe common fame, by the English.

now stilling flad out to like

This

This finifter incident, difcouraging as it was to the Captain, engaged in bufinefs of great urgency and importance, did not however deprefs his fpirits, or cool his zeal. The foreign labourers were inftantly replaced by Irifhmen, with a very confiderable gain in point of the progrefs of labour, as well as of faving in the article of expence. The roads, which had been only begun, were foon put into good condition; and the land, which at firft was fold at one dollar per acre, in two years time fold for three. The produce of about eight hundred thoufand acres, difpofed of in this manner by Captain Williamfon, have not only refunded the purchafemoney, and the whole amount of the other expence incurred, but alfo, by his own confeffion, yielded a nett profit of fifty thoufand pounds fterling.

This great and rapid accumulation of property he, undoubtedly, owes to the money he at first advanced; but befides the neceffity of this money being laid out with judgment and activity, it was also requisite, that, in addition to his other means of forwarding improvement, he should be mafter of fome fubordinate advantages, without which, fo rapid a return of his first disbursements was hardly to be expected. Captain Williamson conftantly refides in the very centre of his fettlements, which circumfance, alone, gives him a very fuperior advantage over all the great landholders, private fpeculators, and trading companies, who refide in towns; for thefe, being often engaged in ftock-jobbing, which holds out confiderable profit, nearer in profpect than what can be obtained from the fale of land, difcourage purchasers, either by subjecting them to enormous travelling charges, or obliging them to carry on a tedious correspondence, in the course of which they have frequently to wait a long time before they can get a definitive anfwer, if they do not incur confiderable unneceffary expence to expedite the bufinefs.

Captain Williamfon, on the contrary, who is always to be found in the midst of his possession, and is ever attentive to see and answer those who have business with him, frequently concludes a contract, and removes every difficulty, in the course of a sew minutes conver-

S 2

fation ;

fation; fo that the purchafer, when he comes to view the land, being extremely pleafed with the foil, the trifling purchafe-money, the fpeedy conclusion of the contract, and the good reception he has experienced from the Captain, on his return home imparts his fatisfaction to his whole neighbourhood, and generally brings along with his own family fome new fettlers, who alfo win over other profelytes in the like manner, and from the fame motives.

2dly, Captain Williamfon's land is free from all difpute or queftion concerning its right of occupancy. His claims being ftrictly legal, all his land is properly afcertained and marked out. The purchafers can, therefore, with entire fecurity, extend at once, like Captain Williamfon, their operations over every part of their fettlement. This is an important additional advantage in the fale and purchafe of land, which however is but too little attended to by those, who are engaged in speculations of this nature.

3dly, His land, the price for an acre of which has gradually rifen from one dollar, to twelve fhillings, two dollars, and at laft to three dollars, is always fold with a proviso, that a number of acres be cleared, equal to the number of families which shall come to settle, within eighteen months. This claufe is, however, only exacted from those, who purchafe a large quantity of land; they who buy fmall fhares of five hundred or a thousand acres, are bound only to procure one family. No contract is concluded without this claufe, which is of more importance, than at first fight it appears to be; for every man, who posseffes a piece of ground, the value of which is progreffively encreasing every year, will be folicitous not to forfeit the pofferfion of it, and conduct himfelf accordingly. However, if he fhould fell again before the expiration of eighteen months, the new purchafer is rendered liable to the condition, and Captain Williamfon, who adheres to his original contract, and confiders the land as mortgaged for the execution of it, refumes the pofferfion of the fhares then fold, if the conditions of the fale be not fulfilled. This rigorous measure is not purfued in cafes, where known

132

known obstacles impede or protract the execution of the clause: for the Captain is too fensible, that it is his interest to act uniformly in a mild, just and condescending manner. The clause however can always be enforced, and is actually enforced often enough, to spur the indolence of fuch purchasers as need this incitement. It is, therefore, upon the whole, extremely well adapted to promote the success of his undertaking. For, in proportion to the quantity of land already rendered fit for cultivation, will doubtless be the price of that which yet remains unfold.

4thly, The following are the Captain's terms of payment: to difcharge half the purchase-money in three years after the first conclusion of the contract, and the remainder at the expiration of fix years. The payment of interest to commence from eighteen months after the period when the bargain is ftruck. Thefe terms are remarkably advantageous to a purchafer ; for if he inftantly fet about clearing the ground, he may eafily obtain the produce thereof, before the interest becomes due; nay, his crops may frequently procure him fomewhat towards the payment of the first instalment. Such families, as are extremely poor, the Captain fupplies occafionally with a cow, an ox, or even a houfe to live in. But this generofity he exercises with great prudence and diferetion. He makes but few prefents of this nature, yet these are in fufficient number, to invite colonists, by a well-founded reliance on his general character for benevolence; and hitherto none, but German families, have abufed his kindnefs. Affistance fo highly important can only be afforded by landholders, who refide perfonally on their demefnes. A proprietor, who is absent from his estate, or a distant commercial company, can only act upon general principles, the application of which frequently leads to inconvenient expences, or has a tendency even to deprive the country of inhabitants, who alone can give it agricultural or political importance.

5thly, Captain Williamfon never eftablifhes a fettlement, without having previoufly made fuch arrangements, as fhall fecure a regular fupply of provifion

provision to the inhabitants. His own ftores, which however he does not feem to confider as his own, are never opened, unlefs it fhould happen, that fettlers, from want of prudence or property, are exposed to want. Were he to open them before, the industry of the inhabitants would be quickly relaxed; which in all new fettlements it is highly neceffary to foster and stimulate. He employs the fame means in fuch fettlements as are already formed; and this precaution, though not always neceffary, is never attended with any loss or damage, because in a new country of fuch vast extent, the prime necessaries of life are fure at all times to meet with a ready fale.

6thly, He encourages every new fettlement by taking himfelf a fhare in it. When five or fix new fettlers have formed the project of building their houfes together, he always adds one to them at his own expence, and which is much fuperior to theirs. This expence, which at firft fight feems to carry with it an air of generofity, or perhaps affectation, is in reality founded on the foundeft policy. The fhare, on which Williamfon builds, generally acquires ten times its former value. A purchafer or tenant foon appears; and the different houfes and mills, which he has erected, have hitherto, without exception, produced twice or three times as much as they coft.

7thly, Once every year, at leaft, he makes it a point, to vifit each of his fettlements, and thus diffufes activity by his prefence. This infpection tends to promote the fale of the land, and to enfure fecurity and eafe to the purchafer. In addition to thefe prominent traits of his management, he employs all the various means, which the peculiarity of fituation or other circumftances may offer. Independently of the medical flores, which he keeps in all the chief places of his fettlement, he encourages by premiums races, and all other games and paftimes of young people. He is attempting likewife to eftablifh horfe-races, with a view to improve the breed of horfes, and keeps himfelf a fet of beautiful ftallions. Thefe horfes cover only the mares of proprietors, who muft hire them, from motives which muft be obvious to all who are converfant in fubjects of this nature.

Captain

134

Captain Williamfon has now nearly put the finishing ftroke to his great undertaking. Next autumn he proposes to fail for England, and to return the following spring with a choice affemblage of horses, cattle, and sheep, of the best breeds he can obtain, and a collection of models of all implements of agriculture, the dimensions of which are so nicely calculated, and so well made in that great country, where all useful arts, and especially those which relate to agriculture, have attained to an uncommon degree of perfection. Captain Williamson will, therefore, not only procure to his extensive possible fingular advantages over those of other landholders, but also become the benefactor of America at large, whose agriculture he cannot fail to meliorate, by offering to her view improvements, fanctioned by time and experience.

What I have related on this head is not merely the refult of what we faw and heard from the Captain himfelf during our ftay at Bath, but it tallies correctly with the information we afterwards collected at Geneffee. Captain Williamfon is here univerfally refpected, honoured, and beloved. How glorious, in my efteem, is his career ! How fortunate and enviable his deftination ! How much more important than that of a diffipated courtier, or a mercenary flock-jobber! I too, not in a new country, but in France, where there is fuch an ample field for useful exertion, formed fimilar establishments on my estates, by which I diffused activity and induftry all around me; I studied to enrich the country, and to render it industrious and flourishing. I hoped, and expected, to encrease the felicity of my own fituation, by adding to the comforts of my poor neighbours. Undertakings, which had no object but the welfare of my country, were beginning to be crowned with all the defired fuccefs, when I was fuddenly obliged to relinquish that much loved country, to which I was rendering fo much fervice. I am now, alas! an exile; all my hopes have vanished like a shadow. Solitarily I wander, without a country I can call my own: life, therefore, for me, is completely at an end. But no more of these reflections on what I was, and what I am : they are too painful:

nwo an in them is remarkably good, and he aceps them in his own

To

To return to Captain Williamfon. The four days we remained here, we employed in vifiting the different fettlements in the neighbourhood of Bath. This place has been fixed upon, to be the chief town of a county. The prefent county of Ontario, at the next fitting of the Legiflative Affembly of New York, is to be divided into two parts, one of which is to retain its former name of Canandaqua, from the chief town fo called; and the other is to affume the name of the county of Bath, the chief place of which is to be the city of that name.

Mr. Williamfon is, at prefent, building a fchool, in Bath. This he intends to endow with fome hundred acres of land, and to take upon himfelf the maintenance of the mafter, until the money, paid for the inftruction of the children, shall be fufficient for his support. For good reafons, the Captain has been for fome time past enquiring after an able school-master. He is also building a seffions-house and a prison. The present inn was likewise built by him; but he afterwards disposed of it at a confiderable profit. He is now building another, chiefly to excite proper emulation, and an Englishman already occupies a part of the unfinished building, which, in addition to other conveniences, is also to contain a ball-room. Near Bath, on the other fide of the Conhoctoon, he has crected a corn-mill, and two faw-mills; which works, from the great quantity of water at hand, are capable of confiderable enlargement. He is likewife conftructing a bridge, for the purpose of opening a free and uninterrupted communication with the country on the other fide; it will also prove of effential fervice to the road leading to Williamsburg, which runs along the foot of the mountains. These mills, when finished, will not coft more than five thousand dollars; and the Captain has already been offered for them twelve thousand five hundred dollars, befides a fhare of one hundred acres of land. He alfo poffeffes fome fmall farms in the vicinity of Bath. A good hufbandman, who was his neighbour in Scotland, fuperintends thefe farms, which appear to me to be better managed, and better ploughed, than any I have hitherto feen. In all these settlements, he has at least one estate referved for himself. The ftock on all of them is remarkably good, and he keeps them in his own possession,

136

137

poffeffion, until he can oblige fome of his friends with them, or handfome offers are made for them from other quarters.

To the different fettlements already mentioned the Captain is now adding two others on Lake Ontario; one near Rondegut, on the river Geneffee; and the other at Braddock, thirty miles farther inland, As there appeared fome danger of a war breaking out between America and England, it is but very lately, that he carried this project into execution; and for the fame reafon the works at Great Sodus have alfo been much delayed. Last year General Simcoe, Governor of Upper Canada, who confidered the forts of Niagara and Ofwego, which the Englifh have retained, in violation of the treaty, as English property, together with the banks of Lake Ontario, fent an English officer to the Captain, with an injunction, not to perfift in his defign of forming these fettlements. The Captain returned a plain and fpirited anfwer, yet nevertheless conducted himself with a prudence conformable to the circumftances. All these difficulties, however, are now removed by the profpect of the continuance of peace, and still more fo by the treaty newly concluded. It is afferted, that the fituation of Great Sodus, on the coast of this district, promises to afford fafe and convenient moorings for fhips, from the depth of the water, and that the post may also be eafily fortified against an enemy. On confulting the map, the great importance of fuch a harbour to the United States, will be readily difcerned, whether it be confidered as a port for fhips of war, or for merchantmen.

Hitherto I have fpoken of Captain Williamfon merely in his public character, as founder of the most extensive fettlement, which has hitherto been formed in America. I shall now follow him into private life, where his hospitality and other focial qualities render him equally confpicuous and amiable : and here it is but doing him common justice to fay, that in him are united all the civility, good nature, and cheerfulnes, which a liberal education, united to a proper knowledge of the world, can impart. We spent four days at his house, from an early hour in the morning un-

1361

til

til late at night, without ever feeling ourfelves otherwife than at home. Perhaps it is the faireft eulogium we can pass on his free and easy urbanity, to fay, that all the time of our ftay he feemed as much at his eafe, as if we had not been present. He transacted all his business in our prefence, and was actively employed the whole day long. We were prefent at his receiving perfons of different ranks and defcriptions, with whom the apartment he allots to bufinefs is generally crouded. He received them all with the fame civility, attention, cheerfulnefs, and good nature. They come to him prepoffeffed with a certain confidence in him, and they never leave him diffatisfied. He is at all times ready to converse with any, who have business to transact with him. He will break off a conversation with his friends, or even get up from dinner, for the fake of difpatching those, who wish to speak to him. From this conftant readiness of receiving all who have business with him, should any conclude, that he is influenced by a thirft of gain, this furmife would be contradicted by the unanimous testimony of all who have had dealings with him, those not excepted, who have bought land of him, which many of them have fold again with confiderable advantage to themfelves. But were it even undeniable, that money is his leading or fole object, it is highly defirable, that all, who are fwayed by the fame paffion, would gratify it in the fame juft, honourable, and ufeful manner.

The prices of all forts of provision, of cattle, and labour, in this diftrict, are exactly the fame as in the Friends' Settlement, or, at leaft, fo nearly the fame, that it is needlefs to mention the difference. The price of carpenter's work is four pence a foot for hewn timber, and two dollars for ten fquare feet in boarding the fides of buildings, or covering them with fhingles. It fhould be obferved, however, that all forts of merchandize are much dearer in the fhops here than at Mrs. Hill's, at Friendfmill. The price of commodities in thefe new fettlements depends, it may be faid, entirely on the honour of the trader; for he alone can fupply the wants of the inhabitants, and the Americans never offer lefs than the feller demands. The prices of planks are higher

higher at the Captain's mill than any where elfe. He takes feven dollars per thousand for cutting them, and the mill, which is continually at work, can cut fix thousand in twenty-four hours time. He fells them at the rate of nine fhillings per hundred. Should he continue poffefor of the mill for any length of time, it is his intention to lower the price. He obferved to us, that if he were to do fo at prefent, he should discourage all the other inhabitants, who may have formed the defign of conftructing mills, and that the prices will foon be brought down by competition.

We are affured, that the climate here is much more temperate, both in winter and fummer, than in Pennfylvania; that the winter feldom or never lafts above four months; that the cattle, even in that feafon, graze in the forest without inconvenience; and that no provision of fodder is requifite, during the winter, except for fuch cattle as are to be fattened. Neither does the fnow ever lie fo deep as to cover all the herbs, which ferve for their pasture.

Captain Williamfon has hitherto endeavoured, but in vain, to remove the objection of this district being rather unhealthy. In his opinion, the unhealthiness ascribed to it is nothing but the natural effect of the climate upon new fettlers, and is confined to a few fits of fever, with which ftrangers are usually feized in the first or fecond year after their arrival. It is certain, however, that the inhabitants all agree in this unfavourable report of their climate; notwithstanding which crouds of new fettlers refort every year to this diffrict. Thus much, at least, we observed, that marfhes and pieces of ftagnant water are thickly fpread over the face of the country; but thefe will, no doubt, be drained, as population and cultivation shall encrease; this however is and will for some time be unattempted; and moreover, the water for common drink is in most places unpleafant and unwholefome.

Though we flept at the inn, yet we fpent the whole day, from morning to night, at Mr. Williamfon's, where we enjoyed more tranquillity than in the noify inn, which is no bigger than a sparrow's neft, and is T 2 always

always crouded with travellers. One night twenty-five of us flept in two rooms, in fix beds, which rooms were, in fact, nothing but defpicable corn-lofts or garrets, pervious to the wind and rain.

The habitation of the Captain confifts of feveral fmall houfes, formed of trunks of trees and joiner's work, which at prefent make a very irregular whole, but which he intends foon to improve. His way of living is fimple, neat, and good; every day we had a joint of fresh meat, vegetables, and wine. We met with no circumstances of pomp or luxury, but found ease, good humour, and plenty. In the useful, yet comfortable, manner, in which the Captain lives, life may be fecurely enjoyed, without diffurbing the enjoyments of others.

About twenty houfes compose, as yet, the whole of the town of Bath. It is built on one of the bays, which the Conhocton forms in its courfe. The banks of this creek are bounded on the opposite fide by pretty high mountains, which are chiefly covered with pines and hemlock firs.

Our first intention was to have stopped at Captain Williamson's only one day; in compliance with his wish, however, we added another, and necessity compelled us to stay a third. When on the point of setting out, I perceived that my horse was lame; and though we were assured, that he might make the journey without the least inconvenience, yet Captain Williamson obligingly infisted on our staying one day longer. We should not have hesitated a moment to comply with this invitation, but for the uneasiness, which our delay might occasion to our friend Blarons. Mr. Guillemard obviated this difficulty, by offering to proceed himsfelf, and thus remove any anxiety of our friend. Mr. Dupetitthouars and myself yielded, after this, with great pleasure, to the earness and polite entreaties of the Captain.

Mrs. Williamfon, whom we had not feen for the first two days, made her appearance on the third at dinner. To judge from her deportment, timidity, even to a degree of bashfulnes, had till then deprived us of her company. She is a native of Boston, and was married there to the Captain, who, in the contest with Britain, had resided at Boston as a prisoner

of

140

141

of war; being carried thither by a privateer, who captured the fhip, on board of which he was a paffenger, with a view to join his regiment. Mrs. Williamfon, it feems, had followed her hufband to Scotland, and afterwards to Geneffee. She is yet but a young woman, of a fair complexion, civil, though of few words, and mother of two lovely children, one of whom, a girl three years old, is the fineft and handfomeft I ever faw. This our opinion we did not fail to report to her parents, which afforded them great fatisfaction.

# Friday, the 12th of June.

Our horfes, as well as ourfelves, being completely refreshed and recovered, through the civility of the Captain, we at length quitted his hofpitable dwelling, and took our leave, with mutual promises of epistolary correspondence, and rendering each other every fervice in our powerby which at least my travelling companion, Dupetitthouars, and myself, could furely be no losers.

After leaving Bath, we paffed through a fmall fettlement, confifting of about four English families, which arrived here from London only fix months ago. They are chiefly fawyers, who had been used to work for the cabinet-makers in that great metropolis. They now work for themfelves, and poffefs each an eftate of about ninety acres. These they have already begun to clear for cultivation, affifting each other with their cattle and labour. They cannot fail, in time, to make their fortunes; and in the mean while they enjoy that flate of independence, which forms one of the best bleffings of life, if accompanied with the means of sublistence. Their log-houfes have an appearance of cleanlinefs, neatnefs, and order, which plainly befpeak thefe families to be English. To judge from the choice of their books, which form a part of their furniture, and from the conversation of fome of them, they appear to be Methodists. These new English settlers have, this year, already made maple-fugar, and one of them the fineft I have yet seen, even that of Afylum not excepted. Two of the wives of these new settlers have already caught the fever, and not tere one

one of them appears to enjoy a good state of health. Eighteen miles farther from Bath, we found another family, that came hither last autum from Maryland, afflicted with a fever. Four miles farther on we stopped at one Mrs. BEVER's, who was likewife laid up with an intermittent fever, the fits of which returned every day. This fever may, perhaps, be a tribute, paid but once to the climate, as Captain Williamfon thinks; but the country, excellent as it is in all other respects, carries, I think, undoubted marks of being unhealthy; fuch as stagnant waters, phofphoric exhalations, fwampy creeks, bad water for drinking, and an absolute scarcity of springs. Having some quantity of bark in our travelling-cafe, we gave a little of it to Mrs. Bever, with directions how to use it; we, at the fame time, wrote a letter to Captain Williamson, informing him of the diftrefs of this family, and of their want of more bark. We entertain little doubt, but that the Captain will receive this intelligence as a first attempt to fulfil, on our part, the engagement we entered into when we took leave of him.

It will be eafily conceived, that after we had given the poor woman this advice, her hufband fhewed us all the refpect, which men of the medical profeffion generally receive in this country. Yet his demonstrations of refpect ceafed, when we refueed his repeated offers to pay us for the bark. Though we no longer appeared to Bever physicians of the usual caft, yet we were certainly deemed very knowing and clever, for feveral of the ten or twelve perfons, who had repaired to this cottage for shelter and food, shewing us their wounds and contustions, requested our advice concerning them. We recommended to them, to wash their fores with falt and water; and the simplicity of this remedy, which would perhaps have met with little approbation from European peafants, did not here, in the leaft, abate the high opinion, which these good people had conceived of our superior knowledge. The company we met with at Mr. Bever's confisted of furveyors and fome other perfons, who had furveyed land, which they intended to purchase on the heights of Lake Canandaqua.

I fay on the heights, becaufe in that place a chain of mountains, about ten

142

ten or twelve miles in length, feparates the water, which flows in a fouthern direction, from that, which difcharges itfelf into the river of St. Laurence.

We found, among thefe perfons, a young man, who about fix weeks before had been bitten on the knee by a rattle-fnake, while he was fifting on the banks of Lake Canandaqua. At firft he did not feel much pain in the part affected; but an hour afterwards a fwelling appeared, which gradually extended all along the leg to the foot, and both became fo ftiff, that he was unable to move them. A cure was effected within the fpace of only fix days by the juice of fnake-root laid on the wound and fwelling, as a poultice, mixed with milk, together with a few drops of that juice, pure and unmixed, taken internally. Inftances of fuch bites occur but very feldom, and only, it feems, when the animal has been touched; otherwife it conftantly retires, and may be killed by a blow with the flendereft flick.

It is a common obfervation, that wild animals are lefs fierce in America than in other parts of the globe; the truth of this is confirmed by the teftimony of fuch as, from their refidence in forefts, are beft qualified to poffers fatisfactory information. Wolves, bears, nay even panthers, mostly flee before man; and the inftances of their doing mifchief are fo rare, that the very reality of it might be doubted.

The dangers, therefore, to which new fettlers are exposed, are not much to be apprehended. The feverest misfortune, to which the inhabitants of the American forest are liable, is the loss of their children in the woods. These unfortunate infants, over whom it is almost impossible to keep constantly a watchful eye, are apt to run out of the house, which is feldom fenced the first year, and straying from their homes are unable to find them again. In such cases, however, all the neighbours, nay perfons from the remotest parts, join in the fearch after these little unfortunate creatures, and fometimes they are found; but there are also instances of their being totally lost, or discovered only when dead of hunger or fear.

Saturday,

## Saturday, the 13th of June.

From Bever's we rode on, till we came to Captain METCALF's, where we ftopped for the night. He lives at the diftance of eight miles from the former houfe, and keeps an inn. This diftrict is called Watkinftown, from feveral families of this name, who poffers the greatest property here. The road from Bath to Metcalf's habitation is generally bad enough, as is mostly the cafe in a luxuriant foil, and especially after a fall of rain; fo that, where the roads are not properly made, the interest of the traveller must absolutely clash with that of the landowner.

Two miles on this fide of Bever's houfe we had observed the commencement of a range of mountains, which appeared to us to feparate, in these parts, the waters of the Susquehannah from those of the lakes.

After we had paffed the above English fettlement near Bath, we met with no habitation but at distances of eighteen, twenty, and twentytwo miles. Between Metcalf's house and Canandaqua, however, the dwellings stand closer together. The lands, belonging to Captain Williamson, terminate at Bever's house; all the ground thence to Canandaqua, and farther on, has been fold by Robert Morris, or Messers. Phelps and Gorham, who had purchased their demesses before Mr. Williamson bought his. Metcalf, for instance, three years ago, purchased his estate from them for one shilling per acre. Of the one thousand acres, he then bought, he has already fold five hundred and upwards for from one to three dollars per acre, and some have fetched twenty-five dollars.

The profits, which are made by fpeculations in land, all over America, and efpecially in this neighbourhood, are great, beyond calculation. We paffed, however, through feveral fettlements, which were deferted. Occurrences of this kind are common enough in new countrics; and experience flews, that of ten new fettlers, who, in the first inftance

144

inftance join to clear and cultivate fresh grounds, at the expiration of a couple of years, one only will, for the most part, remain; and the *fecond*, nay, at times, the *third* fettlers are generally the best colonists. They take advantage of the labours and difburfements of their predecessors, remain in the country, and thus become truly useful to the fettlement. Captain Metcalf, besides his lands and inn, possibles a fawmill, where four thousand five hundred feet of boards are cut daily. These boards he fends on the Lake to Canandaqua, where they are fold for ten shillings a thousand feet. Wheat is fold here for fix shillings a bushel, and Indian corn for four shillings. There is a schoolmaster in Watkinstown, with a falary of twelve dollars per month; all the families, that contribute to this stipend, have the right of fending their children to his school.

The road to Canandaqua is bad and miry, running for the first three miles constantly along water. A little farther on, where its direction is more elevated, it mends. The foil contains a stratum of black earth, a foot or more in depth. On travelling this road, we observed one or two extensive tracts of ground, cleared by the Indians, but few habitations. The few ploughs we faw here were drawn by oxen. The woods are thick and losty. Sugar-maple, black birch, oak, hickory, hemlock fir, and beech, are the most prevailing trees. The ague is a common diforder in all these parts.

The Lake of Canandaqua, which we reached at the diffance of four miles from the town, exhibits a very delightful afpect. The banks are not very low. The long and tedious famenefs of thefe woods, through which we had paffed, contributed, probably, not a little to enhance the agreeablenefs of the profpect now before us. On the opposite fide of the lake is an orchard, where very confiderable quantities of cyder are made for fale at Canandaqua.

## Sunday, the 14th of June."

Canandaqua is, as I have already observed, the chief town of the county of Ontario. It stands on the bank of the lake of the same name. On

U

145

the

the ground, now occupied by the town, flood, four years ago, a fingle factory, which carried on fome trade with the Indians. The town confifts, at prefent, of forty houfes. The territory of this city, which contains about fifty thousand acres, is one of the districts, which belonged to the State of Maffachufetts, and were fold prior to the contract concluded with Captain Williamfon. The town, although feated on an eminence, is not more healthy than the neighbouring country. Mr. de Blacons found here, last autumn, a great number of perfons afflicted with the ague. This was attributed to the uncommon wetnefs of the feafon, and the ague, it was faid, had made its appearance during the rains. We are now here in the month of June; and yet it rages as much, if not more, than it did laft autumn. No alleviation of this afflicting circumftance is, therefore, to be expected, except from time, and a gradual encreafe of labour, cultivation, and population. The houfes in Canandaqua, though all built of wood, are much better than any of that defcription I have hitherto feen in other cities. They confift moftly of joiner's work, and are prettily painted. In front of fome of them are fmall courts, furrounded with neat railings. Some of the inhabitants poffefs confiderable property ; among thefe are Meffrs. Phelps and Gorham, for a long time paft proprietors of these lands, or, to fpeak more properly, their children; Mr. THOMAS MORRIS, fon of Mr. Robert Morris of Philadelphia, and agent for his father in the management of a large tract of land, which he poffeffes in this neighbourhood, with other confiderable diffricts on the banks of the river Geneffee, and beyond it, still occupied by the Indians, but which he has acquired the right of purchasing in preference to all other perfons; Mr. CHIPPING, director of the affairs of the United States with the Indians; and many others, whofe names I have not been able to learn. There are two inns in the town, and feveral fhops, where commodities are fold, and shoes and other articles made. The encrease of population, however, is not confiderable in thefe new fettlements; and there is at prefent a great deficiency of labouring men. The habitations in the adjoining diffrict are but thinly fcattered. The lands, as well as the town-

146

Contraction of the second

147

an

town-fhares, are, for the most part, the property of rich individuals, who refide in towns, and having purchased them on speculation, are unwilling to part with them until time shall have raised their value.

The only potable water in Canandaqua is obtained by pumps; but even this is indifferent, and no fpring has yet been found in the town, or in its neighbourhood. There is not even a creek lefs than four or five miles diftant; and there is, confequently, no profpect of eftablishing any mills nearer the town.

The lands here are faid to produce as much wheat as is neceffary for the confumption of the inhabitants; the ordinary price of it is fix fhillings a bushel. The woods contain but very few large trees, the fcarcity of which, together with the want of faw-mills, is the reafon why boards, when bought at the mill, cost here ten dollars a thousand. The price of land is three dollars per acre, without the town, and fifteen dollars within its precincts. The price of Indian corn, oats, &c. are much the fame as at Friendsmill and Bath. Day-labourers, whom it is difficult to procure, generally earn five shillings per day wages. During the last harveft, however, Mr. Thomas Morris paid as high as ten fhillings, befides finding them in victuals. The land, although tolerably good, is inferior to what we faw in other parts of Geneffee, which we traverfed. The average produce, in the first year of its cultivation, is from twenty to twenty-four bufhels of wheat per acre. They make use of the plough even in the first year. The oxen are good, because most of the new fettlers come from New England, and generally bring their cattle with them from that province. In our journey we met, near Canandaqua, feveral parties of American emigrants, more or lefs numerous, travelling to Niagara. One of them confifted of five or fix families, who had with them, thirty-four head of cattle. Thefe travelling companies are very frequent; emigration from Niagara into the United States is alfo confiderable, but lefs fo than in the first-mentioned direction.

I had a letter to Mr. Chipping from General KNOX, which Mr. de Blacons had delivered previous to our arrival. This letter procured us

U 2

an Indian, who fpoke the French language, and was to conduct us in our journey from Canandaqua to Niagara. He was accordingly fent for by Mr. Chipping. We called at the houfe of that gentleman, to return him our thanks for this favour, and alfo to fee fome Indians, who were with him. He acts as agent for the United States, with all the nations bordering on Canandaqua.

These Indians were about twelve in number, among whom were feveral chiefs of the tribe of Seneca Indians ; one of them was RED JACKET, a warrior of no fmall note among his countrymen. They paid Mr. Chipping a vifit, that is to fay, they came to partake of his whifky and meat. Such parties come very frequently, and, in general, merely for this, and no other purpofe. On these occasions they drink as much as they can, and, when fatiated, a few bottles are generally diffributed. among the party, to take with them. We found them in a fmall hut, behind the agent's houfe, which indeed refembled a ftable, rather than a houfe. Two of them lay on the ground, intoxicated to a high degree of infenfibility. They were nearly naked, except that each wore a woollen apron, about a foot square, fastened to a girdle, to which it was again. tied behind. From this girdle is fufpended that dreadful inftrument, the fealping-knife; a fmall knife, which they generally use to cut their meat. Their heads were not fhaved, but the hair was cut very fhort, and tied above in a braid, which is made to pafs through a filver pipe; their ears were quite bare, and adorned with a variety of fmall rings. Some wore fmall filver plates at the extremity of the nofe, which is generally confidered as an ornament of diffinction for the chieftains. They were all very cheerful, addicted to laughter, and full of glee. They appeared highly delighted with viewing us, and were most of them handfome looking men. One fpoke a little English. As we expect to fee whole tribes of Indians in the progrefs of our journey, I may perhaps. hereafter be able to give a more ample and fatisfactory account concerning them. As far as my knowledge and observation reach at prefent, it is merely the immoral policy of civilized nations, which has fubjected thefe

148

Control of a specific strain the second strain s

thefe people to the loweft rank in the fcale of human beings. As long as they were fuffered to remain in their favage ftate, they were warlike and independent, wild, perhaps, yet humane. Now that the white people find it convenient, to attach them to their interefts, they are feduced with money and whifky, and rendered as brutal and debauched, as it is poffible to make them. The odious and illiberal artifices practifed by civilized nations, to render every thing fubfervient to their interefts only, make their vaunted fuperiority appear the more difgufting to the eye of genuine philanthropy.

A little before our arrival, a party of Indians, from the neighbourhood of Le Bœuf, came to Captain Chipping's, to demand justice upon an American foldier, who had murdered two Indians, from motives of jealoufy and revenge. The bufinefs, however, was hufhed up by the payment of two hundred dollars for each Indian, which is the fettled price of compensation in fuch cases, and the soldier remained at liberty. Not fo, however, when an Indian murders a white man: in this cafe, the affaffin is delivered up to the Americans, and hanged. And thus it isthat a people, which makes its boaft of honefty, justice, and equality, can connive at the most flagrant perversion of justice, to the eternal difgrace of both its executors and its victims! The treatment of the Indians, and the fervitude of the negroes, have branded the fair face of American freedom with an odious ftigma, which government, as foon as poffible, flould strain every nerve to efface. It is to be feared, however, that the caufes will not be eafily removed, connected as they are with one of the most powerful passions of the human breast-the love of money !

We hoped to find a good inn at Canandaqua, which is no unpleafant thing in the Geneffee country in general, but we were difappointed. What reafons could induce Mr. Blacons to prefer the fecond inn, I could not learn, but it is certainly far inferior to the firft. We put up, however, at the fecond, though not without throwing fome blame on our friend, who is, in general, more prudent in his counfel. Our diffatisfaction was greatly encreafed, when we were fhewn into the corn-loft to fleep, being four.

four of us, in company with ten or twelve other men! But fleep, the great balm of human uneafinefs, foon calmed our minds.

My reft, however, was ere long interrupted by a little circumftance, which I fhall mention, as it may ferve to illustrate the habits of this country. This was the arrival of two new guests, who soon entered our loft; an old man, and a handsome young woman, who, I believe, was his daughter. Three rows of beds were placed in this large apartment, which half filled it; and there were two empty beds in the same row with mine.

In one of these the good old man lay down without undreffing himself, and the young woman, thinking every one about her fast asleep, fell to stripping, which she did as completely as if she had been in a room by herself. No movement on my part interrupted the business of her toilette, although I could not fall asleep again until the candle was put out. This little anecdote, at which European coyness will no doubt either fcoff or laugh, shews, in an advantageous light, the laudable simplicity and innocence of American manners.

Laft night, we rejoined Blacons at Canandaqua; and this morning Dupetitthouars left us, to proceed ftraight to Conawango, where the Indian, who fpeaks French, is waiting for us. We fet out with Blacons on our way to Ontario, intending to take a view of an effate belonging to one Mr. PITT, of which we had heard much talk throughout the country. On our arrival, we found the houfe crowded with Prefbyterians: its owner attending to a noify, tedious harangue, delivered by a minifter, with fuch violence of elocution, that he appeared all over in a perfpiration. We found it very difficult to obtain fome oats here for our horfes, and a few hafty morfels for our own dinner. As we had no opportunity of viewing the effate, we were obliged to content ourfelves with the fine profpect of the neighbouring grounds, which the houfe afforded. The fields are in a better ftate of cultivation than any we have hitherto feen, and thoroughly cleared of wood.

This eftate has been only five years under cultivation. Old Mr. Pitt and his two fons poffess about nine hundred acres, one hundred and thirty

thirty of which are cultivated. These beautiful fields were cleared long ago by the Indians. Of the above one hundred and thirty acres just mentioned, fixty are laid out in meadows, on which clover and timothy-grafs are fown. Their flock confifts of fixty or feventy head of cattle, of which they fell very little, as they wish to augment their number by breeding. The first crop of their meadows yields two tuns of hay per acre, and the fecond is fed off by the cattle. The winter does not laft here above three months and a half, during which, the live ftock kept near the houfe are fed with hay, morning and evening, in the farm-yard. The dung-cart very rarely vifits the land. Its average produce is twenty bushels of wheat, and thirty-five bushels of Indian corn, per acre. The price of wheat is fix shillings, and of Indian corn and oats three shillings per bushel. The price of cattle is the fame, as in the places before mentioned. Labouring men earn five shillings a day wages, without victuals. The faw and corn-mills lie at a confiderable diftance from this house. The first is eight miles, the fecond twelve miles diftant. Corn and flour are transported on fledges, during the winter. All the corn-fields, as well as grafs-lands, had a fine appearance, and feemed to be under excellent management. Yet a view of the handfome married and unmarried women, who filled the church during both morning and evening fervice, was even more delectable to our fenfes, than the fine rural fcenery.

We ftopped at Captain WATWORTH's to pass the night. Along the whole route from Canandaqua, the woods appear beautiful to the eye, but are not fo crowded with trees as on the other fide of that place. Several parts of the forest have been burnt down by the Indians, who posses this country from time immemorial. We frequently traced or met with Indian *camps*, as they are called, i. e. places where troops of them, who were either hunting or travelling, had passed the night. Their tents or huts are nothing in the world but four posts, driven into the ground, and overlaid with bark. In this day's journey we passed by the extremity of four lakes, viz. of Hemlock, Conefus, Honeygoe, and Conhocton.

We:

We were much concerned at our difappointment in not finding Mr. Thomas Morris at Canandaqua. But a young gentleman of the name of WICKHAM, who feemed to be his clerk, and lives in his houfe, received us with as much civility as he could have done himfelf. In addition to other kind offices, he gave us a letter to Captain Watworth, a nephew of Colonel Watworth of Connecticut, who lives in Ontario, and is concerned with Mr Thomas Morris in the purchafe of lands.

Our letter of introduction obtained us, as we expected, an invitation to fleep at the Captain's. On our arrival, he told us, that he was obliged to fet out early the next morning for Canandaqua, to review a party of foldiers, over whom he is captain. Two minutes after this the Captain got on horfeback, to fee a friend, as he told us, though it was then eight o'clock at night. This conduct, in France, would have juftified a fufpicion, that the mafter of the houfe was difpleafed with the vifit of his guefts. With fome latitude it might, perhaps, have borne the fame conftruction in America; but we found it more convenient to afcribe it to an uncommon love of eafe, and freedom from reftraint. There was no inn in the neighbourhood; and, as we found our fituation not at all the worfe, but rather better for this his behaviour, we endeavoured to make ourfelves on our part as agreeable as we could. As to his habitation, it is a fmall log-houfe, as dirty and filthy as any I have ever feen. Whether the offenfive fmell, which infected this dwelling, proceeded from cats or decayed ftores, which the Captain is reported to keep fometimes till they become putrefied, I am unable to determine; but, this is certain, that we never paffed the night in a more unpleafant hole. The beds, bedding, fheets, fowls, room, fmell, &c. in fhort, every thing was naufeous, fo much fo, indeed, as to render the houfe extremely difagreeble. I rofe early in the morning to fee the Captain, before he fet out on his journey. I found him undergoing the operation of hair dreffing by his negro woman. He had just fold a barrel of whifky to an Indian, and was treating about the fale of fome land with two inhabitants of Williamsburg.

The price of the Captain's land is from two dollars to two and half per acre;

152

acre; at leaft, this is the price at which he offers it for fale. He demands payment of the whole fum agreed for within four years, or one fourth of the purchafe-money every year. The intereft to commence the first day after the fale. It may eafily be conceived, that Captain Watworth is not a little jealous of the great character and influence of Captain Williamson, who, from his terms of fale being far more moderate, and other circumstances, cannot but have, and actually has, greatly the advantage over him.

We learned, in this place, that the Geneffee flats are, every year at the end of March, regularly inundated for four or five days by the river of that name, which flows through them, and deposits on the land a bed of flime, about two or three inches deep; this ferves as an excellent manure to the foil, and greatly promotes its fertility. In-Itances are known of one acre having produced fifty bushels of wheat; but the average crop is thirty bufhels per acre. Very little of this land has been vended yet; as the proprietors do not care to part with it, until an increase of population shall have added confiderably to its value. It is very difficult to procure day-labourers here, and their wages are one dollar per day. Maple fugar, of which great quantities are ufually obtained in this neighbourhood, has not anfwered this year, from the uncommon wetnefs of the feafon. It is fold for one fhilling a pound. Many commodities, together with numerous droves of cattle, are exported hence annually into Upper Canada. The Captain, who keeps a fhop, imports his goods from Connecticut. They are brought in waggons, drawn by oxen, which he afterwards fattens, and, by felling them at Niagara, amply indemnifies himfelf for any lofs he may fuftain from the long carriage of his wares. The beef of the oxen thus fattened is fold, at times, for one shilling a pound.

After the Captain had left us, his nephew, a youth about fifteen years of age, conducted us to the flats, or low grounds, which border on the river Geneffee. They are a tract of land, about five or fix miles in length and breadth, for the most part fituate on the east-fide of the river; yet fome are on the other fide. Captain Watworth possifiers X about

about fifteen or fixteen hundred acres; of these fome are cultivated, but much the greater number lie in grafs, which was as high as our horfes. The flats belong, for the most part, to the Indians; but, as they are fituate within the limits of the territory lately ceded by Great Britain, which extend to the river St. Lawrence, the State of Maffachufetts claims the fupreme right to the property, and, in virtue of this right, has fold to Meffirs. Phelps and Gorham the exclusive privilege of purchasing these lands from the Indians, whenever they shall confent to part with them. Meffrs. Phelps and Gorham have fold this privilege of purchase to Mr. Robert Morris, by whom it has been again fold to the Dutch Company; this gentleman has also engaged to open a negociation with the Indians, and to prevail upon them to relinquish their right to a part at least of these lands. Thus four different sets of puchasers have succeeded each other in regard to an object, concerning the fale of which the confent of the true original owners has not yet been obtained; and four different contracts have been entered into, founded on the fuppofition, that it will be an eafy matter to remove the Indians from thefe diftant corners into which they have retired. It is fome fatisfaction, however, to reflect, that the property of these lands cannot be actually transferred without their confent; but this, alas! is very eafily obtained, as their more polifhed neighbours well know. A little whifky will bribetheir chieftains to give their confent to the largeft ceffions; and thefe rich lands, this extensive tract of territory, will be bartered away, with the confent of all parties, for a few rings, a few handkerchiefs, fome barrels. of rum, and perhaps fome money, which the unfortunate natives know not how to make use of, and which, by corrupting what little virtue is yet left among them, will, ere long, render them completely wretched. Yet, on the other hand, it will not be difputed, that, if America were to become more populous; and if, in process of time, this immense region could, by fair means, and on reafonable terms, be obtained from the honeft and peaceful natives, and duly cultivated ; fuch a measure would doubtlefs promote the general good of America, and even conduce to the interests of mankind at large. At present, scarcely the twentieth part of this-

this vaft continent is inhabited, unlefs nineteen uncultivated parts, ftill in the pofferfion of the Indians, be fo confidered. In a word, it may be queftioned, whether, even in the cafe of all America being peopled with European fettlers, the fignal benefits, to be derived from the cultivation of fuch extensive tracts of land, might not be obtained honeftly and honourably, without driving the original inhabitants out of their pofferfions, or at leaft without thus palpably impofing upon them.

The hufbandry of the Indians is confined to the culture of a little Indian corn, and fome potatoes. The produce of one or two acres is fully fufficient for the maintenance of a whole family. Their extensive meadows they leave to fuch fettlers, as choose to pasture their cattle on the grafs, or to cut it for hay ; nay, they even fuffer them to be cultivated and inclosed by fresh colonists, who are continually removing westward. Property, whether real or perfonal, has with them no value ; and the meadows, which at prefent only produce from four to five tuns of hay per acre, would yield the richeft crops of various kinds of produce, and throw into cultivation vast quantities of marketable and useful commodities. To reduce an acre of ground under skilful cultivation, is, to confer a benefit on the mass of civilized fociety. This is an admitted principle of political occonomy. But here unfortunately it happens, that the ground, even when taken out of the hands of the Indians, is not immediately reduced to a proper flate of cultivation. It frequently continues long in the hands of mercenary fpeculators, who choose neither to fell nor cultivate it, until its value shall have been confiderably enhanced. As an ultimate confequence of this conduct the poor Indians will be harrafied, gradually expelled from their homes, and, in the end, either extirpated, or rendered completely miferable.

In the course of our twelve miles excursion to the flats we ascended two eminences, from which we had a view over the whole plain; one of these, called Squawhill, lies nearer to Ontario, and the other, Mountmorris, to Williamsburg. They both contain Indian villages. That fituate on the former height confifts of about fifteen, and that seated on the latter.

155

of

of about four or five fmall log-houfes, ftanding clofe together, roughly built, and overlaid with bark. In the infide appears a fort of room not floored; on the fides they conftruct fhelves, covered with deer-fkins, which ferve as their cabins or fleeping places. In the midft of the room appears the hearth, and over it is an opening in the roof to let out the fmoke. Their flores, confifting, for the moft part, of nothing but Indian corn and the flefh of deer, lie carelefsly thrown together in a corner. One of their huts not unfrequently contains two or three families.

As we paffed through their villages we faw fome women employed in works of hufbandry, but very few men. Among the Indians the hufband does not work at all; all laborious fervices are performed exclusively by the wife. She not only transacts every part of domestic business, but cultivates the ground, cuts wood, carries loads, &c. The hufband hunts, fishes, smokes, and drinks. Yet there are some tribes, such as, for inftance, the Tufcarora-Indians, among which the hufband works, though occafionally and flightly. When I fpeak of Indian tribes or nations, I wish to be understood as confining my observation to the fix nations, commonly called the Iroquois, who inhabit the northern parts of North America, to the fouth of Lake Ontario, namely, the Onandagas, Tufcarora, Oneidas, Cayugas, Seneca, and Mohawks. The Oneida nation excepted, which, northwards from New York, still inhabits the banks of the lake that bears their name, all the other tribes have been gradually expatriated, and have decreafed in number ; every nation is now divided into different branches; the families are difperfed abroad, and whifky is rapidly thinning the number of those which yet remain. A few years more, and these nations will disappear from the furface of the earth, as civilized people approach !

Near the Geneffee, on this fide of that river, and about five miles below the villages before-mentioned, ftands another village belonging to Indians of the Oneida nation. The men are here lefs flothful than among the Seneca-Indians; they are alfo tolerably ingenious and expert. It fhould be recorded highly to their honour, that the Indians, of whatever tribe or nation,

156

Carlos Carlos Pilo

nation, are in general mild and peaceful, kindly officious in little fervices to the whites, and, on the whole, excellent neighbours. I for my part am pretty well affured, that, in all the numerous quarrels, which have taken place between the different colonifts and the Indians, on the confines of the United States, in ninety-nine inftances out of a hundred the former have been the aggreffors; they are weak, and they are oppreffed.

In Mountmorris Mr. Morris poffefies a farm of about fixty acres, the management of which he leaves entirely to an Irifhman, who arrived here about two years ago, from New England. The wheat, rye, and Indian corn are certainly excellent; but the account this man gave us of the nature and quality of the foil does not correspond with Captain Watworth's statement. It yields, he fays, only twenty-five bushels of wheat per acre; and as this perfon is not concerned in the felling of land, I judge his report to be much more deferving of credit, than the Captain's. It must be allowed, however, that the land here is uncommonly productive, that the flats form a very extensive tract of ground, and that they afford a fine profpect, which cannot but be extremely pleafing even to those, who have not been cloyed, as we were, with the eternal aspect of forefts and woods. Mr. Morris, it fhould feem, had eftablished this farm rather with an intention to exercife and fecure his right of property, than from any immediate views of profitable culture. Its prefent occupier enjoys the produce but of a very finall portion of this vaft territory. Neither his habitation, nor his establishment in general, impresses you with the idea of a refpectable farmer.

Returning from our excursion, we passed through Williamsburg, the central point of Captain Williamson's fettlements in this neighbourhood. It is a village confisting of about twelve houses. The habitations are faid to be very numerous in the adjacent country. Williamsburg is feated on the point, where Canaferaga creek discharges itself into the river Genesse. This river, as well as the creek, which on our excursion we were feveral times obliged to ford, are so closely hemmed in, that frequently it is very difficult to solve their banks. The course of the river Geneffee

is

is rapid, and full of windings, its water alfo is generally muddy, and bad.

Three miles from Captain Watworth's habitation, a Frenchman, formerly an inhabitant of St. Domingo, refides, with his mulatto, on an eftate of about twenty acres, and in a houfe only twelve feet fquare, which he constructed himself, with the affistance of his faithful fervant. This Frenchman is named DE BOUI, and is a native of Alface. A quarrel with a gentleman of confequence in his province, whom he accufed of having defrauded him of an inheritance, and a duel that enfued, in which he wounded his antagonist, who was much older than himself, compelled him, in the prime of youth, to quit his native country, from the dread of a "lettre de cachet." The first step, which he took after this, was to enlift, as a private, in the regiment, which bears the name of the Cape; and in this fituation he foon evinced by his conduct, that he had received a liberal education. He next obtained his difcharge; and as he had been originally deftined for the profession of an engineer, his attainments, which were very refpectable, furnished him with the means of rendering himfelf ufeful to the colonists. By degrees he rose to the fituation of Grand Voyer (inspector general of the high-roads) in St. Domingo: he moreover cultivated a plantation, bequeathed to him by a friend. He now poffeffed a good income, and had a fine profpect of acquiring a very handfome property, when on a fudden the civil diffentions at the Cape broke out. Being forced to quit the town, he retired to America, though in a very indifferent plight, with but little money, few effects, and fome bills on France. From motives of parfimony, he proceeded to Hartford. Here Colonel Watworth, commiferating his misfortunes, and his diftreffed fituation, made him an offer, that he would endeavour to negociate his bills, in which he fhould probably meet with lefs difficulties than an emigrant Frenchman; he at the fame time made Mr. de Boui a temporary grant of a certain number of acres on the river Geneffee, engaging to fupply him with the neceffary money and ftores, and to render him every other affiftance in his power. The bills were

158

Contraction and a state of the second

were to ferve as a fecurity for all the previous difburfements. Such is the outline of the hiftory of Mr. de Boui.

There are but few men, I fhould fuppofe, who do not feel themfelves agreeably interested by the fight of a countryman in a remote part of the world. Unhappily the French revolution has in a great measure fliffed these amiable, natural feelings. If two Frenchmen now meet, they are, in general, fo foured by political partialities, that they feel a mutual diftruft, if not averfion. Thanks to heaven, the revolution and its concomitant evils have not yet infpired me with hatred to any individuals, much lefs have they foured my feelings to mifanthropy. This is a comfort, which I highly prize, and to which, even in my prefent fituation, I am indebted for moments, not altogether unaccompanied with pleafure. I, therefore, fincerely fympathifed in Mr. de Boui's misfortunes. Meff. Blacons and Dupetitthouars became acquainted with him laft year. Blacons was deputed by the reft of us to inform this hermit, a name, which he deferves as well as any man living, of our intention to dine with him that day. De Blacons' vifit, and our arrival, afforded him much pleafure and fatisfaction. The fight of his countrymen was the more agreeable to him, as from a peevifhness of temper, either contracted by prior misfortunes, or because he has been actually ill ufed, he is highly diffatisfied with the Americans. He is about forty years of age, poffeffed of a found understanding, and entertaining in his manners and converfation. From the natural generofity of his own mind, his difgust at the felfishness of others, and his overnice feelings, he is a perfect mifanthrope; a conftant gloom hangs upon his fpirits. He fpeaks of Americans with a bitternefs, which can hardly be justified when applied to individuals, but evidently degenerates into prejudice and injuffice when applied to the nation at large. He lives here, fequeftered from all the world, or at least with no other company, but that of his mulatto Joseph; who has never left him, and is indeed his friend, rather than his fervant. Joseph acts in the different capacities of cook, gardener, and hufbandman, for Mr. de Boui fows one or two acres in the flats with Indian corn, half the produce of which he allows the proprietor; he takes care of the fowls and pigs, and works at times for the

the neighbours, that they may, in return, lend their oxen occafionally to his mafter, and fupply him with eggs, milk, and other fuch like articles, which, though trifles in themfelves, are of no fmall value in this folitude. Jofeph always appears bufy and cheerful: he is, in fact, a rare and affecting inftance of the moft faithful attachment to his mafter, who, in return, fets a high and juft value on this refpectable fervant, without whofe affiftance and fupport his philofophy would be of little avail. Mr. de Boui is a man of extensive reading, but the morofity of his temper frequently difforts his ideas. He hates mankind, and therefore is conftantly fullen and wretched.

Dupetitthouars, who rejoined us there, and myfelf, ftopped the night at the habitation of this worthy gentleman, because he seemed to wish it. Meff. Guillemard and Blacons, however, took up their night-quarters in Canawaga, with a view to get every thing ready for our journey to Fort Erie. We paffed the afternoon and next morning in converfation with our hoft, and in taking little walks, efpecially to a finall Indian village already mentioned, with which De Boui holds a frequent intercourfe of civilities, fervices, and trade, and where at times, when there is a prefs of bufinefs on his hands, he alfo hires labourers to weed his garden : thefe are women, whom he pays at the rate of three shillings a day. We left him, not without a high fense of gratitude for the kind and friendly reception we had met with, nor did he feem altogether infenfible to a degree of fatisfaction afforded by our company. He may perhaps prove, ere long, a very valuable acceffion to the fettlement at Afylum .- May he live there, if not happy, at leaft content; but it is greatly to be feared, that the peevifhnefs of temper, which this unfortunate man has contracted, will dry up every fource of promifed happinefs and comfort, which this world might yet afford !

### Tuesday, the 16th of June.

The road from Ontario to Canawaga is a good one for this country. As ufual, it leads through the midft of woods. Within a fpace of twelve miles

160

Contrast 2 page 20 11

miles we faw only one habitation. In this journey we difcovered two Indians lying under a tree; though we had already feen a confiderable number of them, yet this meeting had for us all the attraction of novelty, as we found them in a ftate of intoxication, which fearcely manifefted the leaft fymptom of life. One wore round his neck a long and heavy filver chain, from which a large medallion of the fame metal was fufpended, on one fide whereof was the image of George Washington, and on the other the motto of Louis the Fourteenth—*nec pluribus impar*, with a figure of the fun, which was ufually difplayed with it in the French arms. This Indian was, no doubt, the chieftain of a tribe; we were, however, obliged to leave his excellency in a ditch, out of which we made repeated efforts to drag him, but in vain.

Canawaga is a fmall town; Mr. Morris is the proprietor of the lands, which he holds on the fame condition of procuring their ceffion from the Indians, as he does all the other lands already mentioned. The price of land here, which at first was one shilling and fix pence per acre, foon rofe to three fhillings, and, by degrees, has been fo enhanced, that fingle acres, near the town, were lately fold for eight dollars. The habitations here are yet but few, but among them is one of the best inns we have feen for fome time paft. Mr. BERRY keeps it; a good, civil man, but conftantly inebriated. In common with feveral other inhabitants of the town, he has bought land from the Indians, regardlefs of the prior right of purchafe, vefted in Mr. Morris by the state of Maffachufetts. Without any wifh to vindicate this prior right, which, in my judgment, confidered with refpect to the Indians, the original proprietors of the foil, is an act of flagrant injustice, I cannot help observing, that this right, founded as it is on the laws of the land, cannot be infringed by private individuals, without expofing themfelves to the hazard of being difpoffeffed, and that in ftrict justice, of the lands, purchafed in violation of this right. The perfons here alluded to, who have bought land from the Indians, are perfectly aware of the flippery ground on which they stand; but hope, that as the affairs of Mr. Morris are rather in a ftate of derangement, he will not be able to make good his purchase

Y

of

of the lands from the Indians; hence they are led to conclude, that the contract, by which he has transferred his right to the Dutch company, must eventually become void.

This whole track of land is, as yet, fo thin of inhabitants, that we could not come at a right eftimate of 'the price of provision, labourers' wages, &c. Both labourers and provision are equally fcarce; and the prices are, I presume, not much different from those in the diffricts I mentioned last. The neighbourhood of the Indians occasions a frequent intercourfe with them, for the purpofe of buying game, fish, &c. and though they are no ftrangers to the value of money, and appear fond of it, yet fearcely any bufinefs is transacted with them, unlefs in the way of barter. Whifky is their chief object; but old clothes, hats, knives, looking-glaffes, paints, &c. in fhort, almost every commodity, the refuse of European markets, will do for them; and it may be advanced as a moral certainty, that the white people can hardly become lofers in this traffic. The Indians, indeed, to fpeak a well known truth, are constantly cheated; their ignorance lays them open to fraud, and it is taken advantage of almost ninety-nine times in a hundred, by those who have dealings with them.

Before I quit this country, which is more or lefs inhabited by fubjects of the United States, I fhall prefent the reader with a few general obfervations on their manners and cuftoms, which may ferve as a fupplement to those I made on my arrival at Northumberland. Since that time we have traverfed a country altogether new : the various fettlements, which lie more or lefs closely together, and are occupied by colonists from all parts of the world, afford nothing particularly worthy of obfervation. It feems to be the chief object of the inhabitants of this new country, to raife the price of their labour as high as possible, and then to spend their earnings in unneceffary trifles, as fast as they can. From this prevailing humour we may readily account for the flouristing condition of the shop, to lay out fix-pence in ribbands, or two-pence in tobacco. Perhaps they have four dollars in their pockets, and with these, fuch is the rage for

162

SIC 1 3 2 2 3

for fhop commodities, they purchase articles, which, on entering the shop, they never intended to buy, and for which they have no real occafion. Sometimes they purchase on credit; and the shopkeeper, who clears, at leaft, one hundred per cent, has generally no objection to felling upon thefe terms to perfons who are housekeepers in the neighbourhood, or who work there for any length of time. The difbursements of those, who, in this new country, undertake to clear large tracks of ground, and at the fame time keep a flore, are, therefore inconfiderable, especially in regard to labourers' wages, as the money cleared in the fhop quickly brings back all that is expended in labour for days, weeks, and months together. The ftorekeepers too frequently take advantage of the credulity, eafinefs of temper, and ignorance of the half-favage fort of people, who inhabit the back fettlements, and these in return abuse the credulity, easiness, and ignorance of the poor Indians. In fact the conduct of mankind at large is in general nothing more than a chain of frauds and impositions, only fomewhat lefs barefaced than those of the storekeepers in the new American dominions.

I shall add a word or two on the methods practifed by them in the management of these new settlements. When a family have come to a refolution to fettle in this country, the hufband, the latter end of fummer, repairs to the fpot where the fettlement is to be made. The first thing he does is to cut down the fmall trees on one or two acres; he next barks the larger trees, and then fows a little rye or wheat. Of the wood he has felled, he conftructs a fmall house, and makes fuitable fences around it; a labour, which may be performed in about a month's time. He then returns to his former habitation ; and, at the beginning of fpring, he brings his family and the best of his cattle to the new fettlement. His cows cost him little, being turned into the woods to graze : he then finishes his house, plants potatoes, fows Indian corn, and thus is enabled to provide for the first year's maintenance. While thus employed, he is at the fame time Y z clearing

clearing more ground, burning the trees he has already felled, and, as far as may be, even those which he has barked. By this process the roots of the bushes are in a great measure destroyed; yet they require to be more carefully grubbed out of land, which is to be thoroughly cleared. The ashes afford a very useful manure, and, in the opinion of the best judges, are employed this way to much greater advantage, than when converted into pot-ash, the making of which is, with the new settlers, merely the refult of necessity; for if a faw-mill be at hand, the large trees can be conveyed thither by oxen. Thus, within the fpace of twelve months, a man may clear fifteen acres; and few families cultivate more than thirty. The barked trees are left flanding for a longer or shorter time, according to circumstances, viz. the species of the tree, the nature of the foil, and the degree of the wetness of the seafon. The hemlock-fir will stand eight or nine years, the oak four or five, the maple three or four, and trees, all the branches of which have been burnt off, feldom fall before this time. The flumps of the felled trees, generally two or three feet high above the ground, hardly rot fooner than the barked trees, which have been left flanding on the lands. The dwellings of new fettlers are commonly at first fet up in a very flight manner; they confift of huts, the roofs and walls of which are made of bark, and in which the hufband, wife, and children pass the winter, wrapped up in blankets. They also frequently conftruct houses of trees laid upon each other; the interffices of which are either filled up with loam, or left open, according as there is more or lefs time to fill them up. In fuch buildings as have attained to fome degree of perfection, there is a chimney of brick or clay; but very often there is only an aperture in the roof to let out the fmoke, and the fire is made and replenished with the trunks of trees. At a little diftance from the house stands a small oven, built fometimes of brick, but more frequently of clay, and a little farther off appears a fmall shed, like a fentry-box, which is the neceffary, or privy.

164

11. St. 27 23, 20 511.

Salt

Salt pork and beef are the ufual food of the new fettlers; their drink is water and whifky, yet there are few families unprovided with coffee and chocolate.

We fhould not omit to obferve, that the axe, of which the Americans make use for felling trees, has a fhorter handle than that of European wood-cutters. Not only the Americans, but Irish and German workmen have alsured me, that they can do more work with this short handled axe, than with the European. The blade likewise is not fo large as that of the latter. Most of these axes are made in America, but confiderable numbers are also imported from Germany.

Though fome or most of the particulars above detailed may be found in works, which treat of the inland or back parts of America, yet I judge them not unworthy of a place in this journal.

Refpecting the tenets or obfervances of religion, it fhould feem that little room is left for a due attention to either, among the inhabitants of Pennfylvania and other parts of Geneffee. In the towns, as well as in all parts of the country that are in any degree populous, there are, indeed, every where places appropriated to religious worfhip; but, unlefs I am greatly miftaken, religion is generally confidered rather as a political engine than a way to falvation. In the new fettlements you meet frequently with religious books, but they contain the peculiar effutions of different fects, rather than the fimple morality of fcriptural religion. Prayer-books, with other devotional exercises of that defcription, are chiefly found among the rigid Methodifts, or fanatic Scotch Prefbyterians. Yet the bitternefs and fanaticifm of thefe fects are rapidly wearing away in thefe forefts. Chiefly taken up with clearing the ground, and anticipating in imagination the beneficial refults of their labour, they foon forget all other concerns.

The colonists, who arrive from New England, are, upon the whole, more religious than any of the other inhabitants. They make a point of building churches, and providing preachers, as foon as circumstances enable them to do fo. Most of these religionists fettle in

the

the upper diffrict of Geneffee, and fpeak with contempt of the fettlements on the Sufquehannah, and in the neighbourhood of Tioga, where the inhabitants, far from having places of worfhip, fcarcely ever mention the name of God. At the fame time it must be admitted, that the planters, who come from New England, are purer in their morals than any of the reft; and that they are not only remarkably industrious, but alfo the most expert agriculturists and workmen.

As to the fertility of the country in natural productions, it is very great indeed. In many parts, the trees are of a prodigious fize and thicknefs. It is remarkable, that the largeft trees feldom ftrike their roots deeper than about four or five inches into the ground; this was at leaft the cafe with all thofe which had been overturned by the winds, and lay near the road. The thickets are frequently fo clofe, that, for feveral miles together, they bear the appearance of one large tree, under which grafs is growing in thick tufts and clufters. Fern, a fight rare in the neighbourhood of Philadelphia, is very frequently in the back fettlements. Shrubs of every defcription, and flowers of various forms and hues adorn the woods and pleafe the eye with their beautiful appearance, but do not fo much regale the traveller with their fragrance. They more or lefs refemble European plants; but are in general of different fpecies.

Among the great variety of infects and flies feen here, which alone would furnish abundant matter of enquiry for the curious naturalist, luminous worms are fo very numerous, as frequently to diffuse by night a brightness, which is really aftonishing.

The town of Canawaga is fituated on the river Geneffee, the courfe of which we have followed without deviation ever fince we left Ontario. By the Indians this river is called Cafhoufiagon. We much regret, that we did not fee the three falls of this river, which are but half a quarter of a mile diftant from each other; the first is one hundred, the fecond thirty, and the third feventy feet high; they are all two hundred and fifty feet in breadth. This river, which empties itfelf into Lake

166

MAN LAND DO

Lake Ontario, previoully forms a very fmall lake of uncommon depth, which alfo is difcharged into Lake Ontario by a narrow channel, not very deep. The appearance of these falls is faid to be extremely grand and beautiful; we felt a strong inclination to visit them; but Mr. Blacons expressing an earness define to hasten his return to Afylum, and to see the Niagara, we facrificed to his wishes our own curiofity with respect to the falls of the river Genessee.

# Wednesday, the 17th of June.

After remaining half a day at Canawaga, we at length fet out, early in the morning, to traverse the defarts, as they are called. The guide, procured by Mr. Chipping, as already mentioned, had been waiting for us two days. This man, a native of Canada, who, according to false reports, had adopted the manners and customs of the Indians, from love for a fquaw (the term for an Indian woman) of whom he was exceffively fond, did not, on a nearer acquaintance with him, anfwer any of the romantic, or at least extraordinary ideas, we had been led to form of him. During the American war, he had ferved for fome time in an English regiment in Canada; but having found an opportunity to defert, he fettled in the American dominions on the banks of the Geneffee. He has been enabled to fave a little money by means of a fmall trade, which he carried on, and especially by felling whilky to the Indians; after this he became acquainted with an Indian girl, tolerably handfome, whom he married, after she had borne him feveral children ; that is to fay, he declared her his wife in the Indian manner; an obligation, however, which binds him no longer than he himfelf choofes. According to his own account, he posseffes a small estate in the district of Geneffee, and another much larger in Tonowanté (an Indian village equally diftant from Niagara and Canawaga), which PONDRIT (our guide) purchased of the Indians for some gallons of whifky, and which he can enlarge, at pleafure, as every one there is at liberty to appropriate to himfelf any quantity of land he thinks proper. This man, as far

as we could judge, appears to have fettled among the Indians from motives not the most praise-worthy, viz. laziness and indolence; he would rather, it feems, let his wife work, than do fo himfelf, gain money without care or toil, and by his fuperior knowledge overreach the Indians in the fmall trade he carries on with them. In other respects he is a free, jovial fellow enough, proud, good-humoured, artful under the appearance of aukwardness; and in brief, not a little like many of the French peafants, who, after having ferved fome time in a regiment, return to their native village with a tolerable flock of felfconfidence and affurance, which, if not blended with a due regard to confcience and morals, frequently degenerates into impudence, and fometimes draws them in the end, into a licentious and reftlefs way of life. Under the guidance of this Pondrit, who, by the by, was not even dreffed as an Indian, we fet out on our journey. He led a horfe that belonged to him, and was loaded with our ftores, which Indian guides generally trudge with on their backs.

About a mile and a half from Canawaga, stands a small village of the Seneca Indians, through which we paffed, confifting of only three or four houfes. We found there again a handfome young man, who had visited us the night before in Canawaga. It was observable, that these Indians shewed a strong attachment to us as Frenchmen, repeatedly affuring us, that the remembrance of our nation was peculiarly dear to them; we in return regaled them plentifully with rum. The young man, who was more intoxicated than his comrades, was feized every now and then with fits of madnefs, which might have proved fatal to himfelf or those about him, but for the careful attendance of a young fquaw, who, partly by menaces, and partly by careffes, got him out of the inn, caufed his arms to be tied by his comrades, and carried him to the banks of the river, where, lefs difturbed, fhe continued her attendance, until she had foothed his rage, though he was not perfectly reftored to his fenfes. An Indian wathed the face and head of his inebriated comrade, by fpouting water upon him, which he

168

14 1 1 1 2 A 2 3 . - 10

he took into his mouth, and at the fame time by rubbing him with his hand. The intoxicated young man, though not quite fober, was at length, however, fo far recovered, as to be fet on his legs. A boat was waiting to carry him acrofs the river, when, on a fudden, he broke from the hands of his attendants, and precipitated himfelf with great violence into the river. A moment after he came up again, and we faw him fwimming towards the oppofite bank. The indefatigable young woman then fprang alone into the boat, and rowed up to her charge, overtook him, and feized his hand to make him ftep into the boat. But he would not enter, but dived again, rifing up in different places; fo that to all appearance he was in no little danger, confidering the flate he was in, of being drowned. The young fquaw followed him with her boat, called on him feveral times very kindly, did not cease a moment to follow him, with her eyes constantly fixed on him, or on the fpot where she thought he was likely to appear again ; for he was as frequently under as above water. At last she grasped him again, and fo tenacioufly as to retain her hold. This imprefive fcene lasted about two hours, during which time the uneafinefs, care, and endearments of the young woman, were inceffantly manifested, and inspired us with mingled emotions of furprife, admiration, and efteem. She was tolerably handfome, and a fifter of the young man. It is hardly poffible to thew more fympathy, or more fincere, tender, and unwearied affection, than was evinced by this poor fquaw, as long as her intoxicated brother was in danger; and all this too in a manner fo fweet and engaging, as it is not in the power of man poffibly to do. This fcene imprinted in still deeper characters on my mind the idea, which I have conflantly entertained, of the great fuperiority of women above men in every thing, relative to affections of every fort. He, who never experienced the friendship of a woman, knows not half the charms and delights of friendship. Men, undoubtedly, are capable of making great facrifices, which I certainly should be the last to difown; indebted as I am for the prefervation of my life, to the generous and ardent attachment of two friends. May they, fince a Z more

more explicit testimony of my gratitude might perhaps endanger their fafety and welfare, recognize in these lines the grateful sentiments, which fill my bosom, and which shall not cease but with my existence, though I should never have the happiness of personally expressing to them the tribute of my thanks. But while a woman is capable of the fame attachment and facrifices, while a female friend will chearfully meet the fame dangers as men, she possefiles besides the art of embellishing and brightening the faddeft moments of our life, by unutterable fweetness of temper, constant care, and unwearied attendance on her friend; she can fympathize in his fufferings, mingle with his pleafures, and comprehend and divine all his projects; fhe can pour balm on his wounded sensibility, raife his dejected spirits, unburden him of the load of forrow, and thus reconcile him to himfelf. Well can she fosten the harshness of advice, which she has the courage to offer at a seasonable interval, and can infpire a boundlefs confidence, without creating pain, or caufing exertion. She bids defiance to obstacles, is discouraged by no accidents, not even by absence itself. In short, female friendship is a divine feeling, and the fweeteft charm and comforter of life: when deprived of it by misfortune, the bare remembrance of it will still afford us moments of refined pleafure.

A journey through uninterrupted forefls offers but little matter either for fpeculation or remark. The woods are, in general, not clofe, but ftand on a fruitful foil. A foot-path, tolerably good, upon the whole, but in fome places very miry, winds through them over a level ground, that rifes but feldom into gentle fwells. After a ride of twelve hours, in which we croffed feveral large creeks, we arrived at the Plain, where we determined to take up our lodgings for the night. Big Plain is about thirty-eight miles diftant from Canawaga. We breakfafted at Buttermilk Fall, and dined on the bank of the creek of Tanawago, which is, feveral times, either approached or croffed, in this line of travelling. For both thefe meals our appetites were fo keen, that we, perhaps, never ate any thing with a better relift. But, this was not the cafe with our fupper. The marangouins,

170

14/1 × 1 × 1 2 0

rangouins, of which we had heard fuch frightful accounts, but from which we had hitherto fuffered but little, began now to torment us. We were near a brook, for it is neceffary to keep within a little diftance from water, if between arrival and departure it is intended to breakfaft, fup, and water the horfes. The fire and tobacco finoke were not fufficient to keep off the offenfive fwarms of marangouins, mufquitoes, wafps and gnats; nor did the veils of gauze, provided by Mr. Guillemard, fhelter us from their pungent flings. Thefe innumerable fmall blood-fucking infects are a very great annoyance, and though killed by thoufands, they feem to encreafe in proportion as they are deftroyed. It is indeed impoffible to form an adequate idea of the torment and trouble they occafion, without having felt it.

Two Americans, who arrived from Buffalo Creek, with two horfes, loaded with furs, fhared our fire and our moleflation, but not our fufferings. The next day (Thurfday) at four o'clock in the morning, the Americans having found their horfes, proceeded on their journey; while our horfes, which, in fpite of our entreaties, Mr. Guillemard's fervant had not coupled, were not to be found, having run back part of the way we came. It happened, however, very fortunately, that a bell, which I had faftened to my horfe, having in the night indicated to our guide the courfe they purfued, he traced them before the break of day, overtook them at a diftance of fifteen miles, and brought them back about eleven o'clock in the morning. His uncommon zeal to ferve us, joined to his fuccefsful alertnefs, infpired us with as much admiration, as we felt pleafure, to fee our horfes fafe returned.

The two Americans, who left us in the morning, belonged to Bofton; they make, it feems, the journey to Buffalo Creek, five or fix times every year, to barter for furs with the Indians; they carry on this trade jointly with three or four other fmall companies; and we learned that, on the whole about twenty thoufand dollars are annually circulated in this way, the fhare of thefe two amounting to eighteen hundred or two thoufand dollars.

Z 2

It

It was too late to indulge the hope of reaching Buffalo Creek before the fall of night. Our journey must, therefore, take us up two days longer, although we had provision only fufficient for one. In these circumstances we resolved to take the road to Tonowanté, the residence of one PONDRIT, which determination, though it occafioned a circuit of ten or twelve miles, yet fecured to us all the certain advantage of obtaining fresh provision, which, by Pondrit's account, was in great abundance in that place. But Pondrit is as frivolous a prattler as he is a good pedestrian; we found no provision, nor was there the least prospect of procuring viands of any fort in the hut of this demi-Indian. We were fain to be content with a little rum and two wet indigestible cakes of Indian corn, prepared by Mrs. PONDRIT, and were, moreover, under the neceffity of waiting a whole hour for the lady's return, who, on our arrival was engaged in cultivating the grounds of her husband. Besides this wretched repast, we got a little Indian corn for our horfes. Mr. Guillemard, whofe limbs were fwoln in confequence of the ftings of the mulquitoes, fancied he was ill, and determined to remain that night at Tonowanté. We left him under the care of the fquaw Pondrit; and Mr. de Blacons, Dupetitthouars, and myfelf, fet out, with our guide, to purfue our journey.

Tonowanté, which we have juft left, confifts of fifteen houfes or wigwams, built on the zig-zag windings of the river of the fame name. The foil is marfhy, yet good. However defirable it would have been, to fhorten our next day's long journey by proceeding ten miles further this night, yet the remembrance, and the ftill-exifting fenfation of the mufquito-ftings of laft night, deterred us from adopting this measure, and we halted, therefore, half an hour before fun-fet, to gain the neceffary time for making arrangements more likely to keep thefe infects off. A fmall Indian camp, which we found in the woods near Small-fall, was chosen for our night-quarters, notwithstanding dreadful fwarms of mufquitoes and fmall flies, perhaps even more troublefome than the former, were buzzing about us. We furrounded this little place

172

and the second states and

place of refuge, to the windward, with fires, which we kept up with dry leaves and rotten wood. The wind driving the fmoke through our camp, the mufquitoes could not exift there. After having coupled our horfes, tied them to trees near us, and thus prevented the danger of lofing them, we procured fome water, made a mefs of a few cakes of portable foup, which we had remaining, and being protected from the attacks of our enemies, we partook of our cakes and remaining ham with great fatisfaction, and being farther comforted by a few fegars, we paffed a very pleafing night; I, on my part, at leaft, did not awake from nine o'clock at night till half paft three in the morning, the time when we were obliged to prepare for our departure. What an excellent remedy, or, at leaft, what a palliative for the fufferings of the head and the heart, is travelling. Alternate wearinefs and reft leave no room for any train of ideas, and every thing confpires to render us as happy as if our fufferings were ended.

Before I close the hiftory of the day, I must observe, that in the morning we met with a large rattle-fnake, on our way to Tonowanté. She was awake, bent backwards, and her head erect; in fhort, fhe was in the attitude, in which these reptiles dart to bite. Our guide noticed her at the fmall diffance of two paces, and Cartouche had approached her within half a pace. We ftopped ; I called my dog. The afpect of our horfes, our dogs and ourfelves, who furrounded her fo clofely, did not difturb her; and Pondrit, who had cut a flick, was at full liberty to choose the spot where he would apply his blow. This snake was upwards of four and half feet in length, beautifully black, with rings of a bright, golden yellow, and fixteen rattles. I relate this triffing ineident, to shew how little dangerous these animals in general are, the accounts of which, in Europe, fo greatly alarm all, who are preparing to go to America. We continued upwards of five minutes within a fmaller distance from her than her own length. The dog almost touched her; fhe was awake, and yet shewed no fort of malignity. Since I have travelled fo much in forefts, I have met with a great number

ber of rattle-fnakes, killed fome with my own hand, and, notwithstanding, have never yet received the least injury.

# Friday, the 19th of June.

For thefe two days past the roads have been truly execrable, full of deep holes, earth-falls, and thick-fet bushes. You are obliged, at once, to beware of the branches of trees, which tear your face or throw you down, to felect the fpot for the horse to tread on, to give it the necesfary aid when it passes a difficult place, and to take care not to crush your knee or leg against a trunk or stone, which even with the utmost precaution cannot be always avoided, and frequently caufes a very painful senfation. By the account of our guide we were this day to enter better roads; and yet, a level tract of about feven or eight miles excepted, these were even worse than the former.

Being defirous of feeing a large Indian fettlement, and having learned that Buffalo Creek is the largest in this neighbourhood, we turned that way, left the foot-path which leads ftraight to Fort Erie, and ftruck into another, which is the worft I have yet feen. We breakfasted twelve miles from the fpot where we had paffed the night, and finished the remainder of our stores in Buffalo Town. You reach Creek Buffalo twelve or fifteen miles before you come to the village. The fource of this creek, which is very narrow on the fpot where you fee it first, is fifteen miles farther up the country. Yet it confiderably enlarges its breadth, and is upwards of a hundred yards broad, where it discharges itself into the river. You must ford it between a hamlet inhabited by the Cayuga nation and the village of Buffalo, where it is about forty yards in breadth, but its bed is fo confined and miry, that we were fcarcely able to work our way out of it.

The village of Buffalo is inhabited by the Seneca-Indians. The chief of this nation is BROTHERFARMER, a man generally respected by all the tribes as a great warrior and statesman, and for this reason much courted

174

6位3月二人下了办法

courted both by English and American agents. Buffalo is the chief place of the Seneca nation. Inftead of eighty houfes, of which we had been told this village confifted, we found only about forty. The reft ftand on the banks of the creek farther up or downwards, and thus people an extent of feveral miles. The village is fituated on a plain, the foil of which, to judge from the grafs it produces, is extremely fertile. We faw Indians cutting the grafs with their knives. Some families keep cows, and others even horfes. There were fome fine oxen to be fold in the village. All the commodities being confidered as the produce of the labours of the wives, they alone difpofe of them at pleasure. They are looked upon as the fole proprietors. It is with them that every bargain is made, all the money, even the houses in which they live, belong to them; the hufbands have nothing but their gun, their tomahawk (a fmall axe, and at the fame time their pipe), and the scalps fevered from the skulls of the enemies they have flain, and which in greater or lefs number form the decoration of the dwellings of all Indian warriors. More property they do not want.

The dignity of a chieftain is, in general, hereditary among the Indians; though fome are alfo appointed by election. The fons of the chieftains, however, do not fucceed, but those of the female chiefs. For the wives preferve this right of fucceffion in their families, and transmit it to their descendants. Yet these Indian queens cultivate their fields with the spade in their hand. Though they have oxen to fell, it has hitherto not occurred to them, to yoke these animals to the plough. I have already observed, that a small field of Indian corn suffices for the wants of a family. There is, at times, another planted with potatoes; but, in general, these are planted between the rows of Indian corn.

The fields are moftly irregular pieces of land taken from the common; they are not inclosed, being more effectually guarded by an univerfal honefty, which never deceives. The cattle, which conftantly remain in the woods, do no damage to the crops. The fields, cultivated by the Indians, have, in general, a more luxuriant appearance than others.

others, from the manner in which they are cultivated. Being better tilled, and kept conftantly free from weeds, they cannot but produce heavier crops, which is actually the cafe. The Indian huts in Buffalo are not fo bad as others I have feen, but equally unclean and filthy.

Our guide conducted us to a family, in which he faid a demi-French woman lived, which, however, was not the fact. On entering the habitation, we found the landlord engaged in bleeding himfelf in the foot. He faid he fuffered from pains in the bowels, and placed great confidence in this remedy, which he prefcribed and applied himfelf. Two leaves of fage ferved for a comprefs, and an old garter for a bandage; he looked about for his tomahawk to fmoke during the application of this remedy. One or two other families live in the fame hut. The hufbands, fathers, and brothers were fitting before the door; the women were in the fields; we were compelled to wait their return, to learn whether they had any eggs or milk. When they came home, we found that they had none. They gave us, however, butter-milk, and very good butter. During the two hours we paffed among them, nothing particular occurred. There is but little expression in their faces, little cheerfulnefs, and little fagacity. They were extremely curious, as every one would be, who has feen nothing. They laid hold of our watches, our compass, our pencils, and bridles, viewed them with much attention, yet without the least mark of aftonishment or fatisfaction; but remained as cold and unconcerned as three-fourths of the American country-people remain on fimilar occafions, though they are as curious as the Indians.

I had bought at Philadelphia a great quantity of trifles, with a view of diffributing them among these people, who, I knew, are excessively fond of them. With these trifles we paid what services they had rendered us; but I diffributed my fineries far beyond their amount; men and women seemed to receive them with astonishment rather than pleasure. The young girls appeared more pleased with them than the rest. Three or four of these were very handsome; and I fancied that I could

176

ers and cost and the

177

ners

I could obferve in their manners a certain modefty, which I love to fee blended with beauty.

The Indians feem to occupy themfelves much with their children; they are extremely fond of them during their childhood, and their affectionate attachment frequently lafts far beyond that tender age. Sucking children are generally fuspended in a basket, fastened to the ceiling by long ropes, and thus rocked. When the mother goes on a journey. or to work, the babe is put into a fort of portable cradle, the back and lower part of which are made of wood; it is laced before with ftraps of cloth, with which the child can be tied as fast as they please. This fort of cradle is carried by means of a ftrap, tied around the forehead of the mother. In this manner the Indians generally carry all their burthens. Yew Indians live to be very old. They who grow old and infirm are put to death by their children, who confider this act as a duty they are bound to perform, in order to fave their parents from the mileries of old age. However, they do not always fulfil this duty. Let this barbarous cuftom be fairly confidered, and it will be found in fome manner confistent with reason; for of what use and value is life, when nothing can be expected but forrow and fufferings?

S.

Death is, with the Indians, no object of terror; and the relations of the deceafed grieve but little for their lofs. Some howlings at the burial are the only figns or expressions of their grief, while feveral days before and after the interment are spent in feasting and dancing. The entire property of the deceased is frequently spent in thus eating, drinking, and rioting to his honour.

The imperfect civilization, which the Indian nations, we have feen, owe to their conftant intercourfe with white people, has altered their original manners, which it would be peculiarly interefting to obferve. Whifky renders them flupid; and whifky is known and fought after by all the Indians, who are engaged in the fur trade with white people. Europe has inflicted, and will ever inflict fo many evils on every country difcovered by her, that it is neceffary to travel as Mr. MACKENZIE has done, beyond the known tribes, in order to trace the original man-

Aa

ners of the Indian nations; yet Mr. Mackenzie himfelf diffributed whifky as he went along.

I fhall fubjoin here a few obfervations concerning the Indians, which, though they may not be perfectly new, will yet form a fletch, not altogether uninterefting to Europeans, and which I fhall be able to improve from other accounts, efpecially from the narrative of the captivity of one of my friends belonging to Virginia, which I intend to introduce in the fequel. But previoufly to my entering on this fubject, I muft obferve, that all the Indians we faw ufed every means of flewing us particular kindnefs, on account of our being Frenchmen, whom, they told us, they love very much, knowing that their people have always been kindly treated by them, and particularly without any fort of contemptuous infolence. On this account they conftantly called us their fathers.

Age is fo much honoured by the Indians, that in their language age and wifdom are fynonimous terms.

Notwithstanding this high estimation, in which old age is every where held, and the great respect enjoyed by their chieftains in time of peace, and by their leaders in time of war, health, dexterity, and courage alone obtain distinctions among the Indians. Although from disposition and habit they are independent of each other, in all the concerns of life, yet they are never wanting in obedience to their chiefs and leaders.

Hofpitality is with them a duty, which it would be a crime not to obferve, and which they never fail to practife. They confider revenge as a duty equally facred. They conceal their vindictive views as long as they know they cannot be gratified. But neither the longeft period of time, nor the greateft obftacles, ever ftifle in them the imperious paffion for revenge. Although theft is very common among them, and more fo among the women than the men, yet the thief, caught in the fact, is compelled to reftore the property he ftole; and in cafe of a violent robbery, the conjurors are confulted, who condemn the robber to death.

Homicide is atoned for by a fum of money, the amount of which is paid

178

paid in a fort of shells, called wampum, by which the price of all commodities is measured and adjusted. An offender, who cannot raise this ranfom, is delivered over to the family of the deceased, that they may take their revenge on him. Deliberate murder is feldom committed ; manslaughter perpetrated in drunken quarrels is more frequent. Yet the fame indulgence, in regard to homicide and theft, is not fhewn by all the Indian nations. I have learnt from Colonel BRANT, chieftain of the Mohawks, that among the Six Nations, who ftill occupy lands near the lakes in the dominion of the United States, and in Canada, and to whom the Mohawks and Seneca Indians belong ; every Indian, who has killed or robbed another, must inevitably fuffer death. The murderer is generally put to death by the relations of the perfon murdered. But every Indian belonging to the nation has a right to kill him, as foon as the crime is known. It frequently happens, that the offender, far from making the leaft refiftance, voluntarily furrenders himfelf up for execution.

Among fome nations the wife takes revenge of an unfaithful hufband, by a fimilar conduct on her own part; and the hufband, in the fame circumftances, has recourse to the fame means of revenge. Among fome the husband puts the wife to death, if he catch her in flagranti delicto. The greatest crime among the Indians is to touch a captive, even with her confent. This crime would be punished with instant death. I know from Colonel Brant, that among the Six Nations there has yet been no inftance of fuch an offence. As foon as the captive is fet at liberty, there exists no farther prohibition, in case she consents. As they can neither read nor write, and yet are defirous of transmitting the memory of their actions to posterity, especially the fortunate exploits of their tribes; they effect this purpose by cutting figures in the bark of trees, which, to those who are unacquainted with this fort of language, appear to have no form, but are very intelligible to them and their posterity, as long as they are spared by all-destroying time. It is in this manner they record their exploits in hunting and war, the number of the scalps they have torn from the skulls of their enemies, &c. The

Aa 2

wampum,

wampum, which is their money, is alfo their ornament, and their pledge for the performance of every contract and oath. They are more or lefs fkilled in cafting up accounts, in proportion to the extent of their trade. They count their months and days by the moon and the night, and their years by fummer and winter. The pole ftar, with which they are acquainted, guides them in their nocturnal journies.

The cuftoms of the Indians, with refpect to marriage, are various. In fome tribes the children are given in marriage by their parents; in others they make their own choice. Among fome polygamy is permitted; with others it is not in use. In fome tribes the infidelity of the wives caufes not the leaft uneafinefs to the hufband ; in others it afflicts them to fuch a degree, that they frequently poifon themfelves; an act of defpair, which is alfo fometimes committed by women from the fame motives. Marriage, however, is in general with them but a tranfitory union. Divorces are very frequent; and in this cafe the children remain with the wife, together with all the other property. Converfation feldom or never takes place between the hufband and wife ; the Indians in general speak little. The wife, when she returns home from hard labour, prepares food for her husband, twice or thrice a day, who is ever fatisfied with what fhe gives him. If no meal be prepared, the hufband goes away without complaining, and eats with one of his neighbours.

Their ufual difeafes are inflammatory and putrid fevers, and the fmallpox. The laft never attacks them, but when they are near the habitations of white people, to the care of whofe phyficians they commit themfelves with a tolerable fhare of confidence. If there be no medical perfons in the neighbourhood, they place equal confidence in their conjurors, who are often women. The remedies, which the conjurors apply, confift generally of the infpiffated juices of herbs. They alfo often caufe the patient to be put into a kind of oven, or vapour-bath, to bring on a violent perfpiration, which is the moft common cure. Thefe vapour-baths are made by means of large ftones, heated as much as poffible, and arranged in the form of a circle, in the centre of which the patient

180

an stand

tient is placed. Over this fmall inclofure is fpread a very low tent cover, made of wool, the red-hot ftones are wetted with water, and when the patient, by means of this fteam, is in a ftrong perfpiration, he is fuddenly immerged into the coldeft brook. This remedy is repeated feveral times, and proves often falutary in pleurifies and colds. But never is any remedy applied without fome concomitant myfterious ceremony; fuch as blowing upon the patient, dancing, howling, or beating the drum. Whenever they apply a remedy, or practife their art, they invoke the *Great Spirit*, to whom, they fay, they are called in their fleep. Pains in the head, and in the mufcles of the neck, are very common among the women. They are attributed to the manner in which they carry their burthens.

The bite of the rattle-fnake is eafily cured, the remedy being known to all the Indians, and ufually applied. I have already mentioned, that it is the rattle-fnake root (polygala fenega, Linn.). The bruifed leaves are applied to the wound, and the juice, extracted from the root, is taken with a little butter or fat. There are, however, feveral other remedies against this accident, which no Indian regards. The flesh of the fnake is confidered as a delicacy by the Indians, and the flough, which the fnake casts off twice a year, beaten into powder, is used as a cleansfer of the blood.

The language of the Indians, in their conferences, is always figurative. When, for inftance, they wifh to defcribe the reftoration of peace between two nations, they express themselves as follows: "We are making a road five hundred miles in length through the forest; we are tearing up the roots and branches that obstruct the way; we are clearing it of stones, rocks, and trees; we are removing the hills; we cover it with fand, and make it fo perfectly light, that all the nations can fee each other without the least obstruction." Although they conduct themselves with great coolness, in all their dealings, yet they often grow warm in the delivery of their speeches, and then so ward the field declamation into musical notes: the affembly listens in profound filence. The members of the council fmoke their pipes all the while, and the orator, when

when he has done, fits down with them, and does the fame. Their fpeeches may be as long as they pleafe; they are never interrupted; fince to interrupt an Indian would be deemed the greatest offence. In their deputations, their reception of ambassadors, and their negociation of treaties, they introduce much folemnity, and many ceremonies.

When one nation wages war against another, they resolve on so doing after due deliberation, but never declare war against their enemy. They come upon him in greater or smaller numbers, and kill and deftroy every thing within their reach. Whenever they meet with single individuals, who belong to the hostile nation, they treat them in the fame manner. There are, however, places of inviolability, where their hostilities are fuspended. Such is a certain spot on the banks of the river Missouri, where a species of stone is found, of which they stand in particular need, for making pipes. Here the bitterest enemies work quietly near one another, in breaking these stones, which they all alike want. There are more shows having become a scene of contention.

Peace cannot be concluded between two nations, but through the intervention of a neutral tribe; and until it be actually concluded, the contending parties continue to deftroy each other. As foon as the words of peace are proclaimed by the neutral nation, the ambaffadors of the tribes at war meet and agree upon the *ceffation of hoftilities*. No other conditions are ever made. The propofals are reported by the ambaffadors to the different councils of their refpective nations. All the chieftains now affemble, fmoke the calumet of peace, prefent each other with belts of wampum, and peace is definitively concluded. They do not give up the prifoners they have made, who remain where they are in a ftate of flavery.

When the Indians are at war with the white people, in which generally feveral nations join, the negociations for peace are ufually opened by meffengers, deputed by the latter, who are frequently murdered by the former. This happened in the laft war with the Americans. General Wayne, at the beginning of the year 1794, fent three officers

182

The state of the

officers, attended by three interpreters, to different nations, which had taken a polition in front of his army; the fix perfons, who carried the American flag, were all killed. After the battle, which took place in August following, near Lake Erie, and in which the Indians were defeated, General Wayne, instead of putting the prifoners to the fword, ordered them to be well treated, and fent feveral of them back with propositions of peace. The Indians being difpirited by their defeat, as well as by the faintness of the affistance afforded them by the English, who had excited them to the war, were glad to get their prifoners back, yielded to the general wish as well as necessfity of living at peace, and confented that negociations should be opened. Eleven stations had been at war with the Americans; ambassian for the eleven nations arrived; and the negociations lasted three months.

As foon as the point has been agreed upon, that negociations for peace shall be opened, the Indians confider peace as actually concluded, and for this reafon they bring the calumet of peace into the first affembly, which is always very numerous; it is prefented by one of the chieftains, and every one prefent fmoaks it. To wipe the end of the pipe would be a great affront to an Indian, and might even lead to the rupture of the negociation. The fubsequent affemblies are less numerous. They are composed of about three or four deputies of each nation, attended by interpreters; for all the nations fpeak different dialects. The fpeeches of the Indians are very long, and, at times, last three hours. They are listened to, as I have already obferved, with the utmost attention. Their remarks and answers are often extremely pertinent and acute. The orators frequently mark down with wampum the leading points of their fpeeches, in a manner fcarcely intelligible to any one but themfelves. By a fimilar arrangement of their wampum, the young Indians, who affift at the principal deliberation, report to the council of their nation not only all the propofals which have been made, but, in general, every thing that has been faid.

The

The negociations being brought to a clofe, the articles agreed upon are written on a long piece of parchment, comprising every thing that relates to every different nation concerned in the peace. These parchments are figned by all the chieftains of the nations, who, for the most part, use as their fignature a misssapen image of the animal, which forms the diftinctive mark of the tribe. One of these parchments, thus figned, remains in the hands of the white nation, and the other is delivered to one of the Indian nations concerned, which is most numerous, and from which the rest receive copies of the treaty in wampum. Every thing being terminated, prefents are made, and the calumet is fmoaked by way of conclusion.

General Wayne, from whom I learned thefe particulars, allows, that the Indians poffefs an excellent difpofition, with much found underftanding and judgment. In the battle, which decided the iffue of the war, they difplayed the moft obftinate valour, bordering on bloodthirfty ferocity. They even executed bold and tolerably fkilful manœuvres, which, though they had undoubtedly been contrived and indicated to them by Englifh officers, neverthelefs did them infinite credit.

The Indians, giving a hofpitable reception to travellers, make them fmoke the tomahawk, as they ratify a peace by fmoking the calumet with their former enemies. They generally fmoke a very pleafant tobacco, which is rendered ftill milder by a mixture of the bruifed heaves of fragrant plants, and efpecially of fumach.

Let it, however, be remembered, that these general remarks on the manners of the Indians admit of many modifications in regard to fingle tribes and individuals. I have collected them here, rather with a view of gratifying, as far as I am able, the eager curiofity of my European friends, than with an intention of prefenting them with a complete delineation of Indian manners, fuch as could fatisfy myself. Yet I can at least offer this picture as faithful, if imperfect, though it be not drawn from my own immediate observation.

Buffalo

Buffalo Town is about four miles diftant from Lake Erie. The road, which leads thither, runs under the most beautiful beech trees and pines, and is for this reason even worfe, than that by which we came this morning. All this country is full of stagnant waters, and large stinking sumps and morasses; and yet we did not observe any agues among the Indians, who seem less liable to such discases than white people.

At length we reached Lake Erie, that is to fay, a fmall fettlement of four or five houfes, ftanding about a quarter of a mile from the lake. A fmall creek feparated them from our road. This creek is fo muddy, that nobody ventures to ford it on horfeback. The faddles are, therefore, taken off: the horfemen pafs the creek, which is about twenty feet in breadth, in boats, and make the herfes fwim acrofs, though thefe find great difficulty in gaining the oppofite bank.

We met, on our journey, fome troops of travelling Indians, and two or three caravans of white people; occurrences, which afford great pleafure. A fire, not yet extinguished, vessiges of a camp or restingplace, nay, a broken utensil, which has ferved for the use of a traveller, excites, in these wildernesses, the most pleasing sensations. The idea, "I am not alone in this vast folitude," cannot but be still more important to him, who travels by himself in these forests, than it was to us. And yet we enjoyed these emotions, in every part of our journcy, where the habitations lay at considerable distances asfunder. The finalless portion of cleared ground, or a little wood cut down, is beheld with the utmost joy, and its assess the beholder with fresh courage to proceed.

We had hoped to find Mr. Guillemard at the inn, but learned from the Indian, who had conducted him hither, that he had arrived here two hours ago, and had already proceeded onward on his journey; he found it too tedious to wait for us; and befides, nothing could be had in the inn. He had very properly croffed over to the other fide; we intended to do the fame; but it was too late. We were, therefore, neceffitated to content ourfelves with a very poor fupper, and to lie down on the floor, wrapped up in our cloaks. Not the leaft furniture

Bb

was to be feen in the houfe, nor was there any milk, rum, or candles. With confiderable trouble we got fome milk from the neighbours; but they were not equally obliging, in regard to rum and candles. At length we obtained these articles from the other fide of the river; our appetite was keen; we fpent a pleafant evening, and flept as well as in the woods.

At Lake Erie (this is the name of this clufter of houfes) every thing is much dearer, than in any other place, through which we have hitherto paffed, in our journey, from want of any direct communication with other countries, to facilitate the intercourfe of trade and commerce. There is fearcely one houfe in this little hamlet, without a perfon indifpofed with the ague. We found ourfelves here furrounded by Indians; fome of them had caught, with harpoons, feveral large fturgeons on the border of the lake, which they offered us for two fhillings a piece. The banks are crowded, nay rendered noifome with places where the Indians dry the fifh, which they catch in great numbers in Lake Erie.

From the fmallnefs of the lakes we had feen in Geneffee, we were much difpofed to admire this lake. We were charmed with its vaft extent. Were it not for the oppofite bank, its afpect would refemble that of the fea; as no other land was to be feen, and the profpect of water was boundlefs. The banks of the lake are rather flat, and uninhabited throughout this whole extent. Father CHARLEVOIX obferves in his travels, that Lake Erie received its name from a tribe of Hurons, who inhabited its banks, but were exterminated by the Iroquois, and the word *erie* in their language fignifies a *cat*. The immenfe number of wild cats, which are found on the banks of this lake, and the fkins of which are much valued, have probably given rife to the name.

At break of day Mr. de Blacons and myfelf proceeded to the place, where we were to crofs the river, three miles diffant from the inn. Dupetitthouars had hired a boat to fail down the river, which iffues from Lake Erie, is about three quarters of a mile in breadth, and is called the Niagara. We here embarked, and confequently left the territory of the United States.

MINE-

#### MINERALOGICAL OBSERVATIONS.

I fhall here fubjoin a few remarks on the mineralogy of the country, which we have traverfed. I owe them to Mr. Guillemard, who on this fubject possesses more ample and correct information, than I can boast.

In the vicinity of Philadelphia the rocks are all composed of granite or gneifs. The most common is a granite interspersed with mica, and you frequently meet with large strata of mica or talc. The strata of these rocks incline towards the horizon, forming an angle of about forty-five degrees. The layer of earth, spread over them, is generally a fort of fand of the same quality as the rock. Under this bed of stand, a hard fort of clay is frequently met with.

This large mass of granite is interfected by veins of hornstone, calcareous spars, and other lime-stones, with very good marble. On the banks of the Schuylkill, and especially near Norristown, a vein of fine marble shoots out of the furface; it is connected with the rock of granite, which, towards the north-west, borders upon the river.

The direction of all these veins generally forms a right angle with that of the stratum of granite, and they usually drop in a line perpendicular to the horizon.

In the whole neighbourhood, no petrifactions are found of marine animals and plants, or of any thing fimilar; but in holes, dug in the ground, as well as in brooks, a ftone is frequently met with of a loofe and granulated texture, which is eafily pulverifed, and bears a clofe affinity to fluor.

Further northwards, the foil, which before was much covered with mica, begins to be lefs fo, and the rocks contain lefs granite. Near the creek Perkioming, a reddifh argillaceous flate is found, with which the country in general abounds, till you come within nine miles of Reading. Here begin flrata of a flone of a light grey, and fometimes of a blueifh colour, which breaks into large fquare pieces, and feems to be a fpecies of fluor.

On the road to Reading, at a fmall diffance from that place, are B b 2 found

found large maffes of a kind of pudding-ftone, confifting of fragments of gneifs and flate, imbedded in a dark grey bafaltes.

Near this fpot is found calcareous fpar, but in fmall quantities; and in the vicinity of Reading is much lime-ftone.

We were told, that pudding-ftone, in this country, is never found in ftrata; it is commonly of a dark red colour, which is rather dull.

The country about Lancaster, also, abounds in lime-stone, but without any impression of marine animals. The adjacent strata consist of a greyish flate, and fink deep into the ground.

On the banks of the Sufquehannah a ftratum of fandy loam covers the perpendicular veins of gneifs and flate, which, at times, form confiderable maffes.

Near Middle Town the rocks are of a reddifh colour, and contain much clay. On paffing the Peters' Mountains, you meet with much granite; yet flate predominates. The rocks, which form the bafes of the mountains, or the fteep banks of the river, on the road from Northumberland to Afylum, exhibit but little variety in a mineralogical point of view. In fome places, the flate breaks readily into fmall plates, which are made ufe of to cover the roofs of houfes. No granite appears any more; and both in brooks and rivers free-ftone is found, with impreffions of fea animals and plants. Quarz difappears by degrees. The foil confifts of fand, except in plains, meadows, and low grounds, which are covered with either rotten plants or vegetable earth. The ground, in general, is fo much covered with earth, that a traveller, who has no time to explore rocks and ftone-quarries, will hardly be able to form a complete and diferiminative idea of the minerals of this country.

Near Loyalfock ftones are to be found, which have the appearance of bafaltes. Some contain mica, but in a very fmall proportion. Above Afylum the rocks are of an argillaceous composition. The foil in the neighbourhood is, for the most part, rich and fertile. The ftrata incline with a lefs acute angle, and frequently run parallel to the horizon. The ftone, when broken, appears of a testaceous texture, and its grain refembles metallic particles, not yet perfectly formed. Free-ftone is frequent, and fo is bafalt. Broad level plains, exposed to inundation, form the

188

610 St 1. 390 3

the greater part of the territory, which extends towards the diffrict of Geneffee. At Painted Poft, the water role, in December, 1797, nineteen feet above the common level for the fummer months. The depth of the layers of earth, and the fwamps, greatly obstruct mineralogical refearches.

The firft firata, in which I found marine bodies in their native beds, are in the vicinity of the fmall lakes, between Lake Seneca and Crooked Lake. Near Friendfmill and Friendflanding, oyfter-fhells, with remains of other teftaceous animals, are found in a foft argillaceous ftone. Farther weft the argillaceous ftones difappear, and are fucceeded by calcareous. The country grows more and more flat; but wherever the nature of the ground, or moraffes, did not prevent us from examining into the nature and form of the ftrata, they ran nearly parallel to the horizon. They are, for the moft part, of a calcareous composition, and contain numerous remains and imprefions of fea animals. Of this defcription are moft of the ftones in Big Plain, on the Buffalo Creek, on the banks of Lake Erie, at leaft at its extremity, the only part which we traverfed, and on the fouthern bank of the river, as far as Niagara.

As to the *fpecies of* TREES, that compose the woods, through which we have passed fince our departure from Philadelphia, they are without number. I possed to little information on this subject to diferiminate and enumerate them all. Those which I diffinguished were the red, or fearlet flowering, the associated, the mountain, and the fugar maple, the black, and the poplar-leaved birch, the curled maple, which, however, in Pennsylvania and Geneffee, is but a middle fized florub, the button tree, the perfimon tree, the small-leaved chession tree, an associated the poplar indented leaves, the white nut tree, the hickory, the bermudian cedar, the benjamin tree, the magnolia with indented leaves, the white fpruce and hemlock fir, the white and black oak, the white and black associated and filver poplar, the plum tree, the cherry tree, the tulip tree, the common fumach and the vinegar plant, beside an immense number of thrubs, for the most part with beautiful, yet senters flowers, and a vast variety of fylvan plants.

THE

The Hiftory of MR. JOHNSON, of Virginia, who, in 1790, was taken Prifoner by the Indians, written on board the Pigeon, in October, 1794.

The following narrative contains the hiftory of Mr. Johnfon, an American gentleman, a native of Virginia, and of his release in the year 1790.

Although this hiftory does not abound with remarkable events, and fome of them are rather unimportant, yet it appears to me interefting, inafmuch as it enlarges our knowledge of Indian manners from facts, which Mr. Johnfon, a gentleman of veracity, of an unaffuming difpofition, and of a calm, temperate imagination, related to me himfelf, and which I wrote down, in a manner, from his mouth.

Mr. Johnfon, inhabitant and merchant of Richmond, in Virginia, found himfelf under the neceffity of proceeding to Kentucky; there to receive certain fums of money, due to his father, who was recently dead; and to examine fome witneffes before the fupreme court of the state of Virginia. Having made the fame tour the preceding year, he fet out accordingly from Richmond, in the beginning of the month of March, 1790, and proceeded with his friend, Mr. MAY, a great landholder in Kentucky, and an inhabitant of Petersburg, to Kecklar's Station, in Virginia, on the banks of the Great Kanhaway. They found there James Skuyl, a merchant, of Great Brayer-court-houfe, in. Virginia, who was carrying a large quantity of merchandize to Kentucky. They jointly purchased one of the veffels, which, as they are intended merely to defcend the Ohio, and are not built to remount it, have no more durability than is required for that purpose, and are, confequently, fold at a cheap rate. They are large flat bottomed veffels, without any deck; and are fold in Limestone for the value of their timber. That bought by Mr. Johnson and his fellow travellers coft thirty dollars.

I flate these particulars, though they may appear triffing, as they will

not.

191

not, perhaps, be found altogether unufeful; the emigration to Kentucky being at this time extremely frequent, and the way of proceeding thither by water being the most expeditious, the least expensive, and the most generally chosen of any.

Having embarked on board this veffel, with their merchandize and ftores, they defcended the river, working the veffel themfelves. During the whole paffage of two hundred and ninety-five miles thence to Limestone, nothing is required but to keep the veffel in the middle of the ftream, which is fufficiently rapid to carry her down, without the leaft affiftance from rowing. At the confluence of the Kanhaway with the Ohio, at Point Pleafant, they found three other travellers, who were waiting for an opportunity to proceed on the fame journey; namely, WILLIAM PHLYN, of Point Pleafant, a petty tradefman, who was in the habit of travelling to Kentucky; and DOLLY and PEGGY FLEM-ING, likewife of Point Pleafant, who intended to proceed to Kentucky, under the protection of Phlyn, a relation of their's, and to fettle in that place. They were all of them fully aware, that the navigation of the Ohio is not exempt from danger; but they also knew, that inftances of the Indians attacking a veffel in the midft of the ftream are very rare, and that an attack on a veffel, with fix perfons on board, was altogether unprecedented. They, therefore, made themfelves perfectly eafy. Having left Point Pleafant on Friday, the 20th of March, early in the morning, they proceeded, during a paffage of twenty-two hours, with all the care, which the weather, when favourable, admits of in thefe forts of veffels. They had failed one hundred and fix miles; it was five o'clock in the morning; they were near the confluence of the Sciota, and had a fair profpect of reaching Limeftone the next morning, by day-break. Paffing on with this expectation, they heard dreadful fhrieks, proceeding from two men, who fpoke English, and told them, in the most affecting tone of grief, that they had been taken prisoners by the Indians, and had made their escape, but feared to fall again into their hands. They had not eaten any thing for these four days past, and entreated, if they could not be taken on board, to be at least supplied with

with fome provision, and thus faved from the unavoidable danger of perifhing through hunger. The first and immediate fentiment of all the paffengers impelled them to fuccour thefe unfortunate perfons. But a little confideration excited strong apprehensions in some of them, left the affistance, which they might afford these persons, should throw themfelves into the hands of the Indians. Mr. Johnfon, as well as Mr. May, entertained this fear, which, on the other hand, was combated as groundlefs by the other two men; and the two women, yielding to compaffion (a feeling more prevalent in their fex than our's) declared it an act of barbarous cruelty, on the part of the above two gentlemen, to oppose the faving the lives of the above two perfons, in danger of inftant death. Johnfon and May, though still impressed with the same apprehensions, felt extremely uneafy, when they confidered, that in confequence of their prudence, the unfortunate men might, perhaps, perish. They would not appear lefs humane than the reft, who fhared the fame danger, and accordingly defended their opinion with lefs firmnefs, than when they first proposed it. The two unfortunate men followed the veffel along the fhore, as fhe was carried onwards by the current. Their mournful lamentations, their fcreams, and expressions of agonizing anguish and defpair still increasing, William Phlyn, who derived some kind of authority from his being accustomed to this passage, and in the habit of frequenting Kentucky, proposed that he would go alone, and carry bread to the unfortunate fufferers, if his companions would land him on fhore. He contended, that he should difcern the Indians from afar, if they made their appearance; that, in this cafe, the veffel might eafily regain the middle of the ftream; and that he would make the journey to Limeftone on foot, without falling into the hands of the Indians. It would have been extremely hard to oppose this proposal, which was seconded by the two women, and by James Skuyl. Mr. Johnson and Mr. May, therefore, yielded, rather out of weaknefs, than from any hearty approbation of the meafure. They fteered towards the fhore, where the twofufferers were dragging themfelves along, as if tormented by the most excruciating pains. Why is it, that humanity and candour must fo frequently

192

10 - 1 - 2 - CO

quently fall victims to artifice and fraud ? The apprehension of the two gentlemen were but too well founded. The two men were two traitors, fuborned by the Indians to decoy the veffel to the fhore. The Indians followed them, at fome diftance, conftantly concealing themfelves behind trees. The moment the veffel reached the fhore, they burft forth, about twenty-five or thirty in number, raifed a dreadful howl, and fired on the paffengers. Two of them were killed by the first firing, and the reft, in equal aftonishment and terror, endeavoured to regain the middle of the ftream. But being too near the fhore, and their activity and dexterity being feverely checked by the proximity of the impending danger, they made but little way. The two perfons killed were Mr. May and Dolly Fleming. The Indians continued to fire. James Skuyl was wounded, and two horfes, which were on board, were killed. All this increafed the terror of the three travellers, who were yet able to work, and impaired their exertions. The fury of the Indians increased in proportion to their hope of fuccefs. Some threw themfelves into the river, and fwam towards the ship; those who remained on shore threatened to fire on the paffengers, if they should make the least refistance, and kept their pieces conftantly levelled against them. The fwimmers brought the ship accordingly on fhore; and the unfortunate Americans were obliged to land under the continued howl of the Indians, which, however, were no longer the accents of rage, but fhouts of joy, on account of the feizure of their prey. The Indians offered them their hands, which they flook with more or lefs fatisfaction, in proportion to the greater or lefs degree of fear they felt, which we may eafily conceive not to have been finall. This reception, however, in fome measure allayed their apprehension. While fome of the Indians were thus faluting the prifoners, and led them away from the fhore, the reft were bufied in landing all the merchandize and ftores. Some cut wood, and made a fire. These arrangements were foon made. The articles found in the fhip were carried to the fire, as well as the two unfortunate perfons who had been fhot. The latter were completely ftripped of their clothes, fcalped on the fpot, and their corpfes thrown into the river. Mr. May was an intimate friend of Mr. John-Cc

103

fon ;

王のと言葉のためにと

fon; and the latter is yet at a lofs for adequate terms to exprefs the horror he felt at this dreadful fight, which for fome time overpowered all his apprehension concerning his own fafety. The fealps were dried by the fire, to increase the trophies of the tribe.

While the male prifoners were ftripped of what articles they had about them, with more or lefs rigour, according to the whims of those who took this tafk upon them, or happened to be the nearest, the clothes of Peggy Fleming were not touched. Mr. Johnfon's coat and waiftcoat were already pulled off, and half his fhirt, when an Indian, who hitherto had not concerned himfelf with his drefs, returned it to him, and fpoke to him who was pulling off the fhirt, in a tone not only implying cenfure, but alfo a right to offer it. The fame Indian gave him a blanket, by way of indemnification for the lofs of his coat and waiftcoat. His fhoes were taken from him, and inftead of them they gave him mockipons, or Indian shoes, made of deer-skins. His breeches and stockings were yet left him; all the clothes were added to the reft of the booty. The Indians were now near feventy in number, among whom were about a dozen women. Their leader affembled them around the fire, and, holding the tomahawk in his hand, addreffed them in a fpeech, which lafted about an hour, and which he delivered with great eafe and fluency of expreffion, with geftures, and in a tone of enthufiafm, looking frequently up to heaven, or cafting down his eyes on the ground, and pointing now to the prifoners, now to the river. Almost at every phrase the Indians, who listened to him with the utmost attention, expressed their approbation and applause with accents of deep, mournful exclamation. The booty was divided among the different tribes, which shared in this enterprize. The tribe of the Shawanefe, being the most numerous, and that to which the leader belonged, received three prifoners; and William Phlyn fell to the fhare of the other tribe, the Cherokees. Every prifoner was given to the charge of an Indian, who was anfwerable for his perfon. Although thus distributed, the prifoners remained together, and neglected not to improve the liberty allowed them, converfing with each other without constraint.

194

The

The two men, who by their lamentations had decoyed them on fhore, now rejoined the Indians. Their wretched victims poured forth against them fevere reproaches, though they were fomewhat foftened by the fear of being overheard by the Indians. They pleaded neceffity, and that they had been ordered on pain of death, to act as they did. By their accounts, they were inhabitants of Kentucky, furprized by the Indians, fix months before, in their own habitations; and had already, feveral times, been employed in fimilar treachery. The ftores found on board the veffel ferved the Indians for their meals, in which they generoufly allowed the prifoners to partake. Night coming on, every one lay down to reft under the trees. The prifoners were furrounded by the tribes to which they refpectively belonged, and fingly guarded by the Indian, who had the charge of them. Peggy Fleming, who was never left by her guards, was, this night in particular, furrounded by women. Mr. Johnfon was tied by the elbows; and the ends of the ropes were fastened to trees, which ftood far afunder, fo that it was altogether impoffible for him to lie down. Yet this was not deemed fufficient. Another rope, fastened to a tree, was tied around his neck, and from it a rattle was fufpended, which, if he had made the least motion, would have awakened the whole troop. The reft were treated nearly in the fame manner. The two white fpies enjoyed the most perfect liberty. Some Indians were stationed, at certain distances, around the party, to observe what was paffing in the furrounding country.

Early in the morning the prifoners were unbound, and fuffered to enjoy the fame liberty as on the preceding day. About ten o'clock the Indians, who were pofted along the banks of the Ohio, reported, that a veffel was dropping down the river. The prifoners were ordered to join the other two, who yefterday beguiled their prey, and to exert their utmost efforts to decoy the paffengers in the fhip on fhore. It is easy to conceive, that the horror which they felt, on receiving these orders, was strongly combated by the fear of inftant death, with which they were threatened, in case of disobedience and refusal. They were, therefore, under the necessfity of joining the other two white men. Mr. Johnson, however, though com-Cc2 pelled

to

pelled, for the prefervation of his own life, to pretend to do like the others, firmly determined not to make himfelf guilty of occasioning the flavery, or probable death of the unfortunate paffengers on board, by any voluntary action on his part; and, confequently, neither to make the fmalleft gefture, nor to fpeak a word. And well might he fpare himfelf this trouble. His companions exerted themfelves to the utmost, to excite the compaffion of the paffengers on board, who, without the least hefitation, flood in towards the fhore, to fuccour and refcue from flavery, those whom they thought unfortunate captives. Scarcely had they approached within a small distance of the shore, when the Indians, who, as on the preceding day, had stolen along behind the bushes, hastened up, fired, and that the fix perfons on board. Shouts of victory fucceeded to the howls of barbarous rage. The veffel was hauled on fhore; and two of the illfated paffengers, who were not yet dead, were immediately difpatched with the tomahawk. The fix fcalps were torn off and dried, and the booty was divided, but with fewer formalities than on the preceding day. Soon after the fcouts made fignals, that three other veffels were in fight. The fame stratagem was employed, but, for this time, in vain. The families on board, which were proceeding to Kentucky, did not appear to make any attempt to deviate from their course, but, on the contrary, purfued it with redoubled activity. The Indians fired at the veffels, but, from the breadth of the Ohio, which, in this place, is almost a mile, the balls took no effect. Yet the paffengers were panic-ftruck. Of the three veffels, which they occupied with their cattle, they deferted two, and joined all in one; believing, that they might thus proceed fafter, and more certainly make their efcape. The other two veffels they abandoned to the stream. This measure inspired the Indians with a hope of feizing them, which they would never have attempted, if the paffengers, without leaving these two veffels, had stedfastly pursued their courfe. The Indians, who, in all their enterprizes, are rather animated by a thirst for plunder than by real courage, never venture upon an attack, without being convinced, that they are fuperior in ftrength ; a conviction, which they do not readily admit. Infpirited by their number, by the

the obvious panic of their enemies, and by the feparation of their means of defence, they refolved on purfuing them. Having on the preceding day captured two veffels, they went on board, embarked their prifoners, and, with all poffible fpeed, purfued the fleeing fhip. The two veffels, which had been abandoned to the ftream, foon fell into their hands; but, not fatisfied with their capture, they were bent upon taking the third, which they purfued with redoubled exertion, raifing dreadful howls, and difcharging all their pieces; but their fire proved as ineffectual as their other exertions. The fugitive veffel having gained confiderably the ftart of them, approached a fpot, where the Indians feared to encounter new enemies. They were, accordingly, obliged to relinquish their defign, and to content themfelves with the rich booty, which had already fallen into their hands. It confifted of effects, ftores, and other valuable articles, belonging to the four families, which had jointly emigrated from Virginia, to fettle in Kentucky. They brought every thing on fhore : and, without diffributing the whole, fell eagerly on fome cafks of whifky. They drank fo largely, that all of them were foon intoxicated. Six or feven, to whom was committed the charge of guarding the booty, and who had been ordered, at the beginning of these Bacchanalian revels, to drink with moderation, retained alone the use of their senses. All the reft lay buried in a profound fleep; and, among them, the leader of the party, and the guards of the prifoners. William Phlyn himfelf had drunk fo much whifky, as to be in the fame fituation with his mafters. Mr. Johnfon's mind was too deeply affected by his dreadful fituation, to fhare in this difgufting banquet. Totally abforbed in the contemplation of the dangers and miferies that awaited him, and eagerly defirous of warding them off, if poffible, he conceived, that the profound fleep of all the Indians around him might afford the means of efcape, and communicated his idea to James Schuyl, who was lying by his fide. The veffels were fastened to stakes along the shore, at a small distance from them; the fuccefs of their enterprize depended merely on their flealing thither unobserved, throwing themselves into the first vessel they should find, the night being very dark, and abandon her to the ftream. Succefs appeared

197

のないというないで、

COLUMN SALAN

appeared as certain, if they could reach the veffels, as inftant death, on the other hand, if they were apprehended. James Skuyl the more readily embraced this project, as, but half an hour before, he efcaped death in a manner little fhort of a miracle. An Indian ran up to him, in the firft fit of drunken madnefs, with the dreadful knife in his hand, to fcalp him, and would certainly have accomplifhed his purpofe, but for the interference of two other Indians, lefs inebriated than he was, who checked his fury. The laft words of this converfation were uttered in a voice fo very low, that it was impoffible to conceive they fhould have been underflood by an Indian, who lay at a confiderable diftance, though he were even poffeffed of a knowledge of the Englifh tongue ; yet he arofe, and and tied them in the fame manner as the preceding night, without fhewing, however, the leaft paffion, nay, without fpeaking a word.

Thus the pleafing hopes of the two prifoners were blafted on a fudden, and converted into renewed defpair. Tied fast to trees, separated from each other, convinced, by experience, that they were clofely watched, without the least intermiffion, even in moments when they might imagine themfelves to be totally unguarded; they could not but fuppofe themfelves doomed to a state of hopeless misery. The remembrance of all they had heard of the cruelty of the Indians towards their prifoners, oppreffed their minds with conftant horror. They were aware, that they would be yielded up to the groffest infults, and to lingering, cruel, and varied torments. They confidered the Indians, who were lying around them in a ftate of fenfelefs, brutish intoxication, as the inftruments of their tortures. It was with these painful ideas, that the two unfortunate prifoners paffed the remainder of the night. At break of day, the furrounding troop awoke; they were untied; and this day, the third of their captivity, was spent in continued revels, kept up with the whifky, which had been left the preceding day. The leader, probably from an opinion that his expedition had already proved fufficiently productive, proclaimed his will on the next following day, that it fhould be clofed; and the different tribes, which had taken a fhare in it, fet out on their way home. They all inhabited the neighbourhood of the lakes Ontario and Erie, The

The leader of the most numerous tribe was a Shawanese; the rest were Lower Creeks, Wyandats, Mingoes, Othenwages, Delawares, Ottawas, Chepawas, and Cherokees.

Johnfon, Jacob Skuyl, and Peggy Fleming, as has already been obferved, had fallen to the lot of the Shawanefe, forty of which tribe were prefent in this expedition. They left the Ohio together; while William Phlyn departed with the Cherokees. On the first day's journey, Johnson was ordered to lead a cow, which formed a part of the booty, found on board the two deferted veffels. Jacob Skuyl, being wounded, had nothing to do, but follow the troop. Peggy Fleming, who was furrounded by men and women by turns, could go wherever fhe pleafed. They were all three at liberty to converfe as they chofe, without the Indians having hitherto conceived the fmalleft diftruft. The vaft booty, which had fallen to the fhare of this tribe, was, in part, transported on horfes, ten or twelve in number, found in the veffels, and in part carried by Indians, who, at times; loaded Mr. Johnfon with part of their burden. The first day's journey was but five miles. The Shawanefe halted in a beautiful vale, where, under ftraggling trees, about forty horfes were grazing, which, in the course of the expedition, had been taken from the different travellers, and fent to this fpot. They had adopted this measure, becaufe they were to return this way; and it, befides, fupplied the horfes with food in the utmost abundance. The cow was killed the first day, roafted, and devoured. What had not been caten, was left behind the next morning, when they fet out to renew their journey. The leader, with eight or ten Indians, had, by this time, left the troop, mounted the beft horfes, and rode off to reach their habitations, before the arrival of the reft. They took Peggy Fleming with them, who, for the prefervation of her life, did all fhe could to pleafe the leader, and the other Indians, on whom fhe depended. Her good and playful humour infured her fuccefs. She was carried off on one of the best horses, and the apprehensions of her future fate were lost in the pleafure of her journey. Her two companions in misfortune, unable to charm their mafters, as fhe did, continued their journey in the fame man-134437 ner

190

Carlo and a late

ner, in which they had begun it ; except that they had nothing to carry, as the horfes were more numerous: the cow too had been killed. The troop breakfasted on some falt meat they had found on board the veffels, and on the remains of the meals of the preceding day, and then moved farther onward. About twelve o'clock they halted. The game killed by the huntimen was dreffed, and the time of their halting was frequently determined by the good or bad luck of the chace. They finoked their pipes before and after dinner, and then fet out again to purfue their journey, until about an hour before night-fall. At this time they ftopped to eat their evening meal, which was much like the dinner, ufually fmoked a pipe in profound filence, and then lay down to reft on hides. The prisoners were constantly tied at night, and the journey was purfued in the fame unvaried manner. During the march, fome Indians, generally the huntimen, formed a kind of van-guard, and others brought up the rear, at fome diftance, to watch whether the troop were purfued; for both the miftrust and the vigilance of the Indians are very great. The main body marched as they chofe, without the least order. If game was efpied, either by the main body or the rear-guard, they killed it. But the van-guard feemed in particular charged with this duty. No more game is killed, than what is required for the next meal; and the woods are filled with it to fuch a degree, as to preclude all apprehenfion in regard to future fubfiftence. The game killed is cut into large pieces, and put on flakes driven into the ground. The cookery is performed by the women. The Indians, on lighting their fires, take peculiar care not to fet fire to the neighbouring trees.

The prifoners, we may eafily conceive, profited by the liberty they enjoyed of keeping conftantly together. Their melancholy conversation breathed defpair in confequence of their having miffed the laft favourable opportunity of efcape, rather than hope of meeting with another. Yet this hope, chimerical as it might appear, was not entirely abandoned. The chief of the troop had conceived fome miftruft from their being conftantly together; and his apprehension encreased at the fight of a knife, which Mr. Johnson inadvertently drew out of his pocket, and which

which he had carefully preferved for the purpole of cutting the ropes, with which he was tied at night, if any favourable opportunity fhould offer. On the prifoners being again fearched, a few guineas were found in the pocket of James Skuyl, which had been overlooked at the first fearch, and which heightened the mistruft. The first means to which the Indians reforted for their fecurity were, to ftrip both the unfortunate prifoners of their breeches, inftead of which they were furnished with a fhort apron, tied round their hips, and reaching half way down their thighs, which cloathed them in the Indian fashion. Their shirts were exchanged for coarfer ones. Yet all these precautions were not fufficient, to allay the fears of their keepers. On the next morning the Chief ordered the troop to feparate into two divisions; and James Skuyl to proceed with one, while Johnson continued with the other; they were both to reach the fame place of defination by different roads.

This new feparation proved extremely painful to Mr. Johnfon; the fellowship in misfortune had converted a four-days acquaintance into the most intimate friendship. Skuyl was his support, his hope, the only being with whom he could affociate; yet him he loft, left alone in nature's vaft domain, and given up entirely to his grief and apprehenfions, confiderably heightened by this lofs. The feparation from a dearly beloved wife, Mr. Johnfon faid, could hardly affect the heart with keener pangs, than he felt on being torn from this four-days friend. Yet how was he to oppose the iron-hand of necessity? A wife man, and this is his chief merit, refigns himfelf to calamities he cannot avert: thus did Mr. Johnfon. He foon determined on concealing, as much as poffible, his painful fenfations, and, under the appearance of ferenity, to beguile the miftrust of his masters. He was powerfully supported in the execution of this defign by an innate firmnefs, calmnefs, and cheerfulnefs of temper. Though the hideous image of impending death would often prefs upon his mind, he found fome confolation in the thought, that not every prifoner is irrevocably doomed by the Indians to fuffer death ; but, that, at times, they employ their captives to affift them in hunting, or adopt them as members of their tribes. He has repeatedly affured me, that

Dd

even

「日本市大学」の「日本」というので、「日本」」

北方のないないであったのであるとなると

even in moments of the moft imminent danger, during his captivity his fpirits never failed him for any length of time. A ray of hope would conftantly re-animate his courage, though, wanting probability, it quickly vanifhed; but, though lefs miferable than many others would have been in his fituation, he was conftantly wretched.

The famenefs of the remaining journey was not chequered by any remarkable events. The marches were longer or fhorter in proportion to the game they killed, to the duration of their fleep at noon, and to the delight they found in fmoaking their pipes. But their length efpecially depended on the will of the chief, and the advice of the conjurors. Their dreams frequently alter the direction of their journies. They fell. in with feveral wandering troops of Indians, which caufed a longer or fhorter delay, according to the hour at which they met. At times the two troops would dine together; but they never parted without having informed each other of their exploits, and exhibited their prifoners with pride and oftentation. At night Mr. Johnson was always tied loofer or tighter according to the whim of the Indian, who undertook this charge, without always belonging to his guards, being fometimes deputed by one of them, who had perhaps fome bufinefs in front or rear of the troop ; and in this cafe the deputy would often endeavour to juftify the confidence placed in him, by tying his prifoner as clofely as he could. One night he was tied fo tightly, that the ropes cut deep into his arms, and were covered by the fwelling they occafioned. Yet he dared not to complain, for the whole party being interested in the prefervation of prifoners, every measure tending to that purpose could not but obtain universal approbation. At another time he was beaten by the chief for no other reason than the ill humour of this brute, yet he dared not to murmur. Once he was feverely beaten by an Indian from a mere brutish defire of using him thus; but this time his patience forfook him. He returned the blows with the approbation of the whole troop. They faid he had proved himfelf a man; none but women fubmitted to fuch treatment without opposition. From that time he observed, or fancied, that they treated him with more respect. In the meanwhile the real commander

mander or chief of the troop rejoined them, after two days feparation. Having altered his idea of reaching home fooner than the reft, he refolved on fcouring the woods with his Indians, and it was by mere accident he fell in with the troop from which he had feparated. Peggy Flemming was with them, apparently much habituated to their mafters, as the preferred their protection to the company of Mr. Johnson. A few days after the troop met a negro laden with whifky. He was the flave of an Indian, who was hunting in the woods, and had commiffioned him to fell this liquor. Within a fhort time the negro fold his whole ftock, and followed the troop, waiting for his mafter. The Indians halted foon after to drink their whifky with more eafe, and to prepare for their entrance into Sandufky, which was diftant but a few days journey. Their preparations confifted in the complete process of an Indian toilette, that is to fay, they touched up and refreshed the colours with which the Indians are accuftomed to paint both the face and body. Every one is at liberty to paint himfelf after his own fancy, except that they all wear one certain mark either on their breaft or arms. A black paint, prepared of charcoal, and a red, composed of minium and cinnabar, are most frequently used. The whole body and face are plastered with these paints. They fuffer their hair to grow only about the fcalp ; and cut off the reft, clofe to the head, either in irregular lines, proceeding from the eyes and the root of the nofe, and branching out from this central point in various forms, or parallel lines extending near each other in the fame direction. At times it is a fort of hair-drefs, on which apparently no care is beftowed. But the fact is, that they attend to this fort of ornament with a peculiar care, and pafs whole hours before their looking-glafs, which they carry conftantly about them to complete their dreffing. This they value as highly as the handfomeft European coquette can do; and are as much pleafed, when it is finished to their fatisfaction, as she may be. On fuch days they pluck off the hair from the eye-brows and beard, with more care, than they ufually beftow on this operation. As to the common mark or fign, which they wear painted on their breaft or arms, it is generally the image of fome animal. That of the tribe of the Dd 2 Shawancfe

203

「日本のない」というというであるというである

the state of the second second second

Shawanefe was a wolf. The women wear it in common with the men; but they paint only the cheek-bones, for the most part, red. They fufpend finall filver or iron rings from the whole cartilaginous part of the ear. The men wear them in the nofe. Either fex generally wears a filver collar, from which a crofs is fufpended. A fhort fhirt, reaching down to the apron, which is tied round the hips, is the common drefs of both fexes; in cold weather they throw a fhort mantle round the fhoulders. Such, at leaft, are the drefs and fineries of the Shawanefe. Nearly all the tribes vary in this refpect, as well as in many others. After the company were thus arrayed, they proceeded on their journey. The negro fpoke English; and, as the Indians entertained no mistrust against him, he had it in his power, to impart to Mr. Johnfon fome interefting information, which, though not calculated to infpire the prifoners with hope, yet proved to him extremely valuable and important. The troop was foon joined by the master of the negro, and shortly after by two other Indians, who took Mr. Johnfon by the hand, and conducted him to the chief, whom they feemed to address in a fuppliant manner, and with an air of fubmiffion. At the close of an hour's conversation, the fubject of which was the prifoner, and after the petitioners had delivered two gallons of whifky, mostly quaffed by the chief, Mr. Johnson was furrendered to them and carried off. All his ideas were abforbed by the profpect of certain destruction, which impressed his mind ; every ray of hope vanished for a moment; every perception was loft; he dared not to ask the negro, who, in conjunction with his mafter, had joined the two Indians; ignorant as he was, whether he might not be connected with them ; whether the compatiion, he feemed to fhew, were not an artifice to betray him ; whether he were not, perhaps, his most cruel enemy, his executioner ! For fome time he moved on in filence, and fecret defpair ; but, being no longer able to fupport the torturing idea of the uncertainty of his fate, he, at last, with great timidity, had recourse to the negro, and learned from him, that one of the two Indians, to whom he now belonged, having fome time ago killed an Indian of the tribe of the Mingoes, he was bound by the laws of the tribe, to furnish a perfon instead of the

the Indian flain, or, in default of this, to be himfelf furrendered up to the vengeance of his family; that, being too poor to buy a prifoner, he had prevailed upon the Shawanefe by his entreaties, and perfuaded the chief, by means of the whilky, to make him a prefent of Johnfon, fo that he now pertained to the tribe of the Mingoes, but that previoufly to his being delivered up to them he would pafs a few days at his mafter's, who was a neighbour of the two Indians. The profpect of flavery was pleafing to Mr. Johnfon ; he was happy even at this price to preferve his life, the lofs of which had been conftantly before his eyes. He deemed himfelf more fortunate, as he entertained a hope, that by fome means or other he might be able to fhorten the period of his captivity. He journeyed on about four days with his new masters, and lived with them in the fame manner as with the former, except that he was not tied at night. His old mafters had given him back his clothes, and, on comparing his prefent fituation with his former, and efpecially with that which he expected in anxious fuspense, he felt happy. But this happines was not of long duration. His unlucky ftars would have it fo, that after four days marching he again fell in with the Shawanefe. The chief, who had now become fober, was no longer fo generous as before, and regretted his former generofity. He demanded Mr. Johnfon from the two Indians, but was refused. The two Indians referred to the testimony of the negro and his mafter, which was in their favour ; but, the Shawanefe being the ftronger party, they proceeded from demands to menaces, and from menaces to acts of violence; the two Indians, deftitute of all means of defence, were eafily conquered ; and Mr. Johnfon, torn from the Shawanefe, was replunged into his former anxiety and mifery. His fituation appeared to him the more defperate, as a French merchant of Canada, who, being informed by the Indians, that the Shawanefe had a white prifoner with them, came to redeem him, but had met with a refufal from the chief, who told him, that he meant to lead him with the other booty in triumph through his town. The merchant promifed Mr. Johnfon, to renew his application the next morning, but the latter had renounced all hope. The merchant actually came the next morning, according

#### 205

Carly With Conversion States of

COLORANS COL

according to his promife, at the time of the arrival of the prifoner, and made feveral trifling bargains with the Indians; but all his applications concerning Johnfon were in vain. The unfortunate young man, therefore, had no hope left, but what the profpect of occurrences, incidental to a journey of one hundred and fifty miles, the actual diftance of his place of deftination, could afford. An event, with which his most fanguine hopes could not have flattered him, foon took place. The Shawanefe, proceeding on their journey, met an Indian with a horfe loaded with whifky; part of the booty was quickly exchanged for fome barrels. The next morning the remainder of the booty went the fame way, and on the following day they paid the Indian for what whifky he had left in horfes, which they had brought with them from the banks of the Ohio. The Shawanese passed fix days in a state of continual intoxication, and continued drinking until they had nothing left to drink. Ashamed to return to their tribe without any trophies, but one fingle prifoner, they determined on another expedition, in which Mr. Johnfon was to co-operate. Yet, on mature deliberation, they found it still more advifeable, to fell the prifoner, in order to be able, to drink whifky, and drink it largely, previoufly to their taking the field again. The expression of vehemence and favageness in their faces, which was heightened by the fumes of whifky, not yet altogether evaporated, greatly encreafed Mr. Johnfon's uncafinefs during these debates. It was in vain his woe-worn mind endeavoured to find out their object, when the following morning he was called to the two chiefs, who ordered him to mount a horfe, and push on with them as fast as he could. He now imagined, that his last hour was come, but this time his fear was not of long duration. The place whither he was conducted was not above five miles diftant ; it was the habitation of Mr. DUCHOQUET, the merchant whom he had already feen. After fome glaffes of whifky had been drunk, the bargain was foon ftruck ; fix hundred finall filver fhirt buckles, fuch as the common people wear, conftituted the ranfom, amounting to twenty-five Louis d'or. Mr. Johnfon's happinefs may be eafily conceived, but he did not yet feel it in its whole extent; which is generally the cafe in fudden transitions from

from extreme wretchednefs to a ftate of felicity and peace. This rapid and complete delivery from death and bondage appeared to him like a dream, in which he dared not to indulge. Mr. Duchoquet endeavoured to convince him of the reality of his happy fituation, and he began to believe in it, when the next morning the two Indians, who had conducted him thither, again made their appearance. Mr. Duchoquet was himfelf of opinion, that they came to refeind the agreement, and confirmed his new guest in the determination he had formed, to fell his lifedear, when one of the Indians came up to him unarmed, and faid fmiling, that on the preceding day he had forgotten fomething, which belonged to him, which most certainly he must have missed, and which they came to return to him. It was a code of laws for Virginia, which his masters had left him during his journey. Mr. Johnson was lefs fensible of the delicacy of this conduct, which even among refined Europeans would have been confidered as a proof of great attention, than happy on account of the perfect fecurity, which this behaviour of his former mafters guaranteed to him, and which continued undifturbed by any further accident.

Not being able to reach the fettled parts of America without a guide, he was neceffitated to wait the feafon, when Mr. Duchoquet ufually went to Canada. Until that period he continued with him in his habitation, and affifted him in his trade with the Indians. This afforded him an opportunity of getting acquainted with feveral tribes, whofe mannersand cuftoms differed but little from those of the Shawanese. Unacquainted with their language, he could not himfelf collect much information concerning them; and befides, he was too much occupied by his eager defire of being reftored to his family and friends, to ftudy the manners and habits of favages, whom he was anxious to quit. He learned, however, from his hoft, that all the tribes in that neighbourhood believe in a Supreme Being, and in the duration of the existence of the soul after the close of this mortal life. They hold, that the punishment of thofe, who have rendered themfelves guilty of wicked deeds, and with them none are wicked deeds but inactivity and cowardice in hunting and warfare, and perfidy to their friends, confifts, in their being removed after death

207

CONTRACTOR ON

death into unhealthy woods, where there is no other game but fmall birds; while they, who have conftantly obferved an honeft, gallant conduct, are transplanted into forefts, abounding with the largest game, of which the numbers never diminish. He farther was informed by his host, that Indian women, called in their language fquaws, are kept by their hufbands in a fort of flavery, frequently beaten, and in cafe of adultery often maimed by them-a punifhment which they are much inclined to inflict. Girls, or unmarried women, on the contrary enjoy full liberty, to gratify their defires as they pleafe ; and fo far from their forfeiting by this gratification the efteem of the men, a woman is held in little eftimation by the Indians, who, previous to her marriage, has not been engaged in fome amorous intrigue : " for," fay they, " difdained as fhe has been by all men, the is unworthy of love." According to his obfervation, the Shawanefe are lazy, imprudent, melancholy, filent, and without thought for the coming day. As to the general character of the Indians, he knew, that, whatever acts of cruelty they may exercife against their prisoners, in particular against fuch, as they take in time of war, they are in their friendship true and faithful to a degree, which has long become obfolete among civilized nations.

At the beginning of June Mr. Duchoquet fet out with his gueft on his journey to Canada. Lake Erie was but fifty miles diftant. They embarked there for Detroit, where Mr. Duchoquet refides. But, before they reached Lake Erie, they had to pass the small lake Sandusky. A violent guft of wind drove them to a fmall ifland in the middle of this lake, inhabited by two Indian tribes. Mr. Johnfon was there invited with his friend to a grand feaft, given by a family in celebration of the recovery of an Indian lady. The feaft confifted of a grand meal, preceded by a great deal of dancing around a large fire. Almost all the inhabitants of the ifland were invited. A fmall painted flick fupplies among the Indians the use of our cards of invitation ; and these dances, thefe banquets, and large fires, are religious rites, deemed by the Indians extremely efficacious in curing their fick ; in all probability they lefs obftruct their recovery at leaft, than the prefcriptions of many phyficians might do. Mr.

Mr. Johnfon reached Détroit on the 13th of June; and there feparated from Mr. Duchoquet. The English governor ordered him to be conveyed acrofs Lake Erie in a king's yacht. Thence he went in another veffel to the celebrated cataract of Niagara, to conceive an adequate idea of which, is beyond the powers of human fancy. From this ftupendous water-fall he proceeded in a boat along the banks of Lake Ontario, and thence on the river Ofwego to Albany, New York, and Virginia, where, having been afflicted fix weeks by fate, favages, and mulquitoes, he rejoined his family, whom he had utterly defpaired of ever feeing again; happy, that fo many fufferings terminated in this fortunate, but unexpected event.

## The Hiftory of PEGGY FLEMMING.

Peggy Flemming continued with the Shawanefe, when Mr. Johnfon was, by their chief, delivered up to the two Indians of the tribe of the Mingoes. But he did not find her again, when he was furrendered back to his former mafters. Two or three of them had carried her off; and after a journey of a few days, given her to three Cherokees, whom they met in the woods, and who carried her to Sandufky, where Duchoquet and Johnfon faw her, without being able to obtain from her one fingle word ; undoubtedly in confequence of a prohibition of her prefent mafters, who used her more rudely than the former had done. Some days after, these Indians brought her into the neighbourhood of the lake Sandufky, where they pitched their tents, and being much pleafed with the furrounding country, determined to pass fome days in their camp. Mr. MAC-INTOSH, partner of Mr. Duchoquet, proceeded thither, on the first intelligence that a white woman was in the hands of the Indians, with a view to redeem her. A young Virginian, who, fome years before, had been taken prifoner by the Wyandots, and by them adopted as a member of their tribe, accompanied him thither. He happened to know the whole family of Peggy Flemming, and to be perfonally acquainted with her. Being much liked and refpected by the chief of the tribe, he folicited of him the favour, to procure him this captive from the Indians, Ee afferting,

afferting, that fhe was his fifter. The aged chief, in compliance with his requeft, paid the three Cherokees a vifit, and after the ufual compliments expressed his wish, that they might either give or fell him this young woman, in whom he profeffed to take the most lively interest. The Indians gave him a denial in terms, which grew peremptory in proportion as his entreaties became more earneft. They threatened, that they would rather kill both him and her, than give her up. The old chief, being the weaker party, was obliged to yield. But the next morning he came before break of day, attended by twenty Indians of his tribe. Peggy Flemming was tied to a tree, around which the three Cherokees were lying in a profound fleep. The Wyandots feized her; the old chief cut himfelf the ropes, with which fhe was tied, and as foon as he got her into his power, gave the three Cherokees fome hundred fmall filver buckles, with which they were obliged to content themfelves. Peggy Flemming was delivered up by the old chief to his favourite WHITAKER (this was the name of the Virginian), who was become a Wyandot Indian, first from necessity, and afterwards from choice. She was provided with clothes, and carefully nurfed by this tribe. Whitaker had married a young Indian woman, who took the greatest care of her. Soon after, she was conducted under an efcort of men and women of this tribe through the midft of the woods to the banks of the Ohio, oppofite to Point Pleafant, where Mr. Johnfon learned from her the particulars of her adventures, and where fhe now lives, in the twenty-eighth year of her age.

### The History of JAMES SKUYL.

It will be recollected, that Mr. Johnfon was feparated from James Skuyl on the fourth or fifth day of their march. The latter, with part of the troops, proceeded by a different road to the habitations of the Shawanefe, where he was infulted, beaten, and otherwife ill ufed. On his arrival, his wound was almost mortified, owing to the exceffive fatigues of the journey, and the stings of the musquitoes. He was, neverthelefs, kept to the hardest labour of the tribe, i. e. he was employed to cultivate

cultivate the ground. It is in general the employment of prifoners, if they have any, to relieve the women of a part of the toils, which have fallen to their lot. James Skuyl, though extremely uneafy on account of his fituation and future fate, yet could not think of making any attempt to efcape through forefts, where at every ftep he ran the rifk of falling inwith Indians. The fuccefs of fuch an undertaking was fo highly improbable, as to preclude every idea of it. Yet being one day informed by a woman, in whofe company he ufed to work, and who feemed to fympathife in his fufferings, that he would be burnt within two days, he was irrefiftibly impelled, to try every means of efcaping fo terrible a death. Furnished with a mutket, and fome cakes of Indian corn, he ventured, one night, to elope from the habitation, in which he was guarded. He stole through the woods, and reached the bank of the river Miami. Here he was obliged to leave behind his mufket, though it ferved, at once, for his defence and fubfistence. Having fastened his cakes to his head, he fwam acrofs the river. He met great numbers of Indians, in fpite of his anxious endeavours to avoid them; nay, he found himfelf under the neceffity of paffing by fome of their habitations. The care he had taken in painting himfelf, fome Indian words, which he had learned, during his captivity, and his firm deportment, gave him the appearance of an Indian, and from this fupposition he was actually feveral times affifted in his flight. When he thought himfelf out of danger, he had nearly fallen by one which he leaft fufpected. Having reached the bank of Lake Ohio, he intended to crofs it in a veffel, which he happened to find, in order to reach the ifthmus; the ferryman refused to take him on board, as he miftook him for a fpy, who intended first to feduce him, and then to punish him, if he should yield to his intreaties. He also told him, that the preceding evening a troop of Shawanefe had fearched the banks of the river in queft of a prifoner, who had made his efcape on the day before that of his intended execution. He could not but recognife himfelf in this defcription; celerity was therefore of the utmost importance, and yet he was compelled to repair to the mafter of the veffel, whofe habitation was two miles diftant. He informed him, that he was the pri-Ee 2 foner

foner, of whom the Shawanefe were in fearch, and this man, fortunately more humane and lefs ferupulous than his fervant, not only confented to his going on board, but would alfo carry him over himfelf, that he might fee him fafe beyond all danger. Having arrived at Détroit, he traverfed Canada, and the Northern States, and at length reached Great Brayercourthoufe, where he has fettled. At leaft he has hitherto given up the trade to Kentucky.

## The History of WILLIAM PHLYN.

The diftreffes of William Phlyn, who was delivered up to that tribe of the Cherokees called Chikamages, inhabiting a diffrict adjacent to the great river Miami, confifted in his having been tortured two days together, until the fire put a period to his wretched exiftence. He loft his life, a few days after his arrival at the habitations of the Indians. James Skuyl, on his journey to the town of the Shawanefe, faw the fpot, where he had been burnt the preceding evening, but was not able to collect any farther information concerning the fate of this unfortunate man.

Although the three laft ftories contain but few particulars, and are not infeparably connected with that of Mr. Johnfon: yet they will not, I think, be found altogether uninterefting, as they, in fome meafure, ferve to complete his hiftory. An acquaintance with that gentleman cannot but confiderably heighten the joy, which his fortunate deliverance must excite in every feeling mind, and ftamp his reports with the authority of indubitable truth.

I have forgotten to mention, that the two whites, who by their lamentation decoyed Mr. Johnfon and his companions, effected their efcape the fecond night, when the Indians, after the capture of the two veffels, were almost all of them intoxicated with whifky. Mr. Johnfon had strong grounds to suspect, that the Indians, from motives of friendship or of gratitude for their affistance in the capture of so rich a booty, forwarded their flight.

TOUR

# TOUR THROUGH UPPER CANADA.

(213)

## Saturday, the 20th of June, 1795.

THE veffels, in which we croffed the river Niagara, belong to the English, and are, for this reason, in a better condition than the major part of the American veffels or ferries, which are entirely left to the will and pleafure of the owners, without any public officer taking the least notice of their condition, and providing for the fafety of travellers. The ferry confifted in a veffel of confiderable capacity, the fides of which were one foot and a half high; it was tolerably ftaunch, and fufficiently large, to contain five horfes without any apparent danger. The mafter of the veffel is directed to write down the names of the paffengers; our's were already known. General Simcoe, governor of Upper Canada, informed of our journey by Mr. HAMMOND, the English ambassador to the United States had long ago given notice by the poft of our expected arrival. Mr. Guillemard, who had croffed over on the preceding evening, had announced our intended arrival on the next morning; and the Captain of an English frigate, which was receiving fome repairs on the opposite bank, fent us his boat, as foon as he perceived us. Our guide, PONDRIT, had preceded us to the river to call the ferrymen; and the ferry arriving fooner than the boat, of the deftination of which we were ignorant, we ftepped into the former. The paffage from the American to the English fide requires four or five minutes, and from the English to the American shore about a quarter of an hour. Fort Erie stands on the shore of the lake, about two miles above the ferry. The commandant had defired the captain of the frigate to fupply his place, until he fhould be able to vifit us himfelf. We thought it right to return this act of civility, by immediately fetting out to prefent to him our paffports. We did fo, though we were not dreffed to pay a vifit of ceremony; but the rain having made our appearance ftill worfe, we determined on drying our clothes at the inn, until the weather should clear up, and permit us to proceed to the fort. We were

not

not yet dreffed, when the commandant arrived at the inn, and invited us to dinner, acquainting us, at the fame time, that he was directed to fhew us every civility in his power. This invitation was very agreeable to us; a dinner at a Governor's, after three day's travelling through woods, is a real feaft. We accordingly attended him to the fort.

Fort Erie, as it is called, though we know not why,\* confifts of fome houses roughly formed of wood, and furrounded with tottering palifadoes. It has neither a rampart, a covert-way, nor any other works. The buildings, which are all of them block-houses, are inhabited by the officers, foldiers, and a commiffary of provision. Without the precincts of the fort, stand four fimilar houses, destined for the habitation of the workmen, and a large magazine, or ftore-houfe, belonging to the king. The upper ftory juts out beyond the ground floor, fo that all who fhould attempt to approach the ftore-house, might be easily kept off with firelocks, by means of openings made in the upper ftory. This fort is to be confidered merely as a point of defence against the Indians for the British trade on the lake, at the extremity of which it stands. The term FORT, in its usual import, cannot by any means be applied to this place, which is even now in a worfe fituation than formerly, fince the impending furrender of the forts fituated on the oppofite fhore to the Americans, leaves the English no alternative, but to have either no forts at all on this fide of the lake, or to put those which they shall maintain in a refpectable state of defence. Fort Erie is garrifoned by a company of the fifth regiment, the captain of which company is, at the fame time, the commandant of the place. Captain PRATT holds this command at present; on account of his long fervice, he has been nominated major by brevet. The duty of the foldiers, who form this garrifon, confifts in ftanding fentries; but they are alfo obliged to ferve on board the fhips, which belong to the government. Almost all the provision, and all ammunition, without exception, come from England, and across the

\* Dr. Morfe fays, that Fort Erie is a *ftrong fortification*; an affertion, which it is impoffible to reconcile with the defcription given by the Duke, but by fuppofing it to have undergone confiderable improvement fince 1795.—*Translator*.

+ Buildings of this conftruction are very common in the United States, as well as in British America; they are called block-houses.—Author.

lakes.

lakes. The navigation on the river Niagara ends feven miles above Lake Ontario, whence there is a land-conveyance as far as Chippeway, nine miles diftant, where the navigation for boats and other fmall veffels recommences, extending as far as Fort Erie. Here the goods, deftined for Fort Détroit, are laden in fhips, navigated by foldiers from Fort Erie to Fort Chippaway. The return paffage is extremely difficult; and for this laborious tafk, they are allowed only fifteen fhillings, to be diftributed among five men, who compose the crew.\*

The foldiers have a garden, where they cultivate the neceffary vegetables, which by any other means they would not be able to procure. Their allowance of provision, which confifts in a pound of flour, a pound of falt pork, four ounces of rice, and a little butter, a day, is, no doubt, paid for by the government at a very high rate; but to the foldiers it is delivered for two pence halfpenny a ration, which is deducted from their pay, amounting to fix pence per day. All the troops, quartered in Canada, are treated in the fame manner. Another company of the fame regiment is at Fort Chippaway, and the remaining eight companies form the garrifon of Fort Niagara. + Fort Détroit, and feveral other forts, which the English still hold in their possession, but which are to be given up to the Americans, are garrifoned by the twenty-fifth regiment. Fort Détroit stands at the end of Lake Erie, on the strait or river, which separates it from Lake St. Clair. It was crected about the year 1740. The inhabitants are mostly French, and confift of about three hundred families. It is faid to be in a very flourishing condition. About one hundred artillerymen are distributed in Détroit, Fort Niagara, and fome other places, which I shall have occasion to mention. The troops generally remain feven years in Canada, during which time the garrifons relieve each other every year. But the war in Europe, and the fear of a rupture with America, have occafioned various alterations in thefe ordinary arrangements. The regiments now remain three years in the fame place; a change, with which they alone are pleafed, to whofe lot it falls to garrifon the

\* This, no doubt, is in addition to their pay as foldiers .- Translator.

+ Fort Niagara, as well as the other forts mentioned by the Author, were furrendered up to the Americans in July, 1796.—*Tranflator*.

fmall

fmall forts. For the fame reafons, the regiments at prefent have but half their complements.

A ftore-houfe, belonging to a private gentleman, is alfo included within Fort Erie, but ftands apart from the buildings, which appertain to government. In this magazine are warehoufed all the goods, which come upwards, and are deftined for Détroit, as well as those which go down the river to Niagara, Kingston, Montreal, Quebec, &c. They are forwarded to their places of destination, either in boats, when they go down the river, or in large vessels, when they are destined for Détroit. The trade on Lake Erie is carried on in four or five merchantmen, befides three or four armed yachts belonging to the king.

Peltry is the chief commodity exported from Détroit ; but we alfo faw feveral cafks of very fine maple fugar, made by the Indians. We were informed, that the quantity of this article, which paffes yearly through this place, is very confiderable; but were not able to learn its exact value in money. The owner of the ftore-houfe hires, at times, about twenty Canadians, for the fhipping and unfhipping of the goods, for carrying them into the magazine, and transporting the boats by land to the lower country. The Canadians no fooner learned, that we were Frenchmen, than they expressed to us a fatisfaction, attachment, and respect, repeated demonstrations of which our peculiar fituation obliged us to avoid.

The Chippaway, a king's yacht, commanded by Captain HARA, arrived here during our refidence in the fort. He had been feven days paffing the ftrait, which fhips frequently clear in two days.

Hard cafh or fpecie is extremely fcarce in this corner of the world. It can come only from Lower Canada, but they like to keep it in Quebec and Montreal. Nay, the pay-mafter of the troops, on pretence that the conveyance is dangerous, fends no fpecie for the troops, though he receives their pay in hard cafh. He could most certainly not refuse it to the paymasters of the regiments, if, for that purpose, they proceeded to Montreal or Quebec, where he refides. But to undertake this journey at the expence of the corps, would occasion too confiderable a deduction from their money, which should reach its defination without the least diminution.

diminution. He accordingly remits it in bills of exchange, which are paid in paper-money, that every one makes to any amount he choofes, and which neverthelefs is univerfally received with a degree of confidence, equal to that which obtained in France in the fecond year of the revolution. There are *notes* of this kind of only two pence in value. They are fmall flips of paper, either written or printed, frequently without any fignature, and mostly effaced and torn.

During our dinner feveral Indians arrived in boats. They formed a finall camp on the bank of the river, which we vifited on our return. We experienced from them the most cordial reception, to which, perhaps, the ftate of one of our companions, not diffimilar to that in which most of these drinkers of rum found themselves, contributed not a little.

# Sunday, the 21st of June.

After a hearty breakfaft on board the Chippaway frigate, where we learned, that this veffel, which is about four hundred tuns burthen, and pierced for fixteen guns, cofts five thoufand pounds fterling !---a proof of the enormous price of labour in this country-we embarked for Chippaway. Major Pratt infifted on our taking our paffage in a veffel belonging to government, as he had particular orders to that effect. He manned it with fix foldiers, who were excellent hands at rowing; and also directed Lieutenant FAULKNER to attend us as far as Niagara. No denial, on our part, could prevail with him to withhold this act of civility, which, even during my profperity, would have embarrafied me, and which now bore the appearance of fcorn rather than politenefs. We were, therefore, obliged to fubmit, and to affume the air of perfons, whofe rank demanded this diffinction. We were now approaching the profpect of the Grand Cataract of Niagara, one of the principal objects of our journey, and which I had long defired to fee. We formed, every one of us, different ideas of this waterfall, according to our different powers of fancy; each stroke of the oars brought us nearer to it, and our attention being entirely turned to difcover the foam, and hear the noife, we took but little notice of the banks of the river, which, on the fide of Canada, are tolerably fettled, of the uncommon width of its channel, or Ff the

217

the majeftic courfe of its ftream. At laft we heard the noife, and perceived the fpray. The weather was rather unfavourable, fo that we could not, at any confiderable diftance, enjoy this grand fpectacle. The rapidity of the ftream, which is perceptible feveral miles from the falls, foon carried us to Chippaway. A whole mile before you reach that place, you must keep clofe under the fhore, without which precaution the ftream would foon involve the boat, and irrefiftibly hurl it to deftruction. You must even make the utmost exertion in rowing to remount the Chippaway Creek, from which the fort takes its name.

We had no fooner landed, than, with the utmost impatience, we hastened to the falls, fcarcely returning with due attention the civilities we experienced from Captain HAMILTON, commandant of the fort. We accepted, however, his invitation to dinner, which on our account he kindly deferred until four o'clock, mounted our horfes, and, with Lieutenant Faulkner, proceeded to the falls. The distance of Chippaway from the falls, in a straight line, is but a mile and a half; but the banks of the river form fo many flexures, that the road, which winds along them, is three miles long.

At Chippaway the grand fpectacle begins. The river, which has been conftantly expanding from Fort Eric to this place, is here upwards of three miles wide; but on a fudden it is narrowed, and the rapidity of the ftream redoubled by the declivity of the ground on which it flows, as well as the fudden contraction of its bed. The channel is rocky; and the interfperfed fragments of rocks encreafe the violence of the ftream. The country is flat and even to this point; but here a range of white rocks arifes on each fide of the river, which is contracted to half a mile's breadth. This range is a branch of the Alleghany mountains\*, which, proceeding from Florida, previoufly to their reaching this point, interfect the whole continent of America. The river, more clofely hemmed in by the rocks on the right, incroaching upon its channel, branches into two arms, one of which flows along the bank, formed by

\* This principal ridge of the Alleghany mountains, which extend north-eaft and foutheaft, nearly parallel to the fea coaft, about nine hundred miles in length, and from fixty to one hundred and fifty and two hundred miles in breadth, is defcriptively named the backbone of the United States, -Tranfl.

the rocks on the right; and the other, far more confiderable, being feparated by a fmall ifland, makes ftraight on to the left, and fweeps through a bason of stone, which it fills with much foam and noise. At length, being again obstructed by other rocks, which it meets on its right, it alters its courfe with redoubled violence, and along with the right arm rushes down a perpendicular ledge of rocks one hundred and fixty feet high\*, nearly half concave, and probably worn out by the inceffant impetuofity of the waters. Its width is nearly equal to that of its bed, the uniformity of which is only interrupted by an ifland, which feparates the two arms, refts unshaken on its rocky basis, and feems, as it were, to fwim between the two ftreams, which rufh down at once into this stupendous chasm. The waters of the lakes Erie, Michigan, St. Clair, Huron, and Lake Superiour, and of the numerous rivers, emptying themfelves into thefe lakes, inceffantly replace the water that thus dafhes down. The water of the falls tumbles perpendicularly on the rocks. Its colour is, at times, a dark green, at others a foaming white, brilliant throughout, and difplaying a thoufand variegations, as it is ftruck by the rays of the fun, or, according to the time of the day, the ftate of the atmosphere, the force of the wind, &c. The water, which rushes down the rocks, rifes in part in a thick column of mist, often towering above the height of the falls, and mixing with the clouds. The remainder, broken in its perpendicular defcent by fragments of rocks, is in continual agitation; fpouts and foams, and cafts on fhore logs of wood, whole trees, boats, and wrecks, which the ftream has fwept along in its courfe. The bed of the river, formed by the two ridges of rocks which extend a great way farther, is still more narrowed, as if part of this mighty ftream had vanished during the fall, or were swallowed up by the earth. The noife, agitation, irregularity, and rapid defcent of the ftream, continue feven or eight miles farther on, and the river does not become fufficiently placid for a fafe paffage till it reaches Queenstown+, nine miles from the falls.

\* Other accounts fay, that the perpendicular height at the cataract is only one hundred and thirty-feven or one hundred and fifty feet.—*Transl.* 

\* In Upper Canada, on the weft fide of the ftraits of Niagara .- Transl.

Ff2

I crept

210

A THE REAL COL

I crept down to the cataract; the defcent is very difficult; perpendicular steps, hewn out of trees, caverns, and projecting rocks, the scattered fragments of which warn the traveller of the danger from the defcent, without offering any hold, except fome decayed bufhes, which the imprudent adventurer, who fhould place any dependence on them, would carry with him into the unfathomed abyfs. Every thing feems calculated to ftrike with terror; but curiofity is as heedlefs as any other paffion. The certain profpect of a fplendid fortune would hardly induce me to attempt, what I at this moment did from the mere impulse of curiofity. I frequently crawled along on both hands; the zeal with which I purfued my object gave me a dextrous activity, which I was not confcious of poffeffing. I feveral times abandoned myfelf entirely to chance, and thus I toiled a mile and half to reach the foot of this stupendous cataract. The pleafing confcioufness of having attained our end is the only reward of the exertions, by which we have obtained fuccefs. In the courfe of our life we frequently meet with fimilar inftances.

Near this fpot is a whirlpool, the fpray of which drenches your clothes even at a diftance. The columns of foam, arifing from the falls, mix again with the defcending ftream. The bafon itfelf is hidden by this thick cloud, and the tremendous noife, which is more violent here than any where elfe, is the only enjoyment to be attained. You may proceed a few paces on pieces of rock, lying between the column of water and the rocks from which it rufhes down; but here you are completely fequeftered from the world, you are even deprived of the profpect of the falls by the column of water, which, by its denfity and motion, intercepts the free accefs of air to fuch a degree, that fuffocation muft unavoidably be the refult of a long continuance in this place.

It is impoffible to defcribe the impreffion, which this cataract made upon our minds. Fancy, which had long cherifhed the hope of viewing it, now offered pictures, which might feem exaggerated, yet were much inferior to the reality. To attempt a defcription of the impreffion we felt, would be equivalent to a defcription of the falls; an attempt far exceeding our powers. The enthufiafm, which feized my foul at the afpect of this magnificent fpectacle, was too powerful to be weakened by our

our unpleafant journey back to the Fort; and it was not until I arrived at Captain Hamilton's, that I found leifure to notice my wearinefs, my hunger, my bruifes, the miferable condition of my clothes, and the time of the day.—It was two o'clock.

Poer Lieutenant Faulkner, who thought himfelf obliged to attend my Highnefs, unfortunately partook not of my enthufiafm, but merely affociated in my ftruggles with various obftacles, and bore his fhare of contufions and fatigue. In fpite of his exceffive politenefs, he feemed extremely fad and dull, until fome glaffes of wine had cheered up his fpirits.

Captain Hamilton, commandant of Fort Chippaway, which is even inferior n ftrength to Fort Erie, was fo kind as to detain us to dinner. The *ermui* naturally refulting from this dreary poft, the most dull of any, is beguiled by the fociety of a handfome, fweet, and lovely wife, and fix children, who constantly furround him. They both received us in that plain, cordial, and eafy manner, which characterises perfons who have constantly frequented the best fociety.

Chippaway was formerly the chief place of an Indian tribe, which now inhabits the borders of Virginia. The carriage rendered neceflary by the water-fall and its continued effects ends here. Previous to the treaty of peace of 1783, veffels were laden and difcharged on the other fide of the river near fort Slufher \*, oppofite Chippaway.

Befides the barracks, here as at Fort Erie, are flore-houfes, which belong to government; and others, appertaining to merchants. The whole village confifts of a tolerable inn, and a finall number of other houfes; the flagnant water of the creek renders it very unhealthy, and to this circumflance are imputed the endemic fevers, which every year afflict the inhabitants of this place.

# Monday, the 22d of June.

We left Chippaway early in the morning, with an intention of once more viliting the falls. The rain, which fell in torrents, could not deter us from our defign. I faw it now from a fpot, from which Mr. de Blaconshad viewed it the preceding evening, and to which he defired to

\* The author mifnames the fort, which he calls fort Skuyler.—*Tranfl*. conduct

conduct us. This place is known in the country by the name of Table-Rock, and forms a part of the rock over which the river precipitates itfelf. You here ftand in the midft of its bed, and almoft in the water, fo that you can, with perfect fafety, fee the river rufhing down at your feet; but, advancing only two paces, you would be hurried to deftruction. On this fpot you alfo enjoy the beautiful profpect of the foaming water dafhing along over the rapids of the awful fall, from which you are not feparated by any intervening object, and of the tremendous whirlpool, which engulfs it. It is *from this fpot*, that this wonder of nature fhould be viewed, if you would fee it but *from one fpot*. But it ought to be contemplated from all fides; your aftonifhment will conftantly rife, and you will behold and admire in awful filence.

The defcent is more eafy to the Table-rock than to any other fpot. It is much to be regretted, that the government of a people, which furpaffes all other nations for fondnefs in travelling and curiofity, fhould not have provided convenient places for obferving this celebrated phenomenon, at all poffible points of view. It is pleaded in excufe, that the number of travellers, whom curiofity leads to this fpot, is inconfiderable; that even they, who travel this way on account of bufinefs, and ftop here to view the falls, are few in number; that only hunting Indians and idle children form the idea of creeping down to the falls; and that confequently nobody would be benefited by the money expended in providing an eafy accefs. Yet all thefe pleas cannot juffify a faving of thirty dollars, for which expence the greateft curiofity in the known world would be rendered acceffible.

It is fuperfluous to mention, that, notwithftanding the feverity of the winter in this country, the cataract, as well as the river above it, are never frozen. But this is not the cafe with the lakes, and fmaller rivers, which fupply it with water. Enormous flakes of ice rufh conftantly down this cataract, when the thaw fets in, without being entirely dafhed to pieces on the rocks; and thus are frequently piled in huge maffes, up to half its height. With the noife, occafioned by the falls, we were lefs ftruck than we expected; and Mr. Guillemard, as well as myfelf, who had both feen the Rhine-fall near Schafhaufen, could not but acknowledge,

ledge, that the noife it produces is far more ftriking. Yet, I muft repeat it again and again, that nothing can ftand the teft of comparison with the Falls of Niagara. Let no one expect to find here fomething pleafing, wildly beautiful or romantic; all is wonderfully grand, awful, fublime; every power of the foul is arrefted; the imprefiion ftrikes deeper, the longer you contemplate, and you feel more ftrongly the impoffibility of any exprefiions doing juftice to your perceptions and feelings.

About a mile above the falls, two corn-mills and two faw-mills have been conftructed in the large bason, formed by the river on the left. We examined, with peculiar attention, the most distant of them. It is the most remarkable chiefly on this account, that the logs are cut here: into boards, thrown into the Chippaway creek near its mouth, and by means of a fmall lock conveyed into a canal, formed within the bed of the river by a double row of logs of timber, fastened together and floating on the water. The breaking of these is prevented by other large balks floating at a certain diftance from each other, which form, as it were, the basis of this artificial canal. The water retains in this canal the rapidity of the current, and conveys the logs into the lower part of the mill, where, by the fame machinery which moves the faws, the logs are lifted upon the jack and cut into boards. Only two faws at a time are employed in this mill. The power of the water is almost boundlefs, but the prefent wants of the country do not require a greater number of faws. The very intelligent owner of the mill has conftructed it on a plan, which admits of the addition of a greater number of courfes, according as thefe shall be required by an increased confumption. On the fame principle he has built his corn-mill, which has at prefent only four courses. The miller's dues for grinding, as fixed by the legislative power, amounts to a twelfth throughout all Upper Canada, and for fawing logs to a moiety of the wood fawed.

In the courfe of laft year a fulphureous fpring was difcovered at a few yards diftance from the bank of the river, which was, however, filled up by the fall of earth crumbling from its verge. This fpring has again of late fhown itfelf in the canal, which conveys the blocks to the mill. A ftone,

223

laid

A STATE OF A

224

laid over the fpring, prevents its water from being mixed with that of the river. On the approach of a fire-brand the vapour or fteam kindles, affumes the colour of burning fpirit of wine, and burns down to the bottom. Much time will probably elapfe, before an enquiry fhall be inftituted, whether this fpring be endowed with any medicinal powers.

An iron-mine, too, has lately been difcovered near Chippaway creek. A company has aflociated for the working of this mine, and refolved on crecting an iron-forge in the vicinity of the falls. But this they dare not eftablish without the governor's permiffion; for the mother country ftill perfists in fupplying all its colonies with its own manufactures; and refuses to relinquish a monopoly, that has already cost it that part of America, which composes the United States\*. But the company hope to obtain the defired permiffion.

The land all along the road from Chippaway to New York is feemingly good, though not of the best quality, and exhibits a confiderable number of dwelling-houfes. The grants of land, made by government in this country, are fome of them of a recent, others of a more ancient date; the first fettlements are hardly ten years old, and the major part only three or four. The houfes, entirely built with logs, are better conftructed, and more cleanly than in most other parts of the United States. The mode of agriculture appears to be much the fame, as in other parts of the Union. The common price of land in this neighbourhood is one pound, New York currency, or two dollars and half an acre, if the proportion of the cleared ground to the wooded be as forty to two hundred, or nearly fo. Peculiar circumftances, a favourable fituation, more extensive buildings, &c. enhance the price. Throughout this whole tract of country, labourers are not eafily procured; and they receive, befides their board, from five to fix shillings per day. The winter continues only from the middle of December to the beginning of April.

The roads from fort Erie to Newark are tolerably open, and lie for the most part over a fandy ground, which renders it more easy to keep them in repair. The frequent passage to and fro, in this part of the country,

\* Impolitic difputes, chiefly relative to the right of taxation, not this monopoly, occafioned the difmemberment of the British Empire in America.—*Transl.* 

does,

225

we

does not deftroy them. Such commodities, as are deftined for the upper country, are unfhipped in Queen's Town, and goods, expedited from it, are embarked in this place. The different buildings, conftructed three years ago, confift of a tolerable inn, two or three good ftore-houfes, fome fmall houfes, a block-houfe of ftone, covered with iron, and barracks, which fhould be occupied by the regiment of General Simcoe, but which are now unoccupied, the regiment being quartered in another part of the province. Mr. Hamilton, an opulent merchant, who is concerned in the whole inland trade of this part of America, poffeffes, in Queen's Town, a very fine houfe, built in the Englifh ftyle; he has alfo a farm, a diftillery, and tan-yard. This merchant bears an excellent character; he is a member of the Legiflature of Upper Canada, but at prefent in England.

The portage was formerly on the other fide of the river; but as this, by virtue of the treaty, falls under the American dominion; government has removed it hither. The whole country, though extremely fandy, is covered with oak, chefnuts, and fine hickory trees, and fuch parts, as are better watered, bear, in common with all other parts of America, afh and maple-trees.

It was on this fpot, that Mr. de la JONQUIERE, commiffioned by the French Court to fecure the free navigation of the lakes to French traders, formed his first fettlements, which by permiffion, and under the protection of the Indian tribe of the Yonnowshouans, (who, with many other tribes, have vanished from this part of the globe), were afterwards transferred to Niagara.

From the civil treatment we experienced, as foon as we reached the boundaries of the government of General Simcoe, we could not but expect a kind reception on his part; and yet the event exceeded our expectation. No fooner was he informed of our arrival, than he fent his adjutant-general to invite us to dinner. Having just alighted from his horfe, he could not come himfelf. We accepted his invitation, and shortly after dinner, he entreated us to remain with him, to fleep in his house, and confider ourfelves as at home. To refuse this invitation would have ill corresponded with the politeness of his conduct, of the funcerity of which

Gg

we were convinced. By accepting it, we greatly promoted our own convenience, as we had no vifits to pay in the town, which is full half a mile diftant from the Governor's houfe, and could not but expect to be most agreeably entertained in his fociety, and to obtain from him the most fatisfactory information respecting the country, which so forcibly engaged our curiofity and attention.

We foon underftood, that we fhould be obliged to continue longer in Niagara than we originally defigned. On my acquainting General Simcoe with my intention to proceed to Quebec, he informed me, that, without the express permission of Lord DORCHESTER, it was not in his power to allow any foreigner to enter Lower Canada; he even shewed us the Governor-general's politive orders to that effect, iffued in the month of October, and occafioned by the conduct of fome Frenchmen. Although the wife measures of prevention, adopted by the Governor-general, as well as all other fteps tending to avert a revolution, met with my fulleft approbation; yet I could not but find it extremely unpleafant, that Mr. Hammond in fo positive a manner should have assured me of Lord Dorchefter's perfect concurrence with him on the fcore of my intended journey. On his afferting, that a paffport, granted by him, was the only fufficient mean to enable a foreigner to proceed from the United States into Lower Canada, I entreated him, in addition to this paffport, to write a letter to Lord Dorchefter, who, by ordering the fubordinate commander to let us pafs, would have faved us a tèdious delay in our journey, and the uncafinefs naturally arifing from our incommoding Governor Simcoe for fuch a length of time. Yet, we were neceffitated to conceal our diffatisfaction, and wait until Lord Dorchefter could fend his anfwer to Kingston, to which I requested him to direct it.

I employed my long refidence in Niagara, to acquire fome knowledge of the country, the attainment of which was greatly facilitated by the generous opennefs of Governor Simcoe.

So late as in the year 1791, the administration of Upper Canada was feparated from that of Lower Canada. It formerly conflituted a part of the province of Quebec. The administration of it was much the fame

25

as that of the English colonies, and depended entirely on the will and pleafure of the Governor; yet was undoubtedly here conducted with still more precaution, not only because Lord Dorchester, by all accounts, is a man of a mild and just disposition, but also because the lesson, given by the United States, will not prove altogether structures. The British Parliament, at the same time when it divided these two tracts of the province of Quebec into Upper and Lower Canada, gave them a representative form of government, which, though all the springs of this political machine are yet in the hands of the Governor-general, is framed in such a manner, that if this country should grow more populous, more opulent and enlightened, it will not prove an arduous task, to refcue the management of public affairs from this influence, which at present is very great, and, in the actual state of things, perhaps absolutely necessary.

Lord Dorchefter is Governor-general of the British possession in North America; the governors of the different provinces are only lieutenant-governors; who, whenever he appears, yield to his fuperior authority; and are also responsible to him in all military affairs, if they be gentlemen of the army, which is by no means an indifpenfible qualification for the place of a lieutenant-governor. In regard to ftate-affairs of whatever nature and complexion, the lieutenant-governor corresponds immediately with the English ministry. It is from them he receives his orders and inftructions, without being obliged to communicate them to the governor-general, who is not even poffeffed of the right, on leaving the different diffricts of his government, to give the fmallest directions for what is to be done during his abfence. For this reafon the Governorgeneral, except when preffing military arrangements call him from the chief town of his government, conftantly refides there, while the lieutenant-governor, who has no bufinefs in that place, keeps as much as poffible at a diftance from it. But as no accounts of any public expenditure pafs, without being figned by the Governor-general, he poffeffes a powerful influence over all forts of operations and projects, which at leaft require his approbation; an influence that extends through all the different branches of his government.

Gg2

The British possession of the provinces are governed by the new constitution. The others are governed as in former times.

The boundary between Upper and Lower Canada lies about one hundred miles above Montreal\*. The extent of Upper Canada far exceeds that of Lower Canada, as, the weftern boundary being undefined, it comprises all the known and unknown countries, extending as far as the Pacific or Great Sea, and is bounded northwards alfo by unknown countries. The population of Lower Canada is effimated at about one hundred and forty thousand fouls, and that of Upper Canada at thirty thoufand, but this effimate feems rather high  $\dagger$ .

The leading articles of the new conftitution of Canada are as follows:

That the Province of Quebec be divided into two provinces; Upper and Lower Canada.

That it have two houfes of legislature ; one hereditary ; one elective.

That Upper Canada be defined for the reception chiefly of British fettlers.

That the allotment of lands in Upper Canada be, under certain reftrictions, left to the authority of the local legiflature.

That the representative house of legislature be septennially elected.

That the clergy be provided for by an ample allotment of lands, amounting to one-feventh.

That certain titles of honour be connected with the right to a feat in the hereditary house of legislature.

\* The line between Upper and Lower Canada commences at a frone boundary on the N. bank of Lake St. Francis, in St. Lawrence River, in the cove W. of *Point au Boudet*, t hence northerly to Ottawas River and to its fource in Lake Tomifcaning, thence due N. till it firikes the boundary of Hudfon's Bay or New Britain.—*Tranfl.* 

† Dr. MORSE estimates the population of both these provinces at one hundred and fifty thousand fouls. Lower Canada, in 1794, contained one hundred and thirteen thousand and twelve inhabitants.—*Transf.* 

That

That the liberty of introducing more or lefs of the municipal law of England be left to the diference of the Provincial Affembly.

Upper Canada is a new country, or rather a country yet to be formed. It was probably for this reafon General Simcoe accepted the government of it. He was fully aware of the advantages, which his native land might derive from fuch a colony, if it attained perfection; and imagined, that means might be found adequate to this purpofe. This hope was the only incitement, which could impel a man of independent fortune, and, as he fays, of confined wifnes, to leave the large and beautiful eftates he poffeffes in England, and to bury himfelf in a wildernefs among bears and favages. Ambition at leaft appears not to have been his motive, as a man in General Simcoe's fituation is furnifhed with abundant means of diffinguifhing himfelf by ufeful activity, without removing to a great diftance from his native country, where, in fuch a cafe, he is almoft fure of being forgotten. But, whatever have been his motives, his defign has been attended with confequences highly beneficial.

The plan conceived by General Simcoe for peopling and improving Upper Canada feems, as far as he has communicated it to us, extremely wife and well arranged. The central point of all his fettlements, and of the population of this country, he means to place between Détroit River and the plantations already eftablifhed in Lower Canada, within a fquare formed by Lake Ontario, Lake Eric, Détroit River, and Lake Huron. From a fuppofition that the Fort of Niagara would certainly remain in the poffeffion of the Englifh, he at firft intended to make Newark the chief town of his government. But, fince it has been decided\*, that this fort is to be given up, he has been obliged to alter his plan. A chief town or capital muft not be feated on the frontiers, and much lefs under the guns of the enemy's fort. He has fince thought of York, fituated on the northern bank of Lake Ontario, nearly oppofite to Niagara †; it is in this place he has quartered his regiment, and he in-

\* By the Treaty of 1794.—Tranfl.

† York, defigned to be the feat of the government of Upper Canada, is fituated on the north-weft fide of Lake Ontario, forty miles north by weft from Niagara Fort, and one hundred and twenty weft-fouth-weft from Kingfton.—*Tranf.* 

tends

tends to remove thither himfelf when he shall withdraw from the frontiers.

York, from its extent, fecurity, and fituation, offers an excellent road. The communication between Lake Ontario and Lake Huron is facilitated by feveral rivers and fmall lakes. The furrounding territory poffeffes a good foil, and affords all poffible means to improve the trade on the lake. Even in a military point of view its fituation is very advantageous. The banks of Lake Ontario are likely to be first peopled by the Americans, and to become most populous; and Lower Canada will always prove to them an object of jealoufy and envy rather than Upper Canada. On this ground it is extremely important, to choose a situation, which renders it more easy to fuccour fuch points as are most exposed to an attack. Yet Governor Simcoe feems to have relinquished the idea of establishing his refidence, and the feat of government, at York. He intends to remove them to the banks of a river, which is to be found in all maps under the name of De la Franche, and which he has named the Thames. This river, which rifes between Lake Huron and Lake Ontario, but is not yet fufficiently explored, is fupposed not to be far distant from the Miami or Great River. It flows four or five miles in a fouth-west direction, and empties itfelf into Lake St. Clair. It is the Governor's intention, to build his chief town, to which he has already given the name of London, about two hundred miles diftant from this lake. A communication between this river and another, which falls into Lake Huron, may be eafily established, in the vicinity of Gloucester, and by land-carriage a communication may also be opened with Lake Ontario. The Governor is at the fame time mafter of these two lakes, as well as of Lake Erie, which, though fifteen miles diftant, he can reach without any intervening portage, but one of three miles. Moreover, that part of Lake Erie, which lies nearest to the projected capital (Long Point), is exactly the most important point for the defence of the lake, and on this point, which lies opposite to the American fettlement on the peninfula, the Governor means to form a harbour, and erect confiderable works for its protection. If the capital be fituated on this fpot, it will of confequence enjoy feveral advantages, befides those which York would afford. It ftands

ftands nearer to the centre of the expected population; is more remote from the parts belonging to the Indians; and the Governor intends to ftation the troops, which yet occupy the forts to be delivered up to the Americans, in the pofts of Gloucester on Lake Huron, of Long Point on Lake Erie, of Michigan, in two or three towns, which are to be built on the banks of the Thames, and lastly in York. This intended capital is furrounded by all possible means of defence, and is fo fituated, that it may speedily give fuccour, wherever it may be wanted.

From the readinefs which government difplays in granting lands gratis, the Governor entertains not the leaft doubt of foon obtaining a numerous population. Many families, who at the beginning of the American war embraced the royal caufe, have fince the conclusion of peace fettled on lands, which were beftowed on them gratis. The American foldiers, who fought under the fame unfortunate banners, obtained alfo an indemnification in lands, on which most of them have fettled. All officers, who ferved in that war, are likewife entitled to fome hundred acres, a certain number of which are already cultivated by them. The Governor is alfo fanguine in his hopes of procuring many colonifts from the United States; he relies on the natural fondness of these people for emigrating, and on their attachment to the English government. There arrive indeed every year a confiderable number of families from different parts of the Union; they do not all fettle, it is true, but fome remain in the country. He alfo reckons upon drawing numerous fettlers from New Brunfwick, who cannot endure the climate of that country. And laftly, the confiderable emigration from Europe, which he fancies he forefees, affords him certain hopes of obtaining thence a very numerous population. Yet, by his account, the prevailing fentiments of the people render the admiffion of new inhabitants, who prefent themfelves, rather difficult; especially of those, who come from the United States. For this reafon, he fends fuch colonists, as cannot give a fatisfactory account of themfelves, into the back country, and stations foldiers on the banks of the lakes, which are in front of them. He would admit every fuperannuated

annuated foldier of the English army, and all officers of long fervice, who are on half pay, to fhare in the diftribution of fuch lands as the King had a right to difpose of. He would difmiss every foldier, now quartered in Canada, and give him one hundred acres of land, as foon as he fhould procure a young man to ferve as his fubftitute. With his views to encreafe the population of the country, he blends the defign of drawing young Americans into the English fervice, by which he will augment the number of American families, attached to the King of Great Britain. In the midft of these families of foldiers, which he intends to settle on the lakes, and on all the frontiers towards the United States, he means to place all the officers, who, as has already been obferved, have any claim on the lands. He propofes thus to form a militia, attached to the King from habit and gratitude; and this he confiders as one of the most certain means for fuppreffing the disturbances, which might be excited by fome difaffected new fettlers, who inhabit the midland counties, and at the fame time as one of the best measures of defence in case of an attack. By this plan of fettling amidst the foldiers officers and gentlemen of refpectable families, whom he hopes to attract from England, he wifnes to form a class of gentry, and to promote more or less the execution of the project, clearly difcernible in the new conftitution, to introduce into the two Canadas an hereditary nobility.

It is afferted, that all Canada, vaft as is its extent, produces not the neceffary corn for the confumption of its inhabitants; the troops are fupplied with flour from London, and with falt meat from Ireland. In General Simcoe's opinion Upper Canada is not only capable of fatisfying the wants of all its inhabitants, but alfo of becoming a granary for England, and of creating a confiderable trade by the exchange of this neceffary of life for other commodities; nor does he entertain the leaft doubt, but that the activity, in agricultural purfuits, which he endeavours to excite in Upper Canada, will operate as a powerful example in regard to Lower Canada, and roufe it from its prefent fupinenefs and indolence. He conceives, that the vaft quantities of fifh, with which the lakes abound, and efpecially

especially of sturgeons in Lake Ontario, afford the means of a successful competition with Russia, which supplies England with this article to a very confiderable amount.

The corn-trade is, in his judgment, far preferable to the fur-trade, which appears to him at once unprofitable for Great Britain, and a means of oppreffion to Canada, in as much as it throws the whole trade into the hands of a few companies, and at the fame time renders them mafters of the commodities, which are imported from England in return. It is his wifh, that merchants may fettle on Lake Ontario, in Montreal, and in Quebec; and, by the eftablifhment of a corn-trade, deftroy that monopoly which very juftly excites his indignation; and he entertains hopes, that this will actually take place.

The maxims of government, profeffed by General Simcoe, are very liberal and fair; he detefts all arbitrary and military government without the walls of the forts; and defires liberty in its utmost latitude, fo far as is confiftent with the conftitution and law of the land. He is, therefore, by no means ambitious of invefting all power and authority in his own hands, but commits to the lieutenants, whom he nominates for each county, the right of appointing the juffices of the peace and officers of the militia. By this measure, he thinks, he shall be able to attach men of weight and influence to government, and fubordinate officers to their fuperiors, and thus fecure additional refources for preferving the good opinion and affection of the Canadians towards the British Government. All the justices of the peace, whose number is very great indeed, posses the right within their respective districts of affigning, in the King's name, to every fettler, with whofe conduct and principles they are acquainted, a lot of two hundred acres of land. The furveyor of the diffrict is informed by the justice of the peace of the grant, made in favour of the new colonist, and of the oath of allegiance, he has taken; on receiving which information he gives the new fettler a certificate, pointing out that part of the diffrict, where he is to find the land, allotted to him by the magistrate. If he should wish for a greater quantity of land, he must apply to the Executive Council.

Hh

From the prefent smallness of the number of the inhabitants of Upper Canada; which, however confiderable the migration may be, for a great length of time will bear no proportion to the extent of country to be peopled; General Simcoe entertains not the fmalleft with to enlarge his territory at the expence of the Indians; on the contrary, he receives with the utmost kindness those whom the Americans drive from their habitations; and this conduct is extremely wife. If, on the one hand, the policy of the united States require that, in the intermediate fpace between them and the English, there should not refide a people, who may prove dangerous from their extreme fusceptibility of feduction, who cannot be useful on account of their fmall number, and who, being a nation that lives by hunting, demand a large tract of country for their fubfiftence; Governor Simcoe may, on the other hand, tolerate them, without the leaft danger, on the frontier of the English posseffions, connect them by this meafure more clofely with England, and exafperate them against the Americans, in order to take advantage of their hatred in cafe of need; efpecially as he finds they will, at any time, cede to him whatever lands he may defire.

Although the fur-trade, in General Simcoe's opinion, is not fo profitable to England, as many Englishmen imagine; yet he will not divide its profits with the Americans; who, by the furrender of the forts, acquire a share in the navigation of the lakes, and excellent harbours on their coaft; and of confequence, are poffeffed of every means to participate in this branch of commerce. A communication, he thinks, may eafily be opened between Lake Huron and Lake Ontario, by means of St. Jofeph's River, which by relieving the fur-traders from the trouble and expence of the circuitous navigation of the Détroit River, of Lake Erie, of the Niagara river, and of a great part of Lake Ontario, would difappoint the United States in their hope of receiving in future, as they have hitherto done, any articles across the lakes from the forests, fituate above Lake Huron, and would at the fame time free English ships from the neceffity of paffing by the forts of Détroit and Niagara, which are henceforth to belong to the Americans. Nay, he is of opinion, that a direct

direct communication might be established between Lake Huron and St. Lawrence river, which would however require feveral portages, on account of the numerous rapids which interrupt the navigation of that river, as well as of the small lakes through which it flows.

The plan of military operation conceived by the Governor, in cafe of a war with the Americans, confifts in chiefly drawing them into the Englifh dominions, where, under the protection of his forts, he can fight them to greater advantage. He further intends to eftablifh a refpectable navy, composed of fmall veffels, mounting heavy guns, which no American yacht can dare to engage, and which, if a defcent were openly attempted on the territory of the United States, would be well qualified to cover the landing. He alfo promifes himfelf much from the affiftance of his militia, with whom he would make confiderable inroads into the heart of the enemy's country. The communication between Lake Huron and Lake Ontario appears to him ftill more neceffary in time of war, as by means of this communication he intends to convey into the latter lake the galleys, bomb-ketches and gun-boats, which he purpofes to build at another town, lying on the Thames, to which he has given the name of Chatham.

The views of Governor Simcoe, I mean thofe, which concern the civil government, are undoubtedly extensive, and well planned. They are, in my judgment, the best which can be conceived, in his fituation, as an English governor; and the possibility of their being carried into effect cannot be questioned, if he possibility of their being carried into effect cannot be questioned, if he possibility of the may also, in the execution of his plans, derive confiderable aid from the foldiers, quartered in his province. He is aware of the indispensible neceffity of habituating the troops to labour in a country, where he cannot hope to make them masters of a complex fystem of tactics, and where laborious habits peculiarly fit them for that fort of warfare, which is best adapted to the south of the in the enemy they have to combat, and to the difficulties they have to encounter.

But the execution of his projects is neverthelefs, upon the whole, ob-H h 2 ftructed

235

のまたいので、それのことので

ftructed by numerous obstacles; the greatest of which consists in the Governor's determination to return to England at the expiration of five years. A plan of fuch vaft magnitude, and which comprises fo great a variety of defigns, can be carried into execution by him only, who was able to conceive it. From the very nature of the principles on which it is built, and the intimate connection of its various parts, the fuccefsful execution of fuch a project fuppofes, on the part of the executor, befides a thorough knowledge of its ftructure and complexion, courage, order, and a laudable ambition of achieving arduous and useful undertakings; requifites, hardly to be met with in any perfon who may be fent to fucceed this governor. If fuch a one be a man of moderate capacity, he will neither be able to purfue nor to execute a plan, which is not of a nature to be committed to fubaltern officers; and if he be poffeffed of fome parts, as is generally the cafe, felf-love will diffuade him from purfuing a plan, laid down by another; and however positive and peremptory his inftructions may be, at two thousand miles distance they will be easily evaded. Add to this, that fondness for military power, and the love of arbitrary authority are in every region of the globe the ufual attributes of men in power. If, therefore, General Simcoe should execute his defign of leaving Upper Canada, two years hence, he will hardly find fufficient time to lay the foundations of a plan, which appears to him, and I think very juftly, extremely well adapted to promote the profperity of Upper Canada, and greatly enlarge the interefts of Great Britain. The various branches of this plan, are fo extensive and fo numerous, that a long feries of years, fpent in the fame fpirit and unwearied exertion, will be requifite to execute it in its whole extent.

But he himfelf, I believe, would meet with impediments in the execution of his plan. Although General Simcoe is entirely independent on Lord Dorchefter in all civil concerns, yet he is not fo in regard to the military department, of which the quartering of the troops forms a part. He told me himfelf, that, in this refpect, he feared to meet with oppofition; and I incline to think, that on this fubject he did not express all he knows. Unless the troops be flationed in fuch posts, as to cover and defend

fend the projected capital, and the various fettlements which he has in contemplation; unlefs they be kept to labour rather than military exercifes, and unlefs thofe, who can find fubititutes, be difmiffed from fervice, his project fails in three very material points, which can hardly be accomplifhed by any other means.

Lord Dorchefter is advanced in years, and, like all aged people, no friend of new ideas. Befide that he is fond of boundless power, the prevailing disposition of the inhabitants of Lower Canada may excite in him a wish of drawing more troops into that province; and feveral hints, thrown out by General Simcoe, incline me to believe, that he thinks his Lordship has fome fuch intention. The Governor may also, perhaps, be too fanguine in fome of his expectations, or indulge delusive hopes.

As to the emigration from the United States to Upper Canada, I mean a confiderable emigration, it appears not to me altogether fo probable as to him. The free grant of lands feems at first fight a much greater inducement, than it actually is. The lands are indeed given away gracis; a certificate of the furveyor, granted by command of the Executive Council, gives the new fettlers a right to the ufufruct of thefe lands; but the property thereof is fooner or later transferred, according to the will and pleafure of the Council. To the best of my knowledge, none of these free grants include a transfer of the right of property. If an occupier of this defcription dies without iffue, previoufly to his having acquired that right, his eftate efcheats to the King; no collateral friends or relations fucceed in the poffeffion of the eftate; and, of confequence, the money and labour expended in its improvement and cultivation have been fpent for the benefit of the Crown. In the United States, a new fettler, on purchafing a certain quantity of land, the price of which is to be paid by diftant inftalments, has a profpect of difcharging them by felling again a fmall portion of his eftate, the value of which he has doubled by cultivation; while the Canadian planter has to look for the permanency of his poffeffion merely to the will and pleafure of the Governor ; and, if he underftand his intereft, he will not place on him an implicit dependance. Interest and an acquaintance with fubstantial and respectable settlers may, no doubt,

237

「日本のない」というないで、「日本のの

doubt, procure him, fooner, the right of property, and thus facilitate a fecond fale. But favours of this kind are always confined to a part of the eftate, and depend on the arbitrary will of the Council. As long, therefore, as there fhall exift no law, determining the period and terms of the inveftiture with thefe rights; the poffeffors will remain uncafy and infecure; and confequently the progrefs of improvement will be greatly retarded. Mines of every defeription, from gold down to pit-coal, which may be difcovered in the lands, thus ceded, as well as all timber, which, in the judgment of the Surveyor-general, is fit for fhip-building, are in all thefe grants referved in favour of the King. All thefe reftrictions cannot but render a good fettler very uneafy, and may, in the effimation of many people prone to emigration, far outweigh the advantages of a free grant.

The attachment to the King of Great Britain, which is frequently alleged as a ground for emigration, feems an empty dream. It is common with all Englishmen, who hold here places under government, to boast of this attachment of many inhabitants of the United States of every rank and defeription. On what grounds this opinion refts, I know not; but it is certainly not warranted by what I learned in the United States. They there profess fo loudly and uniformly principles, which indicate the exact reverse; that these professions ought doubtless to be confidered as better pledges of the true fentiments of the Americans, than the affertions of a few Englishmen in place.

The families, who arrive here from the United States, emigrate most of them, it is afferted, from their being fubject there to a tax, with which, however trifling it may be, they are yet difpleased. If this be really the case, fuch a disposition cannot in future times prove favourable to Great Britain. We were also told, that General Simcoe, from his eager defire to people Upper Canada, is by no means difficult in regard to the qualifications of the new fettlers, who prefent themselves; and that, notwithstanding his aversion to speculations in land, and his perfonal disinterestedness; frequently a whole township, nay at times two or three together, are affigned to one and the same perfon.

The Governor is of opinion, that the trade of Upper Canada may be encreafed by the commodities of the Geneffee diftrict, for which he fees no other outlet, but by the river of St. Lawrence. This opinion, however, feems to have no foundation; when it is confidered, that Lake Oneida, the Wood-creek and Mohawk-river offer ready means for a water-communication with Lake Ontario and the North River; which is at prefent interrupted only at three places, where the boats are to be carried; and that the Americans, in every part of the Union, difplay the utmost zeal, activity and industry, in every thing which tends to facilitate communication by water. But upon the whole the Governor's mifcalculations, originating from national prejudices, are of too little importance to impede the execution of his project; they may perhaps protract its completion, but cannot occasion its failure. The true impediments are those, which I have before mentioned, and the chief obstacle is the Governor's return to England.

The prefent population amounts, as I have already ftated, to thirty thousand fouls. The principal settlement is that of Détroit ; which confifts, entirely, of French families, and is mostly fituated on a tract of land that, according to treaty, is to be given up to America. The English flatter themfelves, that the families, who have fettled there, will remove from the American to the British fide. But, if the conduct of the American government towards thefe families should be fuch, as the interest of America dictates; there remains but little probability, that they will leave their long cultivated eftates, merely from a defire of living under the English dominion. The other fettlements in Upper Canada confist in a very confiderable colony, which ftretches along the river from Fort Erie to Newark, is not fully occupied, and does not comprise a large extent of ground; in a few plantations on the creeks, which run into Lake Ontario from Newark up to its northern point; in an infignificant beginning of a fettlement in York; and laftly in Kingston, extending along the banks of the river St. Lawrence to the boundaries of Lower Canada, which is the most populous of all.

As to the Governor's military plans, his measures of defence only are fettled

230

「「「「「「「」」」」

fettled and determined; his plans of offenfive operation are fo unde fined and uncertain as not to deferve any mention.

The hatred of the Governor against the United States occasions him, on the flightest occasion, to overleap all the bounds of prudence and decency, which he carefully observes in all other matters. He was a zealous promoter of the American war, in which he took a very active, yet very unfortunate, part. The calamitous iffue of the war has still more exafperated his hoftility; and it was with the fincereft grief I liftened to his boafting of the numerous houses he had fired during that unfortunate conflict, and of his intention to burn a ftill greater number in cafe of a rupture. In fhort, the whole of his intentions on this fubject was fuch as the most violent party-rage alone can inspire. He told us, that, in cafe of another war with America, by expending vaft fums of money, he would force them to expences equally great, which they would not be able to meet, and much lefs to fupport for any length of time; in fhort, wage against them a money-war. Yet he affirms inceffantly, that it is his anxious wifh to preferve peace with the United States. This he very justly confiders as a powerful mean of promoting the profperity of his new colony. But his hatred against the rebels is fo violent; and his difpleafure, occafioned by the furrender of the forts, is fo ftrong; that the charge, preferred against him by the government of the United States, of his having laft year affifted the Indians as much as he could, without making himfelf openly a party in the difpute, feems not devoid of foundation. By exciting this war, the fuccefsful iffue of which he confidered as certain, he attained the twofold purpose of fatisfying at once his ambition and his revenge. He does not himfelf deny, that he had adopted the neceffary measures for conducting to the diffrict of Geneffee all the Indians, who were at his difpofal, and who, by his account, amounted to five thousand men-measures which would naturally have been attended with the firing of all the habitations, and the flaughter of all the inhabitants. A war, thus barbarous and deftructive, would have been waged by England at the end of the eighteenth century; and the founder of a colony, in every other refpect a man of generous and noble feelings,

feelings, would have projected and prepared it. I fhould not have credited thefe projects, had I heard them flated by any individual but the Governor himfelf; or fhould I have ventured to introduce them here, but that, within my knowledge, he has repeatedly communicated them to feveral other perfons.

But for this inveterate hatred against the United States, which he too loudly profess, and which carries him too far, General Simcoe appears in the most advantageous light. He is just, active, enlightened, brave, frank, and possess the confidence of the country, of the troops, and of all those who join him in the administration of public affairs. To these he attends with the closest application; he preferves all the old friends of his King, and neglects no means to procure him new ones. He unites, in my judgment, all the qualities which his station requires, to maintain the important possession of Canada, if it be possible that England can long retain it.

' In his private life, Governor Simcoe is fimple, plain, and obliging. He inhabits a fmall miferable wooden house, which formerly was occupied by the commiffaries, who refided here on account of the navigation of the lake. His guard confifts of four foldiers, who every morning come from the fort, and return thither in the evening. He lives in a noble and hofpitable manner, without pride; his mind is enlightened; his character mild and obliging; he difcourfes with much good fenfe on all fubjects, but his favourite topics are his projects and war, which feem to be the objects of his leading paffions. He is acquainted with the military hiftory of all countries; no hillock catches his eye without exciting in his mind the idea of a fort, which might be constructed on the spot; and with the construction of this fort he affociates the plan of operations for a campaign, efpecially of that which is to lead him to Philadelphia. On hearing his professions of an earnest defire of peace, you cannot but fuppofe, either that his reafon must hold an abfolute fway over his passion, or that he deceives himfelf.

Mrs. SIMCOE is a lady of thirty-fix years of age. She is timid, and fpeaks little; but fhe is a woman of fenfe, handfome and amiable, and I i fulfils

fulfils all the duties of the mother and wife with the most ferupulous exactness. The performance of the latter she carries so far as to be of great affistance to her husband by her talents for drawing, the practice of which, confined to maps and plans, enables her to be extremely useful to the Governor.

Upper Canada pays no taxes, except a duty on wine, amounting to four-pence per gallon on Madeira, and two-pence on other forts of wine, and another of thirty-fix fhillings fterling a year for a tavern-licence, which, during the feffion of 1793, was encreafed by twenty fhillings Canada currency [four dollars]\*. The fum total of the public revenue amounts to nine hundred pounds fterling, out of which are paid the falaries of the Speaker of the Houfe of Reprefentatives and of the fecretaries; the remainder is defined to meet the expence which local circumftances may require for the fervice and maintenance of fociety.

The juftices of the peace determine in the quarter-feffions, as they do in England, the amount of the county-rates for the conftruction of public buildings, for the repair of the roads, and the maintenance of the army. (The laft item is not yet known in Canada.) Thefe rates are raifed by means of a capitation or poll-tax, affeffed in proportion to the probable amount of the property of the whole who are in the diffrict, liable to contribute; the largeft affeffment on any individual exceeds not four dollars.

On the fame principle is raifed the pay of the members of the Affembly, who, on their return at the end of the feffion, deliver to the juffice of the peace of their diffrict a certificate of the Speaker, proving the number of days they have been prefent, and receive two dollars per day out of the money raifed for that purpofe, including the days they have been upon their journey.

\* The value of money in Canada fhould, according to law, be equal to that which it bears in Halifax, and confequently a dollar be worth five fhillings. This ftandard is ftrictly adhered to in all government accounts, but not fo forupuloufly obferved in the courfe of private bufinefs. The currency, which circulates in New York, paffes alfo, efpecially in that part of Canada which borders on New York.—Author.

The quarter-feffions are held in every diffrict; and the division into diffricts is connected with the administration of juffice. The juffices of the High Court of Judicature for civil and criminal causes, who are three in number, including the chief juffice, hold four feffions annually in the town in which the Governor refides. They also go on circuits in the different diffricts of the province once a year; judges for the different diffricts fit at shorter intervals to settle matters of little importance, and the juffices of the peace exercise the same jurifdiction as in England.

A tribunal, composed of the Governor and two members of the Executive Council, form the Court of Appeal in fuch causes as have been decided by the High Court of Judicature. The Governor forms also, with the concurrence of an affistant, the choice of whom depends entirely on his option, a Court of Chancery for the decision of causes, concerning testaments, intestate heirs, orphans, &c.

Refpecting the frequency and punifhments of crimes, Mr. WHITE, Attorney-general of the province, informed me, that there is no diffrict, in which one or two perfons have not already been tried for murder; that they were all acquitted by the jury, though the evidence was ftrongly againft them; that, from want of prifons, which are not yet built, petty offences, which in England would be punifhed with imprifonment, are here mulcted, but that the fines are feldom paid for want of means of execution; and that the major part of law-fuits have for their object the recovery of debts; but fometimes originate alfo from quarrels and affaults; drunkennefs being a very common vice in this country.

The province of Upper Canada is divided into the four diffricts of Détroit, Niagara, Kingfton, and St. John's. The juffices of the peace are felected from among those perfons, who are best qualified for such an office; but, in a country fo recently fettled men worthy of this truft cannot be numerous.

The division of Upper Canada into counties is purely military, and relates merely to the enlifting, completing, and affembling of the militia. The counties are about twelve in number. Their names, with which I

Ii 2

am unacquainted, are not of fufficient importance to deferve to be here mentioned. The militia of each county are affembled and commanded by a lieutenant and fecond-lieutenant; they must be divided into regiments and companies. They affemble once a year in each county, and are inspected by the captains of the different companies at least twice a year. Every male inhabitant is confidered as a militia-man from the age of fixteen to fifty. He is fined four dollars if he do not enlift at the proper time ; and officers, both commiffioned and non-commiffioned, who do not join their regiments at the time the militia are affembled, pay a fine; the former of eight dollars, and the latter of two. An officer, who, in cafe of an attack or infurrection, fhould not repair to his affigned poft, would be punished with a pecuniary penalty of fifty pounds sterling, and a petty officer with a fine of twenty pounds sterling. A militia-man, who fells either the whole or part of his arms, ammunition, or accoutrements, is fined five pounds fterling; and, in default of payment, imprifoned for two months. The Quakers, Baptifts, and Dunkers pay, in time of peace, twenty fhillings a year; and, during a war or infurrection, five pounds sterling, for their exemption from military fervice. Out of these fines and ransoms the adjutant-general of the militia receives his pay, and the remainder is at the Governor's difpofal.

This is nearly the fubftance of the firft act of the legiflative body of Upper Canada, paffed in 1793. In the following year, 1794, an additional act paffed relative to the militia, the chief regulations of which tended to improve and define more accurately the internal form of the regiments, battalions, and companies, and to render the affembling of detachments more eafy and expeditious. This act determines, that, in time of war, the obligation to carry arms in defence of the country fhall not ceafe before the age of fixty; and that, of confequence, Quakers and others, who enjoy an exemption from military fervice, fhall pay for their immunity up to that age. It alfo obliges the militia to ferve on board of fhips and veffels, to act as cavalry, and to extend their fervice beyond the province, on condition however, that the fame men be not bound to ferve more than fix months fucceffively.

244

The

The exemptions from military fervice are confined to the officers of juffice, and other public functionaries, whofe number is very fmall. The whole militia is effimated at nine thousand men, for a tract of country of confiderable extent, in which, however, the communication and affembling of the troops are much facilitated by the lakes.

All the expences of the civil and military administration of Upper and Lower Canada are defrayed by England. The fum total, including the political expences, or the money paid to the Indians, though this forms an item of the military expenditure, amounts for Upper Canada to one hundred thoufand pounds sterling. Nearly two-thirds of this fum, or fixty thousand pounds, are paid to the Indians; including the pay of the principal agents, under agents, interpreters, &c. This pay deducted, all the other charges, occafioned by the Indians, confift in prefents, tomahawks, mufkets, powder and ball, knives, blankets, rings, buckles, hats, looking-glaffes, and, above all, in rum. The agents are charged with the diftribution of thefe articles, which by fome are diftributed every year, by others at various times, according to circumftances. It is by these means the Indians are fuppofed to be gained over. Such of their chieftains, as are believed to poffefs confiderable influence, obtain a larger fhare of prefents; by which, and efpecially by a profuse distribution of rum, their friendship is gained and preferved. The Americans are depicted to them as their inveterate enemies; they are made to fwear, that they will burn and fealp thefe foes at the first fignal. It was in this manner the Governor imagined laft year, from the reports he had received, that he fhould be able to difpofe of fifty thousand men, who had all taken an oath, not to leave a fcalp on the fkull of any American they fhould fall in with. A relation of these atrocities has all the appearance of an exaggerated account of fome nation of cannibals, and yet it is literally true\*. The English affert, that the Americans, on their part, proceed exactly in the fame manner.

243

It

<sup>\*</sup> With all candid readers it will undoubtedly be a matter of regret, that the author fhould have preferred a charge of fuch a ferious and heinous complexion, without giving himfelf the leaft trouble to fubftantiate its truth.—*Translator*.

It must be confessed, that the colonists, by their mean and barbarous policy, teach the Indians to despise them. But we may indulge a hope, that the time is not far distant, when the latter shall posses fufficient fense, to take the prefents of England and the money of the United States, and to laugh at both these great nations; fcorning to be any longer the tools of their ambition and revenge.

We have here been told, that England's annual expenditure for Upper and Lower Canada amounts to four or five hundred thoufand pounds fterling; whether the penfions and donations which England beftows on fome inhabitants of the United States, be comprifed in this effimate, I know not; but this I know, from a very refpectable fource, that they amount to a pretty large fum. Is it this circumftance, to which Meffrs. Hammond and Simcoe allude, when they fpeak of the numerous friends of the King of Great Britain in the United States ?

I have not yet mentioned, that the Governor is alfo Prefident of an Executive Council, composed of five members. In regard to the bills, which have passed both houses, his affent or diffent is determined by the majority of votes. But, as he appoints this council, and has also the power of diffolving it, we may easily conceive, that it confists of members entirely dependent on him. The major part hold feats in the Legislative Council.

An office, which was exclusively charged with preparing for the difcuffion and decifion of the council fuch matters as concern grants of land, has lately been abolifhed. The Executive Council has referved to itfelf the introductory difquifition, as well as the definitive determination, of all bufinefs of this defcription. The number of thofe, who apply for lands, is uncommonly great. The claims of the petitioners are generally grounded on their attachment to the Britifh Monarch, and their difguft or hatred againft the government of the United States. But, under allegations of this kind, frequently lurks a fpirit of fpeculation. Notwithftanding the folicitude faid to be difplayed by the council to difcover the truth, many grants of land are made on no other grounds than favour. By the letter of the law, which, however, is often eluded, one individual cannot

cannot obtain more than one thousand two hundred acres. Yet, as the grants contain no clause fixing the period within which the ground is to be cleared, speculations frequently occur, and not the least security is obtained, that the land will be a moment sooner inhabited for being thus bestowed.

I have already obferved, that officers, who ferved in the American war, have a right to a fhare in thefe lands, which amounts, for a lieutenant to twelve hundred acres, and for a colonel to five thoufand. But officers, who never acted in the American war, nor ever held a colonel's commiffion, have obtained fhares as great as the largeft allotted to thofe who have. Thefe lands, though most favourably fituated, are not yet cleared; nor is there the least appearance of their being speedily cultivated.

Every thing is exceffively dear at Newark. The fhops are few, and the fhopkeepers, combining against the public, fix what price they choose upon their goods. The high duty laid by England upon all the commodities exported from her iflands proves a powerful encouragement to a contraband trade with the United States, where, in many articles, the difference of price amounts to two-thirds. The government of Canada is very vigilant to prevent this contraband trade; but a certain profpect of gain excites to exertion, which will frequently fucceed in eluding the law, as well as the vigilance of the executive power. The fhopkeepers know perfectly well how to favour this contraband trade, the only means for deftroying which would be to lower the duties, and, of confequence, the price of the commodities. The Governor has it in contemplation, to encourage fuch manufactures as produce thefe articles, which are run in large quantities into this province from the United States, fuch as hats. But all his exertions to this effect will fail in regard to fugar, coffee, tea; in fhort, with refpect to all commodities, which are directly imported from the United States, without being there fubjected to as high a duty as in Canada.

During our long refidence at Naryhall, all the inhabitants of an Indian village, of the Tofcarora nation, came to congratulate the Governor on his late arrival at Naryhall. All thefe vifits and congratulatory compliments have

have no other object but to obtain fome drink, money, and prefents. Thefe Indians generally arrive in the morning, in veffels, from the oppofite banks of the river, which they inhabit. They were decked out with ancommon care, covered with rags of every description, and adorned with horfe-hair, and feathers of all poffible fpecies of birds. In their ears and nofes they wore rings of the most varied forms and colours. Some were dreffed in European clothes, others wore laced hats, and fome were naked, excepting the double apron, and painted from head to foot. It is in the manner of painting themfelves, that their genius is efpecially displayed. In general they prefer the harshest colours, paint one leg white, and the other black or green, the body brown or yellow, the face full of red or black fpots, and their eyes different colours. In a word, they unite in their decorations the utmost abfurdity and harshness. They are, every one of them, painted in a different ftyle, and furnished with a fmall looking-glafs, which they every moment confult with as much attention as the most finished coquette. They comb themselves again and again, and touch up the colours, which may have faded from perfpiration or exercife. Many of them wear filver bracelets and chains round their necks and arms. Some have a white fhirt with long fleeves over their clothes, and this forms their most elegant garment; the major part wear as many filver buckles as they can afford. In fhort, their appearance calls to recollection the whimfical mafks, which throng the ftreets at Paris during the carnival. It must, however, be confessed, that their abfurd finery, in a great meafure, confifts of things, which they make themfelves, of horfes', buffaloes', or other hair, or of the briftles of the hedge-hog. They twift ropes of the bark of trees, and make laces of a fpecies of herbs. Many of thefe articles, which they ufe to adorn their drefs, their tobacco-bags, their fcalping-knives, garters, and mockinfons, (a fort of fhoes) are made by the women, with a regularity, a skill, nay, I may fay, with a taste, feldom to be found in Europe. Their chief excellency confifts in the great variety and richnefs of the colours, which they generally extract from leaves, and from the roots of certain herbs; but they poffers also the art of extracting them

them from all dyed linens and filks, of which they can obtain a piece. They boil these rags in the juice of a plant, with the species and name of which I am anacquainted, and thus obtain a very durable colour for dying hair or bark.

On their arrival this morning the Indian vifitors were about eighty in number. The Governor, being particularly engaged, deferred receiving their visit until the afternoon; at which time only thirty made their appearance, the reft being all drunk, and unable to move. The vifit was received on a large plot of grafs, without the finalleft compliment on either part. The Governor was prefent, but kept at fome diftance. The Indians danced and played among themfelves. Some of their dances are very expreffive, and even graceful. A mournful and monotonous ditty, fung by one, and accompanied with a finall drum, fix inches high, and three in diameter, forms all their mufic, except that frequently a flick is added, with which a child beats the time. They dance around the mufic, which they frequently interrupt by loud fhrieks. The hunting and war dances are the most expressive, especially the latter. It represents the furprise of an enemy, who is killed and fealped, and is performed by one perfon. The reft are hopping about, like monkeys, in a femicircular figure, and watch, with the utmost attention, every movement of the dancer. The moment when the enemy is fuppofed to have breathed his last, a strong expression of joy brightens every face; the dancer raises a horrid howl, refumes his pantomime, and is rewarded by univerfal fhouts of applause. When he has thus finished his dance, another enters the ftage, who is, in his turn, relieved by others; and in this way the dance is continued, until they become tired of it. When the dance was over, they played at ball; a game in which they difplayed their agility to the greateft advantage. Every one had a racket, the handle of which was three or four feet in length, and bent at the end, fo that the racket has the form of a bow. The packthread is made of bark; they grafp the racket with both hands, and run after the ball, wherever they fee it, with the view of catching it, one before another. This ball is frequently

Kk

thrown

250

thrown to a confiderable distance, in which cafe they run after it all together; to catch it, either in the air, or on the ground. No bush, no ditches, no barriers check their ardour. They clear every thing, leap over every thing, and difplay, in this game, a verfatility, fwiftnefs, and dexterity, which are truly ftriking. During thefe games the agent came up to the general, with one of the chieftains, and told him, that the Tufcarora nation wished to learn whether they might affift at a meeting, to be held in Onondago by the Oneida Indians, for the purpose of felling a part of the Oneida refervation, which the ftate of New York had manifested a difposition to purchase\*. The Governor's answer was conceived in terms extremely vague; the agent translated this answer as he pleafed, and inreply affured the Governor, in the name of the Indians, that they would not go to Onondago, from the hope that this would prove more agreeable to the British Monarch. Whether this political farce was acted only by the agent, or whether the chieftain took a part, I know not; but this I know, that this chieftain, a moment before, begged of me two fhillings, for which he would have promifed me, had I defired it, to vifit or not to vifit all the meetings throughout the univerfe. Without entering further on this fubject, I shall merely observe, that the whole policy of England, relative to the Indians, is in the hands of the agents, who alone underftand their language, and have the fole management of the prefents. It refts entirely with thefe agents to perfuade all or any of thefe nations to engage in war, and to excite their enmity either against the United States or against each other. The Governor is altogether incapable of judging of their difobedience and oppofition to the orders of his cabinet but by the refults. The fame is undoubtedly the cafe as to the American States.

The English agent, here referred to, is Colonel BUTLER, celebrated

\* The Oneida Nation receives an annuity from the State of New York of three thousand five hundred and fifty-two dollars for lands purchased of them in 1795, and an annuity of about fix hundred and twenty-eight dollars from the United States.— Translator.

for

for his \* He is a native of America of the neighbourhood of Wilkesbarre. His \* \* \* \* \* \* \* \* \* \* 张 \*. England has rewarded his loyalty \* \* \* \* with five thousand acres of land for himself; the fame quantity for his children; a penfion of two or three hundred pounds fterling; an agency, worth five hundred pounds fterling a year; and the privilege of taking from the ftore-houfes, which contain the prefents, whatever he chooses. He is treated with every mark of respect by the Governor.

The Tufcarora Nation is an Indian tribe, the men of which thare the toils of their women in a greater degree than any other. The Governor mentioned a project, he has conceived, of giving a half civilization to all the Indian nations in the intereft of England. Whether or no civilization be likely to promote the happiness of the Indians, is a question, a full difcuffion of which might, perhaps, exceed my powers, or at leaft feem irrelevant. But, were I obliged to decide it at once, I thould anfwer in the negative, as long as they are not hemmed in too clofely by the colonists, possess a sufficient tract of ground for hunting, and have plenty of game. But, I repeat it once more, to do justice to this question would require a more profound difcuffion, than I can enter upon in this place. Befides it can hardly be fatisfactorily decided, fince the ftate of favage nations, left entirely to their primitive life, is widely different from the condition of those, who refide in the vicinity of these colonists, and hold intercourfe with them. If, on mature deliberation, we were obliged to allow, that the creation of wants, the neceffity of providing for them, the exercife of our mutual powers, the unfolding of our faculties, and the refinement of our feelings, prove more frequently fources of misfortune than of happinefs ; every degree of civilization, pregnant with all thefe, fhould carefully be kept, for their own fake, from all favage tribes. But the fame conclusion will not hold good in regard to a barbarous people, who, from their intercourfe with civilized nations, poffers already fome degree of civility; but a civility which acquaints them with vices only, and confequently introduces them to fources of misfortune, and who, there-Kk 2 fore

fore, from a higher degree of culture, may derive an alleviation of their fate and an increase of happines. As to the advantages likely to accrue to the civilized world from the civilization of the favages, the question feems likely to demand a decision in the affirmative.

However this may be, the Governor, in conceiving this project, had not only the happiness of the Indians in view, but also his own advantage. He intends to have them civilized by priests, and would give the preference to missionaries of the Roman Catholic persuasion. The policy of General S—— inclines him to encourage a religion, the ministers of which are interested in a connection with the authority of thrones, and who, therefore, never lose fight of the principle, to preferve and propagate arbitrary power.

I learn here, that rum enervates the Indians, fhortens their lives, renders their marriages daily more barren, and, when fruitful, productive only of poor unhealthy children; and that, from the use of this poison, which now cannot either be wrested from them, or rendered harmless in its confequences, the different tribes are daily decreasing in number.

Eighty miles from Naryhall, on the Miami, or Great River, is the fettlement of Colonel BRANT, with a view of which I fhould have been much pleafed; but he is not there at prefent, and they affure me that, in his abfence, I fhould fee nothing but what I have already feen in those I have hitherto visited.

Colonel Brant is an Indian by birth. In the American war he fought under the Englifh banner, and he has fince been in England, where he was moft gracioufly received by the King, and met with a kind reception from all claffes of people. His manners are femi-European. He is attended by two negroes; has eftablifhed himfelf in the Englifh way; has a garden and a farm; dreffes after the European fashion; and neverthelefs posseffes much influence over the Indians. He affifts, at prefent, at the Miami-treaty\*, which the United States are concluding with the western

\* The treaty, alluded to by the author, is the Greenville treaty, concluded on the third of August 1795, at Greenville, a fort and fettlement on the fouth fide of a northwestern branch of the Great Miami, between Major-general A. Wayne and the chiefs of the

weftern Indians. He is also much respected by the Americans, and, in general, bears so excellent a character, that I fincerely regret I could not fee and become acquainted with him.

The Indians, who inhabit the village, which we paffed on leaving Canawaga, paid alfo a vifit to the Governor during the time we ftayed with him. The weather being too hot for receiving the vifit on the grafs, he ordered them to be ufhered into a room, where he was attended by fome officers of the garrifon. The chiefs of the Indians faid a few words, which the agent interpreted to the Governor, as containing an affurance, that they would employ their tomahawks against any one he fhould point out, and expressions of regret, that they could not use them. last year against the Americans. The Governor thanked them for these fentiments, endeavoured to confirm them in this friendly difpofition, and told them, that the King of Great Britain withed for peace,. whatever lies the maize-thief [Mr. P----, Commissioner of the United States] might have imposed on them last year. They answered, that the Governor was perfectly right, and that P---- was a liar, drank as much as they pleafed, and departed. The conference was held at eight o'clock in the morning, and before nine o'clock half of them were intoxicated. The Governor is very anxious to oblige and pleafe the Indians; his only fon, a child, four years old, is dreffed as an Indian, and called TIOGA, which name has been given him by the Mohawks. This harmless farce may be of use in the intercourse with the Indians.

The Niagara river and lake abound with a great variety of fifhes. We affifted at a fifhing, intended to fupply the foldiers with fifh; the net was drawn thrice. One end of the net was held by men, who remained on fhore, while the remainder was carried into the ftream by means of a boat, which, after the net had been entirely expanded, conveyed the other end back to the fhore. Both ends are joined on the fpot, whence the net is drawn. It is only four feet deep, but one hundred feet in-

the following tribes of Indians, viz. the Wyandots, Delawares, Shawanefe, Ottawas, Chippawas, Putawatimes, Miamis, Eel-river, Weeas, Kickapoos, Pian Kafhaws and Kafkafkias.—*Tranflator*.

length.

length. Upwards of five hundred fifh were caught, among which were about twenty-eight or thirty flurgeons, fmall pikes, whitings, rock-fifh, fun-fifh, herrings, a fort of carp, which in point of fhape refemble thofe of Europe, but differ much in flavour, and in the form of their heads, falmon, trouts; in fhort, all the fifh was of a tolerable fize. Middle-fized fifh are eafily caught by anglers on the banks both of the river and the lake; they frequently catch more than their families can confume in feveral days.

The town of Newark stands on the other fide of the river, directly opposite to the fort. About a hundred houses, mostly very fine structures, have already been crected, but the progress of building will probably be checked, by the intended removal of the feat of government. The majority of the inhabitants, especially the richest of them, share in the administration; and confequently will remove, to whatever place the government may be transferred. In point of fize and elegance, the houfe of Colonel SMITH, lieutenant-colonel in the fifth regiment, is much diftinguished from the reft. It confifts of joiner's work, but is conftructed, embellished, and painted in the best style; the yard, garden, and court are furrounded with railings, made and painted as elegantly, as they could be in England. His large garden has the appearance of a French kitchen-garden, kept in good order. In a country, where it is a hard matter to procure labourers, and where they are paid at the rate of one dollar per day, he finds, in his regiment, as many as he choofes, for ninepence sterling a day, because the men otherwise do not easily obtain leave to go to work. It is in this manner he is now clearing five thoufand acres, which have been granted him, and has the use of thirty more, which belong to the King, are fituate in front of the town, and which the Governor has affigned him, until he shall be necessitated to demand them again.

The fcarcity of men fervants is here ftill greater than in the United States. They, who are brought hither from England, either demand lands, or emigrate into the United States. A very wife act of the Affembly declares all negroes to be free, as foon as they arrive in

in Canada. This defcription of men, who are more or lefs frequent in the United States, cannot here fupply the want of white fervants. All perfons belonging to the army employ foldiers in their ftead. By the Englifh regulations, every officer is allowed one foldier, to whom he pays one fhilling a week; and this privilege is extended, in proportion as the officers have need of a greater number of people. The Governor, who is alfo colonel of a regiment of Queen's Rangers, ftationed in the province, is attended in his houfe, and at dinner, merely by privates of this regiment, who alfo take care of his horfes. He has not been able to keep one of the men fervants, he brought with him. from England.

The regiments quartered in the vicinity of the United States, it is afferted, lofe much by defertion. Seeing every where around them lands, either given away or fold at a very low rate, and being furrounded by people, who within a twelvemonth have rifen from poverty to profperity, and are now married and proprietors, they cannot endure the idea of a fervitude, which is to end only with their existence. The ennui naturally arising from the dull and feeluded manner of living in garrifons, where they find neither work nor amufement, and the flight attention fhewn them by most of the colonels, darken still more, in their view, the difmal picture of their fituation. They emigrate accordingly into the United States, where they are fure to find a fettlement, which, if they choose to work, cannot fail to make them rich and independent. To hold out to them the fame hopes in the English colony of Canada, would be the only mean of rendering lefs dangerous the temptation. offered by the United States. It is with this view, that Governor Simcoe very wifely formed the project of difiniffing every foldier, who fhould find an able fubftitute in his room, and to give him one hundred acres of land; but it is faid, that this project appears, in Lord Dorchefter's judgment, to favour too much of the new principles, to obtain his confent. If it were actually refufed, fuch an unreasonable denial would more forcibly provoke the difcontented of the troops, from their being already acquainted ! with the meafure.

During our refidence at Naryhall, the feffion of the Legiflature of Upper-

255

A THE DAME WAS DRAWN

Upper Canada was opened. The Governor had deferred it till that time, on account of the expected arrival of a chief-justice, who was to come from England; and from a hope, that he fhould be able to acquaint the members with the particulars of the treaty with the United States. But the harvest has now begun, which in a higher degree than elsewhere engages, in Canada, the public attention, far beyond what state-affairs can do. Two members of the Legislative Council were prefent instead of feven; no Chief-justice appeared, who was to act as Speaker; instead of fixteen members of the Affembly five only attended, and this was the whole number, which could be collected at this time. The law requires a greater number of members for each house to discuss and determine upon any bufinefs \*, but within two days a year will have expired fince the last feffion. The Governor has therefore thought it right, to open the feffion, referving, however, to either house the right of proroguing the fittings from one day to another, in expectation, that the ships from Détroit and Kingston will either bring the members, who are yet wanting, or certain intelligence of their not being able to attend.

The whole retinue of the Governor confifted in a guard of fifty men of the garrifon of the fort. Dreffed in filk, he entered the hall with his hat on his head, attended by his adjutant and two fecretaries. The two members of the Legiflative Council gave, by their Speaker, notice of it to the Affembly. Five members of the latter having appeared at the bar, the Governor delivered a fpeech modelled after that of the King, on the political affairs of Europe, on the treaty concluded with the United States, which he mentioned in expreffions very favourable to the Union, and on the peculiar concerns of Canada. Where no taxes are to be fettled, no accounts to be audited and examined, and no military regulations to be adjufted, public bufinefs cannot occupy much time. But, if even all thefe points were to be difcuffed, the bufinefs would ftill be triffing, from want of an oppofition; which feems to be precluded by the

\* By the Quebec Act, paffed in 1791, it is enacted, that the Legiflative Council is to confift of not fewer than feven members for Upper Canada, and the Affembly of not lefs than fixteen members, who are to be called together at leaft once in every year.— Transfator.

256

manner

manner, in which the two Houfes for Upper Canada are framed. The conflictution of this province is well adapted to the prefent flate of the country. The members of both Houfes, who bear a fhare in the adminiftration, are all of them as ufeful, as can be defired, at this period. The influence of the Governor is not ufelefs. And the other neceffary arrangements, effectially fuch as may enfure liberty and good order, will, no doubt, be made in the process of time.

Fort Niagara stands, as has been already obferved, on the right bank of the river, on a point, opposite to that of Miffiffogas, on which Newark is built. It was originally conftructed by Mr. de la TONQUIERE, three miles nearer to the falls; but was, fome years afterwards, transferred to the fpot, where it now ftands, and where Mr. de DENONVILLE threw up an entrenchment. This fort, as well as those of Ofwego, Détroit, Miami, and Michillimakkinak, are to be furrendered to the Americans\*. Fort Niagara is faid to be the ftrongeft of these places, having been ftrengthened with fome new works, in the courfe of laft year ; especially covered batteries, defigned for its protection on the fide of the lake and the river. All the breaft-works, flopes, &c. are lined with timber. On the landfide, it has a curtain, flanked by two baftions, in each of which a blockhouse has been constructed, mounted with cannon. Although this fort, in common with all fuch fmall fortified places, cannot long withftand a regular attack; yet the befiegers cannot take it, without a confiderable lofs. All the buildings, within the precincts of the fort, are of ftone, and were built by the French.

With very obliging politeness, the Governor conducted us into the fort, which he is very loath to visit; fince he is fure, that he shall be obliged to deliver it up to the Americans. He carried us through every part of it, indeed more of it than we wished to see. Thirty artillery-men and eight companies of the soft regiment, form the garrison of the fort. Two days after this visit, we dined in the fort, at Major SEWARD's, an officer of elegant, polite, and amiable manners, who seems to be much

\* All these forts were actually delivered up to the Americans in August 1796, purfuant to the treaty of 1794.—Translator.

Ll

respected

refpected by the gentlemen of his profeffion. He and Mr. PILKINSON, an officer of the corps of engineers, are the military gentlemen we have most frequently feen during our refidence in this place, and whom the Governor most diftinguishes from the reft. In England, as in France, the officers of the engineers and artillery are in general the most accomplished among the gentlemen of the army; and their fociety is confequently preferred. The officers of the fifth regiment, whom we have feen, were well-bred, polite, and excellent companions.

The communication of the fort with Newark is in winter intercepted for two or three months, by maffes of floating ice, carried along by the ftream. At times it is free for a few hours only. The Indians attempt, now and then, to crofs the river, by jumping from one piece of ice to another. But the number of thofe, who venture upon this dangerous experiment, is never great.

Some trifling excursions, we made in the environs of the city; and efpecially a tour of four days, with the Governor, along the banks of the lake; afforded us an opportunity of feeing the interior country. The chief purpose of this journey was, to reach the extremity of the lake. A boat, made of the bark of trees, and defigned for the Governor's excurfions between Détroit and Kingston, contained the whole company; which confifted of the Governor, Major Seward, Mr. Pilkinfon, us three (Mr. de Blacons, having left us two days after our arrival in Naryhall), and Mr. RICHARD, a young Englishman, who arrived here by the way of the North River, and whom we had already feen in Philadelphia. Twelve chaffeurs of the Governor's regiment rowed the boat, which was followed by another veffel, carrying tents and provision. We halted at noon to eat our dinner, and in the evening to pitch our tents and fup. In the morning, we walked, then breakfasted, and fet out to purfue our journey, which was rendered rather unpleafant by a fmall fall of rain. We start west and

Fortymile-creek was one of the chief objects of our tour. This ftream, which interfects in a ftraight line the range of mountains, extending from Queens' Town, flows, with a gentle fall, into the plain; and affords

fords fome wild, awful, yet very pleafing profpects among the mountains. Before it empties itfelf into the lake, it turns a grift mill, and two fawmills, which belong to a Mr. GREEN, a loyalift of Jerfey, who, fix or feven years ago, fettled in this part of Upper Canada.

This Mr. Green was the conftant companion of the Governor on this little journey; he is apparently a worthy man, and in point of knowledge far fuperior to the common caft of fettlers in this neighbourhood. His effate confifts of three hundred acres, about forty of which are cleared of wood. He paid one hundred and twenty-five dollars for forty acres, through which the creek flows, that turns his mill, on account of the greater value, they bear for this reafon; the common price being only five fhillings per acre. Land newly cleared yields here, the firft year, twenty bufhels of corn. The foil is good, though not of the moft excellent quality. They plough the land, after it has produced three or four crops, but not very deep, and never ufe manure. The price of flour is twentytwo fhillings per hundred weight; that of wheat from feven to eight fhillings per bufhel. The bufhel weighs fixty-two pounds upon an average. Labourers are fcarce, and are paid at the rate of fix fhillings a day.

Refpecting the feeding of cattle, the winter is here reckoned at five months and half, and near the lakes often at fix; on the mountains it is a month fhorter. A few habitations are feattered over this diffrict. Wheat is here, as well as throughout all Upper Canada, generally fown; but other forts of grain are alfo cultivated. Wheat and rye are fown in September; oats, in May; barley, in June; turnips, in July; and potatoes, in May. The hay harveft falls between the 10th of June and the 10th of July. Rye is generally cut about the beginning of July; and wheat, in the latter days of the fame month; potatoes and turnips are dug up in October and November. Grafs is, in general, mowed but once. Cultivated meadows are fown with timothy-grafs. The cattle are fed, in winter, with hay; which is kept either in barns, in Dutch lofts\*, or in flacks, after the Englifh manner: the laft are very

\* In this neighbourhood, as well as throughout all the northern parts of the Union, they call a thatched roof of a round, fquare or polygonal form, which refts on long pofis, but can be raifed or lowered at pleafure, a Dutch loft.—Author.

L12

250

の行動のないのです

badly made. Until the winter fets in with great feverity, the cattle are left to graze in the woods; they tell us, that in all parts of Upper Canada, the fnow lies feldom deeper than two feet. The whole of thefe obfervations apply alfo to the cultivated ground near Lake Ontario and Lake Erie.

Mr. Green, who has a very numerous family, intends to bring up all his fons to farming, and to build for each of them a mill, either on this or on a neighbouring creek. He grinds the corn for all the military pofts in Upper Canada; where General Simcoe has ordered all the flour of a good quality to be purchafed, which fhall be offered by millers in larger quantities than fix bufhels.

The road from Fortymile-creek to the extremity of the lake, which we travelled, on horfeback, is one of the worft we have hitherto feen in America. But for our finding now and then fome trunks of trees in the fwampy places, we fhould not have been able to difengage ourfelves from the morafs. Along the road, which is fifteen miles in length, the foil is good; but we fcarcely faw four plantations on the bank of the lake. At the very extremity of it, and on the most fruitful foil, there are but two fettlements.

Burlington Bay borders on Lake Ontario. This bay is five miles in length, and communicates with the lake by a ftreight fixty yards wide; but this communication is interrupted by fand-banks, which, at the extremity of the lake, form a bar, the bafe of which projects nearly half a mile into the lake. This fole paffage excepted, the bay is feparated from the lake by an ifthmus, from to two to four hundred yards broad. At the point, where this ifthmus begins on the fouthern fide of the lake, the unnavigable tract is about fifty feet in width. Small veffels are worked up into a fmall creek in the bay ; whence they proceed without any impediment to any other part within its extent. The mountains, which near Fortymile-creek reach close to the lake, but afterwards recede to the diftance of five or fix miles, approach it again at the extremity of Burlington Bay. Their colour, as well as the quality of the intervening foil between them and the lake, affords ground to fuppofe, that they once formed its borders, and that the tract of ground, which now feparates

feparates them from its prefent bed, and which is covered with very old and beautiful trees, has been formed by alluvia from the waters of the lake. This range of mountains, after having formed an opening, through which a pretty confiderable river empties itfelf into the bay, rejoin, bound the lake for about a fourth part of its length, and ftretch thence towards Lake Huron, in the vicinity of which they divide into different branches, the farther direction of which is not known. The geographical knowledge of this country, as far as it relates to the courfe of the rivers, the fhape of the vallies, and the direction of the chain of mountains, is yet very imperfect. Governor Simcoe is aware of the neceffity of its being enlarged and perfected. But, in a newly occupied country, like this, the number of objects neceffary to be attended to is immenfe.

During the whole of our excursion we passed through woods, copioully adorned with flowers of the most exquisite hues and fragrance, the names of which we could not learn. The numbers of fragrant trees, of a fize unknown in Europe, was equally great.

The banks of the lake are rather unhealthy, and intermittent fevers are almost as frequent there, as in the district of Geneffee. But few furgeons refide in the country; they are not fuffered to practife, till after having undergone an examination by a physician, appointed by government. This prevention, which may prove very beneficial in future times, is at prefent of no avail. For, as very few apply for leave to practife, the most ignorant are admitted without difficulty, if they will only prefent themfelves for admiffion.

By one of them I was informed, that the inferior claffes of the inhabitants dread their advice in intermittent fevers, becaufe they always prefcribe bark; and that poor people, inftead of following their advice, have recourfe to a fort of magic charm, in which univerfal confidence is placed in this country. If feized with the ague, they go into the foreft, fearch out a branch of an elm or faffafras, of the laft year's growth; faften to this branch, without breaking it off the tree, a thread, which muft not be quite new; tie as many knots, as they think they fhall have fits of the fever;

fever; and then return home, perfectly convinced, that they fhall not experience more fits, than they have bound themfelves to fuftain, by the number of knots they have tied. The first discoverers of this arcanum used to make fo few knots, that the ague would frequently disappoint their hopes, but they who at prefent practife this fuperstition tie fo many, that the febrile matter is generally carried off, before the number of fits comes up to that of the knots.

A tour along the banks of the lake is extremely pleafant ; the profpect of this vaft fheet of water is majeftic, and the traces of culture, which upon the whole has been commenced on the beft principles, offer a picture, on which both the eye and the mind dwell with equal pleafure. The Governor is a worthy man, amiable and plain. The company was agreeable, and we enjoyed every convenience, which can be expected on a journey of this kind. And yet, during the whole time of our refidence in Naryhall, where he, as well as every one belonging to him, loaded us with civilities, in a manner the moft agreeable, I did not experience one moment of true happinefs, and real untainted enjoyment.

I am at a loss to account to myself for the various perceptions, which preffed upon my mind, and prevented my feelings from being entirely abforbed by gratitude, and by the pleafing fenfations, it naturally produces. I love the English more, perhaps, than any other Frenchman; I have been conftantly well treated by the English; I have friends among them; I acknowledge the many great qualities and advantages which they poffers. I deteft the horrid crimes, which ftain the French revolution, and which deftroyed fo many objects of my love and efteem; I am banished from France; my effates are confifcated; by the government of my country I am treated as a criminal or corrupt citizen; fevered from all I held dear, I have been reduced to extreme, inexpreflible mifery, by Robefpierre, and the reft of the ruffians, whom my countrymen have fuffered to become their tyrants; nor are my misfortunes yet confummated-and yet, the love of my country, this innate feeling, now fo painful to me, fo clashing with my prefent fituation, holds an abfolute fway over my foul, and purfues me here more clofely, than elfewhere. This English flag, under

which I am failing over lakes where the French flag was fo long difplayed; thefe forts, thefe guns, the fpoils of France, this conftant, obvious proof of our former weaknefs and of our misfortunes, give me pain, perplex and overpower me to a degree, which I am at a lofs to explain. The fuccefs, laft year, obtained by Lord Howe, which the English mention with more franknefs, becaufe they fuppofe our interest to be intimately connected with theirs; the eagerness they display in announcing new defeats of the French, the accounts of which are prefaced by the affurance, that English triumphs and exertion shall reinstate us in the posfeffion of our eftates, and followed with congratulations; all these common topics of conversation, which our guests seem to introduce with the best intention, prove more painful to my feelings, as I am necessitated to hide my thoughts, left I fhould be deemed a fool by the few, in whofe eyes I am no Jacobin, no Robefpierrian, and becaufe I am, as it were, at crofs purpofes with myfelf. And yet it is a fentiment rooted, deeply rooted in my foul, that I would continue poor and banished, all the days of my life, rather than owe my restoration to my country and my estates, to the influence of foreign powers, and to British pride. I hear of no defeat of the French armies, without grief, or of any of their triumphs, without my felf-love being gratified to a degree, which at times I take not fufficient care to conceal\*. And yet, notwithstanding these feelings, the confeffion of which may appear ridiculous in my prefent fituation, I cannot difcern the period, when anarchy shall cease in my ill-fated country, and liberty, regulated by wife and efficient laws, afford happinefs at least to those, who are not banished ; when France shall rest her glory on a fafe and lafting foundation.

I do not know, whether those of my friends, who shall read these lines, will understand my meaning; and whether they will be more able, than

\* These " Confessions d'un Emigré," which ingenuously express the true sentiments of a very confiderable part of the emigrated French nobility and gentry, are not, it feems, unworthy of the notice of foreign powers, and especially of our government. A French emigrant, who acted in the Weft Indies as field-officer in the British fervice, regretted, that the "pavillon cheri" was not waving at the maft-head of the veffel, on board of which he was going to combat the French .- Tranfl. .....

A TAL BOOM TO TAL

263

I am.

I am, to reconcile thefe apparently incongruous feelings and perceptions. I have here thrown them together, as I felt and conceived them.

In addition to the civilities offered here to our finall company, Dupetitthouars experienced one of a peculiar complexion, confifting in an offer of lands in Upper Canada, made by Major Seward, who, without expressly stating, that he was authorised by the Governor to propose this offer, at least hinted something to that effect. The polite, yet peremptory answer, returned by Dupetitthouars, at once ended the business.

The tafte for news is not by far fo prevalent in Upper Canada as in the United States. Only one newspaper is printed in Newark; and but for the fupport granted by government, not the fourth part of the expence of the proprietor would be refunded by the fale of his papers. It is a fhort abftract of the newspapers of New York and Albany, accommodated to the principles of the Governor; with an epitome of the Quebec Gazette. In the front and back of the paper are advertifements. It is a weekly paper; but very few copies are fent to fort Erie and Détroit. The newspaper prefs alfo ferves for printing the acts of the Legislature, and the notices and orders iffued by the Governor; and this is its principal ufe. In point of news, the fituation at Niagara is by no means convenient, efpecially in time of war.

The English ships are not yet arrived from Quebec, and this day is the fixth of July. The intelligence, which reached Philadelphia about the time of our departure, has but just been received at Niagara. They tell us, that they know nothing, but what they have learned directly from England. What little information we have been able to collect from different quarters, concerning the fentiments of the people, and which we could only now and then obtain, as we should otherwise have given offence by too much inquisitiveness on this head, coincides in representing the nation at large as defirous of tranquillity and peace. But the American loyalist, who have actually fuffered by the war, still harbour enmity and hatred against their native land and countrymen. These fentiments however are daily decreasing, and are not states, Nova Scotia, and

and New Brunfwick. There are mal-contents in this country; but their number is fmall. Several new fettlers, who migrate into this province from the United States, falfely profefs an attachment to the Britifh Monarch, and curfe the government of the Union, for the mere purpofe of thus wheedling themfelves into the poffeffion of lands. The high price of provifion, the prohibition of a commercial intercourfe, and the protracted delivery of the deeds, by which the property of granted lands is conveyed to the occupiers, form, indeed, grounds of much difcontent; but this is by no means of a nature to caufe uncafinefs to the government, which feems even to doubt its exiftence, though, in cafe of a war with the United States, it might render its fituation extremely critical.

The Episcopal is the established religion in Upper Canada. In Détroit, however, half of the inhabitants are Roman Catholics; and some families of Quakers, Baptists, and Dunkers, are scattered through the province, though in small numbers.

A feventh part of the lands is allotted to the fupport of the Protestant clergy. For the Roman Catholic fervice nothing is paid, except in Détroit. No church has yet been built, even in Newark. In the fame halls, where the Legislative and Executive Councils hold their fittings, jugglers would be permitted to difplay their tricks, if any fhould ever ftray to this remote country. Our last excursion in the environs of Naryhall brought us by Queenftown to one of the Tufcarora villages, which ftands on the Indian territory, four miles from Naryhall. One of the roads, which lead thither, paffes over mountains, that border upon the falls. This road affords fome interefting profpects, fuch as precipices, dreary receffes, wild romantic fcenes as far as the mountains project over the river, still hemmed in between this double range of high rocks. They become truly admirable where the mountains flope towards the plain, which feparates them from the banks of the lake; this whole plain, Fort Niagara, the bank of the lake, the lake itfelf, nay, a part of the oppofite bank, burfting at once on your view. The foil feems every where to be of a good quality.

265

THE REAL PROPERTY.

This Tufcarora village has as dirty and mean an appearance as all the other villages we have hitherto feen; but the inhabitants, being informed of the intended vifit of the Governor, had painted themfelves with the utmoft care, and were dreffed in their moft fafhionable ftyle. They fancied he came to hold an affembly. A booth, covered with green branches, before the door of the habitation of the chieftain, on which the Englift flag was waving, was the place fingled out for the expected folemnity. The inhabitants were rather difappointed, when they learned from the Governor, that he came with no other view but to pay them a vifit. He fat down in the booth. The Indians were feated on benches placed in a femi-circular form, and finoaked tobacco. As many of the young men as could find room fat at the end, or ftood leaning on the rails. General Simcoe and ourfelves were in the centre of the femi-circle; women and children were kept at a diffance.

PATERSON, an American by birth, whom the Indians took prifoner at the age of ten years (he is now twenty-five) acted as interpreter to the Governor. All his fpeeches, like every difcourfe of the English agents addefied to the Indians, turned on the fame fubject. He told them alfo, at this time, that the Yankees were brooding over fome evil defign against them; that they had no other object in view but to rob them of their lands; and that their good Father (King George) was the true friend of their nation. He alfo repeated, that the maize-thief (T - P - )was a rogue and a liar.

His fpeech, however, met not with much applause on the part of the Tuscaroras. The Seneca-Indians had called here a week before, on their way to Naryhall, and told them, that they were going to the Governor, without entering into any particulars respecting the object of their visit. This circumstance led the Tuscaroras to conclude, that fomething very important was in negociation between the Senecas and the Governor, probably tending to the prejudice of their nation; for mistrus, fuspicion, and apprehensions, form the prominent features of the policy of the Indians; and it must be confessed, that this way of thinking is a very natural confequence of the conduct of the colonists towards them.

The Governor difclaimed all particular negociations with the Senecas; and, in order to divert them from this opinion, made use of all the compliments and affurances, which he thought any way fitted to flatter their vanity, or allay their fears. He again told them of the Yankees, of the maize-thief, and of King George; but all this did not fatisfy them. His promife of granting them lands in Canada, if the Yankees should drive them from their homes, made no deeper impreffion; nothing could brighten that cold, nay gloomy countenance, which they generally preferve while they are treating on bufinefs. The extreme care, which they employ to conceal their impreffions on fimilar occafions, may either be the effect of a fludied diffimulation, the neceffity of which they may have learned in their intercourfe with the colonists, or merely the refult of character and habit. This anecdote, however trifling in itfelf, fhews how eafily the jealoufy between the different Indian nations is roufed; a difposition which, like all the other foibles of the Indians, both the English and the Americans turn to their advantage.

There are few Indian villages, where fome perfons of European defcent have not fettled, who generally enjoy a confiderable fhare of influence over the tribe. They are commonly people of a very indifferent character, attracted by the idle, extravagant, and drunken habits of the Indians. It is a general remark, that the whites, who refide among them, are extremely vicious, cruel, and covetous, and the very worft hufbands and fathers.

Intermitting fevers are very frequent in this village. The Indians frequently take the advice of the phyfician, whom the English government appoints, and pays on their account; but they, far more frequently, take draughts, which they prepare themfelves from the juice of herbs. Although the neighbourhood is much infected with rattle-fnakes, yet none of the prefent inhabitants of this village were ever bitten by them. Their remedy, in this cafe, would confift of falt and water, which they think infallible, and fully fufficient to effect a cure.

We met on this excursion an American family, who, with fome oxen, cows, and sheep, were emigrating to Canada. "We come," faid they, M m 2 "to

267

STATISTICS OF

" to the Governor," whom they did not know, " to fee whether he will give us land." " Aye, aye," the Governor replied, " you are tired of the federal government; you like not any longer to have fo many kings; you wifh again for your old father," (it is thus the Governor calls the British Monarch when he speaks with Americans); " you are perfectly right; come along, we love such good royalists as you are, we will give you land."

On our return from Queenftown we defcended in the Governor's boat the noble river Niagara, the banks of which imagination delights to fancy covered with inhabitants, and reclaimed by culture from their prefent wild ftate, and views rich and charming landfcapes; but this richnefs, and thefe charms, will probably yet, for a confiderable time, enchant the eye of fancy alone.

During our refidence in Naryhall, Meffrs. Dupetitthouars and Guillemard took the opportunity of the return of a gun-boat, and made an excurfion to York. Indolence, politenefs to the Governor, and the conviction that I should meet with nothing remarkable in that place, united to diffuade me from this journey. My friends informed me on their return, that this town, which the Governor had fixed upon as the capital of Upper Canada, before he thought of building a capital on the Thames, has a fine extensive road, detached from the lake by a neck of land of unequal breadth, being in fome places a mile, in others only fix fcore yards broad ; that the entrance of this road is about a mile in width ; that in the middle of it is a fhoal or fand-bank, the narrows on each fide of which may be eafily defended by works crected on the two points of land at the entrance, where two block-houfes have already been conftructed; that this is two miles and half long, and a mile wide; and that the elevation of the fhore greatly facilitates its defence by fortifications to be thrown up on the most convenient points.

Governor Simcoe intends to make York the centre of the naval force on Lake Ontario. Only four gun-boats are, at prefent, on this lake; two of which are conftantly employed in transporting merchandize; the other two, which alone are fit to carry troops and guns, and have

oars

oars and fails, are lying under fhelter until an occafion occurs to convert them to their intended purpofe. It is the Governor's intention to build ten fimilar gun-boats on Lake Ontario, and ten on Lake Erie. The fhip-carpenters, who conftruct them, refide in the United States, and return home every winter.

There have not been more than twelve houses hitherto built in York. They ftand on the bay near the River Dun. The inhabitants do not possible fairest character. One of them is the noted BATY, the leader of the German families, who, according to the affertion of Captain Williamson, were decoyed away by the English, to injure and obstruct the prosperity of his settlement.

Notwithstanding the navigation of this river, there is a portage of thirty miles between York and Lake Simcoe, by which the merchandize, that comes from Lake Huron, might reach that place in a ftraighter line. The barracks, which are occupied by the Governor's regiment, stand on the road, two miles from the town, and near the lake; defertion, I am told, is very frequent among the foldiers.

In a circumference of one hundred and fifty miles the Indians are the only neighbours of York. They belong to the tribe of the Miflaflogas. I fhall here obferve, that all, who have vifited the Indians in Upper Canada, affure us, that Father CHARLEVOIX has delineated their manners with the fame exactness and truth, which he has in general displayed in the description of the countries he traversed.

After a refidence of eighteen days at Naryhall, we took leave of the Governor on Friday the 10th of July. He wifhed us to ftay a little longer; but Lord DORCHESTER's answer had probably reached Kingfton by this time; and, notwithftanding the Governor's true politeness and generous hospitality, we were not entirely free from apprehensions of incommoding him.

I hope that he has been as fatisfied with the fincerity and franknefs of Mr. Dupetitthouars and myfelf, as we were with his kindnefs. As to Mr. Guillemard, I make no mention of him, fince, he being an Englifhman, his fituation is altogether different from ours. We enjoyed in the General's

General's houfe the most perfect freedom of opinion, which a man of his distinguished talents will always cherist, and but for which we should not have been able to continue so long at Naryhall as we did.

Every thing we have feen and heard in this part of Upper Canada renders it, in our judgment, extremely probable, that her dependance on England will not be of long duration. The fpirit of independance, which prevails in the United States, has already gained ground in this province, and will, no doubt, be much encreafed by a more immediate connection with the United States. The comparison drawn by the inhabitants of Upper Canada, between the price of commodities fubject to English duties and customs, and the value of the same articles on the opposite shore, will be a sufficient source of envy and discontent. The navigation being carried on by both countries on the fame lakes and canals, it will be impoffible to prevent the contraband-trade; and this cannot but prove highly prejudicial to Great Britain, at leaft according to the fyftem, by which fhe is guided in the government of her colonies. This contraband-trade will be a constant object of dispute between the two ftates, and will furnish the Governor of Upper Canada with sufficient pretences for commencing and promoting a war. But, a contest, the natural confequence of which would be an increase of the price of provision in Canada far above what it would bear in the United States, could not be a popular war. It would be a repetition of the American War of the Stamp-act, and of the Tea-tax, and would probably be attended with the fame confequences.

The natural order of things at this moment, and the univerfal difpofition of nations, announce the feparation of Canada from Great Britain as an event, which cannot fail to take place. I know nothing, that can prevent it. By great profperity and glory, by fignal fucceffes in her wars, and by undifturbed tranquillity at home, Great Britain may be able to maintain her power over this country, as long as confiderable fums fhall be expended to promote its population and profperity; as long as it fhall enjoy the moft complete exemption from all the taxes and burthens of the mother country; in fine, as long as a mild government, by refources prompt

prompt and well applied, by ufeful public eftablifhments, not yet exifting, and by encouragements held out to all claffes and defcriptions of citizens, fhall convince a people already invited and qualified by a wife conflictution to enjoy all the bleffings of liberty, of the advantages of a monarchical government, which in its benevolent projects unites wifdom of conception with rapidity of execution.

But these conditions are and will hardly be fulfilled. In our time, perhaps foon, Great Britain will lose this bright jewel of her crown.\* In regard to Canada, she will experience the same fate, as she is likely to thare, fooner or later, respecting her possession in India; as will befall Spain in respect to her Florida and Mexico, Portugal in regard to her Brasil, in short all European powers, respecting such of their colonies at least, as they possess on the continents, unless, enlightened by experience, they shall speedily change the colonial form of government.

Before I clofe the article of Niagara, I muft make particular mention of the civility fhewn us by Major LITTLEHALES, adjutant and first fecretary to the Governor; a well-bred, mild, and amiable man, who has the charge of the whole correspondence of government, and acquits himfelf with peculiar ability and application. Major Littlehales appeared to posses the confidence of the country. This is not unfrequently the cafe, with men in place and power; but his worth, politenes, prudence, and judgment, give this officer peculiar claims to the confidence and respect, which he universally enjoys.

We embarked for Kingfton on board the Onondago, one of the cutters, which compose the naval force on the lake. This cutter is pierced for twelve fix-pounders, but carries only fix in time of peace. When

\* Readers, endowed with a larger fhare of political fagacity, than the author difplays throughout the whole train of arguments, on which he grounds this difmal prefage, will probably incline to believe the predicted revolution in Canada not quite fo near at hand, as it appears to the Duke, who feems not to recollect, that the Britifh government, by fubfituting, as he himfelf calls it, " a wife conftitution" in the flead of the ancient conflictutional form of Canada, has adopted the very means, to prevent her lofs, which at the clofe of his obfervations on this fubject, he advifes as the only preventive of fuch a calamity.—Tranflator.

271

thefe

thefe veffels are not laden with flores for the King's fervice, they are freighted with merchandize, for which the merchants either pay freight, or engage to transport in their bottoms an equal quantity of the King's flores.

The Onondago is of eighty tons burthen. On this occafion, fhe had two detachments on board; one of the fifth regiment, defined for Kingfton to bring money, and another of the Queen's rangers, to receive at Montreal new cloathing for the regiment. There were, befides, fortyone Canadians on board, who had conducted ten veffels for the King's fervice from Montreal to Niagara. The cabin-paffengers were, Mr. Richard, Mr. Seward, whom I have already mentioned, Mr. BELLEW, who commanded the detachment of the fifth regiment, which was going to fetch money, Mr. HILL, another officer of the fame regiment, who was ill, and was going to Kingfton for the recovery of his health, Mr. LEMOINE, an officer of the fixtieth regiment, quartered in Kingfton, and our party.

The wind was tolerably fair during our paffage; this is generally accomplifhed in thirty-fix hours ; at times in fixteen ; but it took us fortyeight hours. Dead calms are frequent, efpecially at this time of the year, and last fometimes five days. Scarcely any motion was observable on the waters of the lake. This paffage, which is one hundred and fifty miles long, offers no interefting objects; the coaft foon difappears from your view, efpecially in hot weather, when the horizon is clouded with vapours, as when we failed. Duck's Iflands form, to fpeak generally, the only triffing danger on this passage. They are three in number, lying in a line; there is no paffage for thips either between the coast and the island on the left, or between this and the middle ifland, on account of the rocks under the water, on which thips would unavoidably be loft. You must pais between the middle ifland and that on the right, where the water is from four to five miles in width, and fufficiently deep to afford a fafe navigation. The only danger, to be here encountered, might arife from a fudden guft of wind, fpringing up the moment, you approach the iflands and driving the ship into one of the dangerous channels. To the best of my

my knowledge, but one fhipwreck has happened here, within the memory of man; but no veffel ventures near the islands by night, except when the weather is perfectly fair and clear. A more common and more real danger arifes from the ftorms, which frequently on a fudden arife on the lake, render it even more boifterous than the fea, and caufe the fhips to labour and ftrain more feverely, on account of the shortness of the waves, bounded by the finall extent of the waters. The fhips are then in conftant danger of being driven on fhore, and would hardly be able to avoid it, if the ftorms lafted longer. But they generally continue only for a fhort time, especially in fummer, and the clearing up of the weather is as fudden as was the coming on of the ftorms. They are, properly fpeaking, only violent gales of wind, which in autumn frequently blow two days together, and fucceed each other very rapidly. Five or fix years ago, a fhip was loft, with every hand on board, and inftances of this kind are faid not to be uncommon at that time of the year. From November until April, the navigation is entirely difcontinued on the lake.

During our paffage, Lieutenant EARL, who commanded the cutter, and almoft all our fellow-paffengers, behaved to us, in the moft civil and obliging manner. The weather was very warm, and had been fo for the laft eight or ten days. The mercury in Fahrenheit's thermometer ftood, at Naryhall, frequently at ninety-two; but on board the veffel, in the cabin, it was only at fixty-four. It is lefs the intenfity of the heat, than its peculiar nature, which renders it altogether intolerable; it is fultry and clofe, and more fo by night, than by day, when it is fometimes frefhened by a breeze, which is not the cafe in the night; the opening of the windows affords no relief; you do not perfpire, but feel oppreffed; you refpire with difficulty; your fleep is interrupted and heavy: and you rife more fatigued, than when you lay down to reft.

I have already mentioned, that we had a detachment of the fifth regiment on board. They dreffed, before we arrived at Kingfton. Eight days before we had feen the Indians painting their eyes with lamp-black and red-lead, and braiding their hair, to fix in it feathers or horfes' manes,

Nn

dyed

dyed red or blue. This day we faw European foldiers plaftering their hair, or if they had none, their heads, with a thick white mortar, which they laid on with a brufh, and afterwards raked, like a garden-bed, with an iron comb; and then faftening on their head a piece of wood, as large as the palm of the hand, and fhaped like the bottom of an artichoke, to make a *cadogan*, which they filled with the fame white mortar, and *raked* in the fame manner, as the reft of their head-drefs.

This is a brief fketch of the fpectacle, which thefe foldiers exhibited to us, the laft two hours of our paffage ; though their toilette was not exactly the fame as that of the Indians, yet they confulted their looking-glafs with the fame anxious care. These observations are less intended to throw a ridicule on the drefs of foldiers, and the childifh attention paid to it in all countries, than to check the forwardness of those, who are ever ready to ridicule all manners and habits, which are not their own. The Indian favage would be at a lofs, whether to laugh more at the Turk, who covers his fhorn head with a turban, containing more or fewer folds in proportion to his rank and confequence-at the women in the island of Melos, whose petticoats scarcely cover half their thighs, while their fleeves reach down to the ground-or at our belles, who ten years ago confined their breafts and waift in huge ftays, with falfe hips, and ftrutted along on high heels, and who now fcrew up their waift to the middle of their bofoms, tied round with a girdle, which looks more like a rope, than a fash, wear their arms naked up to their shoulders, and by means of transparent garments expose every thing to view, which formerly they thought themfelves obliged to conceal, and all this, forfooth, to refemble Grecian ladies.

## Sunday, the 12th of July.

When Ducks' Islands were about twenty miles a ftern of us, the lake grew more narrow, and the number of islands encreafed. They feemed all to be well wooded, but are not inhabited, and lie nearly all of them along the right bank. On the left is Quenty Bay, which ftretches about fifty miles into the country, and the banks of which are faid to be cultivated

275

vated up to a confiderable extent. The eye dwells with pleafure, once more, on cultivated ground. The country looks pleafant. The houfes lie clofer, than in any of the new fettled parts of Upper Canada, which we have hitherto traverfed. The variegated verdure of the corn-fields embellifhes and enriches the profpect, charms the eye, and enchants the mind. In the back-ground flands the city of Kingfton, on the bay of the fame name, which the French, in imitation of the Indians, called Cadarakwe. It confifts of about one hundred and twenty or one hundred and thirty houfes. The ground in the immediate vicinity of the city rifes with a gentle fwell, and forms, from the lake onwards, as it were, an amphitheatre of lands, cleared, but not yet cultivated. None of the buildings are diftinguifhed by a more handfome appearance from the reft. The only ftructure, more confpicuous than the others, and in front of which the Englifh flag is hoifted, is *the barracks*, a ftone building, furrounded with pallifadoes.

All the houfes ftand on the northern bank of the bay, which ftretches a mile farther into the country. On the fouthern bank are the buildings belonging to the naval force, the wharfs, and the habitations of all the perfons, who belong to that department. The King's fhips lie at anchor near these buildings, and confequently have a harbour and road feparate from the port for merchantmen. We landed at Port Royal. However kingly were the commander and his fhip, he took our money. Governor Simcoe expressly defired us not to pay for our paffage, as the cutter was a King's ship, and he had amply supplied us with provision. But my friend Dupetitthouars, as well as myfelf, were fo much difpleafed with the idea, of making this paffage at the expence of the King of England, that we ventured to offer our money to Captain Earl. Offers of this kind are feldom refused, nor did ours meet with a denial. Yet, it is but justice to add, that Captain Earl is a worthy man, civil, attentive, conftantly on the deck, apparently fond of his profeffion, and mafter of his bufinefs. shet the wealth of the country, which he could a shand

No letter from Lord Dorchefter had yet arrived, and it was extremely uncertain when it would arrive. The calculation, made at N n 2 Kingfton,

Kingfton, refpecting the probable time of the return of an anfwer, is lefs favourable than what they made at Niagara. We fhall, perhaps, be obliged to wait a week longer. How much time will be loft for our journey, and why? Becaufe Governor Simcoe is not on good terms with Lord Dorchefter; and becaufe he obferves the niceft punctuality, from which, in confideration of the letters we brought with us, he might well have departed in this cafe. Our friend, Mr. Hammond, might have faved us this unpleafant delay, by writing fooner to Lord Dorchefter, as I requefted him to do. Unfortunately fuch accidents cannot be forefeen. If they could, how many things fhould we alter in the courfe of our life? We muft wait. Patience, patience, and again patience.

Kingfton is the place, to which Lord Dorchefter wifhes, that General Simcoe should transfer the feat of government in Upper Canada. In this choice he is, perhaps, in a great measure influenced by the advantage, which he would thus enjoy, of having all the troops, in cafe of an attack, in the vicinity of Quebec, which is, in his opinion, the only tenable place in Lower Canada. He thinks, that if the feat of the government of Upper Canada were removed to Kingfton, which lies nearer to Quebec than any other place, the orders and news, which arrive from Europe, would reach this place with more rapidity and fafety, and would alfo be more rapidly circulated through the province. He further imagines, that the naval flores, fent from Europe, would here be fafer, and that the refitting of thips would be cheaper, and with more fecurity effected in Kingston, whither, at all times, they might be fent directly from Quebec, at least more expeditiously, than to any other place on the lake, where the inconvenience of a tedious and uncertain paffage must be added to the expence for fhifting the cargo on board of another veffel.

Governor Simcoe, on the contrary, is of opinion, that by the aggregate of his arrangements, the defence of Upper Canada might be eafily effected. He adds, that the wealth of the country, which he confiders as the neceffary refult of his projects, will attract the enemy; and that if they fhould make themfelves mafters of Upper Canada, it would be impoffible

to

to diflodge them. He alfo obferves, that, in time of war, by the various means of navigation, confiderable parties might be eafily fent from Upper Canada to every point of the United States, even to Georgia; that Upper Canada is the key of the territories of the Indians; and that thence fuccours may be eafily fent to every part of Lower Canada, which, on the other hand, is not able to fend any to Upper Canada, at leaft not fo expeditionfly as circumflances might require.

As to the more rapid circulation of orders and intelligence, and the earlier receipt of them, the Governor allows the truth of thefe allegations; but anfwers, that, from the vaft extent of Canada, it is extremely improbable, that in cafe of its being peopled, this territory fhould be divided only into two governments. He adds, that the beft method of peopling fuch parts of Canada, as have hitherto been explored, would be, to encourage the population of the two extremities, in which cafe, the profperity of the centre would be more eafily and rapidly attained. He further obferves, that, in fuch a cafe, Kingfton would become the capital of a new province; and that, in regard to the more difficult and more expenfive diffribution of fhips, no facility and favings, to be obtained under this head, could balance the advantage of uniting in its centre the whole naval force ftationed on the lake, and efpecially in a place, where it is moft effentially protected againft an attack.

All men feck after reafons or pretenfions to enlarge the extent of their authority and power. Here, as every where elfe, good and bad reafons are alleged in fupport of a fyftem, of a project, and efpecially of the interefts of felf-love. Yet power is alfo here, as every where elfe, the beft, at leaft the moft decifive of reafons; and if Lord Dorchefter fhould not be able to prevail upon the Britifh government to declare Kingfton the capital of Upper Canada, he will, at leaft, prevent the feat of government from being eftablifhed between the lakes Erie, Huron, and Ontario, according to the wifh of General Simcoe. As to the project of transferring it to York, he declares himfelf in a manner by no means favourable to that city; and in this opinion he is joined by all the inhabitants of Kingfton, whofe difpleafure at their city not becoming the capital of the province

vince is greatly increafed by the confideration, that, in confequence of this project, their town will ceafe to be the emporium of the fmall naval force flationed on this lake. The friends of Kingfton further allege againft the project, and not without reafon, that York is an unhealthy place, and will long remain fo, from the nature of the ground, which feparates the bay from the lake.

Dupetitthouars, who is a zealous partizan of York, as far as he confiders it in the light of an eftablifhment for the navy, cannot help allowing, that it has the air of being an unhealthy place. General Simcoe apparently poffeffes the love and confidence of all the inhabitants and foldiers. But his projects are deemed too extensive; and, above all, too coftly, in proportion to the advantages, which England is likely to reap from their being carried into effect.

The merchants on the lake, whofe rapacity the Governor is endeavouring to reftrain, lay great ftrefs on thefe two objections, and beftow much praife on Lord Dorchefter's profound wifdom and confummate abilities; while, by other accounts, he was formerly an ufeful man, but is now fuperannuated.

Lord Dorchefter being an utter ftranger to me, I am altogether unqualified to judge of his abilities and talents. I am alfo unacquainted with the amount of the expence, which the execution of Governor Simcoe's plans may require, and with the refources which England may poffers to meet them. But I am clearly of opinion, that Great Britain cannot fail to reap fignal advantages from his views and projects, if they fhould ever be carried into effect; and that they compose a complete fyftem, which, if properly purfued in all its parts, will do great credit to him, who fhall execute it.

But, at the fame time, all the information we here obtain on this fubject confirms our opinion, that General Simcoe meets with much oppofition in his plans; that the jealoufy, which Lord Dorchefter flows in regard to him, and which is the natural refult of his age and temper of mind, is carefully kept alive, by those who hold places under him; and that, with the exception of grants of land, and other matters of government,

ment, in refpect to which the Governor is perfectly independent, he can do and enact nothing without the confent of the Governor General. As to his rooted averfion against the Americans, I have heard it cenfured even by private foldiers; but he is allowed by all to possess military talents.

In relating these particulars, which finish the picture of *the man*, I have no other object, but faithfully to draw the character of Governor Simcoe, who, being undoubtedly a man of superior abilities and endowments, deferves to be known.\*

Kingfton, confidered as a town, is much inferior to Newark; the number of houfes is nearly equal in both. Kingfton may contain a few more buildings, but they are neither fo large nor fo good as at Newark. Many of them are log-houfes, and thofe which confift of joiner's work, are badly conftructed and painted. But few new houfes are built. No town-hall, no court-houfe, and no prifon have hitherto been conftructed. The houfes of two or three merchants are conveniently fituated for loading and unloading fhips; but, in point of ftructure, thefe are not better than the reft. Their trade chiefly confifts in peltry, which comes acrofs the lake, and in provision from Europe, with which they fupply Upper Canada. They act as agents or commiffioners of the Montreal Company, who have need of magazines in all places, where their goods muft be unfhipped.

The trade of Kingfton, therefore, is not very confiderable. The merchant fhips are only three in number, and make but eleven voyages in a year. Kingfton is a ftaple port. It is fituated twelve miles above that point of the river, which is confidered as the extremity of the lake. Here arrive all the veffels, which fail up the river of St. Lawrence, laden with provision brought in European fhips to Quebec.

\* Governor Simcoe has fince left Upper Canada, and returned to England, whence he has been fent to St. Domingo. In that colony he has found no opportunity for difplaying his military talents, but has endeavoured to curb the rapacity of the finall army in the pay of Great Britain, and by this meritorious conduct excited the hatred both of the French and Englifh, who have gratified it in a dreadful manner.—Author.

The barracks are conftructed on the fite of Fort Frontenac, which was built by the French, and levelled by the Englifh. The latter built thefe barracks about fix years ago. During the American war their troops were conftantly in motion; and, in later times, they were quartered in an ifland, which the French call Ifle aux Chevreaux, (Goats' Ifland) and which the Englifh have named Carleton, after Lord Dorchefter. Fort Frontenac, which was liable to be attacked on all fides, would anfwer no other purpofe but to protect the fmall garrifon, which the French kept there, againft the attacks of the Indians and Englifh; a part of the garririfon was quartered in Cadarakwe, for the protection of the French trade. Here were alfo built, by Mr. DE LASALLE, the firft French fhips, which navigated the lake.

Kingfton feems better fitted for a trading town than Newark, were it only for this reafon, that the fhips, which arrive at the latter place, and are freighted for Lake Erie, pafs by the former, to fail again up the river as far as Queen's Town, where the portage begins. Nor is its pofition equally advantageous for fharing the trade in provision, with which the lake may one day fupply Lower Canada, England, perhaps all Europe, if Upper Canada fhould ever answer the expectations entertained by Governor Simcoe.

Kingfton is, at prefent, the chief town of the middle diffrict of Upper Canada, the moft populous part of which is that fituated on Queen's Bay. This diffrict not only produces the corn requifite for its own confumption, but alfo exports yearly about three or four thoufand bufhels. This grain, which, in winter, is conveyed down the river on fledges, is bought by the merchants, who engage, on the arrival of the fhips from Europe, to pay its amount in fuch merchandize, as the fellers may require. The merchants buy this grain for government, which pays for it, in ready money, according to the market price at Montreal. The agent of government caufes a part to be ground into flour, which he fends to the different pofts in Upper Canada, where it is wanted; and the furplus he fends to England, probably with a view of raifing the importance of

of the colony in the eftimation of the mother-country. The price of flour in Kingfton, is, at prefent, fix dollars per barrel.

The diffrict of Kingfton fupplied, laft year, the other parts of Canada with large quantities of peafe; the culture of which, introduced but two years ago, proves very productive and fuccefsful. In the courfe of laft year, one thousand barrels of falt pork, of two hundred and eight pounds each, were fent from Kingston to Quebec ; its price was eighteen dollars per barrel. The whole trade is carried on by merchants, whofe profits are the more confiderable, as they fix the price of the provision, which they receive from Europe, and either fell in the vicinity, or fhip for the remoter parts of Upper Canada, without the leaft competition, and just as they think proper.

Although the number of cultivators is here greater than in the diffrict of Niagara, yet the vaft quantity of land under cultivation is not better managed than theirs. The difficulty of procuring labourers obstructs agricultural improvements, and encourages them to infift on enormous wages.

The process of clearing woodlands is here the fame, as all over America. The hufbandmen harrow the cleared ground two, three, or four years fucceffively; during which time wheat is fown. Then they plough, but in a very imperfect manner, and fow peafe or oats, and again wheat, and fo on, according to the common routine. The land yields, in this ftate, from twenty to thirty bushels per acre.

Corn, for the winter, is fown from the beginning of August till the end of September. Snow falls generally in the latter days of November, and remains on the ground until the beginning of April. Under this cover the blade gets up remarkably well; the corn ripens in July, and the harveft begins about the end of that month. For want of reapers, the fcythe is made use of, which causes a great waste of corn, that cannot be housed, and merely serves for feeding pigs. Labourers, whose common wages are from three to four shillings (Halifax currency), are paid during the harveft at the rate of one dollar, or fix shillings a day. Some farmers hire Canadians for two or three months, to whom they pay feven or

cight

eight dollars per month, and find them in victuals. It frequently happens, that these Canadians, who bind themselves by a written contract, meet with people offering them more money than they receive from their mafters, which not being allowed to accept, they, of courfe, grow diffatisfied, and work negligently. They must be procured from the environs of Montreal. Farmers, who have no acquaintance in that country, find it difficult to obtain them; and this difficulty deters many cultivators from recurring to that refource, from which they might elfe derive confiderable advantages. The harveft work is therefore generally performed by the family: thus the houfing of the crops, though it proceed flowly, is yet accomplifhed; but the farmer has much additional trouble, and the lofs he fuftains, by his harveft being lefs perfect, far exceeds the few dollars, which he would have been obliged to fpend in gathering in his crops in a more expeditious manner. The foil, which is but of a middling quality in the vicinity of the town, is excellent about the bay; many farmers poffers there to the number of one hundred and fifty acres of land, thoroughly cleared.

The climate of America, efpecially that of Canada, encourages the imprudence and covetoufnefs of the farmers. There is no danger here, as in Europe, of the hay rotting, and the grain being fpoiled by rains, if not fpeedily houfed. There feldom paffes a day without fun-fhine; the fky is feldom entirely overcaft; it never rains but during thunder-ftorms, and this rain never continues longer than two hours. Grain is, befides, feldom liable here to blights, or any other kind of difeafe.

The cattle are not fubject to contagious diftempers; they are numerous, without being remarkably fine. The fineft oxen are procured from Connecticut, at the price of feventy or eighty dollars a yoke. Cows are brought either from the ftate of New York, and thefe are the fineft; or from Canada: the former coft twenty, and the latter fifteen dollars. Thefe are fmall in fize, but, in the opinion of the farmers, better milch-cows, and are for this reafon preferred. There are no fine bulls in the country; and the generality of farmers are not fenfible of the advantages to be derived from cattle of a fine breed. In fummer the cattle are turned

turned into the woods; in winter, that is, fix months together, they are fed on dry fodder, namely, with the ftraw of wheat, rye, or peafe, and on most farms with hay cut on fwampy ground, but by rich and prudent farmers with good hay. The hay is frequently kept the whole winter within a fort of fence, covered with large branches, through which, however, the fnow finds its way; but commonly it is preferved in ricks badly made, and under Dutch hay-fheds. The meadows yield to the quantity of four thousand pounds per acre, but no aftercrop. There is no ready market at which a farmer can fell that part of his cheefe and butter, which is not wanted for the use of his family. Of cheese and butter, therefore, no more is made, than the family need for their own confumption. They generally begin in the first days of May to make a provision for the winter. Some few farmers manufacture coarfe woollens for their own clothing; the more usual way, however, is to buy the clothes. The farmer is too bufy, has too little affiftance, and makes his calculations with too little judgment, to engage in fuch a multiplicity of labours.

Sheep are more numerous here than in any part of the United States, which we have hitherto traverfed. They are either procured from Lower Canada, or the ftate of New York, and coft three dollars a head. They thrive in this country, but are high legged, and of a very indifferent fhape. Coarfe wool, when cleaned, cofts two fhillings a pound. There are few or no wolves, rattle-fnakes, or other noxious animals, in this country.

The farmers make but little maple-fugar, though the woods abound with the trees, from which it is procured. The Indians import about two or three thoufand pounds, and fell it to the retail traders for one fhilling a pound. Maple-fugar is prepared in much larger quantities in Lower Canada. The Canadians eat it here on bread, or make cakes of it, mixed up with flour of wheat, or Indian corn. On the maple-tree frequently grows a fort of knobs, or funguffes, of a very large fize. If these excrefcences be torn from the tree, and dried in the fun, they form an excellent tinder, which the Indians and Canadians use to light their pipes. Notwithstanding the great number of pines, no refin has yet been ga-

002

thered,

thered. The culture of hemp and flax has been tried, but hitherto without fuccefs; the experiments, however, are continued.

The price of wheat is one dollar per bufhel; laft year the price was much lower; but it has rifen from the general failure of the harveft. Fire-wood, delivered in the town, cofts one dollar a cord; in winter it is conveyed thither in fledges from all the iflands and banks of the river, which are covered with wood.

The river freezes over at the diftance of twenty miles above Kingfton.

The price of land is from two fhillings and fix-pence to one dollar per acre, if the twentieth part be cleared. This price rifes in proportion to the number of acres cleared of wood, though influenced by occafional circumftances. Two hundred acres, one hundred and fifty of which were cleared, were very lately fold for one thoufand fix hundred dollars. The expence for cutting down all the large trees on an acre, and inclofing it with a fence as rude as in the United States, amounts to eight dollars.

There is no regular market in Kingfton; every one provides himfelf with fresh meat as well as he can, but frequently it cannot be had on any terms.

For this information I am chiefly indebted to Mr. STEWARD, curate in Kingfton, who cultivates himfelf feventy acres, a part of two thoufand acres, which have been granted him as an American loyalift. He is a native of Harrifburg in Pennfylvania, and feems to have zealoufly embraced the royal caufe in the American war. Fifteen hundred pounds fterling, which he had placed in the American funds, have been confifcated. Although he continues warmly attached to the Britifh Monarch, yet he has become more moderate in his political principles; he has preferved fome friends who efpoufed the caufe of the Republic, among whom is Bifhop WHITE, of Philadelphia. Mr. Steward is a man of much genetal information, mild, open, affable, and univerfally refpected; he is very fanguine in his expectation that the price of land will rife, and that he fhall then be enabled to portion out his-numerous children. Without

out being a very skilful farmer, he is perfectly acquainted with the details of agriculture, fo that I can place implicit confidence on his statements, the truth of which has also been confirmed by other husbandmen.

The number of farmers is very fmall about Kingfton. By Mr. Steward's report, the agreement between the land-owner and farmer is generally made for their joint account, but not always faithfully performed. From his having been imposed upon in fuch agreements, he leased out last year four hundred and thirty acres, which are fituated on the bay, and forty of which are cleared, for a yearly rent of one hundred and fifty bushels of grain ; on condition that, if at the expiration of three years his tenant be defirous of acquiring the property of these lands, he must pay him one thousand dollars; in default whereof, he is bound to quit the land, and will consequently lose all the money and labour spent in clearing the ground.

The clergy of the Epifcopal church are the only minifters in Upper Canada, who are paid by government. The members of other religious fects pay their paftors, if they choofe to have any. In the diftrict of Kingfton are Baptifts, Prefbyterians, Roman Catholics, and Quakers; but they poffers no building devoted to religious worfhip. Some of the inhabitants of Kingfton are American loyalifts; but the majority is compofed of Scots, Englifh, Irifh, Germans, and Dutchmen.

The emigration from the United States is not confiderable; during the laft three or four years it has been very infignificant indeed, but gains now, it is afferted, a more promifing appearance. This intelligence, which we first received from people attached to the English government, has fince been confirmed to us by a great many labourers. These new colonists emigrate most of them from the States of Connecticut, Vermont, and New Hampshire. The emigration from Canada to the United States is far lefs confiderable.

If any dependence might be placed on the report of perfons, who arrived four years ago from the River Mohawk, fuch families, as are fufpected of an attachment to Great Britain, are, in the United States, looked upon rather with an evil eye; but perhaps they give out fuch reports

reports, merely that they may meet with a better reception in the British possessions.

The inhabitants of the diffrict of Kingfton meddle ftill lefs with politics than the people of Newark. No newfpaper is printed in the town; that of Newark is the only one publifhed in Upper Canada, which being a mere imperfect extract from the Quebec Gazette, is here taken in by no one. I know but of two perfons who receive even the Quebec-paper. As to the interior of the country, no news penetrates into that quarter, a circumftance that excites there very little regret.

In this diffrict are feme fchools, but they are few in number. The children are inftructed in reading and writing, and pay each a dollar a month. One of the mafters, fuperior to the reft in point of knowledge, taught Latin; but he has left the fchool, without being fucceeded by another inftructor of the fame learning.

There are yet but very few furgeons in this diffrict; they, who affume this appellation, contrive to get well paid for their trouble. Excepting intermittent fevers, which are rather frequent in Kingston, the climate is very healthy. The houfes, as has already been obferved, are built of wood, for reafons which it is extremely difficult to differn. The town is feated on rocky ground; and not the fmalleft house can be built without the foundation being excavated in a rock, a fort of stone which affords the twofold advantage of being eafily cut, and of growing hard, when exposed to the air, without cracking in the froft. The inhabitants allow that, if bricklayers were procured even from Montreal (for there are none in this place), building with ftone would be lefs expenfive than with wood. They grant that, in addition to the greater folidity of fuch buildings, they would afford more warmth in winter, and more coolnefs in fummer; but habit is here, as elfewhere, more powerful than reafon. Carpenters' wages amount to fixteen shillings a day; labourers are equally fcarce in Newark, and confequently as bad and as dear.

This diffrict contains no paupers, and, of courfe, there exift no poorrates; the taxes are managed in the fame manner as at Newark.

The roads at Kingfton are much the fame as at Newark; they are kept in good repair by ten days' labour, from which none of the inhabitants are excepted, all being obliged to work ten days at the roads. Labouring people complain, and not without reafon, that this public burthen has not been affeffed in a manner more proportionate to the means of the inhabitants; and calculate, with fome degree of difcontent, that their ten days' labour is tantamount to a tax of twelve dollars and upwards; for they muft alfo find their own victuals when they work on the roads.

There is but one church in Kingfton, and this, though very lately built, refembles a barn more than a church.

We had a letter from General Simcoe to the Commanding Officer in Kingfton, who, at our arrival, was Captain PARR, of the fixtieth regiment. Six hours after the detachment, commanded by that gentleman, was relieved by another of the fame regiment, under the orders of Major DOBSON. This circumftance, however, did not prevent Captain Parr from giving us the moft obliging proofs of civility and kindnefs. He is a fon of the aged Governor of Nova Scotia. At firft he feems cold, grave, and referved; but his countenance brightens on a nearer acquaintance, and grows more open, gay, and cheerful; he foon fell into an eafy familiarity of converfation, which was heightened during our dinner. His behaviour was entirely free from ceremony, and indicated that he was not difpleafed with our fociety.

This dinner, which he gave to the newly arrived officers, forms for us a remarkable epocha. The ingenuity of the English in devising toasts, which are to be honoured with bumpers, is well known. To decline joining in fuch a toast would be deemed uncivil; and, although it might be more adviseable to fubmit to this charge, than to contract a fickness, yet fuch energy of character is feldom displayed on these occasions. Unwilling to oppose the general will, which becomes more imperious in proportion as heads grow warmer, you refort to flight deceptions in the quantity you drink, in hopes thus to avert the impending catastrophe. But this time none of us, whether French or English, had carried the deception

deception far enough, and I was concerned to feel, the remainder of the evening, that I had taken too lively a part in the event of the two detachments relieving each other.

The fixtieth regiment, to which they belong, is the only regiment in the Englifh fervice, excepting the guards, which confifts of four battalions. This regiment, which at the time of the war of 1757 was composed only of two battalions, was raifed in America, and as many foreigners as Englifhmen were enlifted. It was afterwards augmented to four battalions, and was confidered, as in fact it is ftill in many respects, as a foreign regiment. The first two battalions have never yet left America; the two others have been stationed in Jersey, Guernsey, and the Antilles. General AMHERST is colonel of this regiment\*. In point of duty, promotion, and command, the four battalions are perfectly independent of each other.

The officers we have feen are well bred and extremely polite \*

The general opinion, in regard to Canada, is, that this country proves, at prefent, very burthenfome to England, and will be ftill more fo in future; and that, of confequence, Great Britain would confult her true intereft much better by declaring Canada an independent country, than by preferving it an English colony, at fo enormous an expence. The Canadians, fay they, will never be fincerely attached to England, fo that, if, in time of war, a militia were raifed, not half of them would take up arms againft America, and none perhaps againft France. The British government commits, therefore, in their opinicn, a groß error, in expending fuch vaft fums in attempting to improve and preferve a country, which, fooner or later, is fure to feeede from Great Britain, and which, did it remain faithful to the mother country, could not be of real fervice to it for any length of time.

These gentlemen further affert, in direct contradiction to General Simcoe's opinion, that the majority of new settlers of Upper Canada, who

\* On the death of Lord Amherft, His Royal Highnefs the Dake of York was 2ppointed Colonel of the fixtieth regiment.—*Tranflator*.

emigrate

emigrate from the United States, and who are efteemed loyalifts, would certainly affift those States, if they marched any troops into that country. I am not qualified to form a correct judgment on these opinions, which are perhaps mere effusions of the displeasure of officers, obliged to ferve at fo great a distance from Great Britain; \* yet they appear to me not altogether destitute of foundation. But, however this may be, all the Canadians, we have seen, whether inhabitants of the country or failors, conftantly expressed the utmost fatisfaction on meeting with us Frenchmen of old France, and evinced a degree of respect and obligingness, to which we had long been unaccustomed. I cannot fay much on the character of this people; all who came under my observation were full of spirit, active, gay and merry.

The royal navy is not very formidable in this place; fix veffels compole the whole naval force, two of which are finall gun-boats, which we faw at Niagara, and which are flationed at York. Two finall fchooners of twelve guns, viz. the Onondago, in which we took our paffage, and the Mohawk, which is juft finifhed; a finall yacht of eighty tons, mounting fix guns, and laftly the Miffaloga, of as many guns as the two fchooners, which has lately been taken into dock to be repaired, form the reft of it. All thefe veffels are built of timber frefh cut down, and not feafoned, and for this reafon laft never longer than fix or eight years. To preferve them even to this time requires a thorough repair; they muft be heaved down and caulked, which cofts at leaft from one thoufand to one thoufand two hundred guineas. The expence for building the largeft of them amounts to four thoufand guineas. This is an enormous price, and yet it is not fo high as on Lake Erie, whither all forts of naval flores muft be fent from Kingfton, and where the price of labour is ftill higher. The

\* Whether the political opinions of the officers of the fixtieth regiment, alluded to by the Duke, be correctly flated, muft be left to these gentlemen to explain. But the supposition, that British officers, from a mere diflike to remote garrisons, should censure administration for not abandoning a colony, which in the author's opinion is " a bright jewel in the British crown"—" an important conquest," and the loss of which appears to him " a public calamity," is an effusion of Gallic petulance, which should not pass unnoticed.—Transator.

timbers

## TRAVELS IN NORTH AMERICA, I AMERICA

timbers of the Miffafoga, which was built three years ago, are almoft all rotten. It is fo eafy to make provision of fhip-timber for many years to come, as this would require merely the felling of it, and that too at no great diftance from the place where it is to be ufed, that it is difficult to account for this precaution not yet having been adopted. Two gun-boats, which are deftined by Governor Simcoe to ferve only in time of war, are at prefent on the flocks ; but the carpenters, who work at them, are but eight in number. The extent of the dilapidations and embezzlements, committed at fo great a diftance from the mother-country, may be eafily conceived. In the courfe of laft winter, a judicial enquiry into a charge of this nature was inflituted at Kingfton. The commiffioner of the navy, and the principal fhip-wright, it was afferted, had clearly colluded againft the King's intereft ; but intereft and protection are as powerful in the New World as in the Old :---for both the commiffioner and fhip-wright continue in their places.

Captain BOUCHETTE commands the naval force on Lake Ontario; and is at the head of all the marine eftablifhments, yet without the leaft power in money-matters. This gentleman poffeffes the confidence both of Lord Dorchefter and Governor Simcoe; he is a Canadian by birth, but entered the Britifh fervice, when Canada fell into the power of England. While ARNOLD and MONTGOMERY were befieging. Quebec, Lord Dorchefter, difguifed as a Canadian, ftole on board his fhip into that city, on which occafion he difplayed much activity, intrepidity and courage. It is not at all a matter of furprife, that Lord Dorchefter fhould bear in mind this eminent fervice. By all accounts, he is altogether incorruptible, and an officer, who treats his inferiors with: great mildnefs and juffice.

In regard to the pay of the royal marine force on Lake Ontario; a captain has ten fhillings a day, a lieutenant fix, and a fecond lieutenant three fhillings and fixpence. The feamens' wages are eight dollars per month. The mafters of merchantmen have twenty-five dollars, and the failors from nine to ten dollars a month.

Commodore Bouchette is among those, who most strenuously oppose

the project of removing to York the central point of the force on the lake; but his family-refide at Kingfton; and his lands are fituated near that place. Such reafons are frequently of fufficient weight to determine political opinions. Character and and son another of the son and t

The defertion among the troops is not fo confiderable from Kingfton, as from the forts Ofwego, St. John, Niagara, and Détroit; from all those posts, in short, which lie nearer to the United States. Yet, it is pretty prevalent in all the garrifons of British America. We were told by the officers, that the first two or three years after the arrival of the regiment from Europe, no foldier deferts, but that envy and habit foon corrupt their mind. The discipline appears to me more fevere in the British fervice, than it ever was in ours ; the men are treated with lefs attention and kindnefs. be bound ovil of most where a

Several regiments employ the Indians to apprehend deferters. In addition to the eight dollars, which are allowed by government for every deferter, brought back to his regiment, the captains promife them eight dollars out of their private purfe, and infpirit them by fome glaffes of rum. These Indians then enter the American territory, where they are acquainted with every foot-path, every track, which they purfue without ever lofing their way, and frequently fall in with the deferter, whom they ftop, bind and bring back. If the deferter, which is frequently the cafe, be attended by inhabitants of the United States, the Indians make no attempt to ftop him, but the English officers place fufficient confidence in the honefty of the Indians to fuppofe, that they will not fuffer themfelves to be bribed either by money or rum, which the deferters might offer. softward drive bebrotte od videdorg bloow operall

The nearest regular Indian habitations are forty miles distant from Kingston, and belong to the Mohawks. About the same distance from the town are also fome villages of the Miffafogas, and wandering tribes of the fame nation are conftantly rambling about the banks of the lake, pafs a few nights in one place and a few in another, crofs the river on the confines of the United States, and ftop in the iflands. Hunting and fishing are their only employments. They are the filthiest of all Pp 2

the Indians, I have hitherto feen, and have the moft flupid appearance. They are faid to live poorly, to be wicked and thievifh, and men, women and children all given to drinking. The uncommon feverity of the winter in this country occasions not the least alteration in their mode of living. In their fmall canoes they carry with them fome rolls of the bark of foft birch\*, which ferve to cover the huts, built in form of a cone, wherein they fleep, and which are fupported merely by fome flight props, on which reft these portable walls, that at the top leave a paffage for the fmoke.

In the month of September the Indians bring wild rice to Kingfton, which grows on the borders of the lake, efpecially on the American fide. This plant, which loves marfhy ground, fucceeds there remarkably well. The Indians bring yearly from four to five hundred pounds of this rice, which feveral inhabitants of Kingfton purchafe for their own confumption. This rice is of a fmaller and darker grain than that, which comes from Carolina, Egypt, &c. but grows as white in the water, is of as good a flavour, and affords full as good nourifhment, as the latter. The culture of rice would be very ufeful in Europe for the fubfiftence of the poor, efpecially as in those parts the frequent use of it would not prove injurious to health, which it certainly does in hot countries. *Wild rice* is faid to be the fame plant, which in Canada is called *wild vats* (folle avoine).†

The fame banks of Lake Ontario, where this wild rice grows, produce alfo a fpecies of hemp, which grows up to a confiderable height without the leaft culture, and is apparently as ufeful as that, which is cultivated in France. It is ftronger, produces more feed, and its transplantation to Europe would probably be attended with beneficial refults.

To beguile *ennui*, and enjoy a few hours longer the fociety of our friend, Captain Parr, we accompanied him to the diftance of fix miles from Kingfton. His detachment occupied feven veffels, and he had one for himfelf. The foldiers were without exception as much intoxicated

\* Betula lenta, Linn. called by the French inhabitants of Canada, mérifier.—*Tranfl.* + The Duke feems to be mifinformed on this fubject. The wild oat (avena fatua) is a plant altogether different from wild rice, (oryza fylvestris, Linn.)—*Tranfl.* 28

as I ever faw any in the French fervice. On the day of their departure they were fcarcely able to row, which rendered our tour extremely tedious. On our return, wind and current were against us, fo that we proceeded very flowly. Canadians rowed our boat, and according to their cuftom ceafed not a moment to fing. One of them fings a fong, which the reft repeat, and all row to the tune. The fongs are gay and merry, and frequently fomewhat more; they are only interrupted by the laugh they occasion. The Canadians, on all their tours on the water, no fooner take hold of the oars, than they begin to fing, from which they never ceafe until they lay the oars down again. You fancy yourfelf removed into a province of France; and this illufion is fweet. Our whole day, from fix o'clock in the morning until nine at night, was confumed in this tour. So much the better; a day is gone; for although the unwearied politeness of the officers afford us every day in Kingston a comfortable dinner and agreeable fociety from four to eight o'clock in the evening, yet we cannot but feel much ennui in a place, where no fort of amufement, no well-informed man, and no books fhorten the long lingering day.

Our fituation is extremely unpleafant, and might well render us melancholy, did we give up our mind to irkfome reflection. Mr. Guillemard is gone to Montreal, with the Captain. He is perfectly right, for he would have fhared in our wearinefs, without giving us the leaft relief. He is a man of fuperior worth. The goodnefs of his heart, united to the charms of an enlightened mind, have long infpired me with the ftrongeft attachment for him. His determination to leave us gave me, therefore, the utmost concern.

0

After a hearty breakfaft, ferved up at a place fomewhat remote from the troop, we took leave of Captain Parr. The place, where we breakfafted, belongs to Captain STORE, a native of Connecticut, captain in the militia of Upper Canada, a loyalift and proprietor of feven hundred acres of land, by virtue of a grant of the British government. He is owner of a faw-mill, which is fituated on the creek of Guanfignougua, and has two movements, one of which works fourteen faws, and the other

other only one. The former may be widened and narrowed; but frequently cannot work all at once, from the fize of the logs and the thicknefs of the boards. We faw thirteen faws going; a log, fifteen feet in length, was cut into boards in thirty-feven minutes. The fame power, which moves the faws, lifts alfo, as it does near the falls of Niagara, the logs on the jack. For the fawing of logs the Captain takes half the boards; the price of the latter is three shillings for one hundred feet, if one inch in thicknefs, four shillings and fixpence, if one inch and half, and five shillings, if two inches. The fame boards, if only one inch thick, coft five shillings in Kingston. On the other fide of the creek, facing Dutchmill (this is the name of Captain Store's mill), ftands another mill, which belongs to Mr. JOHNSON, who uses half the water of the creek. We viewed the latter only at a diftance from the fhore; the whole profpect is wild, pleafing and romantic, and made me fincerely regret my unfkilfulnefs in drawing. The land is here as good as at Kingston.

Although a communication by land is opened between Montreal and Kingfton, and though half the road is very good, yet the intercourfe between thefe places is moftly carried on by water. The rapidity of the ftream does not prevent veffels from being worked up the river, and this tedious paffage is preferred to that by land, even for the troops. All the provisions, with which Canada is fupplied from Europe, are tranfported in the fame way; and the whole correspondence is carried on by this conveyance, but in a manner extremely irregular; at times eight days clapfe even in fummer, without any veffel going up or coming down the lake.

During our long refidence in Upper Canada we had an opportunity of feeing a Canadian family, who were emigrating to the Illinois River. The hufband had examined the fettlement laft year, and was now removing thither with his whole family, confifting of his wife and four children all embarked in a boat made of bark, fifteen feet in length by three in width. While the parents were rowing at the head and ftern, the children, excepting the oldeft, who was likewife rowing, were feated on

on mattreffes or other effects; and thus they fang and purfued their voyage of at least one thousand one hundred miles. We met them at Newark. They proceed along the banks of the lakes and rivers, lie ftill every night, make a fort of tents of their fheets fupported by two poles, drefs their fupper, eat it, wrap themfelves up in their blankets until the morning, fet off at eight o'clock, ftop once a day to a meal, and then purfue their voyage again until the evening. They generally advance from fifteen to twenty miles a day, but, when bad weather comes on, or they meet with rapids or other obstructions, which force them to go by land, their progrefs is fhorter, and they frequently reft a whole day. Having fet out from Montreal, they came up Lake Ontario; thence they pass Lake Erie, go up the Miami River, travel about fix or feven miles by land, and then reach the Theakiki River, which empties itfelf into the Illinois, or embark on the Wabash\*, which communicates by feveral branches with the Illinois, and thus proceed to the fpot where they intend to fettle. New colonifts commonly form their fettlements on the banks of that river, and chiefly confift of French Canadians.

There is another way from Montreal to the Illinois, which is faid to be more frequented than the former; namely, up the Ottawas River or Great River † to Nipiffing Lake, and thence by the French River to Lake Huron. On this way you meet with thirty-fix places where the boats are to be carried over land, which, however, are very flort. From Lake Huron you proceed by the Straits of Michillimakkinak to Green Bay, thence by the Crocodile River, Roe Lake, and River Saxe, after a flort: paffage over land to Ouifconfing River, which empties itfelf into the Miffiflippi, which you defcend as far as the Illinois, and thence go up this river. The way, juft pointed out, is much longer than the other, but is generally

\* This beautiful river of the north-weft territory is peculiarly celebrated on account of a copper mine on its northern bank, which is the richeft vein of native copper that, has hitherto been difcovered.—Tranfl.

\* The Duke feems mininformed as to the appellation of the Great River, by which the Miami is meant in America, not the Ottawas.—*Tranfl.* 

preferred;.

preferred, effectially by the agents of the fur-trade. On turning to the weitward, this is the fame way, which you travel from Montreal as farthe Straits of Michillimakkinak, which you leave on the left, to reach Lake Superiour, on which you proceed to the great carrying place, thence to the Lake of the Woods, and fo on.

The fettlement on the Illinois is a large *depôt* for the fur-trade; nay, it is the last principal factory in that direction, the chief magazine of which is at Fort Michillimakkinak; but the agents travel one hundred miles farther and traffic even with the Indians of Louisiana.

This traffic is chiefly carried on with rum, but alfo with guns, gunpowder, balls, blankets, fmall coral collars, fmall filver buckles, bracelets, and ear-rings, which are all worn by the Indians in proportion as they are more or lefs rich.

The common ftandard, by which the Indians effimate the value of their peltry, is the beaver-fkin; fo many cat-fkins are worth one beaverfkin; buckles, guns, or a certain quantity of rum, are worth one or two beaver-fkins, or perhaps only a part of one. The traders generally give the Indians in fummer a part of the articles they want on credit; but the fkins they take in exchange are fold at fo low a price, and the provifion they fell rated fo high, that they can well afford to give credit, the more fo as the Indians are, in general, pretty punctual in fulfilling their engagements. Thefe Indians hunt, live in families rather than in tribes, and are, by all accounts, diffingufhed by the fame vices, the fame qualities, and the fame manners, as thofe we have had an opportunity of obferving in the vicinity of the lakes.

The trade in these parts is carried on not by the Hudson's Bay Company, but by two or three houses in Montreal, especially by Mr. TODE, to whom I am indebted for the communication of these particulars. The Missouri River alone has hitherto been shut up against foreign traders by the Spaniards, who have there a fort. Besides the Canadian habitations, which stand along the banks of the Illinois either scattered or affembled in villages and towns, the Illinois Town contains about three thousand inhabitants. There are also some Canadians, who reside among the

the Indians, and live exactly as they do. All thefe fettlements are in the north-weft territory, belonging to the United States; for that part of the banks of the Miffouri, which appertains to Spain, is not inhabited, excepting St. Louis and St. Genevieve, for eighty miles from New Orleans, and but very thinly peopled beyond this.

Such peltry as is exported in the course of trade is conveyed to Montreal by the fame way which the traders travel to these points. The mouth of the Miffiffippi, which by the new treaty with Spain has been ceded to the Americans\*, and the friendly manner in which the Spanifh Governor favours this branch of commerce, procure their trade a more expeditious and less expensive outlet, fo that in this way the expense has been less expensive outlet, fo that in this way the expense has been less one-tenth. By the same way furs can be transmitted either to the United States or to any part of Europe, as the merchant chooses, while all peltry, which reaches Montreal, by the English laws can be fent only to Great Britain. The provision to be exchanged for these articles may also be bought in the cheapest market, and, consequently, at a much lower rate than in Montreal, where the exhorbitant duty on all merchandize, landed in Canada, and which, moreover, Great Britain alone has a right to import, raises their price in an enormous degree.

The furs in the whole of this country are of an inferior quality, if compared with the peltry of those parts which are fituated north of the lakes, where the Hudson's Bay Company alone carries on this trade. By Mr. Tode's account you may travel, in an easy manner, from Montreal to the Illinois in fifteen days, and from the Illinois to New Orleans in twenty. The navigation of the Missifippi is good, but requires great prudence and attention, on account of the rapidity of the stream, and the great number of trunks of trees with which its bed is filled in feveral places. The whole country, through which it flows, is extremely fertile and delightful.

\* By the treaty of 1796, between the United States and Spain, the former obtained the free navigation of the Miffiffippi, but not the ceffion of the mouth or rather mouths of the river.—Tranfl.

Qq

On

On Wednefday the 22d of July arrived the long-expected answer from Lord Dorchefter. It was of a nature to ftrike us with amazement-a folemn prohibition, drawn up in the ufual form, against coming to Lower Canada. It was impoffible to expect any thing of that kind. Mr. Hammond, the English Minister to the United States, had invited us himfelf to vifit Canada, and removed the difficulties, which, from the report of other Englishmen, I apprehended on the part of the Governorgeneral, by affuring me, that Lord Dorchefter had requefted him to take it for the future entirely upon himfelf, to grant paffports for Lower Canada, as he knew better than the Governor-general the travellers who came from the United States; and that the letters which he fhould give me would, without previoufly concerting with Lord Dorchefter, fecure me from all unpleasant incidents. I could not, therefore, entertain the least apprehension of a refusal, as I had not the smallest reason to suppofe that Mr. Hammond, who had loaded me with civilities, would have deceived me on this fubject.

But his Excellency had been pleafed to order his Secretary to fend me an order of banifhment, which he had not even taken the trouble to fign. They told me, by way of confolation, that his Excellency was rather weak of intellect, that he did not do any thing himfelf, &c. ; that fome emigrated French prieft might have played me this trick by his influence over his Lordfhip's fecretary or his miftrefs ;—and well may this be the cafe ; for, though, Heaven be thanked ! I have never injured any one, yet I find conftantly people in my way, who endeavour to injure me. But, be this as it may, a refolution muft be taken, and the beft of any is, to laugh at the difappointment. May it be the only, or at leaft the moft ferious fruftration of my hopes, which yet awaits me.

On my arrival in Canada, my Grace was overwhelmed with honours, attended by officers, complimented and reverenced wherever I made my appearance; and now—banished from the same country like a mifcreant!

" Et je n'ai merité " Ni cet excès d'honneur ni cette indignité."

On

On fuch occasions, as in many other fituations in life, we ought to call to mind, that our own fentiments and feelings can alone honour or degrade us, and that confcious rectitude exalts us above all villains, great and low, above all fools, and all tatlers.

My eagerness to quit the English possession as possible, after the receipt of this letter, will be easily conceived; though, upon the whole, I cannot too often repeat, that the civilities shewn us by the English officers at Kingston, as well as Niagara, deserve our warmest praise.

Major DOBSON being fenfible of the neceffity of our leaving Canada with the utmost speed, affisted us with true and sincere politeness, but for which we should not have been able to attain our end so soon as we wished; for, generally, no vessel fails from Kingston to the American coast except twice a year. He lent us his own barge, on board of which we embarked, four hours after the receipt of the Secretary's letter, for the United States, where no commandant, no governor, no minister, enjoys the right of offending honest men with impunity.

We fhaped our courfe for Ofwego, where we hoped to meet with an opportunity of a fpeedy paffage for Albany. The four foldiers, who compofed our crew, were intoxicated to fuch a degree, that the firft day we fcarcely made fifteen miles, though we failed twelve of them. Mr. Lemoine, the officer who commanded them, made them pay dear for the delay of the preceding day, by obliging them to row this day at leaft fifty-five miles. We left, at four o'clock in the morning, the long ifland where we paffed the night. A heavy fall of rain had wetted us through to the fkin ; the wind had deftroyed the flight covering we had made of branches of trees ; the mufquitoes had nearly devoured us ; in fhort, we had fcarcely enjoyed a moment's reft. But the weather cleared up ; the morning grew fine ; and we foon forgot the fufferings of the preceding night.

We reached Ofwego at half paft eight in the evening, having fcarcely ftopped an hour in the whole courfe of the day. This paffage is feldom Q q 2 effected

200

SIG BURE

00 THOMAT TRAVELS IN NORTH AMERICA, C SHT 74

effected in lefs than two days; but inftead of coafting along the fhore, we ftretched from the place where we breakfafted ftraight over to Ofwego, without approaching the land; an undertaking, which, but for the fairnefs of the weather, might have proved extremely hazardous.

Previous to our departure, we enjoyed the fatisfaction of hearing the report of Admiral Hotham's fecond victory in the Mediterranean, and of the capture or deftruction of four French fhips, with fifteen thoufand land-troops on board, deftined for Corfica, contradicted by an officer, who arrived from Quebec. This action had been fo frequently alleged to us, as a proof of the immenfe fuperiority of English fhips over the French, that we felt extremely happy on finding the whole report vanish like a dream.

The reftoration of tranquillity and order in our country depends, at this time, more than ever on the fucceffes of the French.—May they be as complete as I wifh. Good God, what would have become of us, if Great Britain and her allies fhould prove victorious! I am free—Heaven be thanked !—from the rage against the English nation, which posses for many Frenchmen, and cannot be justified by the still fiercer rage of fome Englishmen against the French. The English are a gallant and great nation; I wish they might be fincerely allied with France— \* \*

\* \* \* \* \* \*

\* \* \* \* \*

Ofwego is one of the pofts, which Great Britain has hitherto retained, in open violation of the treaty of peace, though fhe will be obliged to deliver it up to the United States, in the courfe of next year. It is a miferable fort, which, in the year 1782, was built at a confiderable expence by General HALDIMAN, at that time Governor of Canada. The river Ofwego, at the mouth of which the fort is feated, is at prefent almost the only courfe for American veffels to Lake Ontario. The fort is in a ruinous state; one single bastion, out of five, which form the whole of the fortifications, is kept in better repair than the rest, and might ferve as a citadel, to defend for some time the other works, indefensible by any other means. The prefent garrison confists of two officers and thirty men, under whose protection a customhouse-officer fearches all the veffels,

fels, which fail up or down the river. It is not lawful to import any other articles from the United States into Canada, but grain, flour, cattle, and provision, and no commodities are fuffered to be exported to the United States, without express permission from the Governor of Upper Canada; nay, this prohibition extends even to perfons, who, if they intended to proceed to that country without fuch permiffion, would be imprifoned. As to the prohibited exports in merchandize, they are confiscated, without exception, for the benefit of the customhouse-officer, by whom they are feized. This naturally prompts his zeal, and increafes his attention; but there are fo many points along the coaft, where the contraband trade can be carried on, that it will hardly be attempted in this place, where the Americans are fure to encounter fo many difficulties and obstructions. Yet fome vessels, now and then, slip out, under favour of the night. Two or three, which failed in the attempt, were last year taken and condemned. The large income of the receiver of cuftoms, placed here three years ago, has hitherto been confined to thefe perquifites. Americans, who from an ignorance of the feverity and latitude with which English prohibitions are enforced, have a larger quantity of provision on board, than the rigour of the English law permits, frequently fee the furplus confiscated to the augmentation of the cuftoms, which, if exacted by lefs delicate hands than those of the prefent receiver, might be carried to a much larger amount.

This officer is called Intendant General : a fine title, which ornaments a flation, that, in fact, knows no fuperiors, but has alfo no inferiors, excepting a director, who refides at Niagara. The intendant general has not even a fecretary. His pay is ten fhillings a day, and a ration, which is effimated at two. He receives his pay all the year round, though the navigation of the lake is entirely interrupted for five months, and he himfelf is feven months abfent from Ofwego. Decorated with fuch a title, and furnifhed with fuch an income, he will hardly be fuppofed to tranfact himfelf the triffing bufinefs of his place. This is entrufted to a noncommiffioned officer, who makes his report. This is figned by the intendant general, who, in cafe of abfence from the fort, leaves blanks figned

figned on his table. This *permit*, which authorizes all veffels bound for Canada, to proceed thither, must also be figned by the commanding officer, for which every vessel pays three-fourths of a dollar. For failing up the lake a verbal *permit* is given gratis.

The prefent intendant general is an interesting young man, of the name of MAC-DONALD, who, in addition to his talents and abilities, possed for the peculiar merits, for which his family has long been diftinguished in Canada. They came from Scotland, and settled here about twenty years ago. Mr. Mac-Donald served as an officer in the American war. He is now on half-pay; his brothers hold commissions in a Canadian regiment, lately raised, and one of them is speaker of the house of representatives of Upper Canada.

A man of Mr. Mac-Donald's extraction, in France, would injure his character, in the public opinion, by accepting a place in the cuftoms. In England they know better. There, no injurious idea attaches to any profeffion, which concurs in the execution of the laws; and no blame attaches to a nobleman for holding a place in the commiffion of the cuftoms, or turning merchant. He is, on the contrary, refpected as much as if he belonged to the church, the army, or the navy, or were placed in any other honourable fituation. Yet, if public opinion were altogether founded on juft and reafonable principles, it fhould ftigmatize all perfons, who hold finecures without any ufeful employment, and prefs confequently as dead burthens on the State. This, however, is not the cafe in England.

The number of veffels, which afcend and defcend the Ofwego during the feven months, the navigation is open, amounts to about thirty a month. By Mr. Mac-Donald's account far the greater number of them carry new fettlers to Upper Canada, at which I am not aftonifhed, it being a certain fact, that the emigration from the United States to Canada is far more confiderable, than from the latter to the former country.

Fort Ofwego is the only fettlement on the banks of the lake between Kingfton and Niagara, excepting Great Sodus, where Captain Williamfon forms one, and which bids fair, as has already been obferved, to become very

very profperous; it is thirty miles diftant from the fort. Twelve miles behind Ofwego, flands, on the river, the firft American fettlement. This fort muft therefore fhift for itfelf. The officers hunt, read, and drink; and the privates do duty, are difpleafed with their fituation, and defert. For this reafon the oldeft foldiers are felected for the garrifon of Ofwego; and yet, though lefs open to temptation, they defert to the United States. This fort, which lies too remote for any communication with foreign countries, is for five months together completely cut off from the reft of the world; the fnow lying then fo deep, that it is impoffible to go abroad but in fnow-fhoes. A furgeon, who has feven fhillings and fixpence a day, augments the company in Ofwego. The gentleman, who fills this place at prefent, contributes much to heighten the pleafure of the fociety, by fubmitting to be the general butt of railleries and jefts.

The neareft Indian habitations are forty miles diftant from Ofwego; and yet there is an Indian interpreter appointed at this fort, who has three fhillings and fixpence a day and a ration. He was employed during the laft war. In other places his appointment might carry at leaft fome appearance of utility; but here he is paid without having any employment. The commanding officer has five fhillings a day in addition to the pay he enjoys by virtue of his commiffion; he keeps oxen, cows, fheep, fowls, &c. which, as a permanent flock, one commanding officer leaves to his fucceffor at a fettled price.

The gardens are numerous, and beautiful, in the vicinity of the fort; the lake as well as the river abounds with fifh; the chace procures plenty of game. The officers, therefore, live well in this wildernefs, which they call Botany Bay, and yet wifh to wreft from the Americans. We experienced from all of them a very kind reception.

1

D

ret

The land in the neighbourhood of Ofwego is very indifferent; the trees are of a middling growth, and the wood-lands have a poor appearance.

As fate would not permit me to fee Lower Canada, I fhall here throw together fome particulars, I had collected refpecting that country. I counted on certifying and arranging them on the fpot; and although I have not

not been able to do this, yet they shall not be lost, either to myself or my friends.

The people of Canada poffers the French national character; they are active, brave, and industrious; they undergo the feverest toils, endure hardships with fortitude, and confole and comfort themselves with fmoaking, laughing and finging; they are pleafed with every thing, and checked and difpirited by nothing, neither by the length, or exceffive fatigue of a journey, nor by the bad quality of their food, if their fpirits be kept up by pleafantries and jefts. They are employed in all voyages. At the beginning of fpring they are called together from the different diffricts of both provinces, either for the King's fervice, or that of trade. The people, employed in this manner, refide about Montreal, and fome miles lower down, as far as Quebec. Several of them live in Montreal, where they carry on a trade, which occupies them in winter. Their own inclination and tafte invite them to this active and roving mode of life. Some of them are farmers, who leave the houfing of the harvest to their wives and neighbours; others are artizans, who fhut up their fhops and depart. We met fome of them, who were tanners, faddlers, butchers, joiners, &c. and who by all accounts were very good workmen. They leave their country for a fummer, for one year or more, according to the work, which they are called to perform; and fometimes only for a fhort voyage. In the King's fervice they are employed in working the ships from Montreal, or rather China, which is three miles nearer, up to Kingston. This passage, which is rendered extremely troublefome by the numerous rapids in the river, takes up nine days, more or lefs, the back paffage only three days, and the lading and unlading at leaft one. For this voyage they receive two Louis d'ors and are found in victuals; if not employed in actual fervice, they receive no pay. They now begin to ferve as failors on board the shipping on the lake. Commodore Bouchette is much pleafed with them. Their wages amount to nine dollars a month both on board the King's fhips, and in merchantmen, engaged in the fur-trade.

Mr. MACKENZIE was attended by feveral of them on his travels to the

the South Sea; he brings them back with him from a journey, which, it was fuppofed, would extend as far as the former, but which he intends to terminate at the laft factory. By the account of the English themfelves, who do not like them, they are the best rowers, extremely dexterous in extricating themfelves from difficulties, inured to labour, and very fober, though at times they are apt to drink rum rather too freely. In this cafe their gaiety grows noify, while the English in a fimilar fituation frequently grow fad and melancholy.

There exift few people, among whom crimes are lefs frequent, than among the Canadians; murders are never committed, and thefts very feldom; yet the people in general are ignorant. But this defect is to be imputed lefs to the people, than the government, whofe fyftem it is to cherish and preferve this ignorance. No colleges have yet been eftablifhed in Canada; and the fchools are very few in number. Hence it is, that the education even of the richeft Canadians is much neglected ; but few of them write with any tolerable correctness of spelling, and a still fmaller number poffefs any knowledge, though fome of them hold feats in the Legislative Council of the province. I must, however, mention, that I have received this information from Englishmen, whose accounts of the Canadians deferve but little credit, from the most prominent feature of their national character confifting in a warm attachment to France, which on every occafion they difplay more or lefs, according to the class of fociety, to which they belong, and to the extent of their wifhes and expectations, relative to the British government.

I have already obferved, that all the families in Canada have retained the French manners and cuftoms; that but very few Canadians, perhaps not one in a hundred, underftand the Englifh tongue; that they will not learn it, and that none of thofe, who underftand that language, will talk it, except thofe, who from the nature of their employments have a conftant intercourfe with the military.

1

n.

The British government has, fince the conquest, from a filly affectation, changed the names of the towns, islands, rivers, nay of the smallest

Rr

creeks.

creeks. But the Canadians make no use of these new appellations, but either from affectation or habit retain the ancient French names.

Many members of the Affembly, as well as of the Legiflative Council of Lower Canada, are French inhabitants of Canada; the debates are carried on there in the French and Englifh languages; the fpeech of the French member is immediately translated into Englifh, and of the Englifh into French.

The inveterate hatred of the Englifh againft the French, which is at once fo ridiculous, fo abfurd, and fo humiliating for the people, infomuch as it proves them to be mere tools of the ambition of their miniftry—this hatred, which the lights, diffufed through both countries, and the frequent intercourfe between the two nations, had nearly deftroyed in Europe, before the French revolution broke out, has not abated here in the fame degree. No Canadian has juft grounds of complaint againft the Britifh government; the inhabitants of Canada acknowledge unanimoufly, that they are better treated than under the ancient French government; but they love the French, forget them not, long after them, hope for their arrival, will always love them, and betray thefe feelings too frequently and in too frank a manner, not to incur the difpleafure of the Englifh, who even in Europe have not yet made an equal progrefs with us in difcarding the abfurd prejudices of one people againft another.

When Lord Dorchefter, at the appearance of a war with the United States, tried laft year to embody the militia in Canada, he met everywhere with remonftrances againft this meafure. A great number of Canadians refufed to enlift at all; others declared openly, "that if they were to act againft the Americans, they would certainly march in defence of their country, but that againft the French they fhould not march, becaufe they would not fight againft their brethren." Thefe declarations and profeffions, communicated to me by Englifh officers, and of confequence unqueftionably true, were not the effects of Jacobin intrigues; for, it is afferted, that at that very period the emiffaries of the Convention.

Convention complained of the character of the Canadians being averfe to an infurrection; but they are the natural refults of their attachment to France, which neither time, nor the mildness of the English administration has hitherto been able to extirpate. The notions of liberty and independence are, from their political fituation, foreign to their minds. They pay no taxes, live well, at an eafy rate, and in plenty; within the compass of their comprehension they cannot with for any other good. They are fo little acquainted with the principles of liberty, that it has coft a great deal of trouble to establish juries in their country; they oppose the introduction of the trial by juries, and in civil caufes thefe are not yet in ufe. But they love France; this beloved country engages still their affection. In their effimation, a Frenchman is a being far fuperior to an Englishman. The French are the first nation on earth ; because, attacked by all Europe, they have repulfed and defeated all Europe. The Canadians confider themfelves as Frenchmen; they call themfelves fo; France is their native land. These fentiments and feelings cannot but be highly valued by a Frenchman, who must love and respect the good people of Canada. But, it will be eafily conceived, that they difpleafe the Englifh, who frequently difplay their ill-humour, efpecially the fpirited and impatient British officers, by despising and abusing the Canadians. "The French," fay they, " beat them, ftarved them, and put them into irons; they fhould therefore be treated by us in the fame manner." Such are the opinions on this amiable and liberal-minded people, which you hear delivered during an English repast; feveral times have I heard them with indignation. People of more prudence and referve, it is true, do not profefs thefe fentiments in the fame rafh and public manner; but they entertain them, and the people of Canada know full well, that fuch are, in regard to them, the fentiments of the generality of Englishmen.

Lower Canada, which pays no more taxes than Upper Canada, has of late been obliged to raife a yearly contribution of five thousand pounds fterling, to meet the public expence for the administration of justice, legislature, and other *items* in this province. This contribution or imposs is laid on wine, brandy and other articles of luxury; it is raifed as an ex-

Rr2

cife,

cife, and confequently is an indirect tax, but little burthenfome from its amount, as well as from the mode in which it is raifed; and yet it has excited much difcontent and difpleafure against the representatives, who fanctioned it by their confent.

This is an outline of the fentiments, which prevail among the people of Canada, and which I fhould have more clofely examined, had I been permitted to vifit Lower Canada. I have been affured, that Lord Dorchefter, in confequence of the refufal of the Canadians, to be embodied in regiments, defired laft year to return to England. Whether this be the true motive of his defire to refign, which is a certain fact, I know not. His difpleafure may alfo, perhaps, have been excited by the marked difapprobation of the Englifh miniftry, refpecting his addrefs to the Indian nation. However this may be, his refignation has not been accepted. Lord Dorchefter, from his conftant good and kind demeanour to the Canadians, imagined he was beloved by that nation; his adminiftration has throughout been marked with mildnefs and juffice; he has fupported the new conftitution; he loves the Canadians, but his felflove as well as patriotifm and national pride have been much humbled by the fentiments, difplayed laft year by the people of Canada.

I have already mentioned a converfation, in the courfe of which feveral officers delivered it as their opinion, that it would be for the intereft of Great Britain to give up Canada. This is the general opinion of all Englifhmen, who refide in this country, excepting fuch as on account of their flations and emoluments hold a different language. They, who fhare in the government and administration of Canada, the English merchants and families, who have long refided here, are far from profeffing thefe principles, from a conviction, that in the process of time Great Britain will reap confiderable benefits from the posseful of Canada. Thefe are not the ideas which I entertain on this subject, confidering either the extent or the nature and complexion of the English administration and government in this part of the globe. I conceive, that the enormous expence, incurred by Great Britain, is absolutely unnecessfary, and that the flate of independence, in which the endeavours to keep Canada, does not

not afford the greatest and most permanent advantage she might derive from that country.

What would be faid of a ministry, which would attempt to convince England, that the proceeds of her trade and extensive navigation to Canada fall much fhort of her yearly expence to maintain herfelf in the poffeffion of that colony, and propose to the British cabinet, to declare it independent, to affift it with fubfidies the first years, and immediately to conclude with the Canadian government a treaty of amity and commerce? Such a miniftry would undoubtedly be confidered as a fet of rank Jacobins. And yet it is highly probable, that Great Britain, while on the one hand fhe faved a confiderable expenditure, would on the other lofe none of her commercial advantages, form a permanent and extensive connexion with Canada; and would fpare herfelf the humiliation of another colony being difmembered from the British empire. But fuch a refolution fhould be embraced without any fecret views, and hidden projects, loyally and frankly; fo that Canada, enjoying all the bleffings of liberty and prosperity, might have no just grounds for any finistrous apprehenfions. However abfurd this language may appear, it is perhaps precifely that, which all European powers fhould, at this time, hold to their continental colonies; nay, with fome modification, I think it fhould even be addreffed to the Weft-Indian Iflands. But away with political fpeculations!

The Roman Catholic priefts in Upper Canada are of the fame caft as our former country curates; their whole flock of knowledge being confined to reading and writing, they are of courfe unenlightened and fuperflitious. The French revolution has brought thither fome of a fuperior character, who are probably lefs indolent and more tolerant than the former. I am unacquainted with them, but the British officers are fo aftonished at feeing French priefts possefield of fome fense and knowledge, that, in their opinion, they are very clever.

The only branch of commerce belonging to Canada is the fur trade; with the whole extent and annual amount of which I had fome hopes of getting acquainted during my intended refidence at Montreal. I know from Governor Simcoe, that it is far more infignificant, than is generally believed,

lieved, and that a confiderable contraband trade in this article is already carried on in the United States, the chief agents of which are Canadian merchants. I know alfo, that this contraband trade, which they encourage on the river St. Lawrence, may likewife be carried on, without their affiftance, with the United States, on Lake Eric, as well as on feveral points of the banks of Lake Ontario; and that the furrender of this fort to the United States, and the fubfequent American fettlements on the frontiers, will render it altogether impoffible, to prevent this contraband trade. Befides, it is well known, that the Canadian merchants, who fend the peltry to England, are the abfolute mafters of this trade in this country, and that a monopoly, which raifes the price of commodities to an exorbitant height, is the moft powerful incitement to finuggling.

All the fhips, in which the trade between Canada and Europe is carried on, are English bottoms; none of them belong to merchants of the country. These possess but a few vessels, which are built at Quebec, and employed in the inland trade. In no parts of British America are any ships built, but fuch as navigate the lakes: even at Halifax, ships are not built, but merely caulked and refitted. No fhips but English bottoms are fuffered to fail from Canada for Europe; whence it is, that, if this navigation be intercepted or protracted, the utmost fcarcity of European provision prevails in that country. This year, for instance, all the magazines and warehoufes in Canada were empty, on account of the thips, which generally arrive about the 15th of May, not having yet come in on the 20th of July. Since the 1ft of July, not a bottle of wine, or a yard of cloth, could be procured for money, either at Quebec or Montreal. The officers, who came from thefe towns, and had not been able to fupply their wants, complained of the abfolute impoffibility of procuring any neceffary article in Canada; and, I underftand, the discontent, which prevails on this fubject, is not confined to the military.

It is agreed, on all hands, that the Canadians are indifferent hufbandmen, that agriculture is imperfectly underftood in this colony, and that, in this refpect, the English have not transplanted hither either their own agricultural improvements, or any branch of European skill. The land is

:310

is good, upon the whole; the beft, which is in the ifland of Montreal, is worth from twenty to twenty-four dollars an acre. From this circumftance, which is certain, the wealth of the country may be partly effimated.

The fevere froft, which in winter generally prevails in Quebec, caufes the mortar to crack, and every year occafions expensive repairs at the citadel, which never laft long. The other ftrong places in British America are conftructed of wood, which is never feasoned, but used as foon as felled, and confequently decays very foon. In the whole fort of Ofwego, which was built about eleven years ago, there is not one found piece of timber to be found; and for the fame reason the citadel of Halifax, which was constructed only feven years ago, is now rebuilding from the ground. This is all the information, which I have been able to collect, and which, however imperfect it be, may yet ferve as a guide to other travellers in their pursuits of useful knowledge.

The northern borders of the bason, which holds the waters of the Niagara, just above the falls, confist of a fat and strong reddish earth, lying on a ground of lime-stone.

re I

107

间

DÍ

boil

The rocks, between which the flupendous cataract of Niagara rufhes down, are alfo lime-flone, as are numerous fragments of rocks, which appear within the chafm, and have undoubtedly been fwept away by the tremendous torrent. At the bottom of the bafon you fee alfo large maffes of white flone, of a fine grain, which the inhabitants affert to be the petrified foam of the fall, but which, in fact, appears to confift of vitriolated lime. It does not efferverice with acids. I have tried no other experiments.

The ground between the falls and Queen's Town is a level tract, fome hundred feet elevated above the plain, which joins Lake Ontario, and in which the town of Newark, and the fort of Niagara are fituated.

This whole tract feems to confift of lime and free ftone, which contain petrifactions of fea animals.

Over the plain near Newark are fcattered large maffes of a reddifh granite, which lie infulated on the lime-ftone, like the large blocks of granite,

nite, which you fee on Mount Saleve, near Geneva; fo that it is impoffible to account for their origin.

In the environs of Toranto, or York, the foil is in fome places fandy, in others light clay; no rocks are here to be found.

In Kingfton, or Kadaraque, on the north-eafterly extremity of Lake Ontario, you find again the argillaceous, fine grained lime-ftone, of a dark grey colour. Here, as nearly all along the borders of the lake, are found different forts of flints, fchift, quartz, and granite.

You alfo find at Kingfton, at no great diftance from the fhore, a large black conglomeration, which has the appearance of bafalt, and great quantities of free-ftone, with petrifactions of fea animals.

The trees and plants, I have met with in Upper Canada, are nearly the fame, which I obferved in the northern diffrict of Geneffee. Yet I found the buck-eye, called by the Canadians *bois chicot*, the five-leaved ivy, which I have feen branched thirty feet high around an oak tree, the red cedar, the fmall Canadian cherry (ragou minier), and black or fweet birch. I have feen neither a papaw, nor a cucumber tree. The ginfeng root, which is pretty common in the territory of the United States, abounds in Canada, but forms here not fo confiderable an article of trade, as in the former country. The Canadians use an infusion of this root as a cure for pains in the stomach, especially if they proceed from debility; for colds, and, in short, in all cases where perspiration may be required. They also make use of the leaves of maiden hair\*, which is found in great abundance in the vicinity of Kingston, instead of tea.

Mr. Guillemard having communicated to me the journal of his tour to Lower Canada, I fhall extract from it fuch particulars, as appear most proper to fill up the deficiencies of the information, which I have myfelf been able to collect. This journal confirms, upon the whole, the general obfervations, which I have made on that country. Although the intelligence, gathered by Mr. Guillemard, be not altogether as minute as I could

\* Adianthum capillus veneris, Linn. a plant, from which the once celebrated " fyrop de " capillaire" took its name, which P. Formius, a phyfician of Montpellier, recommended as an universal medicine, in his treatife " De Adiantho," published 1634.—Transl.

have wifhed, yet from the correctness of his judgment, and his character for veracity, the truth of his remarks cannot be questioned. The passing from Kingston to Quebec is made, as far as China, in Canadian vessels of about ten or fifteen tons burthen. The navigation from China to Montreal being intercepted by the falls of St. Louis, this part must be travelled by land. Ships of any burthen may fail from Montreal to Quebec. The rapids are of various descriptions. They are either whirlpools,

occafioned by rocks, against which the water ftrikes in its course, or ftrong declinations of the bed of the river, the rapid motion of which is checked by few or no obstructions. Carried by rapids of this nature, ships may advance fixteen miles in an hour. Those of the former defeription are the most dangerous, though misfortunes but feldom occur. They are most frequent on the cedar passage.

From Montreal to Quebec the river flows with great velocity, but without any rapids. In Lake St. Peter \* fhips muft keep within a natural canal, from twenty to fifteen feet in depth; in other places the lake is only from four to fix feet deep. It is under contemplation to make a canal from China to Montreal, by which the interruption of the water conveyance from China to Montreal will be removed.

There are few or no fettlements between Kingston and St. John's, the chief place of the lower district of Upper Canada, about midway between Kingston and Montreal.<sup>+</sup> Between this place and Montreal they are rather more numerous, yet still few in number.

The right banks, belonging to England, are more thinly inhabited than the left. The few habitations you here meet with lie, almost all of them, contiguous to the river. Between Montreal and Quebec they stand more closely together. Even the inland parts are inhabited within three

SF

or

<sup>\*</sup> This lake is a part of St. Lawrence river. Its centre is fixty eight miles above Quebec, and two hundred and five north-eaft of Kingfton, at the mouth of Lake Ontario. Transfator.

<sup>&</sup>lt;sup>+</sup> St. John's belongs not to the lower diffrict of Upper Canada, but to Lower Canada. By an ordinance of the 7th of July, 1796, it has been established as the fole port of entry and clearance for all goods imported from the interior of the United States into Canada. *Tranflator*.

or four miles of the fhore ; and fo are almost all the borders of the rivers and brooks which fall into the ftream. To judge from the habitations and the mode of cultivation, these fettlements are the worst of any you meet with in the United States ; on the right fide of the river the plantations do not extend to fo great a distance into the interior of the country.

The foil is generally good, efpecially in the iflands. It bears a variety of fine trees and excellent grafs. The land in the ifland of Montreal is efteemed the beft ; while in other inhabited parts the price of the land is at most five dollars per acre, it costs in the ifland of Montreal from twenty to twenty-five. There are eftates in the vicinity of Quebec either fomewhat better cultivated than the rest, or furnished with a good dwellinghouse and out-buildings, the lands belonging to which bear a still higher price. Upon the whole there is but little land fold, either from the poverty of the inhabitants, or the difficulties attending a stale, for reasons which I shall detail in another place.

Agriculture is as bad in Lower Canada as it poffibly can be. In the vicinity of Quebec and Montreal no manure is known but stable dung, and even this the farmers used not long ago to throw into the river. What is here called cultivated land is, even on the banks of the river, neither more nor lefs than ground merely cleared in tracts of about forty or fifty acres, and enclofed with rough fences. In the midft of thefe tracts are fmall plots of cultivated ground fown with wheat, Indian corn, rye, peafe, and clover; they very feldom take up the whole fpace enclosed. The farmers are a frugal fet of people, but ignorant and lazy. In order to fueceed in enlarging and improving agriculture in this province, the English government must proceed with great prudence and perfeverance. For, in addition to the unhappy prejudices, which the inhabitants of Canada entertain in common with the farmers of all other countries, they also foster a strong mistrust against every thing which they receive from the English; and this mistrust is grounded on the idea, that the English are their conquerors, and the French their brethren. There is an all all and the state of the state have been efablished the the set of a state

and electronice for all goods imported from the mice for or the United States into Cashda

3 8

Stranglassie

There are fome exceptions from this bad agricultural fystem, but they are few. The best cultivators are always landholders arrived from England. Mr. Touzy, an English elergyman in Quebec, who arrived very lately from Suffolk in England, is now occupied in clearing and cultivating in the English manner from feven to eight thousand acres, which he holds from government, or at least a part of this grant. Should he be gifted with sufficient perfeverance to succeed, he cannot fail to become extremely useful to this part of the globe. In the mean while, it is a matter of general aftonishment in Quebec, that he should form any succeed eftablishments at so great a distance from the town, and yet this distance exceeds not fifteen miles.

On the road from Montreal to Quebec the dwelling-boufes are fome of them built with finall ftones, and others with wood plaftered over with lime, which abounds in the country; the infide of fuch of thefe buildings, as are inhabited by Canadians, is miferable and filthy. In most of them, which ftand along the road, and where of confequence the death of the King of France is known, you find his portrait, the print which reprefents him taking leave of his family, his execution, and his laft will. All thefe prints are fomething venerable to the Canadians, without impairing their attachment to the French.

Montreal and Quebec refemble two provincial towns in France; the former ftands in a pleafant and delightful fituation; the latter is feated half on the bank of the river and half on the adjoining rock. The lower part of the town is inhabited by the merchants and trade's-people, and the upper part by the military. From its position, encircled as it is with mountains, and from the works constructed to encrease its actual ftrength, Quebec belongs to the fortreffes of the fecond or third rank.

III

the

新聞

D

The military, it feems, enjoy in this city, on account of the prefence of the Governor-general, and of the great number of officers and other perfons attached to the army, the fame diffinction in fociety, which the merchants poffers at Montreal.

The Canadian gentry, who refide in towns, are much poorer than the English, invited hither either by confiderable pay, attached to their Sf 2 places,

# TRAVELS IN NORTH AMERICA, "I AMERICA,

places, or fome other valuable income. They live in general by themfelves; and as they fpend lefs than the English, the latter are apt to call them avaricious and proud; and the former fail not to return the compliment in a different manner. The English merchants are rich and hospitable.

In point of furniture, meals, &c. the English fashions and manners prevail, even in some of the most opulent Canadian families connected with administration. In other Canadian families of diffinction the French customs have been preferved.

The export and import trade of Canada employs about thirty veffels, and is merchy carried on with and through England. From an extract of the cuftom-houfe books for 1786, procured by Mr. Guillemard, the exports in that year appear to have amounted to three hundred and twenty-five thoufand one hundred and fixteen pounds, Halifax currency, and the imports to two hundred and forty-three thoufand two hundred and fixty-two. Since that year not only large quantities of corn have been exported, but the trade has, upon the whole, been confiderably encreafed by the great agricultural improvements made in both provinces, but effecially in Upper Canada.

The whole amount of a common harvest in Lower Canada is estimated at four thousand bushels, three fourths of which are confumed in the country. The principal *dep6t* of the peltry-trade is in Montreal.

I shall at the end of this article fubjoin fome fatisfactory information respecting this trade, extracted from a journal, the veracity of which is unquestionable.

The navigation of the River St. Lawrence is thut up by froft feven months of the year.

An iron-work on the Trois Rivières, and a diffillery near Quebec, are the only manufactories in Canada, and both in a very low ftate. The iron-work cannot even fupply Lower Canada with the neceffary articles; it belongs to merchants of Quebec and Montreal, who make no ufe of the machinery employed in England in manufactories of that defeription. The iron-ore is found in the neighbouring rivers, and alfo in grains on the furface of the toil. It is very rich, and known by the name of St.

St. Maurice ore. The work employs about twenty workmen, all of thera Canadians; they forge the iron into bars, manufacture tools for artifans, utenfils, pots, &c. and earn three quarters of a dollar a day, but are not boarded by the owners of the work.

In the diffillery whifky and geneva are diffilled, but very little of either. The number of workmen is very fmall ; their daily wages confift in two fhillings in money and board. The Canadians, like the inhabitants of the back country in the United States, manufacture themfelves all the clothes they want for their families.

The Roman Catholic religion forms the eftablifhed church in Lower Canada; the minifters are fupported by tythes and gifts, and out of the eftates acquired by the clergy. All the churches in the country belong to the Roman Catholic perfuafion, and are tolerably well frequented by the people. The clergy of the Epifcopal church are paid by the king; as well as the Protestant bishop, who is at the fame time bishop of Upper Canada. Divine fervice is performed by Protestants, in Roman Catholic churches or chapels, at Quebec, Montreal, and *Trois Rivières*. In the country there is no religious worfhip but according to the rites of the Roman Catholic religion.

A convent of Urfelines in Quebec, and another in Montreal, and a fociety of Charitable Sifters, who attend the hofpitals and lazarettoes, are the only nunneries of Lower Canada. The revenue of the hofpitals confifted in part of annuities, paid by the city of Paris, the payment of which was ftopped in purfuance of a decree of the French National Affembly; and this deficiency has not hitherto been made up in any other manner. Two Francifcans only, and one Jefuit, are remaining of the numerous convents of thefe orders which fubfifted here at the time of the conqueft of Canada. One of thefe Francifcans, it is afferted, has, in violation of the treaty, taken the vow fince that time, and the Jefuit is rather a prieft, who ftyles himfelf a Jefuit, than really a member of that religious community. By virtue of a grant of his Britannic Majefty, all the eftates in Canada, which belong to the Jefuits, go to Lord Amherft at the deceafe

ot

# TRAVELS IN NORTH AMERICA, ANT YE

of the laft member of that community in the province; and rumour fays, that the proceeds of these estates, enjoyed by the *foi-difant* monk, which amount to fifteen hundred a year, are the true cause of the enmity which subfifts between Lord Amherst and Lord Dorchester.

The feminary in Quebec is kept by a fort of congregation or fraternity, known by the name of the Priefts of St. Sulpice, who, prior to the conqueft, poffeffed three fuch houfes, namely, one in Siam, one in Pondicherry, and one in Quebec. Since that time the feminary fupports itfelf by its own means. The effates which it poffeffes are confiderable, at leaft in point of extent, and contain from fifty to fixty thousand acres; yet, as the feminary poffeffes not the right to dispose either of the whole or any part of them, and confequently cannot gain any advantage from these effates but by farming them out to tenants, who pay no more than about a buffel and a half of corn for every ninety or a hundred cultivated acres, the proceeds exceed not in the whole five hundred dollars per annum. The mill, which the feminary poffeffes in the Island of Montreal, is let for fomewhat more.

Befides the lectures on theology, which are delivered in the feminary, Latin is alfo taught, and the feholars are even inftructed in reading. This bufinefs is confided to young clergymen, who purfue their ftudies to obtain the order of priefthood, and are excufed from certain exercifes, without which they would not be qualified to take orders, on account of their being engaged in the inftruction of youth. This feminary forms the only refource for Canadian families, who wifh to give their children any degree of education, and who may certainly obtain it there for ready money.

Upon the whole the work of education in Lower Canada is greatly neglected. At Sorrel, and *Trois Rivières*, are a few fchools, kept by nuns, and in other places men or women inftruct children. But the number of fchools is, upon the whole, fo very fmall, and the mode of inftruction fo defective, that a Canadian who can read is a fort of phenomenon. From the major part of thefe fchools being governed by nuns and

\$18

and other women, the number of the latter, who can read, is, contrary to the cuftom of other countries, much greater in Canada than that of men.

The English government is charged with defignedly keeping the people of Cahada in ignorance; but were it fincerely defirous of producing an advantageous change in this respect, it would have as great obstacles to furmount on this head as in regard to agricultural improvements.

The feudal rights continue in the fame force in Canada as previoufly to the conqueft. The proprietors, or lords of the manor, have alienated or alienate the lands on condition of an annual recognition being paid by the tenants, which amounts to a bufhel or a bufhel and half of grain.

At every change, in refpect to the occupiers of land, except in a cafe of a fucceffion in direct lineage, the lord of the manor levies a fee of two per cent; and, in cafe of fale, he not only receives a twelfth of the purchafe-money, but has alfo the right of redeeming the eftate; he moreover enjoys the exclusive right of building mills, where all the people, who inhabit within the precincts of the manor, are obliged to have their corn ground.

The mills are fo few in number, that frequently they are thirty-fix miles diftant from the farms. The miller's dues amount to a fourteenth, according to law; but the millers are as clever in Lower Canada as elfewhere, and contrive to raife them to a tenth. The bolting is performed by the farmers in their own houfes. The mills are numerous in the vicinity of Quebec and Montreal, and belong to the feminary.

On lordfhips of the manor being fold, a fifth of the purchafe-money goes to the crown; all these fees and charges, it will be cafily conceived, greatly impede the fale of estates.

The administration of justice is exactly the fame as in Upper Canada. In this respect Lower Canada is divided into three districts. The penal and commercial laws are the fame as in England; but the civil law confifts of the customs of Paris, modified by the constitutional act of Canada, and by subfequent acts of the legislative power. Nineteen twentieths of all

all property, amenable before the courts of juffice, belong to merchants. Criminal offences are very feldom committed in Canada. The five thousand pounds, which last year were voted for the expence

of the legiflature, &c. are raifed by means of an excife on liquors. The climate in Lower Canada is rather dry, and very cold in winter; the fky is, at all times, beautifully clear and ferenc. In the months of January and February REAUMUR's thermometer flands generally at twenty degrees below the freezing point. In 1790 it fell quite below the feale, and the quickfilver retreated into the ball. In fummer fome days are exceffively hot, and the thermometer ftands at twenty-four degrees; this year it mounted to twenty-eight. The heat in fummer, it has been obferved, becomes more intenfe and continues longer, and in winter the cold grows more moderate than formerly. The climate is healthy; epidemical difeafes are very rare; but, on account of the fevere cold, cancerous fores in the face and hands are very frequent. The declination of the magnetic needle at Quebec is twelve degrees to the weft.

There exifts no incorporated municipality either at Montreal or Que-The police of these towns is managed by justices of the peace, who fix the price of provision, and direct every public measure relative to bec. this fubject. They also meet once a week for the administration of justice, and decide on petty offences.

As to charitable inftitutions, they confift in two hospitals, one at Montreal, the other at Quebec, and a lazaretto at the latter place. They are inconfiderable and badly managed, efpecially in regard to the abilities of the phyficians who attend the fick.

Throughout all Canada there is no public library, except in Quebec, and this is finall and confifts mostly of French books. From the political fentiments of the truffees and directors of this library, it is a matter of aftonifhment, to find here the works of the French National Affembly. It is fupported by voluntary contribution.

No literary fociety exifts in Canada, and not three men are known in the whole country to be engaged in fcientific purfuits from love of the feiences. Excepting the Quebec almanack, not a fingle book is printed in

in Canada. Meteorological observations are made with peculiar care, but only for his own amusement, by Doctor KNOTT, physician to the army, and a man of extensive knowledge.

Provifion is much cheaper in Lower Canada than in the United States; the price of beef is three or four *fous* a pound, mutton fix, veal five, and falt pork from eight to twelve *lous*. A turkey cofts from eighteen pence to two fhillings, a fowl from fix to eight *fous*, wheat from fix to feven fhillings a bufhel, oats three, Indian corn from five to feven, falt one dollar a bufhel, bread two *fous* a pound, and butter eight *fous* [money of Canada, reckoning the dollar at five fhillings.] Daylabourers generally earn in fummer two fhillings and fix-pence a day, women half that money; in winter the wages of the former are one fhilling and three-pence a day, and the latter are paid in the fame proportion as above. A man-fervant gets about five dollars a month. The rent for a good convenient houfe amounts in Quebec to one hundred and thirty dollars, and in Montreal to one hundred and fifty. The price of land has already been ftated.

The markets, both at Montreal and Quebec, are but moderately fupplied in comparison with the abundance in the markets of the large towns in the United States.

Mr. Guillemard in his journal affigns to the Canadians the fame character, which I have above delineated. The first class, composed of proprietors, and people attached to the British government, detest the French Revolution in every point of view, and feem in this respect even to outdo the English ministry. The fecond class of Canadians, who form a fort of opposition against the proprietors and gentry, applaud the principles of the French Revolution, but abhor the crimes which it has occasioned, without their attachment to France being in the least impaired by these atrocities. The third, or last, class love France and the French nation, without a thought of the French Revolution, of which they fearcely know any thing at all.

Lord Dorchefter bears the character of a worthy man, possefied of all the vanity of a darling of fortune. His Lady, who is much younger than

321

Tt

her

The fettlements form, as already mentioned, a large ftripe of about feven or eight miles in breadth on both banks of the river. The whole unfettled country appertains to the Crown, which is ever ready to make any grants that may be demanded; but the formalities, and refervations connected with them, deter many people from making applications for land. All the new fettlers come from New England.

On both fides of the road which leads from St. John's to Quebec, near Lake St. Peter, and in the vicinity of the towns of Montreal and Quebec, are fome Indian villages. One of them is Loretto, five miles from the latter place. The Indians of Loretto have attained, it is afferted, the laft stage of civilization, at least in point of the corruptness of morals and manners. No other Indian village can, in this respect, rival Loretto\*. These Indians, who on working-days dress like the Canadians, wear

on feafts and fundays their ufual drefs. They cultivate their fields in the fame manner as the whites, live like them, and fpeak the fame language; they are of the Roman Catholic perfuafion, and a curate refides in the village.

The fettlements, which carry a more Indian appearance than this village, are farther diftant, and not numerous. On defcending the River St. Lawrence, you meet with a more flaty foil, and in the vicinity of Thoufand Iflands with a range of rocks of granite. These is apparently confist of granite of a reddifh colour, well crystallized, and the chief component part of which is feldtspar. In Kadanoghqui, between Kingston and Thousand Islands, a species of steatite is found, confiderable veins of which are faid

\* Loretto, a finall village of Chriftian Indians of the Huron Tribe, north-weft of Quebec, has its name from a chapel built after the model of the Santa Cafa at Loretto in Italy, whence an image of the Holy Virgin has been fent to the converts here, refembling that in the famous Italian fanctuary.—Tranfl. to

to be difcovered in the neighbourhood. The reddifh granite of Thoufand Iflands is interfperfed with more perfect granite of a larger grain, which is very common in countries confifting of this fort of ftone, fuch as the Alps, the Scotch Highlands, and others of lefs moment, but of the fame defcription.

The rapidity, with which Mr. Guillemard defcended the River St. Lawrence, prevented him from examining the fpecies of ftone of which its banks are formed. But at Montreal he had fufficient leifure to enquire into the mineralogy of the country. It confifts, north of the River St. Lawrence, chiefly of lime-ftone; in the fouth, where the little populous village La Prairie is fituated, you find, befides a fort of chert, nothing very remarkable on this head.

The Ifland St. Helena, a little below Montreal, confifts of this ftone. On the banks of the river large maffes of granite, quartz, and pudding-ftone, are found, which feem disjoined from the beds to which they formerly belonged, and which cannot now be difcovered. The foil on the mountains is rich and fertile, and full of quarries of limeftone. Mines of pit-coal are faid to have been difcovered in thefe mountains.

The houfes in Montreal are mostly built of lime-ftone of a dark colour and very compact ftructure. It whitens in the fire, and affumes a greyish colour, when exposed to the air and fun.

The river Sorrel, after having left the bafon by Chamblee, flows along the foot of a broad and high range of mountains, called Beloeil. Between this river and the river St. Lawrence expands a vaft plain, on which neither a rock nor ftone is to be found. On digging up the ground you find to a confiderable depth ftrata of different forts of earth, fand, clay, vegetable earth, and in many places another kind of black vegetative earth, which bears a clofe refemblance to peat.

The fummit of the mountain Beleoil confifts of granite of a dark grey colour and a ftrong grain. It contains little mica, but much fchoerl. The declivity on both fides of the fummit confifts of flate of a very compact texture; fome pieces refemble bafalt in fhape and grain.

Tt 2

On defcending the Sorrel, you fee not a fingle rock, and the banks of this river, which the English at prefent call William Henry, confift of a fine micaceous loam.

If you crofs St. Peter's lake on your way to the Trois Rivieres, the ground rifes in a ftriking manner in the form of terraces; but no rocks meet your view. The fandy banks of the Trois Rivieres befpeak a poor foil, exhaufted by cultivation, and deprived of the vegetable earth. Marl of a blueifh colour has fortunately been difcovered under the fand, which has much contributed to reftore the fertility of the ground. This marl is of a fine grain, very compact and light; it lies above the level of the ftream below the town of Trois Rivieres.

A few miles thence, farther on in the country, are the only iron works in Canada; the ore is found in feveral places in the neighbourhood. It is bog-ore, and faid to yield very good iron.

Lime-ftone is found as far as Quebec ; its farther extent is not known. It is of various forms and qualities ; in fome places very hard and compact ; in others in the ftate of calcareous fpar. The colour paffes, by imperfect fhades, from a reddifh light brown to a dark blue, approaching to black.

South of the river St. Lawrence, near the bafon-falls, lime ftone is ftill found; but the ground confifts chiefly of ftrata of a black, clayey flate, of a fine grain, interfperfed with beds of lime-ftone. The conglomerations, which form the banks of the river, are of the fame nature as the adjoining ftrata, intermixed with different forts of fchoerl and granite, which must have been washed to this fpot from more elevated parts of the country.

The rock, on which stands the citadel of Quebec, is called the Diamond-rock, on account of several of its fiffures and cavities containing spars, which by ignorant people are esteemed precious stones. This rock confists chiefly of strata of lime-stone, which is in general very compact, and of a dark grey colour.

Over the plain lying farther up the country, called Abram's-plain, lime-ftone and large maffes of granite are fcattered, which are peculiarly remarkable

.324

remarkable on account of the great quantity of schoerl they contain. Near the river you find various forts of pebbles, free-stone, granite, quartz, with some flate and lime-stone.

In Wolfslove the ftrata of ftone confift of a black flate, forming an obtufe angle with the horizon. In the vicinity of Quebec most of these layers have a more perpendicular direction towards the furface of the earth, than in more western countries. The high mountains north-east of Quebec are faid to confift of granite. Mr. Guillemard has not feen them; near the falls of Montmorency and fomewhat farther up, the ftrata confift of lime-ftone, and their direction runs nearly parallel with the horizon.

# Accounts of the Fur-trade, extracted from the journal of Count ANDRIANI, of Milan, who travelled in the interior parts of America in the year 1791.

The most important places for the fur-trade are the following, viz. Niagara, Lake Ontario, Détroit, Lake Erie, Michillimakkinak, Lake

0,			Linne	Tarres TATT	chillingaanaa,	Lake
Huron, yielding	-	-	-	1200	bundles mixed po	eltry.
Michipicoton		-	-		bundles fine pelt	al prove the second
Pic	. Sector	1-10	-	30	ditto.	in the second
Alampicon	-	-	-	24	ditto.	
Near the great carr	ying-pl	ace or po	rtage	1400	ditto.	
Bottom of the lake		-	-	20	ditto.	
Point of the lake	-	-		20	ditto.	
Bay of Guivaranun	-			15	ditto.	

The fkins of beavers, otters, martens, and wild cats, are called fine. peltry.

Mixed peltry are furs, confifting of a mixture of the finer forts with a larger number of fkins of wolves, foxes, buffaloes, deers, bears.

The fineft peltry is collected north-weft of the lakes in the British dominions; the furs grow coarfer in proportion as you approach nearer to the lakes.

This fur-trade is carried on by a company, known by the name of the North-west Company, and two or three other small companies.

The north-weft company, which is generally effected a privileged company, has no charter; for the preponderance, which it enjoys in this trade, it is merely indebted to the large capital, which it employs in the trade, to the unanimity of the members, to their unwearied exertion, and to the monopoly, which the company has appropriated to itfelf in confequence of the above circumftances.

: Its formation took place in the year 1782, and originated from the commercial operations of fome eminent merchants, who ufed to carry on the trade in the country, fituated beyond Lake Winnipey, and efpecially of Meffrs. FORBISHER and MACTARISH, who refide at Montreal. The fignal fuccefs, which this company met with, foon excited the jealoufy of other merchants, and ere long three different companies made their appearance at the great carrying-place, and rivalled each other in the purchafe of furs with a degree of emulation, which could not but prove highly detrimental to themfelves and advantageous to the Indians. The northwest company, being more opulent than the rest, made use of its wealth to ruin its competitors; no ftone was left unturned; the agents of the company's rivals were bribed and feduced; and the animofity between the different traders rofe to fuch a height, that they frequently proceeded to blows. This petty warfare, which coft feveral lives and large fums of money, at length opened the eyes of the rival companies. They became fenfible of the neceffity of uniting in one body, and the north-weft company, effentially interested in preventing any further molestation of this trade, made feveral facrifices, to attain this end. They formed a connection with different members of the other companies, admitted other merchants to a fhare in their trade, and thus fecured their extensive commerce with the country fituated north-weft of the lakes, the only fpot where fine peltry can be had in abundance.

Several thousands of Indians formerly conveyed their furs to the great carrying-place. But at prefent the company fend their agents a thousand miles into the interior parts of the Indian possession. It frequently

quently happens, that these agents continue there two years, before they return with the peltry, they have purchased, to the great carryingplace.

The company employ about two thousand men in carrying on this traffic in the interior of the Indian country, which is, however, fo extremely barren, that whatever articles these agents stand in need of either for their cloathing or subsistence, must be sent thither from Montreal with confiderable difficulties and trouble, and, of confequence, at an exceffive price.

Near the great carrying-place, where all these agents meet, and which is the central point of this trade, stands a fort, which is kept in good repair, and garrifoned with fifty men.

The post of Michillimakkinak is the rallying-point of the different Canadian merchants, who do not belong to the north-west company. Their agents traffic only with fuch parts, as are feated west and fouth-west of the lakes, and where the furs are of an inferior quality. They carry on this trade in the fame manner as the north-west company, but as these fmall companies are less opulent than the former, their agents penetrate not fo far into the interior of the country, as those of the north-west company.

The agents fet out from Montreal in the month of June, and are fix weeks going to the fort near the great carrying-place. They embark at Montreal in boats, forming parties of eight or ten perfons, proceed on the river St. Lawrence from China to the Lake of the Two Mountains; defcend the river Utacoha; crofs Lake Nipiffing; pafs by the French River into Lake Huron; proceed to Fort Michillimakkinak; and thence to the great carrying-place.

This way is fhorter by a hundred miles than that by the lakes, but you meet with thirty-fix carrying places, feveral of which lie acrofs rocks, over which the boats as well as the cargoes muft be carried on the backs of the paffengers, and that with great precaution, on account of the narrownefs of the roads. The boats are but of four tons burthen; they are navigated

14

gated by nine men, cost twenty-eight Louisd'or each, and ferve but for one voyage.

The fhips, employed in the paffage across the lakes, are from one hundred and twenty to one hundred and thirty tons burthen. Flat-bottomed veffels of fifteen tons are also made use of for this purpose, which are easily managed by four or five men, and are very durable.

Notwithstanding the advantages, offered by this paffage, the former route is preferred for the fur-trade, becaufe, although it is attended with much trouble, yet it admits of the day of the departure as well as of the arrival being fixed with certainty and exactness, which point, on account of the wind, cannot be attained on paffing over the lakes, and yet is of the utmost importance for the Canada merchants, as they must neither miss the period of receiving the furs from the interior of the Indian territory, nor that of expediting them for Europe; the navigation of the river St. Lawrence not being open for a long time.

About the end of June the agents of the company, fent into the interior to trade with the Indians, caufe the articles purchased to be transported to their place of rendezvous.

At this time upwards of one thousand men are frequently assembled in Michillimakkinak, who either arrive from Canada to receive the peltry, or are agents of the company and Indians, who affist the former in conveying thither the furs, they have bought.

As the trade of the north-weft company is far more important, than that of the other traders, the number of people, affembled in the fort near the great carrying-place is of confequence far more confiderable at the time of the delivery of the fkins; in this place there is frequently a concourfe of one thousand people and upwards.

The method, obferved by the agents in their traffic with the Indians, is this, that they begin with intoxicating them with rum, to over-reach them with more facility in the intended bufinefs. The agents carry on this traffic in those villages only, where there are no other merchants.

It is a circumstance, worthy of notice, that an ancient French law, enacted

enacted at the time, when Canada belonged to France, prohibits any rum to be fold to the Indians by the agents on pain of the galleys. Hence originates the cuftom, ftill obferved at this day, of giving it away; yet this is not done without exception, for many agents fell their rum.

The one thousand four hundred bundles of fine peltry, from the great carrying-place, which according to the price, paid to the petty traders in Montreal, who collect them in fmall numbers, are valued at forty pounds fterling each, and which by the company are fent to London, fetch there eighty-eight thousand pounds fterling. They form about a moiety of all the fine peltry, yearly exported from Canada, without taking into the account the furs fent from Labrador, from the bay of Chaleurs and Gaspe or Gachepe.

For thefe one thousand four hundred bundles the north-west company pay about fixteeen thousand pounds sterling, and for the proceeds thereof fuch articles are purchased in England, as the Indians are fond of receiving in exchange for their peltry, and the chief store-house of which is at Montreal. As the accounts relative to this trade are generally kept in Canada in French money, the above sixteen thousand pounds sterling must be computed in the same manner, as this actually has been done by Count Andriani in his journal.

1. Commodities purchased in England

- liv. 354,000

- 3. Pay for one thousand one hundred men, who are employed in the traffic in the interior of the country, and who pass the winter there, without returning to Montreal; one thousand eight hundred livres for each

1,980,000

4. Pay for one thousand four hundred men, employed in defcending the river with the boats from the great portage

Total amount of all the expence, incurred by the company for one thousand four hundred bundles fine peltry - *liv.* 2,776,000

On comparing the eighty-eight thousand pounds fterling, which the fale of these furs produces in London, with these two millions seven hundred and seventy-fix thousand livres, it should seem, that the company suffains a loss of fix hundred thousand livres Tournois. But this loss is merely apparent, as will be obvious from the following statement.

The pay of the men, employed in the trade, as mentioned in the above account, is merely nominal; for excepting the forty guides and one thousand four hundred men, who are employed in ascending and defcending the river with the boats, who receive half their wages in cash, all the reft are paid entirely in merchandize, which at the great carryingplace yields a profit of fifty per cent.

The merchandize, imported on behalf of this trade to the above amount of three hundred and fifty-four thoufand livres, confifts of woollen blankets, coarfe cloths, thread and worfted ribbands of different colours, vermilion, porcelain bracelets, filver trinkets, firelocks, fhot, gunpowder and efpecially rum. In fort Détroit thefe articles are fold for three times their ufual value in Montreal, in Fort Michillimakkinak four times dearer, at the great carrying-place eight times, at Lake Winnipeg fixteen times; nay the agents fix the price ftill higher at their will and pleafure.

As the men, employed in this trade, are paid in merchandize, which the company fells with an enormous profit, it is obvious at how cheap a rate these people are paid. They purchase of the company every article, they want; it keeps with them an open account, and as they all winter

winter in the interior of the country and beyond lake Winnipeg, they pay, of confequence, exceffively dear for the blankets, and the clothes, which they bring with them for their wives. Thefe menial fervants of the company are in general extravagant, given to drinking and excefs; and thefe are exactly the people whom the company wants. The fpeculation on the exceffes of thefe people is carried fo far, that if one of them happen to lead a regular, fober life, he is burthened with the moft laborious work, until by continual ill-treatment he is driven to drunkennefs and debauchery, which vices caufe the rum, blankets and trinkets to be fold to greater advantage. In 1791, nine hundred of thefe menial fervants owed the company more than the amount of ten or fifteen years pay.

This is in a few words the fyftem of the company, at the head of which are Meffrs. Forbifher and Mactarifh, who poffers twenty-four fhares of the forty-fix, of which the company confifts. The reft, divided into fmaller portions, are diffributed among other merchants in Montreal, who either transfact bufines with the company, or otherwise do not concern themfelves in their affairs.

The north-weft company is to fubfift fix years: at the expiration of which time the dividends are to be paid to the fhare-holders; until that time they remain with the capital.

That

That branch of this extensive trade, which is carried on by fmall companies in fuch parts, as are fituated below the lakes, is likely foon to fall into the hands of merchants in the United States, as the free navigation of the Miffiffippi, ftipulated in the treaty with Spain, opens a more expeditious, a fafer and lefs expensive outlet for these commodities, and a more eafy importation by New Orleans to all the marts of the United States.

Chocolate	-	129

Sum total, £. 127,616

An exact account of the value of piece-goods has not yet been made out in a regular manner; but in purfuance of an order of Lord Dorchefter, the fum total of the value of all imports was by the merchants, upon a four years average, determined in the following manner, viz.

Amount of the above fum	- £. 127,616		
Merchandize for Quebec	- 99,700	0	0
Ditto for Montreal	- 97,800	0	0
Amount total of Imports	£. 325,110		
Exports	343,214	9	0

Balance in favour of Canada  $f_{s}$ . 18,098 9 0

To the above imports is to be added the value of fix thousand feven hundred and nine barrels of falt pork, and of one thousand feven hundred

dred and fifty-four firkins of butter, of about fifty or fixty pounds each, for the use of the military.

The imports in the following years 1787, 1788, 1789, 1790 and 1791, were nearly of the fame value, with a difference of about five or fix thousand pounds sterling more or lefs.

At the close of this fhort account of the trade of Canada I fhall here repeat once more, that it is a faithful extract of the journal of Count Andriani, of which a friend of his, to whom he had communicated it, permitted me to make ufe. The abilities and character of Count Andriani, as well as the facility, with which he was able to make his refearches purfuant to the direction of the British government, infpire great confidence in the exactness of the information, which he has collected. I have not been able myself to substantiate the veracity of his accounts; and besides it is easily understood, that fince the time, when he wrote, fome alterations may have taken place, in point both of the quality and the value of the exports and imports.

# JOURNEY FROM UPPER CANADA TO BOSTON.

# DEPARTURE FROM OSWEGO.

N Sunday, the 26th of July, the day after our arrival at Ofwego, we learned from the officers, that during the harvest the American fhips fail lefs frequently, than at other times, and that probably we fhould have to wait for one feveral days. We underftood at the fame time, that the best plan we could adopt was, to walk twelve miles farther on, in the hope that the fettlers, who live there, would accommodate us with a veffel. Being both impatient to quit the English dominions, and afraid to incur too great an expence by hiring a whole ship for ourfelves, we were walking, in some degree of perplexity, on the bastion along the fhore, when we discovered a veffel approaching. The foldiers, who have learned hatred and contempt of the Americans along with the manual exercife, perceiving the attention, with which we observed her approach, faid to us, "Why, gentlemen, that is nothing; fhe is but a veffel of the d-d Yankees;" and it was exactly a veffel of the Yankees, we wished to obtain. Mr. VANALLEN, an American, who refides in the vicinity of Albany, commanded the veffel; he came on fhore fhortly after, to procure fome fresh provision, of which he stood in need to cure himfelf of an intermittent fever, that he had caught in the woods. From want of an inn, he had no opportunity of buying any at the fort; the officers might have eafily fupplied him with fome vegetables; but in the opinion of a British officer, it is neither necessary nor decent to fuccour a Yankee.

Mr. Vanallen, although thus difappointed in his hope of finding in Ofwego the neceffary fuccour for his recovery, yet promifed us two places in

in his veffel. He could not however fet fail for Albany fooner than the next day, or perhaps in two or three days, after having been joined by three other veffels, which he expected, and in queft of which he returned to a certain point on the lake. We were thus furnifhed with a certain opportunity of quitting Ofwego, and the eagernefs, with which we embraced it, could not but convince our guefts of our earneft defire of making all poffible hafte. The certainty of our fpeedy departure infpired us with patience. The Englifh officers, who entertained more liberal fentiments towards us, than to the Yankees, peremptorily infifted on fupplying us with provifion; and this they did with a generofity, which perfectly anfwered the kind reception, we in general experienced on their part.

Two whole days had in the mean while elapfed, and the third began to prefs heavy upon us, when, being alone in the fort, while Dupetitthouars and the English officers had gone on a hunting and fishing party, I at last descried two veffels with my telescope, which was constantly pointed to the coaft, whence I expected my deliverance; my effects were foon packed up and my ftores collected. Whether these veffels belonged to Mr. Vanallen or any other perfon, we were determined to feize upon the first opportunity of departing from Ofwego. It was Mr. Vanallen; he had been joined but by one of the veffels, and had refolved not to wait for the reft: yet as it was already noon, as his veffels were heavy laden, and the rapids two miles from Ofwego, which he was obliged to pass, would have detained him too long to make much way the remainder of the day, he propofed to us, to follow him on foot, at four o'clock the next morning. We thought it better, to fhare his tent with him that very evening, and the certainty of quitting Ofwego in the afternoon made us far more happy, than all the attention of the British officers, on which we can hardly beftow fufficient praife, had been able to do. They carried their politeness fo far, as to attend us to our night quarters, and on taking leave, gave us fuch proofs of friendship and attachment, as we cannot but acknowledge with unfeigned gratitude.

The

The mulquitoes, which teafed us fadly, were not able to make us repent our refolution of joining Mr. Vanallen that very evening; and although we did not lie down to reft the whole night, yet we heartily rejoiced in being no longer fubjected to the fceptre of his Excellency the Governor-general of the two Canadas.

# JOURNEY FROM OSWEGO TO THE FALLS.

We fet out at break of day, and yet were not able to advance more than ten miles, the whole day. The navigation of the river Ofwego is extremely troublefome, as there is but very feldom fufficient water, even for pushing the veffel along. Each of our veffels, it is true, carried about one ton and a half, but each was worked too by three men. Befides Dupetitthouars affifted the men in our veffel with the utmost zeal; he pufhed as much as they did, and paffed like them three-fourths of the day in the water, to lift the veffel, that fhe might more eafily clear the rocks and large ftones, with which the river is filled, and which the would not have been able to pass over in any other manner. In five or fix places the strength of a fingle ship's company was not sufficient to keep the veffel afloat, but the men of both veffels were obliged to join for that purpofe. Ships lefs deeply laden, than ours, are faid to proceed with more facility, especially in descending the river, when the current affords fome affiftance. In autumn and fpring the encreafed mais of water is also faid to remove the impediments, which at prefent obstruct and retard the navigation. It may be fo ; yet a navigation, which is practicable only for two months in the year and in defcending the river, and at the fame time affords at prefent the only known outlet for the exportation of all the productions, and the fole inlet for all the provision, which is imported from the other fide of the lake, cannot in any refpect be compared with that of the river St. Lawrence, however imperfect it may be. The State of New York, to whofe territory this rivernavigation belongs, and for which it is of much greater importance, than for any other state, will no doubt make all possible exertion to facilitate

tate it. A project of this nature is, I underftand, already under contemplation, but how far will it be poffible to execute this important enterprife? This is a queftion, which cannot be decided, but after a long and mature confideration of all the obftacles, which it will be neceffary to furmount. To have ftarted it, is fufficient for being aware of the great impediments, by which it is obftructed.

During this whole day's journey nothing remarkable came within our view. There is no fettlement between Ofwego and the Falls. You pafs by an ifland, which has taken the name of Brefwit from a French officer, who in the feven years war obtained here an advantage over a combined corps of Englifh troops and Indians. The ifland is throughout covered with wood, and fo is the whole country, through which we have hitherto paffed. Two miles from the falls ftands a houfe, which appertains to Mr. VAN VERBERG, a Dutchman, who is charged in the country with giving information to the garrifon of the finugglers who intend to run any commodities into the province in the night, and with being an Englifh fpy in regard to deferters. This charge, which, by what we learned in the fort, feems to be founded, is fo generally credited, that laft year, in confequence of the rumour of an impending war between America and England, he was obliged to take refuge in the fort againft the revengeful projects of his neighbours.

At the place, where the navigation is intercepted, we halted at WIL-LIAM SHORTEN'S. He keeps an inn, that is, he admits into one room of his houfe all the travellers, who defire to fleep there, and accommodates them with falt pork and rum; which is the moft he is able to do. We arrived there, at nine o'clock in the evening, wet to the fkin; for fuch of us, as had not been drenched by pufhing and drawing the fhip along, were foaked by the conftant rain. We dried ourfelves at a good fire; and a few flices of ham, we had brought with us, reftored our ftrength. Dupetitthouars fhared with me a very indifferent bed, which however we found extremely comfortable. From exceffive fatigue I conquered the extreme averfion, which I always feel when I am obliged to fleep in

Xx 2

the

the fame bed with another perfon, and became infenfible of the inconvenience of fleeping in fo narrow a room among fo many people and with fo great a noife.

# OSWEGO FALLS AND PENIERS.

The portage, occafioned by the falls of the river Ofwege, is about a mile in length. W. Shorten, at whofe houfe we ftopped, kept only a yoke of oxen, and our two veffels were heavy laden. Each veffel was to be conveyed feparately, and the cargo required four turns of the carriage. The Americans not being anywife remarkable for fpeed and agility, it was not until five o'clock in the evening, that our veffels had reached the place, where the navigation recommences, and where they were again to be loaded. Here a quarrel arofe between our commander Vanallen, and the two mates, who were in his fervice, but quite intoxicated. They used him very ill; he fwore at them, and they returned the compliment by calling him all the ill names, which their well-ftored memory would fupply. This quarrel was fcarcely half accommodated, when another man arrived from the neighbourhood, demanding from Mr. Vanallen fome money, which, he faid, was due to his fon, who for fome time had ferved on board his veffel. This difference, however, was foon fettled on friendly terms; Vanallen conducted us into night-quarters at his adverfary's, and facrificed to this reconciliation fome miles, which we fhould have been able to make the fame evening.

This time we had not even a bed. Our party, our fkippers, landlord, wife, fons and daughters flept all pell-mell in a room, which was about twelve feet fquare. And unfortunately we were not fufficiently fatigued, having travelled but one mile on foot and one mile and a half by water, to find the floor foft, and to be infenfible to the ftings of the mufquitoes and the bites of fleas.

Mr. Vanallen, in whofe veffels we took our paffage, is member of the Congress for the county of Albany in the state of New York. He is also a geometer and surveyor. His age, and, no doubt, his talents, seem to have

have procured him the confidence of his country. He is charged with the commiffion of furveying upwards of half a million of acres, fituated on Lake Ontario and the river St. Lawrence, nearly oppofite to Carlton Ifland, which belong to Meffrs. CHASSANG, REY, DE CHAUMONT, Coxe and Company. He began laft year to execute this commiffion; but was much impeded in the progrefs of this bufinefs by the ficknefs of moft of the affiftant furveyors, employed under him, and was further prevented from completing it by the confiderable declination of the magnetic needle in the vicinity of fome rocks. He was himfelf feized with a fit of the ague, with which the whole country is infefted, and which is caught by wandering through the forefts, as well as by inhabiting the banks of rivers. Mr. Vanallen is juffice of the peace, and for this reafon ftyled 'Squire by his people, if he do not fwear at them. He is about fixty years old, is faid to poffefs a tolerable fhare of information, and feems in fact to be a worthy and intelligent man.

All the fettlements in this part of the country are in an infant ftate. W. Shorten, at whofe houfe we ftopped the first night, fettled here as late as last fpring. He bought his eftate three years ago for three pence an acre, and can now fell it for twelve shillings. He posses three hundred acres, ten of which are fearcely cleared, and these are fituated on the right bank of the river. That which lies on the left is Soldiers' land, as it is called, that is, it has, fince the peace, been distributed among foldiers by the state of New York. PENIERS, at whose house we remained the fecond day, bought two years ago a state of this land from a foldier, to whom it had been given, for three shillings an acre.

The Ofwego fall is about ten feet high; and the river nearly one eight of a mile in width. The profpect is not without charms. A break of the bed of rocks, from which the river precipitates itfelf, and the irregularity of the form, produce a tolerably firiking, but not a grand effect. On the right bank, near the water-fall, are found the traces of an ancient French entrenchment, and hard by them ftands a finall log-houfe, the proprietor of which is at prefent building a grift-mill below the fall,

reactor and start morning as more reactor the more than THREE

# THREE RIVERS POINT AND 'SQUIRE BINGHAM.

There exift few unpleafant fituations in this world, which may not be confidered in a lefs unfavourable point of view; an exercife of imagination, with which, for fome time paft, I have tolerably familiarifed myfelf. The benefit arifing from a bad refting-place is the acceleration of the moment of departure. Mr. Vanallen, who fatisfied Penier's demand with many careffes of the little ones, with compliments to the grown up members of the family, and with a finall prefent of chocolate for Peniers himfelf, haftened to fet off. We went on board before five o'clock in the morning. After a navigation, which ran conftantly between woods, and in the courfe of which we faw, in a tract of country of eleven miles in length, not one felled tree, we reached at laft, partly by rowing, and partly by pufhing the veffel along, the rapids of the Three Rivers. All fuperfluous people were here obliged to leave the vefiel. Mr. Vanallen, therefore, as well as myfelf, went on fhore, and repaired to a fmall cottage, where we found a family, but very lately recovered from the ague, and at prefent bufied in mowing a meagre looking field of wheat. These good poople, who have no neighbours, are neceffitated to do every thing themfelves. Of eight children, who compose this family, the oldeft, who is nine years old, is alone able to affift them a little. They have neither rakes, harrows nor fcythes; and yet it is better to facrifice three fourths of their harvest, than to lose the whole. These poor people, who have lived here a twelvemonth, were conftantly troubled with the They poffeffed one thousand two hundred acres of land, fix ague. hundred of which were, by the ftate of New York, given to the hufband, who had ferved in the army, and the other fix hundred he purchafed two years ago for ten fhillings an acre, but was compelled by extreme diftrefs to fell again three hundred, with the finall profit of two thillings per acre. The good people cultivate a garden ; they exchanged fome vegetables for a few pounds of pork, with which Mr. Vanallen was readier to accommodate them from an opinion, that his recovery depends

depends on the use of fresh provision. They seem to be good and industrious people; the wise, though mother of eight children, and scarcely recovered from the ague, is yet handsome. They presented me with some potatoes and cucumbers, and declined accepting any payment.

After the rapids had been paffed, not without confiderable trouble, we returned on board, and purfuing our voyage with lefs obftruction than before, we at length reached the point, where the Ofwego river joins the Onondago, which proceeds from the fmall lakes, changes its name, and affumes that of the river Oneida. These appellations should rather be reverfed. As we worked up the stream, the river Oneida flowing out of the lake of that name, meets the Onondago, which falls into it, and is now called Ofwego; but I write as I travel.

The whole tract of land, which we have traverfed fince we left Ofwego, lies in the county of Onondago, which extends as far as Lake Oneida, contains nearly one million eight hundred thousand acres of excellent land; and yet, according to the last computation, has no more than three thousand inhabitants.

The Three Rivers Point, which is the name of this place, is a very interefting fpot. The navigation, by which the provision from the diffrict of Geneffee is conveyed across the lakes, and the falt from the brinefpring, near the borders of Onondago, here joins that by which the provision is procured on the Mohawk River from Albany and all the caftern provinces. The navigation between Albany and the Lakes of Geneffee has hitherto been far more frequent than from any of thefe points to Lake Ontario. But the time cannot be diftant, when this fpot, where at prefent ftands no building but an inn, will become the fite of an important town. As yet, it is one of the most unhealthy spots in a country by no means remarkable for falubrity. Our 'Squire, who had purchased in Kingston flour for fix dollars a barrel, and pork for fixpence a pound, and from the connivance or extraordinary blindnefs of the English officers, conveyed it to the River Ofwego, thought now of felling it here with confiderable profit. He had already disposed of some barrels of flour for eight dollars a barrel at the Ofwego Falls, and intended to transmit his whole

# 1. TITOT TRAVELS IN NORTH AMERICA, CANT 12

whole cargo to Saltfprings, where he hoped to fell it for ten dollars a barrel. But he learned here, that the meeting, relative to the treaty with the Indians, was not to take place; that the country was full of provifion; that it was fold at a much lower price than he demanded; and that fpecie was very fcarce. He was, therefore, neceffitated to give up his fond hopes, and embrace the refolution of proceeding fomewhat farther in queft of purchafers.

I entertained fome hope that, on account of this difappointment, we fhould this afternoon proceed fome miles farther, when a veffel arrived, on board of which were Meffrs. RENSELAER, HENRY, and STOUTS, all inhabitants of Albany of great respectability. The first was not yet perfectly recovered from a fever, which had left him in fome measure, but ftill carried all the fymptoms of an intermittent. These gentlemen intended not to proceed farther. Mr. Vanallen proposed to delay his departure until the next morning, to travel in their company; he introduced us to them, and a glass of good wine, which they carried with them (they travelled all much at their ease), confoled Dupetitthouars as well as myfelf for this new delay.

Every one in the houfe was ill. The landlord, another 'Squire, was juft recovered from the ague; but his wife was ftill indifpofed with it, and in bed. His children and fervants were in the fame fituation, and fo was a pretty young woman, about twenty years old, whom we fuppofed to be married, becaufe fhe fuckled an infant of two months; but this, alas! was the unfortunate offspring of her love for a young man, who, under a promife of marriage, had feduced and afterwards deferted her. All thefe people lay ill in the room where we were to dine and fleep; for it was the only room in the houfe. The new comers, who brought with them a very tight tent, declared that they would rather pafs the night under this tent, than breathe the noxious air of this houfe. Mr. Vanallen, ftruck with a dread of a relapfe of the ague, ordered his tent, which confifted only of his fail, to be pitched on the banks of the river; and we wrapped ourfelves up, as ufual, in our blankets.

I had just fallen asleep, when I was waked by the landlord, who called

me Doctor. Having observed, in the course of the day, that I concerned myfelf about his patients, and carefully enquired into the particulars of their indifposition, and their treatment, he concluded that I must needs be a phyfician. "Doctor," faid he, " for God's fake, get up ! unlefs you immediately relieve the young woman fhe will certainly die. The Doctor, who was here eight days ago, left her fome medicine, which was to laft till this day, and he faid would cure her. She is much worfe now, and the medicine is all gone. Pray do give her fomething, that fhe may not die." Though I was a long while debating with myfelf, whether or no I was to accept the title of Doctor, and at length affured him, that I had no claim to that title, yet 'Squire BINGHAM, miftaking my modefty for ill-nature or drowfinefs, infifted on my administering relief to the young woman. Fortunately it fo happened, that in my faddle-bag I had fome James's powder, which Mr. BORDLEY was fo kind as to procure me before my departure from Philadelphia. From an opinion, that in these desperate circumftances it might perhaps be of fervice, I declined with lefs obftinacy to anfwer the confidence repofed in me by the good man. He conducted me to the bed of the patient, who, I found, was fwoln, covered with petechia, and delirious ; under these circumstances my James's powder could do no harm. But unfortunately I had loft the printed direction, pointing out the dofe, a correct knowledge of which I ftood much in need of, as I had never before feen it ufed, and this was the reafon why Mr. Bordley gave me the above direction. By fhewing any irrefolution I fhould have leffened the confidence, which, though very undefervedly placed in me, I wished to preferve. With a tolerable degree of affurance I gave her twenty grains in a glafs of Madeira, which the patient took with implicit confidence. Four hours had fcarcely elapfed, when the enraptured 'Squire waked me again, to announce the good fuccefs of my prescription. It had produced a strong perspiration and evacuations, which the Phyfician of Onondago had, thefe eight days paft, in vain endeavoured to procure. On the following morning, previoufly to my departure, I gave her ten grains more, left her another dofe, and departed loaded with the bleffings of the unfortunate young woman, who kiffed my hands,

345

Yv

my

my coat, and would not let me go. I gave Mr. Bingham, who confulted me alfo, fome bark, and left Three Rivers Point, carrying with me the thanks of all the people in the house, leaving behind a diffinguished reputation for medical talents, and enjoying the happiness of having accidentally done fome good by my advice. The unlucky ftars of the young woman, whom Mr. Bingham took into his houfe eight months before, had conducted her feducer into the inn, who aggravated his former offence by using her ill in her present situation. He arrived on board a veffel bound for the diftrict of Geneffee, whither he was going in queft of labour ; and his conduct had thrown my poor patient into convulsions, which my powder completely conquered. On my return to Philadelphia, it will be eafily conceived, I ceded all the honour of the cure to Mr. Bordley, who made me fhudder at the medical experiment I had made. He told me, that in no cure whatever James's powder fhould be given in a larger dose than seven grains; but I had faved the poor woman, whose life, by a strict observance of the printed direction, might perhaps have been loft.

The fpot, on which the inn ftands, belongs to 'Squire Bingham, who alfo poffeffes a few acres contiguous to the building, and a confiderable quantity of land at fome diftance from it. All thefe lands would be tolerably good, but for their marfhy, low, and flat fituation, which exposes them to frequent inundations. The water is abominable; and the air bad.

# ROTTERDAM AND LAKE ONEIDA .- MR. DE VATINES.

The paffage to Lake Oneida was attended with lefs difficulties, than that of the preceding days; we found it excellent, travelling in the company of the gentlemen of Albany, one of whom was brother to the Deputy-governor of New York, the fecond one of the richeft merchants of Albany, and the third a very refpectable lawyer; their behaviour was frank and polite. We ftopped at Fort Brompton at the entrance of the lake. This ftructure alfo is furrounded with pallifadoes, erected laft year; it ftands at the foot of an ancient entrenchment, conftructed by the

the English during the American war, on an advantageous ground, commanding the entrance of the lake. The work was thrown up in a zigzag figure; but from the remains no distinct idea can be formed, how the cannon could be pointed to advantage. All the antiquities of this country confist in the remains of forts, built in the wars of 1776 or 1756. Fancy must live in future ages, to find occupation in this infant country; past ages can exist here only for generations not yet born.

The proprietor of the houfe had gone to Rotterdam three days before. A girl of fourteen was left behind to take care of the houfe, and of a little brother, who was fick, and whom fhe actually nurfed with a folicitude truly affecting. The girl, poor thing, did all the could for our accommodation, but nothing was to be procured. We fhould have been obliged to content ourfelves with a few fmall potatoes, which we pulled up in the fields, if the Indians, who were encamped on the oppofite bank of the river, had not brought us a large pike, which they had caught in the morning with a harpoon.

Our feamen, worn out with fatigue, refused at first to proceed the fame. evening to Rotterdam, ten miles farther up the lake. But from the fcantinefs of our provision, they altered their mind, thinking, that they might be better off in that place. Rotterdam is an infant fettlement, formed but ten months ago. Mr. SCHREIBER, a rich Dutch merchant, poffesses a large tract of land, extending from Lake Ontario to Lake Oneida. He fixed upon the mouth of Bruce-creek as the fite of the chief place, and another fettlement he has formed on Little Salmon-creek, two miles from Lake Ontario. Bruce-creek continues navigable fome miles farther up. Mr. Schreiber has made a road from Rotterdam to his new town; but all these settlements are yet of no importance. The whole city of Rotterdam, to which the founder has given that name in honour of his native place, confifts of about twenty houfes. The dams, which he conftructs for two mills he is building, have coft him confiderable fums of money; hitherto he has proved rather unfuccefsful in the conftruction of thefe dams, and has feveral times been neceffitated to recommence them a-new. The grift-mill is not yet finished; the dams feem not to be of fufficient Y y 2 ftrength

# TRAVELS IN NORTH AMERICA, TERT YE

ftrength for the mass of water, which they are destined to enclose and direct. Some very expensive works, which he has erected at the entrance of the creek, have contributed but very little to render them more commodious. The money, which Mr. Schreiber has expended on buildings and roads, is estimated at eight thousand dollars. If they were constructed on good principles, this money would have been well fpent. He is now building a handfome houfe of joiner's work, where he intends to keep a ftore, in company with two partners, who are to manage this concern, to have a fhare of the profits, and to act as his agents in every branch of the bufinefs. A ftore or fhop affords here, as indeed it does all over America, the best income, which a man can procure, who incurs a confiderable expence in forming a new fettlement. Mr. Schreiber, by means of his ftore, obtains all the money back, which he expends for his building, &c. He fells his brandy for four shillings and fixpence a quart, rum for three shillings and fixpence, flour for fixpence a pound, and ten dollars and half a barrel, for which he pays no more than feven dollars. The profit, he obtains by the fale of other provision, is still more confiderable. The land, which eighteen months ago he purchafed for one dollar an acre, costs now three, but is not much fought after. The prefent fettlers come from New England and the environs of Albany.

The partners of Mr. Schreiber in regard to his ftore are Dutchmen, like himfelf. Their shopman is a mulatto, who at the same time acts as phyfician and gardener, and feems to have received a liberal education. He is faid to be a brother of Mr. WELTH, one of the partners. Labourers' wages are at Rotterdam four shillings a day with board, or fix shillings and fixpence without it. For the bread for our own confumption we paid nine-pence a pound, about eighteen French fous; its ufual price is fixpence. Fresh meat, when it can be procured, costs eightpence a pound. But these kinds of provision are scarce, notwithstanding the great number of workmen, employed by Mr. Schreiber, and confequently dear. Fevers are as prevalent in this part of the country, as in any we have hitherto traverfed. MI.

Mr. Vanallen found here an opportunity of felling his whole cargo, as well as one of his veffels, but at a lower price than he hoped to obtain. His flour he fold here for eight dollars a barrel, and at the Ofwego-falls for eight dollars and a quarter. He concluded this bargain with feveral fhop-keepers, and as it took up the whole morning, we gained fufficient time to vifit a Frenchman, who enjoyed the reputation of being a very skilful gardener. Although we found him busied in gathering potatoes and onions, yet both his phyfiognomy and demeanour marked him as a man of fome diffinction; and we foon learned from him, that not long ago, he poffeffed a vifcount's eftate in the neighbourhood of Lifle. His father had fpent a part of his property; he himfelf was rather prodigal, and fold for this reafon his finall eftate for twenty-four thousand livres, before the French revolution broke out, to try his fortune with this money in America. Having funk this fum alfo, in imprudent enterprifes and useless expence, he was at length obliged to refort to agriculture for his livelihood. His name is VATINES, and he has already refided three years in the neighbourhood of Lake Oneida. A whole twelvemonth he paffed with the Indians, whom he highly praifes, and afterwards refided with his wife alone on an ifland in the lake, where he cleared about twenty acres of land. About fifteen months ago he fettled in Rotterdam, where Mr. Schreiber fold him one hundred acres on very fair and reafonable terms. By his own confession, the various changes of his place of refidence, have been regulated by the inconftancy of his character, rather than by mature deliberation. He is about thirty years old, fprightly, obliging, always merry, inured to labour, and never troublefome with complaints of his fate. But he is prejudiced against the Americans, on account of their unfair dealings in the courfe of bufinefs, as he fays, and efpecially, becaufe they are extremely dull and melancholy. He lives, however, on very good terms with all the inhabitants of Rotterdam; though, in his judgment, they are even worfe than other Americans. He affifts them in their bufinefs, accepts their affiftance in his bufinefs, and fells them at the higheft poffible rate the produce of his fmall garden, which is well cultivated and ftocked with culinary plants. He

He was extremely pleafed with feeing his countrymen, and offered us all the vegetables in his garden, without accepting a shilling in return. All his ideas are fixed on France, and on the moment, when peace shall allow him to return into a country, which he prefers to any other. Dry bread in France he would not exchange for property and wealth in any other part of the globe. This frame of mind is common to all Frenchmen. With the utmost concern he enquired after news relative to the armies of France and their fucceffes. To judge by our conversation with him, he feems to poffefs more activity than judgment. His fentiments concerning the French revolution are those of an honest Frenchman. He poffeffed fome books, the choice of which was much to his credit-Montesquieu, Buffon, Corneille, and a great variety of travels. After having made away with his jewels, his cloaths and his linen, he was at last obliged to part with his library at half the price, which they would have fetched even in New York or Philadelphia. The keeper of the ftore was the only man within a fpace of two hundred miles, who could procure him a purchafer, in the perfon of a rich Dutchman, who had fettled a few miles from Rotterdam. We wished to see Madame VATINES; she is about twenty-four years of age, pretty and good; her eyes are beautiful; her look has much fweetnefs and expression, and it feems that she, like many other wives, loves her hufband with more tendernefs, than he returns. Nor should I anywife be furprised, if the expressions and light tone of her hufband fhould infpire her with jealoufy, although he appears to be much attached to her. She is mother of three children, the oldest of whom is ten years old; fhe is of a mild and cheerful difposition, fensible and judicious. She makes hay, bakes bread, cooks, and yet her hands are very handfome. She is as little pleafed with America as her hufband, efpecially the environs of Lake Oneida; and fhe encourages him in the defire of refiding at leaft in the fame place with fome other French families. She felt much pleafure in our company, and enjoyed with us, the faid, more happiness in a quarter of an hour, than the would with Americans, if the lived ten years among them. This fort of avertion, or this diflike of Americans, is common to all the Frenchmen, you meet with

with in this part of the globe. However roughly they may have been handled by fate, they demand pleafing forms, verfatility of expression, mildnefs, chearfulnefs, and a frank and open demeanour. Their rafhnefs in forming opinions, and their prejudices, never leave them. Although they may without injustice entertain the opinion, that the outward appearance of the Americans is lefs pleafing than ours; yet they are certainly unjust in contending, that they are lefs honest, than other people. Nothing, that has come within my observation, can justify fuch. an opinion. We learned from Mr. Vatines, that Mr. DESJARDINS, and not the Abbé Desjardins, as we were told at Niagara, had bought of Mr. MACOMBE of Paris three hundred thousand acres of land, along the banks of the Black River in Hunger-bay, in company with two other Frenchmen, one of whom, Mr. FARON, an architect, was lately drowned. in croffing the Black River. They are now furveying thefe lands, on which they intend to form large fettlements. Mr. Desjardins is faid to be a man of confiderable property; he is married, and at prefent engaged in building a houfe in Albany. All thefe particulars we learned from Mr. Vatines, whom we left with the promife of a mutual kind remembrance. Rotterdam flands on the borders of the county of Herkemer, to which it belongs.

### WOOD-CREEK.

Lake Oneida is twenty-eight miles in length, about eighteen of which remain yet to be croffed, before we leave it. You fee not one building, or any fettlement along the banks of the lake, excepting a farm-houfe, built by Mr. VANDEKAMP (the fame who bought Mr. Vatines's books), and fituated five miles from Rotterdam. Endlefs forefts, an indifferent foil, and no eminence, appear towards the north. The country rifes more fouthwards, where mountains come in view, at the diffance of ten or twelve miles, in a direction parallel to the lake: Thefe mountains are the fame, which we faw on Lake Ontario, on our way from Kingfton to Ofwego. Lake Oneida is from five to fix miles in breadth. On its fouth-eaft bank, a few miles from the fhore, ftands the Indian village:

lage of Oneida. This nation is now engaged in concluding a treaty, by which it is to fell the country, fouth of Oneida-lake, called the Oneida Refervation, to the flate of New York. I am not acquainted with the conditions of this treaty; all I know is, that the nation are to retain a tract of land of twelve fquare miles in extent, which is to be fecured to them by all poffible means, together with the right of a free fifhery in the lake. But a few years ago, the Oneida Indians were poffeffors of the immenfe extent of country, which is now in the hands of the American fpeculators in land. That thefe lands should come into fuch hands, as are able to put them into a good condition, can be no matter of regret, efpecially as the Indians confent to it. But might it not be poffible, to form fettlements amidst these people, to civilize them by agriculture, and to instruct them by example? This tribe, it is afferted, encreases rather than decreases in numbers. If this were true, it would be the only inftance among all the Indian nations, yet known, and deferve encouragement. Civilization is faid to have already, in fome meafure, gained ground among the Indians, and agriculture to have reached a higher degree of perfection with them than in any other tribe. The negociations, we were informed, meet, however, with obstructions, which are likely to impede a fuccessful iffue. General SCHUYLER, who conducts them on the part of the United States, and who intends to purchafe all the land on his own account, experiences a ftrong opposition from TIMOTHY PICKERING, the Secretary of State, who is faid to be difpleafed, that he himfelf cannot come in for a fhare in the proposed indemnification. These particulars, which I have from perfons, who think themfelves well-informed, may yet be mere fcandalous reports, although they carry no improbability with them.\*

We counted on advancing a few miles on the Wood-creek, before we fhould ftop, when we fell in with our company from Albany, who had halted at the mouth of the lake. A fit of the ague had obliged Mr. Van

\* The negociations, mentioned by the author, actually led to the treaty of 1795, by which the Oneida nation fold the Oneida refervation to the flate of New York, for an annuity of three thousand five hundred and fifty-two dollars.—*Tranfl.* 

Renfelaer

353

Renfelaer to put a period to this day's journey at two o'clock in the afternoon. The gentlemen proposed to us, to ftop likewife; our conductor accepted the proposal, and our confent was a matter of courfe. We paffed the night in foratching, rather than in fleep; for the marangouins and other fmall gnats are more numerous and troublefome, along the banks of the Wood-creek, than in any other part of these wilderneffes. We were obliged to fend for water, to a fpring, which was known to the people on board our veffel, but three miles diftant. This water, though bad in itself, was excellent in comparison with the muddy, mephitic and ftagnant water of Wood-creek, and, with rum, was drinkable. Our dinner confisted of fome potatoes, which were left from our last meal at Rotterdam; we had plenty of bifcuit; and although we were badly off in every respect, yet we found, that things might be worfe.

### CANADA CREEK.

Wood-creek is the fmall ftream of Lake Oneida; at its mouth it is fcarce fixteen yards in breadth, and fomewhat farther up hardly eight. The courfe of this creek being a continued ferpentine winding, the diftance from its fource to the mouth, which in a ftraight line is effimated at forty miles, is trebled by these meanders. It is under contemplation to conftruct a canal, intended to cut off feveral of these windings, and to retain a part of its prefent channel. The moderate mass of water, contained in this ftream, is also obstructed by a confiderable number of trees, rooted out and fwept along by the ftream in fpring and autumn, when it overflows its banks. It is with great difficulty a veffel works her way through these incumbrances. This sluggish river has probably taken its name from the great number of trunks of trees, which obstruct the navigation, and rot in the water; for, otherwife, it has no better claim to the name of Wood-creek, than all other fmall rivers and lakes in America, which in general flow through woods. This navigation is, in my opinion, far more troublefome, than that of the Ofwego; at leaft it is equally fo; and it can hardly be expected, that the proposed canal, were it even finished, and kept in good repair, should for ever remove the impediments, which Zz obstruct

obstruct the navigation. Throughout the whole course of this creek, it receives only the waters of Canada Creek; which, excepting for two months in the year, discharges into it but a small quantity of water. But, in spring, it rises in so extraordinary a degree, that the trees, under which we are now passing along, and the branches of which hang two feet above our heads, were, last May, covered with water in such a manner, that the same vessel, in which we now find ourselves, at that time passed over the trees, without noticing their existence.

On the arrival of veffels in Canada Creek, they muft be unloaded to pafs nine or ten miles farther, the laft two of which cannot be paffed at all, if the miller, who poffeffes a mill at the entrance of the creek, allow not his water to flow into the creek, which he fometimes refufes. The cargoes of the veffels are transported in waggons, about ten or eleven miles; the paffengers travel over the fame ground, as they choofe, or as they can. The veffels themfelves, when they have approached the fource of Wood-creek within one or two miles, are put on waggons, to pafs the interval, which feparates the lake we have just left from Mohawk River, where they are launched again.

Although our party had formed the bold refolution of pufhing on to the head of Mohawk River, we halted at Canada Creek, refolved to let the veffel proceed onwards in moonfhine, and to purfue, ourfelves, the voyage on the next morning at break of day. The foil was all along of a black colour and excellent quality; although it did not cover the rocky ground to any confiderable depth.

In the whole course of our navigation on the Wood-creek, twentyfour miles in length, we faw not one building, and found but one fpring, called Oakorchard, which was four minutes filling a finall glass, and the water of which was but of a middling quality.

### FORT STANWIX.

In the evening we generally fay, we fhall be awake early in the morning. But this frequently not being the cafe, a fatiguing journey is protracted in a tedious manner, and a good night-lodging is more feldom obtained

obtained in a country, where in general fuch lodging is exceedingly rare. This inconvenience, however, cannot poffibly be avoided by a numerous party, composed of people labouring under infirmities and fond of ease. Our veffels had not yet ftarted at fix in the morning; the waggons had not yet arrived; and it was feven o'clock before we left Mr. GIL-BERT's inn, which we found tolerably good, and which would have been much better, had our company been less numerous. Rotterdam we had left full of fick people; we were now about fifty miles from it, had feen no other house; and the first we entered was no less an infirmary. The landlady, the maid, the man-fervant, were all indifpofed with the ague, and the few neighbours of the inn were in the fame fituation, as the Gilbert family. The land along Wood-creek, which is not of great value, being fubject to inundation, cofts three dollars the acre. The price of that about Gilbert's house is five dollars, and it is but of middling quality. The conftruction of the canal induces the proprietors to raife the price of the land, though it is not frequently fought after; and in truth, I am at a lofs to conceive, how any one can be tempted to inhabit the banks of this miferable creek. Meffrs. Van Renfelaer and Vanallen, the two fick members of our party, made the tour on horfeback; Mr. Henry, Mr. Stouts, and myfelf, travelled on foot; and Dupetitthouars, paffionately fond of veffels and navigation, followed the boats to help them along. Since we began to travel together, not a moment has paffed, but I have congratulated myfelf on my travelling in his company; he is the most quiet, cheerful, and pleafant companion; he plays with children, converfes with exquifite fenfe with men, who deferve his notice; drinks with officers, and rows with feamen-ever brave, ever fimple, and for this reafon profpering, in fome measure, every where.

The whole tract of country, through which this river flows, from one extremity to the other, is called Fort Stanwix, and takes its name from a fort, crected for the protection of the communication between the two ends of the river. Colonel ST. LEGER, in order to attack this fort, attempted the difficult navigation of Wood-creek, still more obftructed by the trees, which the Americans had purpofely thrown into Zz 2 the

the ftream. He fucceeded in penetrating to the fort, which he befieged, but the intelligence of the capture of General BURGOYNE's army put a fpeedy end to the fiege. I learned from General Simcoe, that on this retreat the English troops lost more men from the Indians firing on them, than from the pursuit of the Americans. We halted on the spot where Wood-creek entirely ceases to be navigable, very near to its fource.

The inn of Mr. STERNEY was full of people indifpofed with the ague. The whole neighbourhood was crowded with others in the fame condition; and, by his account, numbers of travellers are daily arriving, who have not escaped the influence of the tainted air and of the contagion, which prevails in the diffrict of Geneffee. Within this last fortnight the flux has joined the fever, already fufficiently dreadful in itfelf; it rages with all the violence of an epidemical difeafe, and carries off a great many people. At every door, at which we ftopped, we obferved the fame yellow paleness in every face, and received the fame accounts. Having, at length, reached the place on the river Mohawk, where we were to embark, we found Mr. Renfelaer in a fit of the ague. An hour after, arrived the mate of Mr. Vanallen's veffel, feized with the fame illnefs, and laft of all came Dupetitthouars, the Hercules of our party, complaining of pains in his limbs, head-ache, and cold fhiverings. The poor man had felt these fymptoms these two days, but concealed it from me, left I should repeat my earnest entreaties to him, not to undergo such exceffive fatigue. Every one of our party, who felt not quite fick, began now to examine, whether he were not deceived in his opinion of being well; the fear of being attacked by the univerfal contagion was openly confeffed; and the whole conversation turned upon the means of escaping it, on the most wholefome food, and the best remedies. Our whole day was fpent in this manner; for our veffels, which had fet out at feven o'clock in the morning, did not arrive until nine in the evening. The great number of the fick in the country, attention to the patients of our own party, and the waiting for the veffels, prevented me from collecting information. What little intelligence I obtained is as follows :- The land on the Mohawk River cofts five dollars an acre. The fettlers in this township,

township, which was formed fix or feven years ago, come most of them from Connecticut; among these are many Methodists, Baptists and Episcopalians; but the major part are Presbyterians. Divine fervice is performed in private houses, and pretty regularly attended; but from want of preachers all the prayers are read fucceffively by a member of the congregation; and in this consists the whole fervice.

# MAYER'S TAVERN .- MOHAWK RIVER.

I had cherished a hope, that Dupetitthouars's sufferings would be finished in half a day, and that this would be the only punifhment for the exceffive fatigue, which he had very imprudently undergone. But the ague has actually made its appearance, with all the fymptoms which characterize this malady. Our fituation is extremely unpleafant, unprovided as we are with any means of affiftance. Although exhaufted by fatigue, and fcorched by the fun, from which nothing can protect us in this vexatious veffel, we have yet not been in a bed for these eight days past. Independently of my apprehension for my companion, I most devoutly wifh to fee the end of this paffage, and yet our arrival in Albany is continually delayed by new obstructions. The navigation of the Mohawk River is fortunately not like that of the rivers, we have paffed lately. We defcend gently with the ftream ; and although its channel is in fome places obstructed with trees, yet they may be eafily cleared. It receives many finall creeks and fprings, the water of which is excellent; for thefe four days paft we had not met with any tolerable water. The foil is good all along the way we have travelled, but grows better, in proportion as you proceed to a greater diftance from the fource of the ftream. The fettlements are more numerous, efpecially on the right bank. Ten miles farther on, they begin likewife to be fo on the left bank; and here the communication between the fettlers on both fides is kept up by wooden bridges. Ten miles from Fort Stanwix, the price of land is from five to fix dollars per acre. A great part is leafed out for life; the leffee agrees to pay the proprietor a certain fum per acre, as long as he cultivates it. The

The leafe is generally granted for three lives, which he can choofe at pleafure, or for his own life and the lives of his children. The man, in whofe houfe we breakfafted, holds one hundred acres by this tenure, but not from the firft owner; and thus without having had the right of choofing the lives, the duration of which is to determine the period of his leafe. Only nineteen acres have been yet cleared, for he fettled here only fifteen months ago. Ten of thefe acres, which are fown with wheat, yield from thirty to thirty-five bufhels an acre; a produce, which affords him not only fubfiftence, but alfo a fufficient overplus to pay his rent.

### SCHUYLERTOWN.

The fettlement of Schuylertown is the most confiderable we have hitherto seen, fince we left Wilksbarre. It is a tract of country populoufly fettled, rather than an infant fettlement; though its occupation commenced but in 1785. The land, which at that time coft a few pence the acre, and three years ago no more than five dollars, is now fold, not only in the vicinity of the town, but also fifteen miles beyond it, for nineteen or twenty dollars per acre. General SCHUYLER and Dr. BLIGHT are the original proprietors of a great part of these lands, which they purchased from the state. A road from Albany to the district of Genefice, which runs by this town, occafions a number of perfons to pafs this way, befide those who come by water. Colonists from New England form the most confiderable part of the population of this rich and opulent fettlement. The land is excellent, and yields, per acre, from twenty-five to thirty bushels of grain. Day-labourers are eafily obtained; their wages are generally four shillings a day, and fix shillings in harvest. Wheat is cut with the fickle. The harveft turns out plentiful, this year; and the price of flour, which was hitherto nine dollars a barrel, has already gotten down. The inhabitants are busied in gathering in their crops; and the country has an appearance of profperity and plenty.

The town confifts of about one hundred and fifty houfes, many of which are well built; of two churches, one belonging to the Prefbyterians,

terians, who are the most numerous, and the other to members of the Epifcopal church. The other fects have churches in the furrounding country. This town is the capital of the county of Herkomer, which, by the laft computation, contained twenty-five thousand five hundred and twenty-three inhabitants.\* Both the jail and court-house were built three years ago; and rates have, but very lately, been affeffed, to reimburfe the expence. The quotas of the inhabitants are raifed on the fame principles, as all other taxes, and are very trifling. The aggregate fum of all the taxes amounts fcarcely to fixpence in the pound. One or two paupers, fupported by voluntary contributions, conftitute the whole burthen upon the charity of the township. The roads are good; the country is beautifully pleafant, and almost entirely cleared. Cattle are reared in great numbers. Fresh meat may be had at all times, and costs fixpence a pound. One grift-mill and three faw-mills within a fpace of four miles around the town, promote its profperity. All the provision, which is not confumed in the country, in winter is fent to Albany. The number of houfes may be augmented in the town, but the profperous and flourishing condition of the country admits of hardly any encreafe. All the lands along the Mohawk River are of a very good quality; the uncleared parts bear none but found and large trees, and the ground under cultivation is extremely productive. The country is everywhere high, healthful, well watered, and doubtlefs one of the fineft parts of the United States. Intermittent fevers are not more frequent here, than in all healthy and fettled countries; few perfons are afflicted with that diftemper, but the flux is at this time making fome ravages among the inhabitants.

### GERMAN FLATS.

The German Flats are ftill more beautiful, than the country about Schuylertown. This eftablishment was formed about eighty years ago.

\* The county of Herkemer contains, by the flate cenfus of 1796, twenty-five thoufand five hundred and feventy-three inhabitants, of whom four thousand one hundred and fixty-one are electors.—*Translator*.

Dutchmen

Dutchmen and Germans were the first fettlers. Since that time other families from Germany and Holland have joined the ancient colonists, and numerous fettlers continue to arrive from those parts, as well as other European countries. The German tongue and German manners have been preferved among the families of the original planters. Yet this language is not exclusively the speech of the district, as in Reading and Lancaster. The German Flats are famous throughout America, on account of their fertility. The fruitful foil is from fifteen to twenty feet in depth; the eminences, which bound thefe low grounds, poffers the fame foil; many of them are high mountains, cultivated up to the fummits, which in fome places are crowned with beautiful meadows. The ftaple commodity is wheat; but Indian-corn, buck-wheat, water-melons, and gourds, are also cultivated. All plants are here of an uncommon fize, and a peculiar flavour, especially potatoes. They are my favourite food, when I am on a journey; especially at present, when they are the only fresh vegetables, which can be had. Moreover, they feem to be prophylactics in the febrific atmosphere, in which we are travelling.

Some lands in the Flats, clofe to the river, would not be fold for lefs than one hundred, or one hundred and thirty dollars an acre. Cattle are here neither numerous nor of a fine breed. Horfes are reared in the greatest number; but those I have feen are not remarkable for beauty; feveral of them are put to a waggon by the farmers. The harveft is uncommonly plentiful; and it is here fpeedily housed, as labourers may be cafily procured. But, what a difference between the grave affiduity of this people, and the cheerful, merry, and melodious activity of our reapers in France! The harvest is and was there a feast, a time of pleasure as of bleffings. All were content. Old people and children, man and wife, young men and girls, all participated in this universal, real, noify, and contagious mirth, which, far from interrupting the labour, infpirited the labourers to greater zeal and exertion. The time of hay-making and the vintage-what an universal joy, charming giddiness, and delightful fpectacle, did they not afford, fit to enrapture the oldest breast! What nation underftands better to enjoy happinefs, than the amiable French?

.11

French? Ah! am I never to celebrate a harvest-home but on a foreign foil?

The corn in the German Flats, although uncommonly fine, would be still finer, if the fields were cultivated with more care; the farmers generally neglect to free them from weeds in fpring. Noxious plants fhoot up, therefore, more copioufly, in proportion as the foil is richer, and obstruct the growth of the corn. The form of the fields, the expanse of the banks of the river, and the fwelling hills and mountains, offer a delightful variegated profpect, the charms of which are heightened by the numerous buildings interspersed, of various forms and colours. To an extent of twelve or fifteen miles, the right bank forms an uninterrupted village, of a confiderable depth. Fevers are not frequent here; but the flux carries off, at prefent, numbers of people. The heat is in truth exceflive, and the fun, which darts piercing rays, remains long above the horizon. The heat is altogether intolerable, exposed as we are to it in an open veffel; and the nights are nearly as troublefome as the days. Never are they cooled by the flighteft breeze, and they are ftill warm with the fultry heat of the preceding day, when the fun rifes again. This is the hottest weather, I have ever experienced. My thermometer stands in the shade generally at ninetythree degrees of Fahrenheit (twenty-feven one-ninth Réaumur).

### THE CANAL AND LITTLE FALLS TOWNSHIP.-PALATINE.

Seven miles from the German Flats are the Little Falls, which again occafion a land-carriage of three-fourths of a mile. These falls are mere violent rapids; feveral rocks of different fize narrow the channel of the ftream; the confequent agitation of the water occafions a foam, and interrupts the navigation. The adjacent country, two miles above and below the rapids, is alfo full of rocks. The foil is fandy, fwampy, and rocky; fuch is the nature of this fpot, a ftain of the finest country in the world. Immediately after you have passed this vein of stone, the land is again as beautiful and fertile as before.

For these three years past, the people have been busied in constructing a 3 A canal.

canal, which runs along the banks of the rapids, and is intended to remove the impediments, that interrupt the navigation. A company of gentlemen of confiderable property, fupported by a great number of fubfcribers, have entered upon this undertaking, and but very lately obtained a powerful aid from the Legiflature of the State of New York, which has fubfcribed largely for this enterprife. The canal, it is afferted, is to be finished this year; and we are affured, that it will be accomplished very foon. The work is, however, in my judgment, but little advanced; although the whole length amounts to no more than three quarters of a mile; the progrefs is very flow; and a rock is to be cut through. The ftones, which are dug out, are partly made use of for crecting a wall three feet in height on both fides of the canal. This wall is again covered with earth, which is also thrown against it on both fides, fo that it forms a dam, the top of which is eight feet in width, and the flope about thirty. As neither mortar nor any other cement is used in crecting the wall, it remains with me a matter of doubt, whether the water will not find its way through the dam, and do mifchief. At the beginning of the canal two locks have been conftructed, which are completely finished, except that the doors are not yet hung. These locks are built all of wood, the foundation as well as the fides, and the workmanship, as far as I am able to judge, is very good; but I am at a loss to conceive, why no ftones are made use of in the construction of this work, as they abound in the furrounding country. Two hundred and fifty workmen are conftantly employed at the canal, who receive each fix shillings a day, without board. These workmen are divided into certain companies; a great number of them are inhabitants of the neighbourhood, but many are also Irishmen newly arrived, nay Irifh convicts, whofe conduct is far from being beneficial to the country.

The town of Little Falls confifts of about fifty well-built houfes. A corn-mill of an excellent conftruction, and a faw-mill, have been erected on these rapids.

After a navigation of twenty miles, our 'Squire ftopped near a houfe, which, by his account, was fully adequate to indemnify us for the inconveniencies

veniencies we had fuftained the preceding nights. But nothing at all was to be had; a whole hour elapfed before we were able to obtain a bed for Dupetitthouars, whofe illnefs grew conftantly worfe. The floor was affigned to us for a refting place; more we could not obtain. This place belongs to the townfhip of Palatine; it is feated on the left bank of the river, poffeffes the fame foil, and the fame honeft, flow, and dirty Germans for inhabitants. This fettlement was formed about feventy years ago.

# SKENECTADY.

My patient felt much relieved after an emetic I had given him the preceding evening; we were obliged to wake him at four o'clock, as we wished to arrive at an early hour at Skenectady. The day passed, in regard to our patient, better than we expected, as we entered the port without his having been attacked by another fit of the fever. We had, therefore, ground to hope, that the dreadful fits, which he had fuftained, were merely the confequences of exceffive fatigue. We ftopped at Canalmgi, which is another German fettlement. The information above detailed applies likewife to this place, even in regard to the prices of commodities. Water-melons and gourds are here also fown, either with Indian corn, or by themfelves, and are employed to great advantage in feeding the cattle, during the five or fix months in which they must neceffarily be kept in the ftable. The Heffian fly is yet unknown in this fortunate country. The land is fo good, as not to ftand in need of manure. The prefent occupier has lived thirty-four years on this eftate, and never laid dung on more than fix acres of his lands, which he manured thirty years ago very flightly.

After having paffed the fettlement, which formerly belonged to W. JOHNSTON, ancient English Director-general of Indian affairs, whose estates were confiscated at the time of the Revolution, because he declared himself against the Americans, we at length reached Skenectady, the end of our navigation. Johnstown is the capital of the county of Montgomery, which contains about thirty thousand inhabitants. Ske-

3A 2

nectady

nectady is a fmall town, as old as Albany, and containing moftly old houses, built in the Dutch style, which give it altogether the appearance of an ancient European city. The Mohawk River, which is here clofely hemmed in, takes a large fweep in the vicinity of this town ; and a cataract renders the navigation impoffible. You here quit the veffel, and proceed by land to Albany. The poffibility of conftructing a canal, by which the falls as well as other impediments of the navigation of the Mohawk River may be avoided, is acknowledged on all hands; and plans, it is afferted, are in contemplation, to facilitate the painful paffage we have just made, and to superfede the necessity of occasional land-carriage. This would be a great and ufeful undertaking, equally honourable and advantageous for the State of New York. Veffels of fifteen or twenty tons burthen, it is faid, might be employed in this navigation, which would thus become an outlet, far preferable to that of the River St. Lawrence, which admits of only boats of three or four tons burthen. We heard it reported in Upper Canada, it is true, that with an expence of one million two hundred thousand pounds sterling an uninterrupted navigation might be opened from London to Niagara. But independently of one million two hundred thousand pounds sterling being a pretty large fum, the whole project is the work of an adventurer, whofe wifhes are eafily converted into hopes, and whole hopes fpeedily mature to opinions, the erroncoufnefs of which frequently time only developes.

The information, which I was able to collect refpecting Skenectady, is as follows. The fettlement was originally formed by Brabanters, in the year 1662: but in later times moft of the colonifts arrived from New England; and fo they do at prefent. Two thirds of the territory of Skenectady, which comprifes one hundred and twenty-eight fquare miles, are already cleared; the good foil is five feet, and on eminences two feet in depth; good land yields from twenty-five to thirty bufhels of wheat an acre; land of inferior quality from twelve to fifteen; agriculture, as well as the price of provision, is much the fame as in the more advanced parts; winter lafts, in regard to agricultural operations, from November till April; the grain fuffers but very feldom, and in a triffing degree,

degree, from the Heffian fly, and from blights; the climate is healthy; the ufual mart for the production of the country is Albany. The Epifcopal is the prevalent religion; although the town contains alfo a church for German Lutherans, and one for Prefbyterians. The Germans were alfo the most liberal benefactors to the institution of a college, which was incorporated last year (1794), and the property of which, raifed by fubferiptions and other means, amounts already to forty-two thousand two hundred and twenty-two dollars, and one thousand fix hundred acres of land, given by the ftates\*.

Skenectady is the emporium as well for the provision, which comes down the Mohawk River, defigned for Albany, as for the merchandize, which from the ftores at Albany is transmitted to the countries, interfected by the Mohawk River and other streams, flowing into the former as far as the district of Genessee. The township of Skenectady contains about three thousand five hundred fouls<sup>†</sup>. It is the frontier-town of the county of Albany towards Montgomery. The capital of this county is Albany; the county of Albany contains about thirty thousand inhabitants, of whom two thousand five hundred are flaves.

In Skenectady we took our leave of Mr. Vanallen, who, in addition to the civilities fhewn us in the whole courfe of our voyage, declined alfo to accept any money for our paffage, on the ingenious pretence, that, as we carried our provisions with us, we had not in the least encreased his expence. We remain, therefore, in many respects, under great obligations to this gentleman.

## TOUR TO ALBANY.

Mr. Vanallen had bufinefs to transact in Skenectady, and we wished to reach Albany as foon as possible. A stable-keeper engaged to carry us

+ By the State Cenfus of 1796, the township of Skenectady contains three thousand four hundred and feventy-two inhabitants, of whom fix hundred and eighty-three are electors, and three hundred and eighty-one flaves.—Tranfl.

<sup>\*</sup> The college, alluded to by the Author, is Union College, which took its name from the union of various denominations of Chriftians in its eftablishment. The faculty of this college confisted, in 1797, of the prefident and one tutor, and the number of fludents was thirty-feven.—*Translator*.

the fame night to Albany, though it was already late; we took accordingly our feats in his waggon, bolftered with ftraw. About four miles from Skenectady, the driver informed us, that he could not proceed farther. Grumbling, we fubmitted, therefore, to the necessity of taking up our night's lodging in a bad inn, where, as foon as Dupetitthouars had occupied the only bed which was in the house, I entered into a converfation with the landlord and our driver, which turned upon politics, the univerfal topic in this country. Since we have fet foot in the territory of the United States, we find newspapers in every village. My new acquaintances were people of uncouth manners, and without the leaft education ; but their opinions were just and fensible, and their judgments extremely correct. They manifested a strong attachment to France, and most earnestly wished her fuccess. They hate England, confide in their Prefident, and speak of DE LA FAYETTE with tears in their eyes. This univerfal attachment of the Americans to De la Fayette, and the grateful fentiments of him expressed by all without exception, though in the course of the French Revolution he acted a part not approved by all, refute in a forcible manner the charge of levity and ingratitude frequently preferred against the Americans. " May he come," faid a man to us this morning who was riding on horfeback by the fide of our carriage, " May the Marquis come, we will make him rich. It is through him that France made us free ; never fhall we be able to do fo much for him, as he has done for us."

After a three hours' journey through a country, which is much like the woods of Anjou, fandy, covered with fern, and bearing none but fickly trees, we at length arrived at Albany.

# MINERALOGICAL OBSERVATIONS.

The minerals between Fort Ofwego and Albany, and the earth, with which they are covered, are much the fame as in the diffrict of Geneffee, and in Upper Canada. The rocks about the fort, as well as near the rapids and water-fall, confift of an imperfect granite, feldom interfperfed with mica; from time to time you meet with flate of a coarfe grain.

On the banks of Wood-creek I fcarcely faw any ftones at all; the ground

ground is immerfed in water to fuch a degree, that during this tedious and winding paffage none come in view. The water-fall in Mohawk River (Little Falls) breaks through a chain of granite rocks, that are obfervable in all parts of this fmall barren fpot, which, as has already been remarked, is a difgrace to the rich furrounding country. In the township of Palatine lime-ftone is found of a very good quality. Two wide terraces of earth, which bound the channel of the Mohawk, and form its banks, are the most remarkable appearance upon that river. The banks of the Connecticut, it is afferted, offer the fame ftriking prospect.

As to the different fpecies of trees, I have had but little leifure to obferve them, not having been on fhore oftener than twice or thrice a day, and never but for a few moments. They feem to be much the fame as in the diffrict of Geneffee.

#### ALBANY.

Albany is one of the most ancient settlements in North America; it was formed in the year 1660; and the town incorporated in 1686. The hiftory of this city, which occurs in all defcriptions of the United States, I fhall pafs over in filence. It is feated one hundred and fixty-five miles from New York, has a harbour, and a very extensive trade. Ships of eighty tons burthen fail up to the town; and the trade is carried on in veffels of this fize. A fort of fand-bank, three miles below Albany, renders the navigation rather difficult; yet it is eafily cleared with the affiftance of pilots acquainted with it, and no fhip arrives without one of them on board. This impediment, it is afferted, might eafily be removed at a trifling expence; and fhips of a much larger fize might then anchor near the city. The navigation of the river from the North country is open from the middle of April until the middle of November. The trade of Albany is chiefly carried on with the produce of the Mohawk country, and extends caftward as far as agriculture and cultivated lands expand. The state of Vermont, and a part of New Hampshire, furnish also many articles of trade ; and the exports chiefly confist in timber and lumber of every fort and defcription, potatoes, potafh and pearlafhes.

alhes, all fpecies of grain, and laftly in manufactured goods. These articles are, most of them, transported to Albany in winter on fledges, housed by the merchants, and by them fucceffively transmitted to New York, where they are either fold for bills on England, or exchanged for English goods, which are in return fent from Albany to the provinces, whence the articles for exportation were drawn. Bufinefs is, therefore, carried on entirely with ready money, and especially in regard to pot-ash; not even the most substantial bills are accepted in payment. The trade of Albany is carried on in ninety veffels, forty-five of which belong to inhabitants of the town, and the reft to New York or other places. They are in general of feventy tons burthen, and make upon the average ten voyages a year, which, on computing the freights outwards and homewards, produces a total of one hundred and twenty-fix thousand tons of shipping for the trade of Albany. Every ship is navigated by four men; the master is paid twenty dollars a month, if he have no share in the ship, the mate fifteen, and a feaman nine. There is also generally a cabin-boy on board, or more frequently a cook, as few fhips have lefs than eight paffengers on board, either coming up or going down. The freight of goods is ufually one fhilling a hundred weight; but this varies, according to their value, or the room they occupy.

The trade of Albany is very fafe, but feems not to be very profitable. The neat proceeds of a voyage amount upon an average to about one hundred dollars, which makes for the whole year one thoufand dollars for a fhip, a profit by no means confiderable. If you add to this the money paid by paffengers for their paffage, which amounts to ten fhillings a head, making from feventeen to twenty dollars a voyage, and from one hundred and feventy to two hundred dollars for the ten voyages, which are made in the courfe of the year, the whole yields but a very moderate profit, which is however encreafed by the fale of the goods. This is as yet the ufual way in which trade is carried on by this city; it deprives the merchants of Albany of a confiderable profit, and throws it into the hands of thofe of New York. Some of the former undertake indeed voyages to England, Holland, and other countries; but, for this purpofe they charter New York veffers. Thefe are the bolder people;

people; and are called men of the new notions, but their number is fmall.

The ancient cuftoms and confined views of the timid, yet covetous, Dutchmen, have carefully been preferved in this city. No fhip fails from Albany directly to Europe; and yet provision is fent thither from this place. It is evident that, if the inhabitants would take themfelves the trouble of exporting their produce, they would fave ufelefs intereft, the return-freight, and double commiffion, and would obtain employment for their fhips during the time, when the navigation to the north is fhut up by ice. Ideas of this complexion begin to dawn upon the minds of fome merchants, and will, no doubt, produce advantageous changes. From the fame habitual apathy the merchants of Albany relinquifh the trade in horfes and mules, great numbers of which are reared in the neighbourhood, to the Connecticut merchants, who purchafe and export them with confiderable profit to the Antilles.

The building of fhips cofts in Albany about twenty-feven dollars and half per ton. The fhips are all fir-built, and laft about ten years. Experiments have been made, which prove, that fhips built of dry and well feafoned timber, last thirty years and upwards. The trade of Albany grows daily more extensive; and the number of shops and ships is increasing fast. Two new towns, built five or fix years ago, a few miles above Albany, on the northern bank of the river, fhare in this trade. Thefe two towns, which have rapidly raifed themfelves to a confiderable degree of importance, and are but three or four miles diftant from each other, carry on the fame trade as Albany with about twenty-five or thirty veflels, which belong to them, draw from the back country the productions of these fruitful provinces, transmit them to New York, take in return European goods, and fupply with them those parts, which were formerly fupplied from Albany. The greater diftance, however, and lefs depth of water, are circumftances unfavourable to thefe new towns. The freight thence to Albany is two-pence per barrel; their largeft fhips are only of fixty tons burthen, and generally cannot take on board more than half their cargo, the remainder of which they receive from

3 B

lighters,

lighters, which attend them for that purpofe in the vicinity of Albany. Yet, they continue their trade, encreafe daily, and will probably animate Albany to greater boldness and activity. New City contains about fixty or feventy ftores or fhops, and Troy fifty or fixty. These new-fettled merchants all profper, and their number is daily encreasing. The merchants of Albany, it is reported, view this growing profperity of their neighbours with an evil eye, and confider it as an encroachment upon their native rights. If this be true, the jealoufy of the merchants of Albany must be the refult of their ignorance and confined views. The provinces, which contribute their produce to fupport this trade, are yet far from having attained to the highest degree of cultivation; many parts, equally proper for that purpofe, are but little cultivated; and others yet uncleared. Towns will be built ftill farther northwards than Troy and New City ; others will be erected even on the western fide of the river, while, at the fame time, the greater number of fettlements and encreafed population, will augment the produce and wants, and every town, whether ancient or new, experience an increase of business beyond what it will be able to do.

Albany contains fix thoufand inhabitants, two thoufand of whom are flayes, as the laws of the State of New York permit flavery. The old houfes are built in the Dutch ftyle, with the gable-end to the ftreet; the pyramidal part rifing in fteps, and terminating in a chimney decorated with figures, or in fome iron puppets. All the buildings, which have been erected within thefe laft ten years, are conftructed of bricks in the English ftyle, wide and large.

The revenue of the city amounts to about thirty-five thousand dollars a year. It posses a great quantity of land in the neighbouring country, and also fells the quays on the river at two dollars and half per foot, and a ground-rent of one shilling, which is irredeemable. This revenue is partly owing to the economy of the administrators, who have hitherto endeavoured rather to enrich the city than to embellish it, and render it more convenient. The fenate is, at prefent, composed of young men, who promise to take care of these articles. But, from the ignorance, apathy,

apathy, and antiquated ideas, which prevail in this city, it is much to be apprehended, left the refults of their exertions fhould prove but very trifling for a long time to come. I almost incline to think, that young people here are old born.

A bank, which was inftituted here four years ago, promotes the trade of Albany; it confifts of fix hundred fhares of four hundred dollars each, only half of which have hitherto been paid. The yearly dividend is nine per cent, befides what is deducted for the expence of the building in which the bank is kept.

There is in Albany a Dutch Lutheran church of a Gothic and very peculiar conftruction; the Epifcopalians, Prefbyterians, German Proteftants, and Methodifts, poffers also churches in this town.

The price of land, in the vicinity of Albany, is from fixty-three to feventy-five dollars per acre. Some lands near the river are ftill dearer. Thefe are remarkably good ; but thofe, which are fituated more backwards, are but of a middling quality. Agriculture is not attended to with peculiar care ; the farms lie half in grafs and half in corn. No country had ever ftronger incitements to perfect its agriculture and induftry ; for none was ever furnifhed with outlets more fafe and lefs expenfive.

Some manufactories have been eftablished at a small distance from the town, among which is a glass-house, in which both window glass and bottles are made. The former is pretty smooth, and the manufactory is carried on with much activity. Mr. CALDHOWELL possesses also near the town extensive works, where tobacco, mustard, starch, and cocoa-mills, are turned by water, and even every accessory labour is performed by the aid of water machinery\*. The tobacco-mill is the most important part of these works; about one hundred and fifty thousand pounds are yearly

\* These valuable works, which are decidedly superior to any of the kind in America, are fituated one mile north of the city, in the suburbs. The ingenious proprietor, whose true name is JAMES CALDWELL, has obtained a patent for the invention of the water machinery, which is truly admirable.—*Translator*.

3 B 2

manu-

manufactured. Laft fummer (July 1794) a complete fet of fimilar works having been confumed by fire, Mr. Caldwell's friends immediately opened a loan of twenty thoufand pounds at the bank, and the legiflative body of New York refolved alfo laft feffion to affift him with a fum of the fame amount. I am to add in honour of Mr. Caldwell, with whom I am not acquainted, that nearly all the labouring people in the city, in confequence of this unfortunate accident, fubferibed feveral days' labour, as a voluntary contribution to the re-conftruction of thefe works, which are truly grand and beautiful. They give employment and fubfiftence to fifty perfons, fome of whom receive one hundred dollars a year; children, nine years old, can earn from fix thillings to one dollar a week. Tan-yards, corn, oil, paper, and fulling-mills, have alfo been erected in the furrounding country; and labourers are found in abundance. The wages of common day-labourers amount to four thillings and fix-pence a day, and to feven thillings in harveft.

Hofpitality to ftrangers feems not to be a prominent feature in the character of the inhabitants of Albany; the few, with whom we got acquainted, looked extremely dull and melancholy. They live retired in their houfes with their wives, who fometimes are pretty, but rather aukward in their manners; and with whom their hufbands fearcely exchange thirty words a day, although they never addrefs them but with the introductory appellation of "my love." Exceptions, undoubtedly, exift in regard to the charms of the ladies, as well as to the conduct and conversation of the hufbands; but, it is afferted, they are very few.

The Schuylers and Renffelaers are the moft refpectable families in point of wealth and intereft: having intermarried with each other, their influence is altogether irrefiftible in the county. The Schuylers are endowed with more talents and knowledge; but the Renffelaers poffefs more riches; and money is a powerful fpring in the management of a ftate. General Schuyler bears the character of a man of much acutenefs, and uncommon abilities. He is frequently employed in ftate affairs; and it is his earneft wifh, to promote and raife the navigation, induftry, and profperity of his country. He is father-in-law to the celebrated Mr. Hamilton.

Hamilton. General Schuyler, who generally accommodates his daughters with rich hufbands, gave one of them in marriage, five years ago, to that famous orator, from refpect for his talents, though he was poor. I fhould not omit obferving, that I fpeak of General Schuyler without having ever feen him. During my refidence in Albany he had gone to affift at the negociation with the Indians; I merely know him from his correfpondence with me, which is highly polite and elegant. The General ranks among the most confiderable men in the United States.

### SARATOGA.

I have feen JOHN SCHUYLER, the eldeft fon of the General; for a few minutes I had already converfed with him at Skenectady, and was now with him at Saratoga. The journey to this place was extremely painful, on account of the fcorching heat, but Saratoga is a townfhip of too great importance to be paffed by unobferved. If you love the Englifh, are fond of converfing with them, and live with them on terms of familiarity and friendfhip, it is no bad thing, if occafionally you can fay to them, "I have feen Saratoga."

Yes, I have feen this truly *memorable* place, which may be confidered as the fpot, where the independence of America was fealed; for the events, which induced Great Britain to acknowledge that independence, were obvioufly confequences of the capture of General Burgoyne, and would in all probability never have happened without it. The dwellinghoufe of John Schuyler ftands exactly on the fpot, where this important occurrence took place. Fifh-creek, which flows clofe to the houfe, formed the line of defence of the camp of the Englifh General, which was formed on an eminence, a quarter of a mile from the dwelling. The Englifh camp was alfo entirely furrounded with a mound of earth, to ftrengthen its defence. In the rear of the camp the German troops were pofted by divisions on a commanding height, communicating with the eminence on which General Burgoyne was encamped. The right wing of the German corps had a communication with the left wing of the

374

the English, and the left extended towards the river. General GATES was encamped on the other fide of the creek, at the diftance of an eighth of a mile from General Burgoyne; his right wing ftretched towards the plain; but he endeavoured to fhelter his troops, as much as poffible, from the enemy's fire, until he refolved to form the attack. General NELSON, at the head of the American militia, occupied the heights on the other fide of the river, and engaged the attention of the left wing of the English, while other American corps observed the movements of the right wing. In this polition, General Burgoyne furrendered his army; his provision was nearly confumed, but he was amply supplied with artillery and ammunition. The fpot remains exactly, as it then was, excepting the fole circumstance, that the bushes, which were cut down in front of the two armies, are fince grown up again. Not the least alteration has taken place fince that time; the entrenchments still exist; nay, the foot-path is still feen, on which the adjutant of General Gates proceeded to the English General with the ultimatum of the American commander; the fpot, on which the council of war was held by the English officers, remains unaltered. You fee the way, by which the English column, after it had been joined by the Germans, filed off by the left to lay down their arms within an ancient fort, which was conftructed in the war under the reign of Queen Ann; you fee the place, where this unfortunate army was neceffitated to ford the creek, in order to reach the road to Albany, and to march along the front of the American army; you fee the fpot, where General Burgoyne furrendered up his fword to General Gates; where the man, who two months before had threatened all the rebels, their parents, their wives, and their children with pillage, facking, firing, and fcalping, if they did not join the English banners, was compelled to bend British pride under the yoke of thefe rebels, and where he underwent the twofold humiliation, as a ministerial agent of the English government, to submit to the dictates of revolted fubjects, and as commanding general of difciplined regular troops, to furrender up his army to a multitude of half-armed and halfclothed peafants. To fuftain fo fevere a misfortune, and not to die with despair,

defpair, exceeds not, it feems, therefore, the ftrength of man. This memorable fpot lies in a corner of the court-yard of John Schuyler; he was then a youth, twelve years old, and placed on an eminence, at the foot of which ftood General Gates, and near which the American army was drawn up, to fee their difarmed enemies pass by. His estate includes all the tract of ground, on which both armies were encamped, and he knows, as it were, their every ftep. How happy must an American feel in the possefion of fuch property, if his bosom be anywife fusceptible of warm feelings! It is a matter of aftonishment, that neither Congress nor the Legiflature of New York fhould have erected a monument on this fpot, reciting in plain terms this glorious event, and thus calling it to the recollection of all, who fhould pafs this way, to keep alive the fentiments of intrepidity and courage, and the fenfe of glory, which for the benefit of America fhould long be handed down among Americans from generation to generation. The English would not have fuffered a fimilar occasion to pafs unimproved. John Schuyler at leaft should have relieved the modefty of government, were it only by marking the fpot with a plain, fimple ftone, which no American would behold but with those brave and glorious feelings, which might be turned to the greatest advantage to the state.

John Schuyler poffeffes an eftate of about fifteen hundred acres, five hundred of which are completely cleared of wood. The land near the river is excellent, and cofts from thirty to thirty-eight dollars the acre; the price of that, which lies more remote, is from ten to twelve dollars. The produce confifts in grain, chiefly Indian corn. He poffeffes one corn-mill and two faw-mills, which are turned by the ftream of the creek. In this creek, which is very wide, and contains plenty of water, are feveral falls, lying behind one another, which might turn works of any extent. John Schuyler makes more hay, than is neceffary for the ufe of his farm; but by a calculation, founded on indolence rather than mature deliberation, it appears to him more profitable to fell the hay, than to fatten cattle. Although poffeffed of three mills and fifteen hundred acres of land, yet the aggregate amount of his quota of taxes, poor and

county--

county-rates, exceeds not thirty-five dollars a-year. The county-rates comprifes this year the expence for building a court-houfe and a jail. I cite this inftance, as it may ferve to enable a perfon to form a judgment on the amount of taxes in the ftate of New York, of which I fhall, no doubt, find an opportunity of fpeaking more fully.

John Schuyler received me in a manner extremely hofpitable and polite. He is a young man of good fenfe, and mild, amiable manners, conftantly engaged in the management of his affairs, which, we underftood, he conducts with prudence and punctuality. He is married to a daughter of Mr. Renffelaer, who paffes all her time at their own houfe, which is a very handfome manfion, but without any neighbours. She fees no company, but her relations, who now and then pay her a vifit. Her hufband, on whom fhe doats, is frequently abfent; fhe complains with much meeknefs of this folitary life, yet bears it, occupied with her children and the management of her houfehold. She is charitable, good, and univerfally refpected.

Labourers may be procured here in great abundance; their wages are three fhillings a day, if they be wanted; but the ufual daily labour is performed by negroes, who are very numerous, fo that there is fearcely a houfe without one or two of them; John Schuyler keeps feven. The negroes, it is generally afferted, enjoy more happinefs, as flaves, than if they were free. This might be the cafe, if liberty were beftowed on them, without their knowing what to do with it. But upon the whole, fuch maxims of morality fall with an ill-grace from the lips of a free people. The negroes, it is true, are kindly ufed in the flate of New York; but it is alfo true, that the convenience of having them conflantly at hand for any work fet apart, the labour of white people is lefs expenfive, than that of negroes. To keep flaves is, therefore, a bad fyftem, even in this point of view.

When I took leave of young Schuyler, he was indifpofed with the fever. Having made the fame tour as we, he became an additional victim to the contagious air, breathed in the peftilential country, which we have traverfed. I learned afterwards at Bofton, with the utmoft

377

moft concern, that he is fince dead. The youngeft brother of Mr. Renflelaer was alfo feized with a fit of the fever, as well as another inhabitant of Albany, who travelled in our company. All the people, who were on board our veffel, are fick, and one of them is dead. We have, therefore, but little reafon to extol the comforts of a tour on Wood-creek. The banks of the northern branch of the Hudfon, from Saratoga to

Albany, have been long fettled, and the country, lying more backwards, is also confiderably peopled from five to thirty miles from the fhore. Connecticut and all New England people thefe fettlements. The land, to fpeak of it in general, is good, and eftates of five hundred acres of cultivated land are not rare along the river. I have feen many of this fort; the farms were chiefly defigned for the rearing and fattening of cattle ; they are managed but very indifferently ; the land received little or no dung, and was ploughed only three or four inches deep. Eftates generally confift here of two hundred acres. The whole of the banks of the northern branch of the river is truly pleafant; the mountains, which bound the ftream, without contracting its channel, are almost throughout covered with luxuriant corn-fields. It was through thefe narrow paffes, that General Burgoyne proceeded to Albany, where he hoped to be joined by General Clinton; this is the only road which leads thither. Here he encountered General Gates, who, after he had been defeated and fuftained a confiderable lofs, retreated into the camp at Saratoga, leaving behind his whole train of heavy ordnance. I have feen the field of battle, where this important action took place, and viewed the height, where Brigadier-General FRASER made fo many gallant attempts to break in upon the Americans; I have feen the hillock, under which he is buried. The inhabitants flow with confcious pride every corner of this diffrict, and you difcern in their countenance, that their ancient energy and vigour would eafily be raifed by any preffing emergency. This action happened at Stillwater. It was here Burgoyne refolved upon his decifive retreat. But under the appellation of Stillwater, as under that of Saratoga, a large extent of country is comprised. The township of Stillwater is 3 C twenty,

twenty, and that of Saratoga thirty-one miles in length, and yet every point of these townships is called Stillwater and Saratoga.

I have omitted to ftate, that the county of Saratoga contains many natural curiofities, among which are cryftallizations of peculiar beauty, and two medicinal fprings, known by the name of the Balltown and Saratoga fprings. Both are in great repute, effectially the medicinal waters of Balltown, where the accommodations in point of lodging and other conveniencies far exceed those of Saratoga. The fprings are both impregnated with *fixed air*, and, in the opinion of fome perfons, communicate with each other. The Saratoga waters, as is afferted, are ftronger than the Balltown fprings.

I must not pass over in filence Justice THOMPSON, who refides at Stillwater. We met with his eldeft fon, who intends to become a furveyor, and made the last passage with Mr. Vanallen, on board the vessels in which we returned from Ofwego, and travelled in his company. I had promifed him not to pass his house, without paying him a short vifit; I fulfilled this promife, and was invited by the family in fo plain and frank a manner to ftop for the night, that I could not give a denial. The family are good, plain, and genteel people, of mild, pure, and uncorrupted manners; a refidence with them is extremely pleafant. Juffice Thompson possesses a great quantity of land in different parts of the flate of New York, which for the most part is yet uncleared. He inhabits an eftate of one hundred and fifty acres, one hundred and twenty of which are under cultivation; he rears a great many cattle, efpecially mules, which, when two years old, he fells to Connecticut traders for fifty or fixty dollars a head. He alfo rears many horfes, and carries on with them a trade of tolerable importance, which the Albany merchants have not yet learned to improve. In these parts, it is afferted, two thousand mules are yearly fold. I have this information from 'Squire Poll, an opulent farmer, for the exactness of which, however, I cannot pledge myfelf; for there are not four perfons in this county, able to draw up accounts and eftimates of the general produce and supplies of a district. Good

Good withes for the fuccefs of the French, a deteftation of their crimes, and decided hatred against the English, form here the universal fentiments, as they do in general throughout the United States.

The land near the river is good, and yields, however badly it is cultivated, from twenty to thirty bufhels of wheat per acre. The price of land is from fifty to feventy-five dollars an acre. I am now travelling here on the fifteenth of August, and yet little hay has been housed, for which reason it is mostly as hard as wood.

On my journey to Saratoga I had paffed the new bridge, conftructed acrofs the Mohawk-river. This bridge is erected on the fpot, where the Cohoez-falls appear to the greateft advantage.\* But the river contains not at prefent fufficient water to fupport the falls. In many places the rocks are quite dry; but in others they afford a fine profpect. The perpendicular height of the falls may amount to about fifty feet, and the river is about an eighth of a mile in width. But upon the whole, the view is not ftrikingly wild, romantic, or pleafant, though the falls are much celebrated throughout America. The bridge is conftructed of timber, and refts on ftone pillars, about twenty-five or thirty feet diftant from each other. The mafonry is not remarkable for folidity or neatnefs; but the carpenters'-work is exceedingly well done.<sup>†</sup>

On my return from Saratoga I croffed the northern branch of the Mohawk river by Halfmoon, to fee the two new towns, New City and Troy, which, as has already been obferved, were built a few years ago, and are already carrying on a confiderable trade. The houfes are very neat and numerous; almost every house contains a shop; the inns are excellent; veffels are moored near all the keys; tan-yards, potash-works, rope-walks, and mills, are either already in full work, or building. The fight of this activity is truly charming. A Mr. TAYLOR, who possibles

\* The Cohocz-falls, which the author mifnames Xohos-fall, appear most romantically from Lanfinburgh-hill, five miles east of them, although they likewife offer a good prospect, when viewed from this bridge.—Translator.

+ The bridge is eleven hundred feet long, twenty-four feet wide, refts on thirteen piers, and was crected in 1794, at the expense of twelve thousand dollars.—*Translator*.

3 C 2

about

about one hundred acres near Ponftenkil-creek, has erected here two grift-mills, two faw-mills, and one paper-mill. He does bufinefs, it is faid, with New York by water. The place is finely fituated, well diftributed, and may, if managed with fkill and prudence, become very profitable. We were told, that the proprietor intends to fell it; and this is one of the places which I would buy in preference to all others, if I had any idea of fettling in America, and had wherewithal to pay for it. There are a variety of things, with which a man may occupy himfelf every day, nay every moment of the day, with benefit to himfelf and the country at large.

The land between Saratoga and Albany is upon the whole fandy; efpecially the hills about Saratoga confift of an indurated fand. The ftoney matter, on which lies the ftratum of fand, is flate of a dark colour, and coarfe grain, with veins of white quartz. On fragments of this flate impreffions are found of a peculiar and very curious appearance. In the vicinity of the medicinal fprings of Balltown and Saratoga are feveral veins of lime-ftone. Ferruginous and cupreous pyrites are alfo found in the neighbourhood; mines of thefe minerals, it is afferted, exift in the environs, but they are yet neglected, as in fact are nearly all the mines in the United States. You meet with few or no rocks, until you reach the Cohoez-falls. The rocks, which form this cataract, confift of an argillaceous fchiftus, fome of which may eafily be reduced to powder, while other parts are harder, have a conchoidal fracture, and refemble bafalt. Near the falls are feveral veins of feldtfpar of a reddifh colour.

Between thefe falls and Albany, the foil of the mountains confift of indurated clay; the ftones, which are found there, are a fpecies of flate. In the intervening fpace between the mountains and the prefent bed of the river was an uninterrupted chain of fmall fand-hills, rifing on both fides of the river, nearly at equal diffances from the flore, and which undoubtedly are the remains of the ancient bed of the river, after it had formed the prefent channel.

In the township of Saratoga you find the last plane-trees, acacias and white cedars, for these trees do not grow more northwards. The red cedar, Virginia

381

Virginia cedar, and poplar of Carolina, you first meet with at the cataracts of the Mohawk river. Several miles around the medicinal springs of Balltown and Saratoga you find only white pines, small fickly oaktrees, and fern.

## THE TREATY OF COMMERCE.

Since we left the English dominions, and have reached the territory of the United States, we have found, that the treaty of commerce, concluded between Great Britain and America, forms the universal topic of conversation, and the principal fubject of discuffion in the newspapers. I shall not prefume to decide, whether the majority of the inhabitants be for or against it; but this I know, that the number of non-contents is fufficiently confiderable, to render the friends of peace uncasive on this fubject. I am not yet acquainted with America in a fufficient degree, nor have I yet studied this treaty with the necessary attention, to form a correct judgment on its advantages, and probable refults. Yet I shall record in this journal the impression, which it made upon me at first view, were it only for the purpose of reviewing my opinion again, when time shall have decided on its merits.

In my judgment, it is extremely prejudicial to America; the mutual relations of the contracting parties are not perfectly poifed, and the commercial intereft of the United States is in many refpects injured. More ancient treaties with France are clearly violated by this treaty; and it evidently clafhes with the repeated profeffions of friendfhip, which America has fo loudly and repeatedly made to France, even under the fanguinary reign of Robefpierre. America cannot but be aware of the unfavourable fentiments, nay hatred and ill-will, which the Englifh government entertains toward the Union. Thefe fentiments will remain unalterably the fame, as long as the principles of the Britifh miniftry fhall be unchanged. England will ever confider the inhabitants of the United States as revolted fubjects, who muft be punifhed for their independence, if they cannot again be fubjected to the Englifh yoke; and though Great Britain condefcends at prefent to enter into temporary negociations with

382

with America, it is becaufe her prefent fituation allows her not to wage war against the Union, and because she hopes to derive signal advantages from a treaty, which cannot but confiderably encreafe the fale of her manufactures, difplease France, alienate her from America, and injure her trade. She hopes, by means of this rupture, to render America dependent on the English government, and in this state of dependence to force her to conclude another alliance ; a defign, perfectly answering the fentiments, which Great Britain has conftantly manifested fince the peace of 1783. The truth of these observations is obvious to all, who are acquainted with the policy of the cabinet of St. James's, and must be more ftrikingly fo to him, who has lived, for any length of time, with the Britifh agents in America, who take not even the trouble of concealing it. To conclude a treaty of amity on fuch a foundation, is to deceive America; as it clearly prefumes, that the must break off all her former connections with France, her true and natural ally,\* who, as foon as fhe shall have obtained a regular, fettled government (at prefent the obvious aim of the generality of the French people), will become more powerful than ever. Should it be America's fecret intention, to break off the former connexion with France on the first favourable opportunity, fuch a defign would not only be the refult of an erroneous, miftaken policy, but would also prove a breach of the principles of duty and gratitude, which, however they may be defpifed by the cabinets of kings, thould never be difregarded by an infant people, in the management of public affairs, and the conclusion of alliances and treaties.

One of the greatest pleafures, I hoped to enjoy on my journey to Al-

\* The translator was lately affured by an American gentleman, acquainted with the author, that it is his most anxious with, to make his peace with the Directory. It is, no doubt, from this motive, that proceed the virulent, unfupported animadversions on the British cabinet, which, the translator is forry to observe, difgrace the interesting narrative of the Duke's Travels, and which in no place of this work betray their origin in a more confpicuous manner than in this paffage, where he charges the English government with *deluding* America into a treaty, the beneficial refults of which the foon experienced, when the faw her trade protected by English convoys from the unprovoked piracies of *her true and natural ally.—Transl.* 

bany,

bany, was to fee Mr. and Madame de GOUVERNET, and to fpend a few days with them. They were not at home on my arrival, but at New York, whence, however, they were expected back every day. As Dupetitthouars's flate of health rendered it neceffary to continue longer in Albany, than we fhould otherwife have done, we determined to wait the return of Mr. Gouvernet, who at length arrived on the evening of the day, beyond which I could not conveniently defer my departure. Yet I now refolved to ftop twenty-four hours longer, to fpend them in their company.

If you poffefs a correct idea of a handfome Parifian lady, who with a fine figure unites all the charms of a well-formed mind, and, of confequence, poffeffes ample means for conquest, and then see this handsome young woman on a fmall eftate of about one hundred acres, managing herfelf the most triffing concerns of her household, with an air of fimplicity and ferenity, which would warrant a belief, that fhe is pleafed with this strange mode of life; you cannot but confider it as an additional ground, to praife and admire the female character in general, and efpecially that of French women. In the course of this dreadful revolution, females have difplayed more courage, more attachment to their duty, and more conftancy in their fentiments, than has ever been evinced on fimilar occasions. They have inspirited the courage of their hufbands, who, but for their fupport, might have funk under their misfortunes. They have foothed their fufferings. Under the feverest trials they have fhewn as much of energy and virtue, as they difplayed of elegant and entertaining manners in happier times. These observations apply to a great number of French ladies, at whofe head flands Madame de Gouvernet; her husband being indebted to her for the prefervation of his life, for his efcape from France, and for what little money he has faved. It is to her he owes his prefent happinefs, and the fortitude, courage, and fatisfaction he manifests in regard to a mode of life, equally foreign to his tafte and habits. They refide five miles from Albany on a fmall eftate, which they have purchased for fifteen thousand livres French money. The land is not of the best quality, but it may be

be converted into very good meadows, and thus anfwer their well-conceived project of rearing and fattening cattle, and keeping a good dairy, until they fhall be able to return to France. They lead a folitary life, without any company but that of a young man, who followed them on their emigration from France, who joins in their labours, and fhares in their fociety. In this refpect they derive but little benefit from the vicinity of Albany. The circumftance, that most of the inhabitants of rank are ignorant of the very existence of Madame de Gouvernet in their neighbourhood; and still more the indifference, manifested by those, who are acquainted with the uncommon merits of this distinguished couple; form the strongest evidence against the hospitality of the inhabitants of Albany.

Some French families refide in the town and its vicinity; that of Mr. LE COUTEUX—a highly interefting name—is the only one, whofe acquaintance I withed to obtain. They who are acquainted with this family, know that it has long been diftinguithed for rectitude and talents, as well as for a confummate knowledge and punctuality in commercial tranfactions; qualities, which have been, as it were, hereditary in it. Mr. Couteux of Albany is, by the unanimous teftimony of all, who have had any dealings with him, worthy of his name. His ideas, as well as exprefitions, carry fome air of peculiarity; but he is good, obliging, honeft, and univerfally refpected. He is engaged in partnerfhip with Mr. QUESNEL, a merchant of St. Domingo; this houfe is again connected with the firm of OLIVE in New York, and through this, it is afferted, with the great and refpectable houfe LE COUTEUX in France.

#### POTASH-WORKS.

Potafh, forming a confiderable branch of the trade of Albany, as well as of other American cities, the back country of which has been lately cleared, I fhall here infert fuch information as I have collected on the manner of preparing this falt, which is generally obferved in the United States. This alcaline falt is extracted from common afhes, after they have

have been previoufly purified from all heterogeneous matter. It is obtained by folution and evaporation. Large tubs, with a double bottom, are filled with afhes; the uppermost bottom, which contains feveral holes, is covered with afhes, about ten or eleven inches deep, while the under part of the tub is filled with ftraw or hay. Water, being poured over the ashes, extracts the particles of falt, and discharges all the heterogeneous matter which it may yet contain on the layer of hay or ftraw. The lie is drawn off by means of a cock, and if it fhould not yet have attained a fufficient degree of ftrength, poured again over the afhes. The he is deemed fufficiently ftrong when an egg fwims on it. This lie is afterwards boiled in large iron cauldrons, which are conftantly filled out of other cauldrons, in which lie is likewife boiling. If the lie begin to thicken in the cauldron, no fresh lie is added, but the fire is well fed with fuel, until all the aqueous particles are feparated, and the whole is completely infpiffated and indurated. This falt is of a black colour, and called black potash. Some manufacturers leave the potash in this state in the cauldron, and encreafe the fire, by means of which the oil is difengaged from the falt in a thick fmoke, and the black potafh affumes a grey colour, in which ftate it is packed up in barrels for fale.

The process of preparing the potash requires more or less time, according to the quality of the assessment of the lie, and to the degree of strength of the latter; the medium time is twenty-four hours. The assessment green-wood, and especially of oak, are preferred. No potash can be prepared from the assess of refinous trees; and assessment, which are five or fix months old, are better than those that are new.

Some manufacturers use only one cauldron for boiling, which they fill with cold lie, as it comes from the tubs; and others put the falt, as soon as it begins to coagulate, into finaller cauldrons, to complete the crystallization.

In many parts of the State of New York, efpecially in the North, and in the vicinity of Albany, the inhabitants, who fell the wood, prepare the potafh. But there are alfo large manufactories, where from thirty to forty tubs are ufed for preparing the lie, and from ten to twelve caul-

3 D

drons

drons for its evaporation. The manufacturers buy the afhes from private families. The tubs and cauldrons are of different fizes in proportion to the greater or lefs extent of the manufactory. By a general effimate from five to fix hundred bufhels of afhes yield a ton of potafh.

The barrels, in which the potafh is packed up, muft be made of white oak, or if this cannot be had, of wood, which is but little porous. The ftaves ought to be far more durable than for cafks, in which other dry goods are packed; the hoops alfo muft be more numerous; for the leaft fiffure would expose the potafh to humidity, to the air, and, confequently, to deliquescence and diffolution. Inftances have occurred, when barrels, badly made and hooped, and which had been filled with potafh, were foon after found to be half empty.

Pearlash is potash purified by calcination. To this end the potash is put into a kiln, conftructed in an oval form, of plafter of Paris; the infide of which being made otherwife perfectly close, is horizontally interfected by an iron grate, on which the potash is placed. Under this grate a fire is made, and the heat, reverberated by the arched upper part of the kiln, compleats the calcination, and converts the potash into pearlash; which is taken out of the kiln, and, when completely cooled, packed in barrels. The process of calcination lasts about an hour. Pearlash is proportionately more heavy than potash, on account of its greater compactness; and the lofs of weight, experienced by the latter through the calcination, is very triffing. Although pearlash is less liable to deliquate by the air than potash, yet the barrels, in which it is packed, are of the same fort and structure as those in which the latter falt is barrelled. They are of different fizes, and contain from two to three hundred pounds. Potafh as well as pearlash are fold by tons in the course of trade ; and it is not lawful to export either before it is duly infpected by the public fearchers, who are appointed for this purpofe in all the ftates, where pearl or potafh is manufactured.

Dupetitthouars's ftrength having been confiderably impaired by his illnefs, he thought it prudent to return home. I parted from him with the utmost concern. To travel alone is extremely unpleasant, and more

fo

fo when you are indifpofed. I had yefterday a fit of the ague, which I prefume is the beginning of a tertian fever. I was feized with it at Mr. DE LA TOUR DU PIN'S. But, neverthelefs, I will proceed to Bofton, where I expect to find letters from Europe, which I much defire to fee. For thefe laft three months I have not heard a word from any of my friends or relations.

## DEPARTURE FROM ALBANY.

I was by no means difpleafed at leaving Albany. Young Mr. Renffelaer and Mr. Henry are the only gentlemen, from whom I experienced any civilities. The Albanians, to fpeak generally, are a fet of people remarkable neither for activity nor politencfs; they are the moft difagreeable beings, I have hitherto met with, in the United States. In every other refpect Albany is a place where, with a fmall capital, you may make money, and with a large capital acquire great wealth. The trade of this place fuits any amount of property, and is attended with lefs rifk than any other fpecies of commerce carried on in this part of the globe. An induffrious and enterprifing man might improve the trade of this place to a very confiderable degree.

We experienced here this day, Friday the 7th of August, an uncommon heat. My thermometer stood at ninety-fix degrees of Fahrenheit, or twenty-eight four-ninths of Reaumur. We were told, that the thermometer of Mr. Lewis, who is esteemed here a very accurate meteorologist, stood at one hundred degrees of Fahrenheit or thirty two-ninths of Reaumur. This excessive heat continued feveral days, and was not the least allayed in the night.

My horfe, which was to be fent after me by Captain Williamfon, was not yet arrived. I took, therefore, a feat in the ftage waggon, that is, a waggon without fprings, but covered. You crofs Hudfon's River on leaving Albany. The road to Lebanon, where we ftopped for the night, lies over a mountainous country. Nearly the whole of the diffrict is in the first ftage of fettlement. All the land, within an extent of twenty-

3D 2

five

five miles, belongs to Mr. Van Renffelaer, Lieutenant-governor, and one of the richeft proprietors in the State of New York, perhaps in all the States of the Union. Much of this land was granted to his anceftors by letters-patent, at the time when the Dutch fettlement was formed. He has also purchased much more. A confiderable part of this estate has been fold; but he fells none without referving a ground-rent. This forms, no doubt, a very pleafant fort of income ; but which, in my opinion, cannot be of long duration in this country. A man, who is obliged to pay every year a ground-rent, foon forgets the moderate terms on which he obtained poffeffion of his eftate, feels only the unpleafant compulfion of paying money at a fixed time, and eagerly feizes upon the first opportunity of freeing himfelf from this incumbrance. An aged Quaker-woman, who did not fpeak a word, but went no farther than Philipftown, and a Mr. MAC-ELROY, were my companions in the ftage. The latter is a land-holder in Pennfylvania, on the Delaware, without any bufiness or trade. He refides on his estate, when he is not travelling for his amufement, and is unmarried. His fifter manages his houfehold. He poffeffes a confiderable quantity of land, efpecially on Fifh Creek, in the diffrict of Mr. Schreiber. He feems to be a worthy man, but is constantly dull and morofe.

The fever, which feized me near Philipftown, prevented me from collecting the information, which I might have otherwife been able to procure, at the different places where the ftage ftopped. What little intelligence I have been able to gather is, that the medium price of land is here from five to eight dollars an acre. The laft place, before you reach Lebanon, is Stephentown, fituated on a fine large creek. It belongs to the Patron : this is the general appellation of Mr. Renffelaer, at Albany, as well as in its environs. The face of the country is fad and melancholy ; it is mountainous and rocky, and bears no trees but hemlock-fir and white pine. On the road from Stephentown to Lebanon, the country expands into an amphitheatre, formed by numerous mountains of various fize and fhape, moft of which lie in grafs up to the very fummits. At

the end of a very circuitous journey through this vale you reach the inn of Mr. Srow.

Lebanon poffeffes a mineral fpring, clofe to which ftands the inn of Mr. Stow, on the declivity of a mountain; most of the invalides, who drink the waters, board therefore at the inn. From this point the profpect of the vale, or rather of the low grounds, is most pleasing. A number of small houses, scattered over the fields, and several villages, enhance the charms of this delightful view, which, on my arrival at the inn, I was too indisposed to enjoy. I was obliged to creep into my bed, although it was fcarcely five o'clock, to suffain my fit of the ague, to take an emetic, and to renounce whatever remarkable objects this place its place its place.

### SHAKERS.

In America, or at leaft in fome States of the Union, no ftages are fuffered to travel on Sundays; this is the cafe in the State of New York. Mr. MAC-ELROY and myfelf fpent, therefore, the morning in vifiting the fociety called Shakers, who have formed a fettlement, three or four miles from the inn. Had I not been indifpofed the preceding evening, I fhould have feen them at work, and, by means of my continual queries, might have obtained fome accurate information concerning their origin, their regulation, the mode of hufbanding and diftributing the common wealth of the fociety, and efpecially on its prefent ftate. We were now obliged to content ourfelves with viewing their villages, the infide of their houfes, their gardens, and their religious worfhip, without any guide, and to reft fatisfied with what intelligence we could obtain from our landlord and another man, who faid that he was well acquainted with the fociety.

As to their form of government, the fociety is a republic, governed in a defpotic manner. All the members work for the benefit of the fociety, which fupplies them in clothes and victuals, under the direction of the Chief Elder, whom they elect, and whofe power is unlimited. Subordinate

nate to him are infpectors of all claffes, invefted with different degrees of authority. The accounts reach him in a certain regular order and gradation; and in the fame manner are his orders carried into effect. It would be high treafon to addrefs the Chief Elder himfelf, unlefs the addreffer belongs to a clafs which enjoys this privilege; in any other cafe this offence is feverely punished, or cenfured, if it be committed by a stranger, ignorant of this law. Marriage is prohibited in this fociety, which is recruited merely by profelytes, who are, however, far lefs numerous at prefent, than eighty years ago, when they first fettled in this country. Married men and women are admitted into the fociety, on condition that they renounce each other. They frequently bring their children with them, who in this cafe become a common property of the fociety. It fometimes happens, that, in fpite of the prohibition, the flefh will have its way; but, in fuch cafes, a fevere, exemplary, and corporal, punishment is inflicted on the offenders; and this punishment is not mitigated, if they effect their escape to join in lawful wedlock, for, on their being apprehended, they are punished with the fame feverity, as if they were not married. Although the members of this fociety do not bind themfelves by vows, yet, in clofe adherence to their tenets, men and women live in feparate apartments, though in the fame houfe. The village contains four fuch houfes; all the other buildings are ftores or fhops, in which all forts of trade and manufactures are carried on. They make cloth, gauze, floes, faddles, whips, nails, cabinet-work, in flort, ever article which is fure to find a ready market. They fell their commodities either here or in the neighbouring towns. The women perform fuch bufinefs as is generally allotted to their fex.

This frame of fociety has attained, it fhould feem, a high degree of perfection. The emulation among the members is uncommonly great, and the fociety poffeffes confiderable property, the amount of which is, however, known to none but the Chief Elder. The Shakers are an honeft, good natured, fet of people; they perform their engagements with the utmoft punctuality, are excellent neighbours, faithful workmen, and very moderate in their prices. This is the whole flock of information

391

tion which I have been able to collect on the abfurdities and peculiarities of the Shakers.

In regard to the form of their religious worship, I can speak from my own observation. On our arrival they were already assembled in the place where they held their meeting. This is a hall, about feventy feet in length by forty-five or fifty in breadth, with eighteen windows, by which light and a free circulation of air is procured. At each end of the hall is a fire-place ; benches are placed all along the walls, and fome on the right of the fireplace. The doors, by which the men and women enter the hall, are in one of the long fides. The infide is overlaid with plaifter of Paris; the ornaments of wood, and window-frames, are painted light-blue, and the benches red. Whoever could find room, fat down; and the reft, by far the greatest part, were standing. The Chief Elder was feated nearly in the centre, on a bench opposite the door, and a place between the two doors was affigned to our party. The most profound filence was obferved. The men were dreffed in a blue coat, black waiftcoat, and pantaloons of blue and white fpotted cloth. The women wore a long white gown, a blue petticoat, an apron of the fame cloth of which the men's pantaloons were made, a large, fquare, well plaited handkerchief, and a plain cap, tied under the chin, fuch as the portereffes of nunneries are accuftomed to wear. The hair of the men is combed ftraight down; the hats were all hung on nails. When a man or woman is tired of fitting, or wifnes to make room for another member, they get up, and their feat is occupied by others. Every eye is fixed on the ground ; every head is bent downward; and ftupidity is the characteristic feature of every face. The women hold in their hand a blue and white handkerchief, and they ftood all, like the men, with their arms folded.

The first act of divine fervice lasted nearly half an hour; on a fignal of the Chief Elder, all the members prefent arose from their feats; and men and women formed two distinct rows opposite to each other, in form of a fan, the central point of which was occupied by the Chief Elder, standing in the fame place, where he was feated before; the rows opened towards the corners of the hall, and their position was studied in fuch

fuch a degree, that they were long deliberating on the place, where they had to put their feet, before they began to move. After a filence of feveral minutes observed in the same position, during which the hands and faces of many of the members were ftrongly convulfed, and their knees and legs shook and trembled, the chief made another fignal, without which nothing is done. They fell all on their knees, and arofe again a few minutes after. The Chief Elder now commenced a chaunt, in which both the nofe and throat bore an equal fhare, and which was confined within the compass of four deep notes ; no words could be diffinguished. The whole meeting repeated the chaunt; and again ceafed, on a fignal from the Chief Elder. After a fhort filence, and upon another fignal, the position was changed. Men and women, who are constantly separate, drew up in nine or ten ranks, facing the chief elder, by whofe fide two or three men and as many women, the elders of the fociety, had taken their feats. The troop of women was disjoined from that of the men by a finall interval of one or two paces. I have omitted mentioning, that the men, previoufly to their drawing up in rank and file, pulled off their coats, which they hung up by their hats, and appeared in their fhirtfleeves, tied with a black riband. The women changed not their drefs. The Chief Elder commenced another chaunt, much the fame as the former, accompanied by the elders, and the first part fung by the women, which rendered it tolerably melodious. This chaunt was no fooner begun, than the whole affembly started into a fort of dance, made a spring and a bow forwards, a fpring and a bow to the right, a fpring and a bow backwards, a fpring and a bow to the left, twelve fprings and twelve bows forwards, and then began the fame motions again, until the Chief Elder ceafed to fing, which is the fignal of filence for the elders, and of immobility for the dancing members. The courtefies both of the men and women confift in a genuflection; the head is bent downwards, the arms are open, and the feet advance with a fort of light caper. The women make the fame courtefies as the men, but they glide along rather than caper. All thefe motions are made to the tune, with a precifion and exactnefs, which would do honour to the beft difciplined regiment. When this

this ceremony is over, they first refume their former position in rows, and afterwards their feats near the walls. The Chief Elder at times utters a few words, but they are unintelligible to a ftranger. When all these different scenes have been acted, two women appear, each furnished with a broom, and fweep first the place occupied by the men, who draw up in clofe order, to make room for the fweepers, and then that occupied by the women, which being done, the fame courtefies, chaunts and capers recommence again. The whole fervice lasted about three hours. I had armed myfelf with a fufficient fhare of patience, to wait the clofe of the cermony, in hopes, that I should be able to converse either with the Chief Elder, or another member of the fociety; but in this I was difappointed. Upon a fignal from the Chief Elder the meeting was broken up ; the members took their hats and flicks, moved off two and two : and the Chief Elder followed, conducted by one of the Elders. The women, after having covered their flat cap with a hat equally flat, went out of the hall by a feparate door, and brought up the rear, at an equal ftep, and their arms folded.

We were told, that they were going to dinner, but could not learn any farther particulars. On Sundays no ftrangers obtain admittance to their garden; we could only view it over the railings, and found, that it was large, beautiful, and kept in good order. All the culinary plants, which are not wanted for their own confumption, fhoot up into feed, of which they fell confiderable quantities. All their railings and doors are painted with as much care, as in the beft kept Englifh garden. The former run along the ftreets, to feparate them from the houfes. Neat little pofts, painted with equal care, mark the foot-way. The whole forms the neateft, prettieft, and moft pleafant fight, I ever faw. I repeat it once more, that what little I have feen of this fociety is fufficient to convince me, that with the utmoft abfurdity in point of religious principles and worfhip, the Shakers unite much order, activity and good fenfe in their bufinefs, and uncommon abilities in the management of their affairs.

Among the fifters were fome very handfome girls, but the major part were rather advanced in years. The number of young men is compara-

3 E

tively,

tively much greater. This fociety, which has nothing in common with the Friends or Quakers, was transplanted, twenty-two years ago, from England to America. The first and principal fettlement was formed in 1774, at Nifqueunia, in the ftate of New York, a few miles above Albany; fince that time, one or two more have been inftituted. The chief leader of the fect is a woman; the first was one ANN LECOQ, who, it is reported, had been kept by an English officer. She died in 1784, and was fucceeded by another, elected by the fect, from an opinion, that, like her predeceffor, fhe is infallible and allied with the Deity; fhe refides in Nifqueunia. The chief elders are her deputies and fubftitutes in the different fettlements.

The medicinal waters of Lebanon fpring in a tolerable quantity behind the inn of Mr. Stow, and are collected in a bafon, fix cubic feet in extent, for the convenience of the drinkers. At the extremity of the bafon ftands a miferable hut, which contains the bath, filled by means of one cock, and emptied by another. About one hundred paces below the bath, the fame waters turn a grift-mill with two courfes. Their ufe is preferibed in almost all diffempers; whether they be of any fervice, I know not, but they feemingly enjoy lefs celebrity, than the medicinalfprings of Balltown and Saratoga, and in point of tafte differ not in the leaft from common water. From the great number of bubbles, that are conftantly rifing from the bottom to the furface, the Lebanon waters appear to be impregnated with fixed air. Dr. CRAIG, of Bofton, the proprietor of this fpring, is to creft, next year, the neceffary buildingsfor the accommodation of the valetudinarians, who repair to this place for the ufe of the waters.

The price of land is here, according to its variations of quality, from fix to twenty-five dollars an acre. Mr. Stow, as well as his whole family, nurfed me with the utmost care, during my illnefs.

The ftages being permitted to fet out as foon as the afternoon's fervice is over, we proceeded on our journey to Pittsfield, which you generally reach the first day of your departure from Albany, unlefs it be a Sunday. On the fummit of Hancock-mountain, to which you turn on leav-

395

de

ing the low grounds, the boundary of New York joins that of Maffachufetts. The country on the other fide of the mountain widens into a more open profpect, although fome finall eminences continue yet in view, which are cultivated and adorned with houfes. You fee Pittsfield five or fix miles before you reach it.

It is a fmall neat town, built about twenty-five years ago. The houfes are moftly of joiner's work, large and handfome; the price both of land and labour is much the fame as in Lebanon, but the currency is of a different ftandard. A dollar is here worth fix fhillings. Pittsfield lies in the county of Berkfhire, which contains about thirty thoufand inhabitants.

Being much weakened by my yefterday's fit of the ague, and expecting another fit this morning, I lay down as foon as I arrived. My reft was however interrupted by a love-fcene, acted in the paffage, by Mr. Mac-Elroy and a niece of the landlord, a tall, buxom lafs with fine eyes. "Give me a kifs, my dear—do, give me a kifs," I heard a whole hour together. I congratulated my travelling companion the next morning on his amorous adventure, which, however, had been confined to the moft tender and ardent kiffes on both fides; any thing more having been conftantly refufed. I relate this trifling anecdote, as it may ferve to give an idea of American manners. Adventures of this defcription are faid to be very common, without the leaft difparagement to the honour of the amorous laffes, although at times they are carried fomewhat farther.

Having arrived yefterday in a covered cart, we were promifed a better carriage for this day's journey; and yet this better carriage confifted in an open cart.' On confidering that I was to fuftain my fit of the ague in this cart, I could not but find it extremely inconvenient; but the law of neceffity fuperfedes all deliberation. I was at confiderable pains to obtain a little hay, on which I might reft; and thus fhaking with the cold fit of the ague, and broiled by the fcorching fun, I paffed over the Green Mountains, a wild, rocky tract of country, but cultivated up to the fummit of the mountains; a fcene, which frequently recalled to my mind the profpects of Switzerland, and efpecially the mountains in the Pays

3 E 2

de Vaud. The road lies over a chain of rocks. Midway from Northampton our cart stopped. Utterly unable to proceed any farther, I lay down to fuftain my fit of the ague, and continued in bed two hours. Through the compaffion of the driver, we obtained here a covered postcoach, fufpended upon fprings, and thus reached at length Northampton, a neat town, fituated in a pleafant country, and containing many handfome and convenient houfes, among which is an inn, fcarcely equalled by any other in America. The building is fpacious and neat, the apartments are well diftributed, the family confifts of well-bred people, and the articles of provision are good and in abundance. The fituation of Northampton is extremely pleafant. The banks of the Connecticut, on which the town is feated, offer a delightful profpect, and lie almost entirely in grafs. The houfes are well-built and neatly painted. The number of the inhabitants amounts to fixteen hundred. It is the capital of the county of Hampshire, in the state of Massachusetts. The town carries on some triffing trade with Hartford, to which it transmits, in veffels, the produce of the furrounding country. Great numbers of cattle are fattened in the county, which contains about fixty thoufand inhabitants.

Maffachufetts is as much cultivated as France. I certainly did not pafs through the moft fertile part of this ftate, it being covered with ftones and rocks, and yet it is throughout cultivated. The houfes lie clofe to each other, and ftand in the midft of the fields and farms to which they belong. They are extremely well built, confift of joiner's work, and are very neatly painted white. The ftables and barns are painted red. Nearly all the fences are made of ftones collected from the fields. The harveft is completely houfed, and the farmers are bufied in mowing the after-crop of grafs. Six or feven mowers are at work in the fame meadow. This carries an appearance of activity and profperity, which is extremely pleafing, and keeps alive the remembrance of Europe. Numbers of horfes are feen in the fields, which, however, are not remarkable for beauty. The cattle are of a fine breed, and all the pafture-grounds are covered with them.

On leaving Northampton, you cross the beautiful river Connecticut. The

The banks, being well-wooded, and floping gently towards the bed of the ftream, fecure the country from inundation. While croffing the river, I learned, that veffels of fifteen or twenty tons burthen fail fifty miles farther up the river, and that ships can come up as far as within forty miles of Northampton. We halted in Bellytown, where the New York road meets that of Albany. Our travelling party had this morning already been encreafed by a dirty little boy, and was now augmented by the paffengers, who arrived in the New York ftage, and by two other travellers, a Mr. WILLIAMSON, a land-holder of Georgia and pleafant companion, but a violent partizan of the Anti-federalist party; and a young man of New York, whofe name I did not learn. Continually the fame fort of land, but better roads as far as Spencer, where the two waggoners of the old and new Bofton roads waited our arrival, to try to prevail upon us, each in his turn, to give the preference to his road. I was determined to choose that, which the others should not. I wanted further reft and convenience, as I had not paffed the day, on which I was free from the fever, quite fo well as the firft.

## THE FAMILY OF WILLIAMS.

We made our arrangements in fuch manner, that four perfons only obtained feats in our ftage-coach; I procured a back feat. In Worcefter three ladies joined our party, who, on perceiving my fickly appearance, would not accept my feat. But, notwithftanding their politenefs, and in fpite of my firm determination to bear up as long as poffible. I was obliged to ftop at Marlborough. Unable to endure any longer the jolting of the coach, I was neceffitated to entreat my travelling companions to fet me down at an inn, where I was certain of an opportunity of purfuing my journey in the mail-coach. And well had I done to ftop here, for I was no fooner in bed, than I was feized with a very violent fit of illnefs, in addition to the ague. Although exceffively ill, I was fenfible. of my dreadful fituation, being thus laid on a bed of ficknefs among people who had never feen me before ; and this idea threw me into an agitation of mind, which bordered on defpair. But, fortunately the family,

397

m

in whofe houfe I had ftopped, were the beft people in the world. Both men and women took as much care of me, as if I had been their own child. Efpecially the women, young and old—for the family is very numerous nurfed me with the utmoft folicitude and attention. Having obferved, that I was attacked by a diarrhœa, which lafted two days, and was probably the effect of heat upon an emaciated conftitution, they infifted upon fending for a phyfician. I was obliged to yield to their remonftrances; the phyfician came; and, as he could not poffibly leave me without preferibing fomething, he gave me pills. I was under the neceffity of continuing four days longer in this houfe, where I experienced the beft treatment; and which, from my uncommon weaknefs, I was not able to leave. I had there another fit of the fever, which rendered me delirious, and afforded me additional grounds to praife this excellent family.

Their name is WILLIAMS. The great grandfather of the Williams, who at prefent keeps the inn, arrived here with the first fettlers from England, and, which is peculiarly remarkable, built the house which is now inhabited by his great grandfon. The room, which I occupied, has not fince that time undergone the least alteration; all the defcendants of the first Williams, the prefent landlord included, were born in this room. The brothers of the landlord, the fifters of his wife, their children, and his own, live all together, and form one family.

Befide the inn, which being much frequented cannot but yield a confiderable profit, Williams poffeffes an eftate of two hundred acres, nearly three-fourths of which are under cultivation, or, to fpeak more properly, lie in grafs, which is the general cuftom in Maffachufetts. Meadows, which are mowed very early, yield a fecond crop, and produce from two to three tons of hay per acre. Such land as does not lie in grafs is fown with Indian corn. They alfo fow a little oats and barley, but no more than is neceffary for the feed of the horfes and the confumption of the inn. The prejudice in favour of Indian corn is deeply rooted in this country; but the ftate of agriculture is, upon the whole, far better here than in any part of America, which I have hitherto traverfed. The dung

is

is carefully preferved, and even the ftreet-dirt is made ufe of as a manure, and in fpring laid on the fields. Agriculture is not fo well underftood here as in England; but they think of the most proper means of carrying it to a higher degree of perfection, and converse on agricultural improvements with good fense and judgment. Cattle are here in great abundance, and of a very fine breed. Boston offers a certain and ready market for all the productions which can be fent thither. The breed of pigs is remarkably fine; they grow uncommonly fat. Day-labourers may be procured in great abundance; their wages are four shillings and fixpence a day, or from ten to twelve dollars a month.

This part of America difplays in every refpect true European induftry. In every village the ftreets along the road are lined with fhops. Cabinetmakers, fhoe-makers, faddlers, coach-makers, and tanners, are very numerous. My friend Williams was not fufficiently verfed in the political economy of the country to inform me of the exact proportion of the taxes and other public burthens. All he was able to tell me on this fubject was, that the aggregate fum of his afferfiments, taxes, county and parifh rates included, amounts yearly to about forty dollars, befides four dollars and half for his licence to keep the inn. Doctor COTTY, a furgeon, who attended me, and pofferfies an eftate of eighty acres, pays no more than twenty dollars. He is alfo a very worthy man, whom I have every reafon to praife.

All these people bufy themselves much with politics, and from the landlord down to the house-maid they all read two newspapers a day. Mr. Williams and Dr. Cotty are by no means friendly to the treaty, because they do not like the English, and contend that no reliance can be placed on that nation. But they fay, at the fame time, that it must all be left to the President, who will make every thing right. I must repeat it once more, that I cannot befrow too much praise on the kindness of these excellent people. Being a stranger, utterly unacquainted with them, sick, and appearing in the garb of mediocrity, bordering on indigence, I possessing in the least claim on the hospitality of this respectable tamily, but such as their own kindness and humanity could fuggest; and

yet,

yet, during the five days I continued in their houfe, they neglected their own bufinefs to nurfe me with the tendereft care and unwearied folicitude. They heightened ftill more the generofity of their conduct by making up their account in a manner fo extremely reafonable, that three times its amount would not have been too much for the trouble I had caufed th em. May this refpectable family ever enjoy the bleffings which they fo well deferve ! This fhall be my conftant, fervent wifh until my laft moment.

Having at length recovered fomewhat more firength, to bear the fatigue of a journey, and being defirous of reaching Bofton, as foon as poffible, as I hoped to find fome letters in that city, I took a feat in the mailcoach, which ftops at Williams's houfe. It is the fame fort of carriage as a ftage-coach, except that it is lighter, better fufpended, and takes but fix paffengers, its chief deftination being to carry the mail. I had fearcely proceeded three or four miles, when we were met by a coach and four. It was General KNOX, who, during a temporary refidence in Bofton, on account of private bufinefs, having accidentally learned, that I lay ill at Marlborough, came to take me to Bofton. My fatisfaction and gratitude for this uncommon kindnefs may be eafily conceived. I had frequently feen him at Philadelphia, in the courfe of laft winter, ; had often been at his houfe, which I found extremely pleafant; but had not the leaft right to expect fuch a diftinguifhed act of kindnefs. I was too weak to exprefs my feelings, but was the more overwhelmed by them.

The road from Marlborough to Bofton is a continual village. Twenty miles from this city begins an uninterrupted line of handfome houfes, cleanly and pleafant buildings, neat gardens, and fine orchards, which form all together a rich and delightful profpect, the charms of which are ftill more enhanced by numberlefs horfes, cattle, and fheep, which enliven the landfcape, and are fheltered from the fcorching fun by clumps of trees, planted for that purpofe. You fee every where numerous churches, of a fimple conftruction, but neatly painted, and furnifhed with fine fpires. They are furrounded with open ftables, in which the countrypeople put up their horfes during the fervice. This is a pretty general cuftom

cuftom throughout America, unknown in Europe, but which is more carefully attended to in Maffachufetts, the most opulent and populous of these states I have hitherto seen.

At laft you pais through the handfome village of Cambridge, and reach Bofton by a wooden bridge, which was finished laft year, and which, including the cause feway leading to it, is a mile in length. This bridge was conftructed at the expence of a company, who receive a toll, which yields nearly twenty per cent interest on the capital spent in building the bridge. I was too much indisposed fully to enjoy the view of this delightful country, which reminds a man of England on many accounts, but was not altogether infensible to its charms.

#### BOSTON.

The towns, which are most populous, most ancient, and most flourishing in point of trade and industry, and which on these grounds interest most the curiosity of foreigners, are exactly those on which a traveller has least to remark. All the observations, which he might make in regard to them, have been anticipated by others, and he will frequently waste his talents in repeating, with less accuracy, what historiographers, gazetteers, nay directories, have faid before him. This is exactly the cafe with Boston. Dr. Morfe's American Geography, and a variety of directories, published in that town, give a more minute, and probably a more exact account of it, than all the information which the most active foreigner can collect in the space of fix months. I shall, therefore, forbear entering into any details, which would be useles, and which my friends may easily procure.

The town of Bofton is fituated on a peninfula. The ifthmus, which connects it with the continent, is but a few yards in breadth, fo that it might eafily be cut through, fhould the fafety of the place demand it. Bofton is fo completely girt by the fea, that the fhorteft bridge, by which you can reach it, is a third of a mile in length.

The harbour is four or five miles in depth, of a ftill greater breadth, and interfperfed with numerous islands, which form a more pleafing profpect from none of them being perfectly flat and level.

3 F

Several

Several of thefe iflands are fituated at the entrance of the harbour, which from one fide to the other may be five miles in breadth, but the navigable part of which is fcarcely half a mile wide. The paffage between moft of thefe iflands is inacceffible for fhips of more than two hundred tons burthen. The only channel, paffable for fhips of a larger fize, lies between two iflands, one of which is called Caftle Ifland, and the other Governor's Ifland, half a mile diftant from each other. This channel is ftill more narrowed by a third of it only having fufficient depth of water, efpecially for fhips of a deep draught, which are obliged to fteer along Caftle Ifland at the diftance of two hundred yards from the land. If thefe iflands were fortified in fuch a manner, as to be able to cannonade fhips with effect long before they could draw near, and even after they had reached the port, the town of Bofton would be moft powerfully protected from any attack, that might be made on it.

General Knox, who but very lately refigned the place of Secretary at War, told me, that not only are plans drawn up and approved of for crecting thefe fortifications, but that Congrefs has alfo refolved to bear the expence, effimated at one hundred thoufand dollars, forty thoufand of which were already granted two years ago, that the work might immediately be commenced; but that the legiflature of the State of Maffachufetts oppofes the execution of this plan.

As many of my readers may be at a lofs to conceive the poffibility of fuch an oppofition to the refolution of the Congress, and to the positive orders of the Prefident, I think it necessary to explain this matter.

If a place is to be fortified by the Union, the State, in the territory of which it is feated, muft previoufly cede it to the Union, which takes it under its immediate protection, and the ceffion of the above iflands has hitherto met with fo ftrong an oppofition on the part of the legiflature, that it has not yet been poffible to obtain it. The true caufe of this oppofition is the general averfion of the States againft fubjecting any part of their territory to the fupremacy of the Union, and the pretence alleged in the cafe under confideration is, that Caftle Ifland is the only fafe place for convicts,

convicts, who are kept here to hard labour, and who cannot be fent to any other place equally fafe and convenient.

The legiflative power has, however, made the propofal of fortifying this ifland, without ceding it to the Union. Sixty foldiers, paid by the ftate, form the garrifon of this ifland, which violates the fpirit as well as the letter of the conftitutional act, enacting, in express terms, " that in time of peace no fingle ftate fhall maintain any regular troops."

The anti-federalift party are charged as being the chief authors and abettors of the above opposition; but it does not appear, that the oppofers belong all to that party. Their number, it is afferted, begins now to decrease, and the whole senate is favourably disposed for the fortification, fo that it probably will foon be commenced.

In this probable manner, the otherwife inconceivable opposition to the joint will of the Congress and President, in a matter of so much importance, has been explained to me.

All the inhabitants, with whom I have converfed on the prefing neceffity of erecting thefe fortifications, manifefted a fort of indifference, for which I can only account from their attention being entirely engroffed by their private affairs. If you obferve to them "That the Englifh, in the prefent ftate of things, may eafily run three or four frigates into the harbour, burn all the fhipping, fet the houfes on fire, and retreat without the leaft danger"—they grant all this, but add, "The Englifh will not come ; we have no war, and fhall wage none; we have nothing to fear." They feem to forget, that the fpirit of revenge againft revolted fubjects conftantly animates Great Britain ; which will never confider the Americans but in that light ; though circumftances may force the Englifh cabinet to enter into public negociations with the United States, and that this fpirit of revenge is peculiarly directed againft Bofton, where the revolution began in fo decifive a manner\*. They feem not to confider, that the wealth

\* The futility of this reafoning precludes refutation, but it is a circumflance, worthy of remark, that the Prefident of the Union, under whofe administration the relations of amity and friendship between Great Britain and the United States have been fo fully established, is the man who bore the most confpicuous part in the decisive measures which 3 F 2 commenced

wealth and importance of Bofton afford additional reafons for ftrengthening its means of defence, and that the importance of a ftate is encreafed in the effimation of its enemies, and of all foreign powers, in proportion as it is rendered lefs vulnerable, by the adoption of the moft proper and most vigorous measures of defence.

Thefe are all principles of acknowledged truth; and thefe maxims fo evidently apply to the United States, and effectially to Bofton, that even the circumftance of the attention of the inhabitants being entirely abforbed by their private intereft falls flort of fatisfactorily explaining the indifference, which they difplay in regard to fortifications, of the neceffity of which they are perfectly aware.

The prefent ftate of Caftle Illand, garrifoned by fixty armed foldiers, and where on the ruins of an ancient rampart fifty pieces of cannon are lying, most of which are defitute of trunnions, would be a matter of fincere regret even for him, who should have the interest of America and the *humiliation of England* less at heart, than I have.\* I lament it most fincerely, inafmuch, as setting apart the confideration of danger, it bespeaks a degree of national indolence, which, I am forry to fay, is truly difgraceful.

Governor's Ifland is ftill lefs fortified than Caftle Ifland; a block-houfe, erected on an eminence, forms the only means of defence. In France three hundred pieces of cannon would be mounted in these islands, and the most parfimonious administration would not repine at this expence, to whatever fum it might amount.

The foldiers, who form the garrifon of Caftle Ifland, have a very dirty and mean appearance, which does not feem to be an infeparable attributeof republican troops.

commenced the revolution at Bofton, the man who in BRISSOT's judgment "has the excefs of republican virtues," and who of confequence must be thoroughly convinced of the wifdom of the political fystem which he has purfued with unshaken firmness.—Transl.

\* The candour, with which the author here points out the fource of his invectives against the British government, and the origin of the farcastic centure, which on all occasions he passes on the English cabinet, deferves much praise. He inveighs and centures, because he anxiously defires the humiliation of England.—Transf. The

The convicts of the flate of Maffachufetts are fent to this ifland, where they are kept at hard labour. They are chiefly employed in making nails and fhoes, and are confined by day; fo that in this refpect their fate is not worfe, than that of the garrifon. But no effectual measures have been adopted to improve their morals, or provide for their welfare at the end of their imprifonment. The machinery, introduced into all other nail-manufactories of America, to fhorten and eafe hard labour, are *here* only excluded, fo that the convicts work to great difadvantage, if compared with other workmen, and are not able to lay by any favings during the time of their captivity, which they might usefully employ, when reftored to the enjoyment of liberty. This heedleffnefs contrafts, in a ftriking manner, with the admirable attention and order which prevail in the prifons of Philadelphia, the excellent flate of which will furnifh juft grounds of cenfure againft all the other flates, as long as they imitate not the laudable example of Pennfylvania.

TO

he

The Englifh laws, called in England the common law, are obferved in the ftate of Maffachufetts in regard to all fuch points as are not decided in a different manner by a politive law, which is frequently the cafe. Fathers poffefs the right of difpofing of their eftates by a laft-will, in its utmost latitude, on condition of their leaving to every one of their children fome part, however fmall, of their property. This right, which prodigality, revenge, paternal difpleafure, and the imbecility of old age, would frequently abufe in our European ftates, is here attended with no inconvenience. "No father has yet made an ill ufe of it," anfwered they, with whom I remonstrated on the plenitude of this right, vefted in the teftator. This anfwer, worthy of Spartans, has, however, not convinced me, that the manners of the inhabitants of Maffachufetts are as remote from an ill ufe of unlimited power, as those of the Spartans were from parricide at the time of Lycurgus; nor has it reconciled me to a law, which, at leaft in fome measure, is unjust.

The penal code is composed of English laws, somewhat mitigated. Mr. SULLIVAN, Attorney-General of the state, takes peculiar care, that justice is administered with mercy; he is a zealous partizan, it seems,

405

of

of the criminal law of Pennfylvania, and is now engaged in endeavours to get it adopted by the legiflature of Maffachufetts.

The ftate levies a tax for the fupport of government, amounting to forty thousand pounds sterling, or one hundred and fifty-three thousand three hundred and thirty-three dollars. The quota of each contributing inhabitant towards this tax, as well as the county and parifh-rates, is very trifling, though more confiderable than in the flates of New York and Pennfylvania. Property, both perfonal and real, is taxed; and fuch parts of it, as are not evident, are rated by commissioners, against whom bitter complaints are preferred at Bofton, relative to the arbitrary manner, in which they frequently proceed. These grievances, it seems, are not altogether unfounded. No recourfe can be had against an unjust valuation on the part of the commissioners, as, in order to obtain redrefs, the complainants would be obliged to difclofe the real amount of their property; which, as they are generally men of great wealth, unjuftly taxed from motives of jealoufy and envy, they with to avoid. Several of them have left Bofton, and fettled in other ftates or towns, where they enjoy fecurity from arbitrary proceedings of this kind. Mr. BRECK of Philadelphia left Bofton on this account, and Mr. THOMAS RUSSEL, a merchant, generally refpected in America, intends, it is afferted, to fettle in Charleftown, a fmall town, feparated from Bofton only by a bridge. His affeffment, under the fole head of capitation or poll-tax, amounted to fifteen hundred dollars.

Out of the parifh-rates, among other articles, the fchools are fupported, of which, according to the laws of the ftate, a certain number muft be kept in each township, proportionate to its extent and population. In addition to thefe fchools, many colleges have been inftituted in this ftate, which are fcattered through its whole extent, for the convenience of those who possibles fufficient property, and wish to pursue their studies beyond the instruction, which common fchools can afford. The University at Cambridge offers also ample means for acquiring extensive erudition. This university, which is modelled after the English universities, has profession for every branch of the fciences. It possibles a fine library, a tolerably

tolerably complete philofophical apparatus, and a mufeum, which is yet rather incomplete, but will, no doubt, foon be improved. The whole inftruction is apparently managed on very good principles. The funds, affigned for its fupport, not being fufficiently confiderable to inftruct the fcholars gratis, they are obliged to pay quarterly the moderate fum of fixteen dollars. They alfo pay fix dollars a month for their board, and are admitted after a previous examination by the profeffors. They remain here four years; if they defire to continue longer, for the purpofe of taking a degree, they pay no longer the above fixteen dollars, but merely for their lodgings. Mr. WILLARD, prefident of the univerfity, from whom I learned thefe particulars, is a man of uncommon merit, verfed in all the fciences, which are taught here.

The town of Bofton, feated on two or three eminences, and in the fmall intervening vales, is but of little compafs. It has no regular ftreets, but is neverthelefs very pleafant. The houfes are neat and cleanly; a great number have gardens adjoining to them, and all afford delightful profpects. The manners of the inhabitants are mild and hofpitable; they are much like the Englifh.

The opulent inhabitants have, most of them, country-feats at fome diftance from the town, where they refide in fummer. A foreigner eafily obtains an extensive acquaintance, and is everywhere invited, in a manner fo extremely obliging, as to preclude all doubts of the fincerity of the invitation. My ftate of health, which was but flowly recovering, prevented me from accepting the invitations I received.

I muft mention in this place, that in the vicinity of Bofton I found again Mr. Adams, Vice-Prefident of the United States, a man of fuch uncommon merits, abilities, and talents, that he has few equals in America, and is not everywhere fufficiently effecemed. He is one of the moft refpectable men in the United States. No one contributed more to the American revolution, from the beginning to the end, than he. The agents of the Britifh miniftry entertain, therefore, much ill-will againft him, although he has defended the Englifh conftitution in a book, full of profound refearches, which he entitled "A Defence of the Government

ment of the United States." John Adams refides with his lady, remote from all intrigues, in a finall houfe, fifteen miles from Bofton, which no Paris advocate of the loweft rank would choofe for his country-feat. Here he fpends all the time, which his fituation as Vice-prefident allows him to pafs from Philadelphia, in reading, and agricultural employments. He fees but little company, fince the very moderate fortune he poffeffes prevents him from receiving many vifitors at his houfe. He is generally refpected ; his converfation is extremely agreeable, and tinged with a fort of farcaftic, yet courteous wit, which renders it highly pleafing.

The treaty with England is the conftant and univerfal topic; it is difcuffed pro et contra, from one extremity of the states to the other. My opinion on this treaty is not altered from its having received the fanction of the Prefident. I admire his letter to the felect-men of Bofton; in his pofition it is impoffible to write any thing more beautiful, more noble, or more glorious. I blame him not for having acceded to the opinion of the Senate : purfuant to the conftitution, and in the prefent conjuncture of circumstances, he was obliged to act as he has done. But, nevertheles, this treaty is, in my judgment, prejudicial to the commercial interefts of America, which it renders, in some measure, dependent on Great Britain, and violates the duty and obligation of the United States, to affift France, their ally, with the neceffaries of war. It is a monument of the weakness of America, to which it will prove productive of pernicious rather than advantageous confequences. The only momentary profit, to be derived from this treaty, will accrue to American merchants, who can be accommodated by the English with long credit, and who in America, as in fact in every other country, attend more zealoufly to the interefts of their counting-houfes, than to the political advantages of the ftate, which they inhabit.

I have perufed every performance, written in favour of this treaty, without my opinion having in the leaft been changed even by CAMILLES. I poffefs, I think, fufficient knowledge of the political principles of Mr. Hamilton, to be convinced, that in this long and laborious enquiry he has rather ferved his party, than followed his own political opinion, and that

that, if he were freely to fpeak his mind, he would confers his grief at having publicly defended fuch a ftate-paper. This treaty agitates, heats, and inflames the contending parties to fuch a degree, that you hardly meet anywhere with cool, moderate, and unimpaffioned reafoning. I fhall fay no more on this fubject, although I am far from having exhausted my arguments against a treaty, which I confider as extremely unfortunate for the tranquillity of the United States.

Bofton trades to all parts of the globe. The enterprifing fpirit in point of navigation, which the Americans are on all hands allowed to poffefs, feems in a peculiar degree to animate the inhabitants of New England. Although the trade of many ports in the ftate of Maffachufetts, north and fouth of Bofton, has of late years confiderably encreafed; and although it is of the fame nature as that of Bofton, yet I have been affured, that the trade of this town, fo far from fuffering by it, has, on the contrary, never been in a more flourifhing condition, than it is at prefent. Several gentlemen, having promifed to fupply me with comparative tables of the exports and imports of Bofton, previoufly to my leaving this town, I fhall until then defer all calculation on this interefting fubject.

Anxioufly defirous as I was of collecting information relative to the trade with the South-Sea Indians, and to the nature of the navigation off their coaft, I could not but feel extremely happy at getting acquainted with Captain ROBERT, who returned from this voyage but a fortnight ago, and who has communicated to me fome particulars respecting this fubject, which, I think, will not be deemed here out of place.

The object of the fhips, which are trading to the weftern coaft of North America, is chiefly the purchafe of otter-fkins, which they barter at Canton for Chinefe goods, either confumed in America, or thence exported to Europe. The articles, which they fhip for the purpofe of exchanging them for the otter-fkins, confift of iron, copper, tobacco, filver trinkets, collars, &c. This voyage, which is generally made from Bofton in fhips from ninety to two hundred and fifty tons burthen, takes up from fixteen to eighteen months. But its duration is frequently protracted, and its produce leffened by adverfe events; which

.3 G

was

was the cafe with Captain Robert. He fpent three years and eight months in this voyage; he loft twenty men out of thirty-fix, who compofed his fhip's crew, and a finall veffel, which he had caufed to be built during his voyage, and which, he thought, might be advantageoufly employed in this trade; his own profit, as well as those of his owners, could not, therefore, but be confiderably leffened. By inferting here a brief account of his voyage, I fhall communicate to my friends particulars, relative to the trade and navigation to the weftern coaft, which, I truft, they will read with pleafure.

# CAPTAIN ROBERT'S VOYAGE TO THE SOUTH SEA.

' He failed from Bofton on the 29th of November, 1791, on board the Jefferson, of one hundred and fifty-two tuns burthen, mounting eight guns, and manned with thirty-fix men. From want of provision, and the neceffity of repairing fome damage, which his fhip had fuftained in a violent gale of wind, he found himfelf obliged to put into Valparaifo, a Spanish settlement on the coast of South America, in latitude thirtythree degrees fouth, and longitude eighty-four degrees.\* He remained here a whole month, and failed hence up the Pacific Ocean, where on the 5th of July he arrived off the Spanish island of St. Ambrofe, which lies in twenty-fix degrees thirteen minutes fouth latitude, and eighty degrees fifty-five minutes west longitude, from Greenwich. This island, which has the appearance of having had volcanic eruptions, abounds with feals, which lie on the rocks, and are eafily killed by the feamen, who frequently kill from two to five hundred of them with bludgeons, in the courfe of one morning. During the two months and a half the Captain continued on this ifland, his crew collected and cured thirteen thoufand feal-fkins, which are fold in China for fixty dollars a hundred. The oil, which is

\* The author is mifinformed in regard to the fituation of Valparaifo. It lies in latitude thirty-three degrees two minutes thirty-fix feconds fouth, and longitude feventy-feven degrees twenty-nine minutes weft, and has a harbour, which forms the port of St. Jago, three hundred and ninety miles eaft of the ifland of Juan Fernandez.—*Tranflator*.

obtained

obtained in great quantity from this fifh, is given in exchange for otterfkins, to the Indians of the weftern coaft, who drink it like rum. The island of St. Ambrofe affording no anchorage, the fhips remain constantly under way, at a greater or lefs distance from shore, according to the weather. The ship's company sleep every night on board, and keep up with boats such intercourse with the island, as is requisite for their fishery.

On his departure from St. Ambrofe, Captain Robert flood to the weftward, and made the Marquefas, or Marquefa islands; he put into the island Woahoo,\* which the Spaniards call St. Christian, in latitude nine degrees fifty-five minutes fouth, and longitude one hundred and thirty-eight degrees weft. This island is inhabited by Indians, not of a very dark complexion, and, by Captain Robert's account, of very fine fhape and regular features. The heat of the climate rendering clothes perfectly useles, they wear only a small apron, which they never put off. On feftivals they drefs in a light ftuff, made of bark, and highly finished, both in point of colour and texture. In this island Captain Robert built a veffel of ninety tuns burthen, for the trade on the American coaft, the chief materials for which he had brought with him. The four months he continued at this island, he lived, upon the whole, on very friendly terms with the Indians, great numbers of whom affifted him in his work. But one day they flewed a defign of feizing upon his veffel, when it was half finished. A great number of these Indians, headed by their king, manifested fo clearly an intention of attempting an attack, that Captain Robert was obliged to repel them by force. At the head of his thirty-fix men he fired upon the Indians, killed feveral of them, wounded others, and routed them completely. On the next following day they came to fue for peace, and brought fome of their wounded to be cured.

\* Woahoo being one of the Sandwich Iflands, the author has probably confounded this name with Waitahù, the Indian name of the Marquefa Ifland, which by the Spaniards is called St. Chriftiana, and lies in latitude nine degrees fifty-five minutes thirty feconds fouth, and longitude one hundred and thirty-nine degrees eight minutes forty feconds weft from Greenwich.—Tranflator.

3 G 2

The Indians are furnifhed neither with fire-arms nor bows; their weapons confift of poles of very hard wood, and long flings, by which they throw flones, with great precifion of aim, to a confiderable diffance. At another time the Indians of a neighbouring ifland made up to Captain Robert's fhip, lying at anchor in the road, with a fleet of about twenty boats, ninety feet in length, to take her; but a lucky flot finking one of the boats, the reft retreated with the utmost fpeed, and never made their appearance again. Thefe Indians are, by Captain Robert's account, engaged in continual warfare with the inhabitants of Waitahù, and offer their daughters, nay, fometimes their wives, to foreigners, with whom they are on friendly terms. You may keep them as long as you pleafe, and return them when you want them no longer. The Indian ladies, fo far from objecting to this fort of civility, commence, on the contrary, as early as the age of ten to do in this manner the honours of their ifland.

The Indian inhabitants of the Marquefas drink nothing but water, and are not fond of fpirituous liquors. The king and chiefs of the ifland only drink a beverage called *hary*, and prepared from a yellow root, which is gathered by their flaves, and cut into pieces, which they chew, fpit into large veffels filled with water, and afterwards fqueeze with their hands to obtain the juice. This liquor, prepared in fo uncleanly a manner, is held in very high effimation by the Indian chiefs, who mix it with water ; lefs diluted it is taken againft the fcurvy. They alfo ufe it as a remedy againft the venereal difeafe, which has become very frequent here, fince the firft vifit of the Europeans, and with which the whole crew of the Jefferfon were infected.

The marriages among these Indians last no longer than the wedded couple chooses, and especially as long as it pleases the husbands, who affert great prerogatives over their wives, and never dine with them. Father, mother, and children frequently live in the same house, even when the latter are married.

Befide the royal dignity, and that of the chiefs of the villages, which are hereditary, there also exists fome inequality among the families, all which pay

pay great refpect to the king and chiefs. Property is known and refpected in this ifland, and the number of fervants and flaves is proportionate to the amount of a man's property. Potatoes, nay, fugar-canes are cultivated in this ifland. Thefts are feverely punifhed, and the punifhment is determined by the chiefs. Fowls, which, however, are very fcarce, and pigs, of the Chinefe breed, which are tolerably abundant, are eaten roafted; but fifh they eat raw. Both men and women are handfome.

The new veffel being finished, and manned with ten men, Captain Robert fet fail for the Sandwich Islands. By his affertion, he discovered, on his paffage thither, a cluster of islands, never mentioned before by any other navigator, and fituated in latitude eight degrees forty minutes fouth, and longitude one hundred and forty degrees weft. He circumnavigated them without going on fhore, called the whole group Washington, and named fome of the islands, Adams, Jefferson, Hamilton, &c.

Captain Ingraham, mafter of the fhip Hope, of Bofton, faw thefe iflands laft year, but he merely faw them, and noted their bearings.\* By Captain Robert's account, he found in one of thefe iflands, called by the Indians Novheva, which he named Adams' Ifland, an old man, feventyfive years of age, who had been there a great many years. This old man was born in Oohoona, which Captain Robert named Maffachufetts Ifland. Having coafted along the fhores of fome of them, he failed for Owhyhee, the largeft of the Sandwich Iflands, which unfortunately derives much celebrity from the death of Captain COOK, and where he arrived on the 27th of March.

\* Captain Jofeph Ingraham, of Bofton, commander of the brigantine Hope, of Bofton, difcovered thefe iflands on the 19th of April, 1791. They are feven in number, and lie between eight degrees three minutes, and nine degrees twenty-four minutes fouth latitude, and between one hundred and forty degrees nineteen minutes and one hundred and forty-one degrees eighteen minutes weft longitude from Greenwich. Before Captain Ingraham's difcovery was known, Captain Jofiah Robert, of Bofton, failed for the northweft coaft, faw the fame iflands, and gave them the names mentioned by the author. But the whole group is named Ingraham's Iflands, in honour of their firft and true difcoverer. --Tranflator.

The manners in the Sandwich Islands are much the fame as in the Marquesas Islands. On account of the great number of ships, which touch at this island, fowls and pigs are kept here in such plenty, that ships may be easily supplied with them. Captain Robert intended to fail hence for the north-west coast of America, and on his return to rendezvous in this island, with his other vessel. After having taken in fresh water, and what provision he could obtain, he proceeded to the above coast.

Nootka Sound lies in forty-nine degrees thirty-fix minutes north latitude. The coaft, commonly defigned by this name, extends from fortyeight to fifty-five degrees north latitude. As foon as a fhip comes within fight, the Indians appear on the fhore, and, if the caft anchor, bring peltry in their canoes, which they know is the object of the voyage. The canoes are, on their return, accompanied by the fhip's boats, with a certain number of feamen and an agent, appointed by the mafter, to conclude the bargain with the Indians. Ships are frequently obliged to remain feveral months off the coaft, before they can obtain their full cargo.

Captain Robert first dropped anchor in Berkeley's Sound, whither Indians from the Straights of Fuca brought a great quantity of furs. His other vessel, which drew less water than that on board of which he himfels failed, he ordered to fail into the bays, to approach nearer to the coass, and to fend the produce of her trade to his ship. The small Charlotte Islands, which lie but a few miles from the coass, contribute also to this trade, which is carried on with great fastery, though very slowly, as the inhabitants are of a mild and honess disposition. They are not yet very fond of spirituous liquors; they prefer copper and iron, especially copper in sheets. They live by hunting and fishing, are of the fame complexion as the Indians, who inhabit the sea coass, but apparently less hospitable than the inhabitants of the Marquess Islands.

After Captain Robert had continued fix or feven months off this coaft, he loft, in a violent gale of wind, his fecond veffel, which was lefs diftant from fhore than that on board of which he was, and lefs able to weather the tremendous ftorm. Twelve men went to the bottom with the veffel,

fel, together with confiderable quantities of peltry and articles for exchange, and alfo with the plans of the coaft, which Captain Robert relates he difcovered.

From Owhyhee Captain Robert fet fail for Canton, where, in the manner peculiar to this place, but now generally known, he bartered his otterfkins for tea, rice, filks, indigo, and nankeens. The Chinefe merchants are not, by his account, remarkable for honefty, but very artful, fo that you may be eafily overreached by them, if you be not on your guard. The otter fkins, which, off the north-weft coaft of America, you obtain for about fix dollars, fetch in Canton twenty dollars. But Captain Robert affured me, that the price encreafes on the coaft, whence they are procured, and decreafes in China. Otters are found between forty and fixty. degrees.

The Englifh, French, and American fhips proceed no farther than Norfolk Sound, in fifty-five degrees north latitude; the Ruffians trade to the more northerly parts. After having traverfed the Siberian defarts in numerous caravans, they ftop in Kamtfchatka, where they build fhips, and then fail to the Fox Iflands, double Cape Providence, and commence their trade in Loak River. They treat the Indian poffeffions as Ruffian provinces, impofe contributions, and flog or kill the inhabitants, if their propofals of exchange be not immediately accepted. Their articles for barter are rum, copper, and tobacco; the peltry which they obtain, they fell to merchants of Kamtfchatka, who fupply them with merchandize. They frequently return three times, to fetch peltry and import into Ruffia the commodities of China, with which they arrive in caravans, after an abfence of three or four years.

From Canton, where Captain Robert continued from the 25th of November, 1794, until the 12th of February, 1795, he failed back ftraight to America, after having loft fome feamen through illnefs and indiferetion. He doubled the Cape of Good Hope, and arrived at Bofton on the 28th of July, 1795, without having touched at any foreign port fince his departure from Canton. However diffatisfied Captain Robert is with this voyage, yet he entertains, it feems, the project of fetting out foon

foon on another for the fame defination. He bears the character of a brave, bold, and prudent feaman, and fpeaks of his voyages as a man, who is perfectly acquainted with those which were made before his, and who is able to improve his own experience, as well as that of others.

# JOURNEY INTO THE DISTRICT OF MAINE AND BACK TO PHILADELPHIA.

# DEPARTURE FROM BOSTON-JOURNEY TO THE DISTRICT OF MAINE.

On the first project I had formed to defcend the river St. Lawrence, to visit Hallifax, and to return into the United States through the district of Maine, I intended to visit General Knox, who, with exquisite politeness, had given me in Philadelphia an invitation to that effect, and whose mansion was fituated on my way. On my arrival I entertained the fame idea, although at that time the district of Maine lay rather out of my way; and the repeated proofs of friendship I received from the General confirmed me in my resolution. I accordingly embarked with him for St. George's River, whither he returned after a four months abfence.

The houfe of the General is fituated about two hundred miles from Bofton, both by land and water. At this time of the year the paffage is generally made in twenty-four hours; but peculiar circumftances prevented us for three or four days from availing ourfelves of the favourable wind; and after these impediments had been removed, our captain wished, as foon as poffible, to improve the first appearance of fine weather. This was very trifling indeed, when he fet fail, for which reafon we were fcarcely able the first evening to clear the mouth of the harbour. On the fecond day we were forced by a thick fog, and ftrong indication of a heavy ftorm, to make the bay of Cape Ann. These measures of precaution, adopted by our captain, of which we could not but approve, removed us forty miles out of the ftraight road. As foon as the fog and indication of a ftorm had difappeared, we got again under way; but meeting with a dead calm, we were obliged to come once more to an anchor, within four hundred yards of our first anchoring place. The wind generally died away early in the morning,

morning, as well as the afternoon, for which reafon we reached not the General's manfion till after a paffage of feventy-two hours, and after having failed fifteen miles up St. George's River.

# CAPE ANN, GLOUCESTER.

The circumftance of our being compelled to put into the bay of Cape Ann afforded me an opportunity of feeing the drying of cod fifh. The whole coaft of Maffachufetts, and efpecially of the diftrict of Maine, is inhabited by fifhermen, engaged in the fifhery on the great fand-bank ; they bring all the fifh on fhore, where they receive the laft dreffing. The fifh are wafhed as foon as they are taken out of the water, and laid firft in heaps, that the water may run off. Then they remain for two or three days expofed to the air, after which they are placed on hurdles, about four or five feet in breadth, three or four feet above the ground, and as long as the field on which they are erected, generally about a hundred or a hundred and twenty yards. The fifh are laid on thefe hurdles, firft three or four, one upon another, and, after they have loft moft of the water, every fifh feparately ; they are frequently turned, that they may get thoroughly dry, which generally takes five or fix days ; at laft they are packed in cafes, preffed down, and exported either to the Weft India Iflands, or Europe.

The beft fifh, that is, those which, caught in the first fishing months, are superiour to the reft from their being dried more flowly, are sent to Spain. They are fold at double the price of those, which are caught later in the year, when the heat is more intense, and which are exported either to the West Indies, or some part of the continent. But from among the fish of the better fort, which are defined for Spain, the best are picked out for those inhabitants of Massachus few families, who have not, every Saturday, a good dish of stock fish on their table. As to the usual partition of the proceeds of the fishery, it is as follows, viz.

The fhips employed in the fifthery, which are generally of feventy tuns burthen, are navigated by a mafter, feven feamen, and a boy. The owner of the fhip has a fourth of the profit; the dryer on the coaft an 3 H eighth,

eighth, and the reft is divided among the mafter and feamen, in proportion to the fifh they have caught. The expence for candles, wood, bait, and falt is deducted, previoufly to the partition; every feaman takes care of the fifh he has caught. A veffel of fixty tuns burthen takes upon an average twelve hundred cod fifh, which are generally worth two dollars and a half per hundred weight, but coft at prefent from five to fix dollars. The town of Gloucester, which is fituated near Cape Ann, employs in the fifhery, at the great bank, about forty or fifty yachts and brigs. These veffels are of the burthen of one hundred or one hundred and ten tons; make in general three voyages in a year, if they commence fishing in March, and continue until November, when the fishery terminates. Before the war, the town of Gloucester, though less confiderable than at prefent, employed more veffels in the fishery than at this time. This decreafe, which feems extraordinary, fince the number of fhips built in this port is much greater now than at that time, originates from the comparatively greater advantages, which the fhip-owners derive from trade. But the number of towns, which fhare in the fifhery on the great bank, is also more confiderable than formerly; fo that although the fhare of fingle places in the fifhery may have decreafed within thefe last fifteen years, yet the number of those that share in it has greatly encreafed.

Befides the fifhery on the great bank, the coafts of Maffachufetts, and the diftrict of Maine, furnifh alfo large quantities of ftock fifh. They are neither fo large, nor fo plentiful, as at the great bank; yet this fifhery affords ufeful employment to a confiderable number of fhips, which preceed only five or fix miles from the coaft, return home every week, and are not exposed to the fame danger as fhips engaged in the other fifhery, which mix their fifh with those that are caught near Newfoundland.

The road of Cape Ann lies fouth-weft from the Cape. It is capacious and fafe. On a commanding eminence on the coaft, a fort is now conftructing, which will most effectually protect both the road and its entrance. Within the fort a block-house is built, the lower part of which ferves for a powder-magazine; and that part, which is defined to be inhabited

410

habited by the garrifon, is built with fo much care, that in all probability it will be bomb-proof.

The town of Gloucefter, fituated at the bottom of the bay, is pleafant, though not regular. It contains a number of ftores or fhops, and a confiderable proportion of good houfes. Like all the other finall towns around, it has an air of brifk and thriving induftry.

In the year 1794, commodities to the value of two hundred and twenty thousand eight hundred and fifty dollars were exported out of Gloucester; but its exports for the prefent year will scarcely amount to one hundred and eighty thousand dollars. Its chief trading intercours is with the West Indies.

We have obtained little new information in the courfe of our voyage thither. We came on board a veffel belonging to St. George's River, which ufually takes in its lading there. The principal commercial bufinefs of the province of Maine confifts in the exportation of timber to Bofton. It is conveyed in fmall yachts from eighty to a hundred and twenty tons burthen : fometimes brigs and fchooners are employed. The yachts are, however, preferred, becaufe they are lighter than the others, and can be navigated by fewer hands. At times these yachts will proceed as far as New York, Philadelphia, Norfolk, Baltimore, or Charlestown. From these places they are always freighted back with a new cargo, by which the profits of the voyage are increafed. From Boston they must return empty, and therefore lefs readily undertake that voyage. The clear profits of a fingle voyage were estimated at fixty-fix dollars. One of these vessels made, last year, fixteen or seventeen voyages; and the owner's neat gains for that length of time amounted to between one thousand and fifty-fix and one thousand one hundred and twelve dollars; while the cost of the veffel was from three thousand to three thousand three hundred and fifty dollars.' When the timber is uncommonly excellent in its quality, the profits are greater. The returns are also unufually good from cargoes of lime, of which there begins to be abundance found in the province of Maine. When the population of this province fhall have adequately in-3H2 creafed.

creafed, and its quarries shall be wrought in a due proportion, it will then find a very ample fource of wealth in the exportation of its line ftone.

The veffel in which we failed was dirty and incommodious. Like the reft of this craft, it was fitted for the reception of goods, not for the accommodation of a few cafual passengers. But the attentions of the captain made every thing as agreeable as poffible to us. It is to be obferved, that these vessels very often go without a lading, and many timesreturn even without ballaft; a condition of the fhip, which makes prudence and vigilance in the captain peculiarly neceffary. Our food, during the fhort voyage, confifted chiefly of fifh, which we caught ourfelves. Of these there is on the coasts fuch plenty, that before your line has been caft two minutes, you are fure to have a fifh on your hook, which will weigh, at the leaft, two pounds, often not lefs than twelve pounds. They are of the species of the cod fish and the halibut; the cod fish are larger, and worfe in their flavour than those of many other places. On these coasts, especially at the mouth of the river, lie a number of islets. At the mouth of St. George's River there appears a multitude of these of almost every diversity of fize and figure : fcarcely one of them is under cultivation. Most of them belong to the state. These coasts are all, more or lefs, inhabited. The tide is faid to flow up St. George's River, for the fpace of two and twenty miles. To the diftance of fifteen miles from its mouth, the channel of the river is three quarters of a mile broad. It there empties itself into a bay of nearly the fame breadth; after which it is fuddenly contracted into a bed fcarcely thirty fathoms from one fide to the other.

# THOMAS TOWN.-GENERAL KNOX AND HIS FAMILY.

At the extremity of this wide bay stands the house of General Knox. From its front there is a truly interesting prospect of the river, for an extent of nine miles. The house is agreeably situated on a declivity, which rises with a gentle elevation from the river-fide. Almost all the adjacent lands

lands have been, for a longer or a fhorter time, under cultivation. The natural fertility of the foil has been confiderably improved, and it affords pafture to numerous herds of black cattle and flocks of fheep. The dwelling-houfes around are frequent; and out of a hundred that may be feen at the General's refidence, there are hardly half a dozen loghoufes. The General's houfe is a handfome, though not a magnificent ftructure; neatly, if not fumptuoufly furnifhed; fufficiently fpacious and convenient for the accommodation of a numerous family, with additional lodging for the occafional reception of feven or eight friends, or even more; who, however unexpected their coming, would not fail to find themfelves as comfortably entertained as they could defire.

The General possession in right of his wife, a very extensive landed estate, which is known by the name of the Waldo Patent. The right of the property of this eftate is derived either from a treaty with the Indians, which was made towards the end of the last century by the family of Waldo, from whom Mrs. Knox is a defcendent; or from a fubfequent agreement between the Indians and the fame family of Waldo. This agreement was at that time ratified by the King of England, then fovereign of this part. of America; and, fince the revolution, it has been declared valid by the ftate of Maffachufetts. The General has acquired likewife a large eftate by purchase, which lies contiguous to the former. He enjoys both these eftates, therefore, under every right of tenure by which property, can be rendered unqueftionably fecure. Of this great eftate, a thousand acres have been inherited from the Waldoes, the anceftors of Mrs. Knox; a family, of which the male line is now extinct : the reft is the acquisition of her hufband, the General. But, befides this, a number of families have, at different times, eftablished themselves on Waldo's Patent, without any authority, fave that they met with no opposition in the attempt, at a time when the tract which remained undivided, was not kept under the particular infpection of any perfon, who might have protected the rights of the original proprietors. Most of these encroachers have fettled near the coaft. The advantage of a rich fifhery first drew them hither, and was

was long their only fource of emolument. By degrees they cultivated fome fpots of ground, befide their huts. The foil was found to be fertile; and it afforded them an abundant increase. To the first simple huts fucceeded houfes of firmer ftructure, and a better appearance; the whole extent of the eftate of Waldo's Patent, along the fea-coaft and the fhore of St. George's River, and for about half a mile inland, is now almost entirely occupied, and under cultivation. The richeft part of this territory is in the poffeffion of perfons who have no just right to it. The value of the productions of the foil, and the advantages of a fituation fo contiguous to the river and the fea-coaft, make their lot extremely defirable. The General's right to difpoffefs thefe intruders is unqueftionable. But, this right is eafier to be proved than to be made effective ; for there are perhaps a thousand families who, if it were to be carried into force, would be ftripped of their poffeffions. Most of them are well aware, that they came hither, and formed their fettlements, without having acquired any previous right to the lands which they chofe to occupy. They knew not then, indeed, that those lands belonged to General Knox or to the Waldo family ; but fuppofed this to be an uninhabited territory, formerly of the Crown of England, and fince, of the State of Maffachufetts. The example of fo many others, who had no more right than themfelves, encouraged, and feemed to authorife them to fettle at their pleafure. In fo doing, they intended no incroachment upon the property of the General; and, fince the commencement of their refidence here, they have improved their ground by their care and labour, and have actually beftowed the better part of that which conftitutes its prefent value, for the lands adjacent are by no means of equal fertility. These confiderations cannot, indeed, inveft them with a clear title to their poffeffions, yet give them, certainly, a claim to indulgence. A great proprietor, who should pretend to overlook these facts, would deservedly incur the blame of base and dishonest felfishness. He might expose himself, even while fuccessful, in vindicating his rights before a court of juffice, to the general refentment of the whole country. And by his fuccefs, even his own pecuniary interefts

423

interests might be injured in consequence of the confusion, the differsions, the differsion, and the clamours, which would, in such a country as this, ensue.

Of the importance of these confiderations General Knox is fully fensible; and he has been guided by them in his conduct towards this numerous class of perfons usurping the possession of his estates. None of them denies his title. Some are willing, on this account, to fell him a part of their plantations, at a very low price; and with them he comes to an eafy compromise. Others wish to acquire a legal right to their posses fions; and with them he agrees, that, for the payment of a fmall fum, they shall remain proprietors, each of a hundred acres of land, which is reckoned, in the State of Maffachusetts, to be a farm fufficient for the fupport of a family. Thus complying with circumstances, he is careful neither to attack the interests of particular individuals, nor to fet himfelf in opposition to the prejudices of the country; and the fagacity of his management cannot fail to be, in the end, productive of the most advantageous confequences.

In this territory, it feems to me, that no perfon can fail to thrive, who poffeffes fo eminently, the qualities of intelligence, prudence, and activity, together with a fufficient capital, to lay out in improvements.

Thefe neceffary fubdivitions of his eftate can only ferve to make it all one fcene of profperous hufbandry and abundant population, fooner than the worthy owner could otherwife have expected. So much do I know of his character and talents, and fo freely did he explain his plans to me, that I cannot but hope as warmly, as I fincerely with, the happieft confequences to his affairs and to the country, to refult from them both. At the fame time, it feems to be indifpenfibly requifite to their fuccefs, that they be profecuted with unwearied and unalterable perfeverance. At the diftance of Philadelphia, and amidft other bufinefs, it will be impoffible to give the due attention to their advancement. A refidence on the fpot is abfolutely neceffary. But, with this, attention and activity cannot fail to furmount every obftacle ; and the happieft event muft infallibly enfue. General Knox is fully fenfible of all this ; and has, therefore

fore, retired from that public bufinefs, in which he was engaged, for five and twenty years of his life, with great honour to himfelf, and to which he generoufly facrificed a part of his fortune. He has even refolved to decline attending the winter-meetings of the legiflature of the State of Maffachufetts. Thus, from a fuccefsful career in political life, he turns himfelf to augment and improve a fair eftate, in confequence of which he may probably leave immenfe wealth to his family. Can a man know a paft life of more agreeable retrofpect, in connexion with future profpects more fair and promifing ?

# A MORE PARTICULAR ACCOUNT OF THE DISTRICT OF MAINE.

At prefent, the trade of St. George's River is neither remarkably brifk, nor very gainful; and a dozen petty merchants refident in Warren, Thomastown, and Waldoborough, are proprietors of almost all the ship-The captain of a fhip has, commonly, a fhare in the property of ping. her. The merchants have fhops; and exchange their goods, with great advantage, for provision, with which they are supplied by the countrypeople, and wood for exportation, with which they freight their veffels. But, though the neceffities of the people, and the advantage with which these merchants can dispose of their goods, might encourage them to a more extensive trade in wood, they rarely procure more of it, in fpring, than will ferve their domestic purposes, and lade a fingle veffel. They fcarcely ever freight any number of veffels with this commodity. Their profits arife chiefly from the retail fale of their goods, and from the freight which they fometimes receive, in confequence of having a fhare in a fhip.

The reft of the trade is carried on by the fmall land-holders and the fhip-captains. Every colonift fells, in winter, a certain quantity of trees, which he either chops up into billets, or carries to the faw-mill. These products of the country he delivers to the captain, to carry them to Boston, and fell them there on his account; if want of money do not

not oblige him to difpose of them to the merchants on the spot. The freight of the timber, and of those other products which the country adjacent to St. George's River affords for exportation, is more or lefs, according to the nature of the different articles. It is, however, no unufual thing for the perfons fhipping cargoes, to agree, that the captains shall receive, as freight, a fourth part of the price, which the commodities shall fetch in the market. This the captain divides with his owners; referving to himfelf one-half. Out of this he fupports and pays the fhip's crew, for the voyage. The owner of the cargo is to receive three-fourths out of its whole proceeds. It often happens, that the clear profit out of these three-fourths is not equal to that one-fourth which was paid for the freight. The prime coft of a cargo, for inftance, shall be a hundred dollars; it shall be fold in Boston for a hundred and eighty dollars : out of this fum, forty-five dollars go to pay the freight; and the clear gain to the exporter, after the value of the goods is deducted, will, then, be no more than thirty-five dollars. It is, indeed, true, that the proprietors of these small cargoes fupply their timber out of their own woods; convey it to the fhore upon their own fledges, drawn by their own oxen, at a time when they are not neceffarily employed in other work; and reckon nothing for their own labour, by all which their fmall profits are fomewhat enhanced. It is likewife true, that, as the felling and removing of the trees clears the ground for agriculture, however little the timber may bring, its exportation is still to be regarded as confiderably advantageous.

When the proprietor of the cargo is, at the fame time, owner of the veffel, he then allows the captain one-half of the clear profit, over and above the prime coft of the commodity. But, of this, I believe, there is no inftance in St. George's River. In that cafe, whether the goods be the produce of the exporter's own lands, or be purchafed by him for exportation, he fixes a certain medium price, which muft first be deducted before the captain can come in for his fhare. When the prime cost of a cargo is four hundred dollars, and it is fold again for fix hundred, the captain then receives one hundred dollars, and the merchant and owner of

3 I

the

the veffel another hundred. Triffing as thefe accounts may appear, ftill they are by no means indifferent with refpect to our knowledge of a country fo new as this, and fo highly calculated to excite our intereft in what concerns it. But, the trade from St. George's River, as I have already mentioned, is not by any means brifk. The fhips, which might take in a lading in the fpace of two or three days, often confume as many weeks in an idle delay, and are, even then, not fully laden.

The caufes of this flackness of business are; 1. The want of creeks fufficiently deep to admit the timber to be conveyed down them for exportation, after the lands more contiguous to St. George's River have been cleared of woods; 2. The fearcity of good faw-mills, which is indeed a natural confequence of the former difadvantage; 3. The want of fufficient capitals in the hands of their merchants, which being employed with intelligence and activity, might conquer any physical difficulties, or might, at least, partially remove whatever is now very unfavourable.

General Knox has projected a canal to improve the navigation of St. George's River, which, by avoiding many rapids, will render the river navigable for feventy or eighty miles further up than veffels at prefent go. A great quantity of wood, that cannot now be brought to be shipped, would, then, be eafily within the reach of water-carriage. The canal is indeed already begun. At the rapids, which it will leave free from navigation, a number of faw-mills may be crected. Thefe Mr. POPE, the ableft civil-engineer in all America, has engaged to form, and which, of confequence, will be constructed in the utmost perfection. Perhaps this canal, when cut, may open a communication with other ftreams, by which means navigation shall be facilitated, agriculture improved, and traffic enriched and enlivened. A magazine of wood, of all forts, might then be formed, to lade the fhips whenever they fhould arrive in the river, and to meet all the demands and fpeculations of the merchants. At prefent there is not a fingle trader in the country, who could fupply a cargo of wood for a veffel of ninety tons burthen, in the fpace of lefs than two months.

Ship-

Ship-building is, in this river, no unpromifing branch of trade. Oaktrees are fo abundant in the neighbourhood, that thefe may long fupply fufficient materials, without there being any neceffity for having recourfe to the more inacceffible interior parts. The common price for fhipbuilding, in St. George's River, is ten pounds, or thirty-three dollars and two fhillings a ton; all things being, for this money, fupplied, and the veffels are fold at Bofton, at the rate of twelve or thirteen pounds, or from forty to forty-three dollars, a ton. To the number of five or fix veffels a year are built in St. George's River. Ships, of any number of tons burthen, can come as far up as the houfe of General Knox; but to Warren, the limit of the influx of the tide into the river, only veffels of eighty tons burthen can afcend.

Agriculture is, throughout this territory, but in a poor flate, although the land is every where fufficiently fertile. The people fow but little wheat, from a perfuasion, that the climate is too cold for it, fcarcely any Indian corn, and, on the whole, but little oats. The ground lies mostly in grass and affords excellent hay, among which is a wild clover, which grows thick, and is of a pleafant fragrance. Befides those things which are adverfe to the improvement of American hufbandry in general, the agriculture of this region lies under the following difadvantages peculiar to itself: 1. The fuccess of the fifthery, which affords abundant means of fimple fubfiftence to those who choose to depend upon it. 2. The fcope for employment in wood-cutting, which yields fmall but certain daily wages, and draws men from the plough, of which the profits return more flowly, and with lefs certainty. 3. The bufinefs of limeburning affords certain, and not inconfiderable wages, and thus allures many of the people from the tillage of the lands, prematurely exhaufts their ftrength, enhances their neceffities, and leads them into the fatal habit of intoxicating themfelves with ftrong liquors. Experience evinces, that these three classes of people are the poorest, the most profligate, and confequently not the happieft. The diftrict of Maine might produce, any where, corn equal to that of the lands round Kingston in Upper Canada, where the foil is not better, and which lies under the difadvan-3I 2 tages

tages of a more northern climate. The tracks of meadow are extenfive and beautiful; in confequence of which vaft herds of cattle may be kept in the country : as the cattle must be housed for fix months in the year, great quantities of dung, are accumulated; and the river affords alfo a rich and fertilizing flime, which might be fuccefsfully employed as manure. All these advantages tend to encourage agricultural improvements, and to render their fuccefs certain. But the prefent practices must first be abandoned; the predominant prejudices must first be relinquished; and, what is the hardest task of all, the people must be roused from their negligence. I was affured, that the people who live at the distance of fifteen or twenty miles inland, are better husbandmen, and raife large quantities of corn. I readily believe the fact. Fishing, the burning of lime, and the felling of wood, are a fort of employment very profitable to great companies, and to the poffeffors of large capitals. And provided these people may have their gains, they little care, whether men's morals be injured, and the general improvement of the country retarded, by the purfuits which they encourage.

A pair of oxen coft here fixty dollars; a cow, eighteen or twenty dollars. Although no pains are taken to improve the breed of the cattle, they are, in general, good. Land may be purchafed very cheap, efpecially from those who apply themselves to the fishery; for these people are often in *difficulties*. Wheat costs feven sufficient and almost all that is here confumed, is brought from New York or Philadelphia. Indian corn is equally dear; rye costs a dollar, or fix sufficient as bushel, if bought on the spot; the price of oats is two shillings and five-pence a bushel; that of barley fix shillings; a ton of hay may be bought for nine dollars. Labourers are not easily procured here; but they may be hired from the environs of Boston. Their wages, for the winter months, are feven dollars a month; for the fummer-months, ten dollars a month. All the milch-cows here are of the best fort.

The mercury in the thermometer has not, in the courfe of the prefent year, rifen above feventy-two degrees of Fahrenheit, or feventeen onefourth of Reaumur, in the vicinity of St. George's River. Its ordinary variations

variations have been from fifty to fifty-five of Fahrenheit, or from eight to ten and half of Reaumur. There has been much cold and rainy weather.

### JOURNEY TO AND FROM THE RIVER OF PENOBSCOT.

As General Knox's bufinefs called him to a different part of his eftates, I took the opportunity of accompanying him, in order to acquire a farther knowledge of the country. We travelled along the fhore of the bay of Penobscot. This bay and the river of the same name are the extreme limits of the trading manufactories of the diffrict of Maine; the fhore of the bay, along the weft coaft, and that of the river for twenty miles, bound the territory of Waldo-patent. Almost all this tract of the fhore is inhabited by perfons, who have occupied their lands without any just title; fo that the true proprietors are excluded from their own lands, by the usurpation of these unauthorised fettlers. Wood-cutting is the great employment of the people who dwell along the coaft; it is almost their fole employment. The wood growing contiguous to this bay is of excellent quality, and finds therefore a certain and ready fale. A hundred acres of land will, by the fale of the wood, afford fuftenance to a family for a number of years. In those districts through which I have travelled during the laft five months, the wood is cut down for the purpose of clearing the ground; and no fooner is the small wood burnt or removed, than the field is fenced in, and fown with grain. Here, on the contrary, the wood is fuffered to fpring up anew, after the old trees are felled; the turf is covered with a native clover, which grows very luxuriantly among the roots of the trees that have been cut down, and the fmall wood that lies fcattered around. This clover affords forage for fheep and black cattle, which the owner of the ground turns out to graze upon it. A flight fence encloses his garden, the little potatoe ground within which his houfe stands. There is no other fort of enclosure in use among these people. Upon all these lands in general, there has been very little labour of cultivation employed; but the foil is almost every where fertile, and better in quality than that in the vicinity of St. George's River. It is fuch, that thefe illegal occupiers, after cutting down the fineft trees

420

on

on one piece of ground adjacent to the fhore, frequently difpofe of this first fettlement; and removing to another, which they occupy without purchafe, clear it in the fame manner, by cutting down and felling off its wood. Purchafers give no great price for these lands, knowing, that the title to the possession of them is not valid, unless it shall be confirmed by General Knox. They buy the lands at less than the fair value, from those illegal occupiers who are willing to relinquish them, expecting to fell them again with advantage, after making fome fuitable arrangement with the General; and, in this expectation, they are rarely disappointed.

The view of the bay of Penobfcot is one of the most agreeable profpects that the eye can enjoy. The bay is very extensive, and is interfperfed with numberless illets of various magnitudes, most of which are inhabited. It is but feldom that any confiderable number of vessels is to be feen in this bay.

Camden was the first stage at which we halted. By the Indians, and often even by its prefent inhabitants, this place is named Myganticock. 'Squire GLAVERY, at whofe houfe we ftopped, is one of those illegal poffeffors of lands, whom in strict justice General Knox might disposses. But various circumftances concur to induce the General to confirm his right, and grant him a title to his pofferfion, upon the payment of a fhilling an acre. He lives near a fmall creek, at the mouth of a little river. He occupies both fides of this river, and has erected two mills upon it. By thefe he gets a great deal of money; though the whole establishments of his business stand upon ground, which he well knows do not belong to himfelf. He is now building a fchooner of a hundred and twenty tons burthen, which cofts him at the rate of thirty dollars a ton. He keeps, likewife, a fhop; and is the only perfon in thefe parts that carries on any confiderable trade; though even what he does, in this way, is, for the prefent, but triffing. Camden river is, with difficulty, navigable by veficls, for the fpace of three miles, from its mouth up to a certain pool of extraordinary depth, in its channel. For a fmall expence, the difficulties which obstruct its navigation might be removed, and it might be rendered navigable for the fpace of a mile higher up than the pool;

pool; though it is not there of fuch width as to admit of any great advantages being derived from its navigation. It is, however, probable, that, when this country shall be in a better state of population, what is now regarded as impossible, will appear to be void of difficulty; and when the river shall be rendered navigable for a greater distance up its stream, the improvement cannot fail to be in various respects highly beneficial to the adjacent inhabitants.

From Camden, we proceeded to the next ftage at Ducktrap-creek, and there halted. Captain ALMA, who poffeffes both fides of the river, fettled here about feven or eight years ago, with the General's permiffion. His brother and himfelf had ferved as officers in the army, without acquiring any provision for themselves, fave the hope of obtaining a settlement upon fome unappropriated lands. They are, at prefent, merchants, owners of lands which they have bought, proprietors of veffels, mafters, in fhort, of a good fortune, which, in the progress of life and business, they will, doubtlefs, confiderably augment. The intelligence and activity of thefe two brothers, have not yet been directed to the improvement of their eftates. Thefe, like almost all the other lands upon the bay, lie entirely without cultivation. The natural grafs affords fufficient hay for winterforage to the few cattle which they maintain. They live in different houses, but are, in every undertaking, equally interested. Captain Alma, whom we faw, refides conftantly in America, and manages all their joint concerns in this place. His brother undertakes voyages in a veffel belonging to them, to England, to the Weft-Indies, and in the coafting trade. He went lately with a cargo of wood to Liverpool. Its prime coft was fix hundred dollars; and the price for which it may be fold at Liverpool, may amount to fix thousand four hundred dollars. Befide this foreign trade, which the brothers Alma prefer to the coaffing-trade, they are alfo engaged in the fifhery, they build fhips, and they fpeculate in landjobbing. They introduce as many new fettlers as poffible into the diftrict of Maine; and this they can do with the greater advantage, as they ftand very high in favour with General Knox, the only legal owner of all this territory. I obtained the following particulars of information from

from Captain Alma, and another inhabitant of this diffrict. 1. The price of ship-building for vessels of a larger fize, at Ducktrap, is forty dollars a ton burthen for veffels exceeding two hundred tons; and from twenty to thirty dollars a ton, for fuch as are of fmaller fize. 2. The wages to the mafter-carpenter, are a dollar and a half a day; to the others, only one dollar; and they are all fupplied with victuals, at a feparate expence to their employer. 3. The fifhery on the coaft is carried on by almost all the merchants on the bay, with veffels of fifteen or twenty tons burthen. The captain has from the owners of the veffel, lines, ropes, provision, coffee, and receives one-half of the profits of the fishery. The fish are dried on the Fox-Islands, at the mouth of the bay of Penobscot. A fixteenth part goes to the people who have the charge of this part of the bufinefs. The fifting will yield, in a fummer, fixty dollars of profit to the fhip-owner. His veffel cofts one hundred and fifty dollars. This fishery is altogether diftinct from that of falmon, of which a great number frequent the bay in the beginning of the fummer. Almost all of the ftock-fifh is purchased by the planters in the back-fettlements, at the rate of five dollars a barrel; the remainder being exported to the Weft-Indies. Foreign trade is reckoned to be twice as profitable as the coaffing-trade. 5. The price of wood of all forts is nearly the fame as in St. George's River; the only difference of price arifes from there being a greater or a fmaller quantity ready for exportation, at any particular time, in either of the two places.

In building veffels, they make the beams, which fupport the deck, from the trunk of the fpruce-fir; taking care that thefe, and fome other parts which are framed of this timber, have a fufficient thicknefs of wood, and be fufficiently rivetted together. The reft of the veffel is made of oak planks, procured from a different part of the country. It is but about three years fince the fpruce-fir was first used in building fhips in this bay. The fhip-builders affirm, that it is an inprovement to the vessels; but I am inclined to think, that the want of oak, or rather a fearcity of this high-priced timber, has been the chief caufe of this innovation. They here affure us, that the timber of the fpruce-fir, when used in this way,

way, is found to be very ftrong and lafting; and confidering how little profit is, at prefent, to be derived from building with fo expensive a timber as oak, the greatest advantages may refult from employing in shipbuilding a species of trees, which have been hitherto less to rot neglected upon the ground. As a proof of the fitness of spruce-fir for shipbuilding, they farther mentioned to us, that some of these trees, which had been felled ten years ago, and had been exposed ever since that time to the sum and weather, were found at this time to be as fresh and sound, as if they had been but newly cut down.

The planks of the body of the ship, to the water's edge, are often made, inftead of oak, rather of beech-wood, or of the wood of the black birch, which is reckoned equally hard and good. The keel is of the wood of the beech, of the fugar-maple, or of another species that is known by the name of the rock-maple. With these forts of wood, there is not above a fifth part of the whole ship made of oak, in order that the expence may be as moderate as poffible. When I fpeak of oak, I mean the grey oak ; the red oak is not much efteemed for fhip-building ; and the white, the beft of all, does not grow here. The ship-builders maintain, that the faccharine particles of the beech, the black birch or the maple, are very ferviceable for the prefervation of iron, which the faline particles of the oak are apt to confume. And inftead of using tallow for those purposes in ship-building to which it has been ufually applied, all the fhip-carpenters in America, now rather make use of train-oil, very plentifully laid on. But this oil is a product of the fifnery, and is, befides, one-fifth cheaper than falt; fo that it may be doubted, whether the true reafon be not rather its cheapnefs, than any fuperior fitnefs in the oil, which makes it to be preferred for these uses. By these means, however, the expense of hip-building has been reduced, within the last three or four years, to half of what it formerly was, to the great emolument of those perfons who purfue this branch of manufacture. Yet, is this manufacture not carried on in all the extent which it might very well attain. The only caufe of this is the prefent poverty of the inhabitants of these parts. When

3 K

this

this is confidered, it must rather appear furprising, that there should have been so much already done in it.

A little river, which is navigable by fmall veffels, for a mile upwards from its mouth, empties itfelf into the creek of Ducktrap, and there drives a faw-mill of moderate fize, the property of Meffrs. Alma. I was not a little furprifed to fee men fawing great blocks of timber, clofe by this mill; but, fuch is the practice throughout America; and it is owing to the prefent imperfection of the faw-mills. Two or three other merchants, befide Meffrs. Alma, are alfo engaged in the coafting trade; but the tranfactions of those others, is comparatively inconfiderable.

Draught-oxen coft, here, feventy dollars a pair; a cow, twenty-eight dollars; a fheep, ten or twelve fhillings. They are purchafed from the planters, whofe neceffities oblige them to fell. The breed of the cattle is tolerably good. Sheep are bought at a very low price, from the ifland of Marthawine, on the coaft of Maffachufetts; and thefe fheep, though of fmall fize, are found to afford a very good breed, after they have had a year's keeping in the diffrict of Maine.

After a poor supper, and an indifferent night's lodging with Captain Alma, who, however opulent, continues to live in a miferable loghoufe, without fuitable fupplies of bread, rum, fugar, or even flesh; we renewed our journey along a very bad road, which, however, was not quite fo bad as the roads of the diffrict of Geneffee. We foon reached Little-river, another fmall stream running into Penobscot, which is not more navigable than that of Ducktrap, but, like it, drives a fmall fawmill. A few folitaries dwell about this bay, almost every one of whom is owner of a finall fifting boat, which is navigated, in the fifting, chiefly by himfelf or his children. Their land lies, like that of all their neighbours, totally uncultivated. The whole fhore is occupied by fuch fmall fishermen, who are miferably lodged, miferably clothed, and miferably fed. The township of Belfast, adjoining that of Little-river, is better settled, than that through which we last passed. The houses are better, and are, even in fome inftances, painted: the lands have been brought into

into a better condition. This territory was fold thirty years ago, by the family of WALDO; and its prefent state of superior improvement seems to evince, that the uncertainty of the pofferfion of those who have fettled in other townships, must be the chief reason that occasions them to leave their lands fo deftitute of culture. A river, that is at the mouth about a mile broad, but navigable for only three miles upwards, here falls into a creek, much larger than any one that we had hitherto feen. We were to pass this river at a place where the access is extremely difficult. The ferry-boat is very fmall, and, for horfes, very inconvenient. We were waiting for it a whole hour, and thought ourfelves fortunate in reaching the oppofite bank, when the wind became boifterous, the tide rofe higher in the river, and our horfes were growing very unruly. The General's negro conducted over two of the horses, swimming. Considerable mountains rife immediately adjacent to the bank of the river. These mountains were the highest I had yet feen in this tract of the country. The ground interjacent between them and the river's edge is cleared; not a ftump remained, and trees lay feattered on the furface. I thought the meadows to be the beft I had feen, for a long while. In this townfhip of Belfast is a church, the only one in all the Waldo-patent. The roads become here better, both becaufe the foil is firmer, and becaufe they are more carefully repaired here, than elfewhere.

It is remarkable, that throughout almost all the district of Maine, the rivers and creeks flow with a straight course into the sea, with a longer or shorter length of progress, in which they are, in sew instances, augmented by any auxiliary streams. The only exceptions from this general character are, as far as I know, the rivers of Kennebec, Penobscot, and Union : there are, I think, no other.

We ftopped, at night, at the houfe of a perfon of the name of NI-CHOLSON, a farmer and landholder of fome eminence. He has lived for thefe four and thirty years in Profpect, a township which lies along the coast, and is contiguous to Belfast. He posseffers nearly eighty acres of land, that has been cleared, and five of these in a state of good cultiva-

3 K 2

tion.

tion. These are partly in tillage, and partly in the state of meadows. He, this winter, felled one hundred and fifty cords of wood, and between one and two hundred large trees; his fons caught cod-fish and falmon to the quantity of about one hundred barrels; his daughters fpun the wool of the sheep, and made clothes for the whole family; they make fhoes likewife of the hides of the cattle flaughtered for fale, for all who belong to the houfe. He is content with his lot, and is full of the ordinary prejudices of all the old, ignorant husbandmen of the district of Maine. But this is the worft that can be faid of him. He thinks it impoffible, that wheat fhould grow in his neighbourhood, and believes that even barley and rye will, at the beft, grow but indifferently. He accordingly, fows as much rye and Indian corn as is requifite for the ufe of his household. Of this they make a fort of fost bread, which is the ordinary food of the people in this neighbourhood, but which, in other places, would be given to the dogs. Upon all that confiderable extent of land, which he has cleared of wood, he keeps only twenty head of black cattle, including cows, calves, and bullocks; and from twenty to five and twenty fheep. One of his fine acres of meadow yields annually fixty hundred-weight of hay, which is rich with a mixture of natural clover, and is more than he needs for the use of his cattle, which for more than fix months in the year must be kept in stalls in the house. He plants an acre annually with potatoes; the produce is often four hundred bufhels, and even in lefs plentiful years at leaft two hundred and fifty bushels. Potatoes find a ready fale throughout the diffrict of Maine, at the rate of one fhilling and fixpence or two fhillings a bufhel.

His land is excellent. His fheep, of which he might keep ten times as as many as he does, but which he is not defirous to augment, are fine, and afford, at the annual fhearing, fleeces weighing each fix pounds. That portion of it, which is not wanted for the use of the family, is fold at the rate of a shilling a pound, and though it were inferior in quality, would not fail to fetch an equal price. After all, it is not easy to see, how old Nicholson can have acquired the reputation of being a good farmer. To me he appears to differ from the rest, only in possessing a greater extent of ground

ground at a finaller price, without, however, making, in any degree, a better use of what he has.

There is no fhip-building carried on in this townfhip of Profpect; there belong to it only fome of those decked yachts, which are used in the fifthery.

The general bufinefs of the inhabitants is wood-cutting. An able woodman will cut down two, or even three, cords of wood in a day. The ufual price is feven fhillings a cord. It cofts about a third part of the value for the conveyance of this wood to the fhore. One who has no oxen of his own can earn, therefore, ten fhillings a day; he may carn fourteen fhillings, if he can convey the wood he cuts down to the fhore. This is fufficient to make thefe people carelefs of agriculture and hufbandry. More diftant profpects of intereft are too weak to engage them fteadily in agricultural induftry.

Those who neither fell their own wood, nor convey it to the shore, pay two shillings a cord to the labourers for cutting it down, and as much for its carriage to where it may be shipped. After this they have still to themselves a profit of half a dollar a cord. An acre of ground, that is well wooded, will afford fixty of these cords. So they pocket, even in this case, a gain of thirty dollars an acre upon their wood. This information will not be without its use, to perfors who may think of purchasing lands in the district of Maine. The growing deficiency of wood, in the vicinity of Boston, and all along the coast, must foon enhance the market-price of that which remains to be cut in these parts.

Our next stage, after we left farmer Nicholson, was Brigadier's Island. This isle, with all the others which are not above three miles from the other shore, belong to the estate of Waldo-patent. It is inhabited by feven families, among whom it is parcelled out into so many different farms. These families have felled the wood around the whole shore of the island, and used that which covered the interior parts according to their domestic necessities and conveniencies. To obtain full possession of this isle, General Knox has offered to the seven families, by whom it is now occupied, to the amount of three thousand dollars, in land and ready money, if they will peaceably relinquish it to him.

This

This ifle is acceffible from the land by a paffage not more than two hundred yards in length, which is dry, when the tide has ebbed. It affords excellent pafture for both great and fmall cattle, and is qualified to repay, in an adequate manner, all the pains that might be employed upon it by a fkilful and induftrious hufbandman. The ftones found at the furface afford reafon for thinking, it contains marble, flate, and iron. The fituation is favourable for trade. General Knox's interefts draw his attention particularly towards the ifland, as being in the centre of his poffeffions. It is his object to clear this ifle for the purpofe of maintaining in it a fheep-ftock. For one month in the year thefe fheep muft be houfed; and he intends to build a proper ftall for this ufe. He is of opinion, that by refiding there he may obtain confiderable fums of money, owing to him for land in the neighbouring country, which he is willing to cede to its prefent poffeffors at a price below its real value, to avoid all trouble and difputation.

Mr. GRIFFIN, one of the prefent inhabitants, is building a brig of eighty-five tons burthen, which he intends for the coafting-trade. It will coft, when fit for fea, to the amount of two thoufand four hundred and fifty dollars, which is about thirty dollars a ton. He has bought almost all the timber necessary for his purpose in Penobscot River, as there was none of fufficient growth, for this use, remaining upon Brigadier's Island.

The township of Crankford was the last place in Waldo-patent that General Knox intended to visit. We halted at the house of an old farmer, named Colonel SCHULTZ. He posses with the permission of the General, three farms lying on Penobscot River, about ten miles inland from its mouth. Though but an indifferent farmer, he had set himself in opposition to the common prejudices against wheat. He fowed fome acres with it, which yielded him a return of fisteen bushels an acre. This year his wheat is smutty; the grain is small, gray, and light, not yielding above a tenth part of the usual proportion of meal. He raises likewise good Indian corn, the return of which is at the rate of twenty bushels an acre. But his ploughing is flight; he lays on little manure; nor

nor can the quality of the foil, nor the fituation of his grounds, be commended. His potatoe-fields yield much the fame increase as those of farmer Nicholson. He has been settled here for these eight and twenty years; yet, out of three hundred acres, which he possesses, has not brought more than five and twenty under culture.

But a fmall quantity of cod is caught at the bottom of the bay, or in Penobfcot River. In the months of June and July, all hands are employed in the falmon-fifhery. They are often taken with the harpoon, but more commonly with nets, while the tide ebbs. The inhabitants, in particular, of one fmall tract of land, which juts out into the fea, derive great profit from this fifhery. It is there usual for a fingle family to take in a feafon from ten to fixty barrels of falmon, weighing, each barrel, two hundred pounds, and fetching in the market the price of eight dollars. The fhore of Brigadier's Island is famous for the plentiful captures of falmons upon it. For fome years this fifhery has been lefs fuccefsful than formerly. It has hitherto been very little fortunate in the prefent year. For this failure the Indians are blamed, who live a hundred miles higher up, on the banks of Penobscot River. They are wont to fifh every day in the year, which hinders the neceffary annual renewal of the numbers of the falmons. The Americans, on the contrary, are accuftomed to refrain from fifting for two whole months in the year together, and always upon Sundays.

Thefe Indians dwell in a pleafant village by the river fide. They live, like the reft of the Indians, without making regular yearly provision for the fupply of their wants, but approach, in their manners, fomewhat nearer to civility. They belong to a tribe, which the French Miffionaries almost converted, or, at least, fupposed, that they had converted, to the Catholic religion. This territory falling afterwards into the possession of Britain, and fince, of the American States, the Catholic religion ceased to be preached to the Indians at the expence of the government. At prefent there lives a French priest among them, from whom they have learned the doctrine of transfubstantiation; but neither the duty and advantage of temperance, nor the principles and practice of agriculture,

ture, nor the injuffice and folly of wafting the beft means for the fupp or of the country by deftroying the falmons at an improper feafon. Thefe Indians bring, every year, a large quantity of beavers, otters, foxes, and racoon fkins, for fale to the merchants on the river. Thefe fkins are purchafed at a very low price; and they receive rum in exchange.

Penobfcot River is navigable as far as the tide rifes, that is, for the fpace of thirty miles from its mouth. For fmall boats it is acceffible to the diftance of one hundred miles higher up. On its courfe it waters feveral beautiful diftricts of country filled with wood, and runs out into many creeks; all of which are fufficient to drive a number of mills. Up to the limit of the rifing of the tide its banks are inhabited. After advancing along them to a certain diftance, you enter the territories which ftill pertain to the Indians.

The veffels belonging to this river are not more than twenty, of which two are employed in the trade to Europe. These two belong to Mr. TREAT, a merchant, who has his principal place of refidence near that part of the courfe of the river, above which the tide ceafes to rife; and poffessieveral storehouses, at different distances, along the river's fide. In the fpace of ten years, during which he has lived here, he has acquired, in trade, a confiderable property. The reft purfue the coafting trade, or, in the years in which this does not promife fuccefs, a trade with the Weft India Iflands. From all that I could learn, I am led to think, that timber of all forts may be had cheap here, as well as in every other part of the diffrict of Maine which I had occasion to vifit. Ship-building is here at the rate of twenty-fix dollars and two-thirds a ton. During this whole year there have not been more than five built in the river. The want of capital is the only reafon why fo little is done in this branch of bufinefs. It is true, that, on account of the prefent war in Europe, the expence is now much greater than it formerly was; but, in the preceding years, when the expence was fmaller, the number of veffels built was not more confiderable.

The whole township of Belfast lies within the county of Hancock. A great

great part of it is still inhabited; and its whole population does not exceed ten thousand fouls upon a district of eleven thousand four hundred square miles in extent. Penobscot is the capital town.

Washington, a county lying somewhat more to the north, and bordering upon the possession of the British, possession of a wider extent of territory, a population of more than three thousand inhabitants.

Penobfcot is ftill known by the Indian name of Bagadus. The exportation from it is not confiderable. The value of thefe exports amounted, in the year 1791, to ten thoufand eight hundred and fifty-four dollars; in the year 1792, to eight thoufand three hundred and fifteen dollars; in 1793, to nineteen thoufand three hundred and twenty-feven dollars; in 1794, to five thoufand eight hundred and twenty-five dollars; in 1795, to four thoufand nine hundred and forty-nine dollars; reckoning the year from the beginning of October, to the end of September.

I believe that Penobfcot River is very justly deemed the most favourable fituation for the commerce of this province. It may be fafely affirmed, that any company or individual poffeffing a confiderable capital, and knowing how to lay it out in improvements, and in the trade naturally connected with this fituation, might fettle here with no finall advantage. A confiderable number of veffels might be built, if all the wood from the lands were appropriated to this use, and if every day were carefully dedicated to inceffant industry. The faw-mills would render the wood of great value; and it would quickly be feen, that the prefent faw-mills are fusceptible of improvement, which would render them much more profitable than they now are : particularly in the cutting of fhingles, and in breaking the bark of the fpruce-fir, as is now done in the vicinity of Bofton for the use of the tanners, there might be great improvement made. In winter the veffels might be freighted with mules and horfes, reared here, for the use of the West India isles; for these animals will be bred here in very great numbers, when example, and a certainty of advantageous fale, shall have duly encouraged the planters to attend to this branch of farming. Salt-fifh, too, either procured by purchase from others, or by keeping filhing veffels, would find a good market in the Weft India isles. These isles might be supplied also with cattle from this pro-3 L vince.

vince, as it is capable of producing prodigious numbers of them. Another product for the fame exportation is corn, which will infallibly afford great profits to this country, when once a fpirit of agriculture fhall have been fufficiently excited throughout it. In this manner might fuch a company or individual, as was above alluded to, gradually clear the land of its wood, and bring it into a good ftate of cultivation, while its exportable products would afford a good income, and the example would be of infinite utility to the whole country. Befide all this, there fhould be a fhop or two furnifhed with the ufual articles for the confumption of the country ; for fuch fhops as I have already had occafion to notice, prove extremely lucrative to those who employ a number of labourers. The confequence would be the fpeedy acquisition of a large fortune by the company or individual by whom these measures fhould be purfued. The increase of their means would naturally enlarge their concerns, and render them more profitable.

Exportation, the grand fource of profit to a great landholder, both on account of the prefent advantage which it yields, and becaufe it tends to enhance the prices of all commodities, is more necessary in the province of Maine, than in many other places. The emigrants make little refort to this province. The diffrict of Genefice, and the back parts of Pennfylvania, Kentucky, and all the western parts where the climate is milder, the foil more fertile, and the land cheaper, are naturally preferred. The difference between the abundant population of Geneffee, which was, within thefe laft ten years, in the poffeffion of the Indians, and the feanty number of families, feattered throughout the province of Maine, of which the greater part was, an hundred years fince, reduced into a colonial territory, is an undeniable proof of the truth of what is here affirmed, which ought certainly to have its weight with the great landholders of this province. It may, indeed, be reafonably expected, that there will be a gradual influx of fettlers into this region, from the great increase of the population of Maffachufetts. The wilds of Maine may be thus at length inhabited; and then the value of land will rife, and there will be an increafe of manufacturing and commercial industry, to the great advantage both of the land-owners and the merchants.

In fome places, labourers are procured pretty eafily; and the wages, for any

any confiderable time together, are there at the fame rate, as in the diftricts beyond Bofton, already defcribed.

The country is healthful, though much colder than the great landholders are willing to allow. Fogs and rains are more frequent here than in the more fouthern parts of America. The maritime fituation of the province of Maine, contributes, no doubt, to increase the humidity of its atmosphere. The perpetual dampness on the second produces a greater occasion for warm and constant fires there, than in the interior parts. But, however rigorous the climate, it is sufficiently favourable to the production of maize, and of excellent hay. Nor is there any just reason for supposing, that wheat and other grains would not thrive in it, if carefully cultivated.

Life is ufually long and healthy in this province. It is not uncommon to meet with old men of the age of eighty, or ninety years, though the general condition of the people be but miferable, at leaft in that part of the country through which I accompanied General Knox. Save the brothers ALMAS, we found none who could be faid to be even moderately intelligent. They are univerfally poor, or at leaft live as if they were fo in an extreme degree. The habitations are every where poor, low huts. Every where, you find a dirty, dark-coloured rye-meal, and that not in fufficient quantity. The fort of fresh meat to be seen on any table, is that of lambs, which are killed, not fo much for the fake of procuring a good difh, as to prevent the fheep-flock from becoming more numerous than is defired. In fhort, of all America, the province of Maine is the place that afforded me the worft accommodation. And, confidering how little reafon I found to praife the accommodations of many other places; what I have now faid of Maine must be regarded as an affirmation, that the condition of human life in that place is exceedingly wretched.

The common drink here, and throughout all America, is grog, or a mixture of water with rum or whifky. It is made also with gin or brandy, but not in these parts.

A fort of beer, made from the twigs of the fpruce-fir, is likewife drunk here. Molaffes, and occafionally maple-tree fugar, are joined with the fpruce twigs, in brewing this beverage.

3L2

Here

彩

Here is also another fort of beer, much like the former ; but it is brewed from the young twigs of the birch, inftead of those of the fpruce-fir.

Both these liquors are very common in Massachusetts and in Canada. Many people are fond of them; to me they are difagreeable.

All the fettlers in Waldo-patent, a very few excepted, occupy lands to which they have no just right. But they are of two different class; of which one confifts of perfons who have fettled here by the permiffion of the General or his ftewards, and are to pay a certain purchase-money at a future time; but the others neither afked nor obtained any fuch permiffion. The condition of the former may appear to be more fecure than that of the latter. But then this last class is fo much the more numerous, that the General will probably find it neceffary to treat them all alike. All acknowledge that they must pay a certain rent or purchase-money; but neither do they offer ready money, nor fix any precife time for payment. The General encounters all the perplexity and difficulties of this bufinefs with the firmest steadinefs, and the most extraordinary patience.

# PRICE OF WOOD IN THE PROVINCE OF MAINE.

I was induced to form the following table of the prices of different forts of timber in different places of this province, by confidering that it might become hereafter a matter of some curiofity to compare the future variations in the price of wood, with that for which it is fold at this present time.

I have added a view of the prices of other products of this province, according to the most complete and accurate information that I could obtain. This also will ferve for a fixed point in the scale of the variations of price, which these products may hereafter undergo.

I have given likewife a view of the expences and the returns of a late voyage of a fchooner to England, which was communicated to me by Colonel Schultz.

# Clear profit to the merchant 2335

This great profit is not to be fo furely reckoned upon, as if the fame cargo for the returning voyage were always to be eafily obtained in England. Yet it affords certain data, from which may be inferred what a confiderable benefit this foreign trade affords in return for a moderate expenditure.

But I repeat, that this country is ftill in its infancy, and in a languid and cheerlefs infancy. The taxes are much heavier than in any newly fettled country I have as yet vifited. Mr. Schultz, by whom I am informed of the fact, pays twenty dollars a year. Among thefe taxes is one. for the fupport of fchools, though no fchools have hitherto been eftablifhed.

## FARTHER OBSERVATIONS

# CONCERNING THE PROVINCE OF MAINE.

There is no houfe for religious worfhip in this province, neither in the diffrict of Belfaft, nor in Penobfcot. Penobfcot is the only town in thefe parts, and it confifts of near a thoufand houfes. A poor preacher lives in thefe parts, who has only a very few hearers, to whom he preaches at different places every fecond Sunday, and who pay him at the rate of four dollars each. Throughout all America, the building of a new church, for every parochial diffrict, is confidered as a very burthenfome expence. Here, therefore, the people rather pay a certain confideration, leaving

leaving the preacher to find a houfe for himfelf. The young people of both fexes, however, efpecially the young women, are very defirous of a church, in which they might have an opportunity to affemble every week, and to difplay their perfons and their drefs. In New England they refrain, on Sunday, with weak fuperfitition, even from the moft harmlefs fports. But, it is, in truth, becaufe it affords them an opportunity of going from home, and meeting with their neighbours, that thefe people are fo fond of vifiting the church.

There is, in this country, a great lack of medical practitioners, at leaft of perfons whole fkill is worthy of the name. The people are not here either fufficiently numerous, or fufficiently opulent, to make it eligible for fkilful furgeons or phyficians to fettle among them. The furgeon's employment is exercifed at prefent by people who are engaged in other purfuits, and therefore make this but their occafional bufinefs, and who are fo ignorant as fearcely to know how to let blood with fafety to the patient. In the ftate of Maffachufetts, any perfon is at liberty to affume the profeffion of medicine at his pleafure; and it is certainly a difgrace to the legiflature, that the health and lives of thefe fimple and credulous people fhould be in fuch a manner expofed a prey to ignorance, impudence, and quackery.

When General Knox had accomplifhed his bufinefs, we went on board the fchooner, which I mentioned above, hoping that, within four hours, we fhould reach the General's houfe. It was ten o'clock in the morning when we went on board, and the wind was favourable. But the wind fhifted on a fudden, the weather became ftormy, our progrefs was confiderably interrupted, and we lay-to till the ftorm was over.

Next morning we found, that we could not yet make way, and therefore retired again to another creek, about fix miles nearer than the former to the place to which we were going, but ftill fifteen miles diftant from where we were to take our way for St. George's River. The weather was now fair, and General Knox, who is not at all fond of navigation, thought it would be better to go on fhore, affuring me that we fhould be able

able to procure horfes from Captain Alma, which would quickly carry us to St. George's River. We were not far from Ducktrap. Upon our arrival at the Captain's houfe, we were encountered by new difficulties. We had to wait for our own horfes, which were coming under the care of the poft; and this happened to be the only place in all the province of Maine, in which the travelling of the poft is fomewhat retarded by the frequency of the plantations. The horfes, whofe arrival was expected to be about noon, came fix hours later. We were thus obliged to pafs the night in a dirty houfe; and, in the mean time, the wind had changed, and our fchooner was gone on her way, much farther than would have been fufficient to conduct us to the end of our journey. Thefe inconvenient occurrences were fufficiently difagreeable to me; for, having fo far to travel, I had now rather too little time remaining for my fubfequent journey; and I had wifhed to fpend fome fhort time longer with General Knox and his family.

# DEPARTURE FROM THE HOUSE OF GENERAL KNOX.

On the 3d day of October, four and twenty hours after our arrival at St. George's, I was obliged to fet out for Bofton. I had experienced fuch friendly entertainment from General Knox and his family, that it was with real concern I left them. They did not treat me as a ftranger, but with the kind and cafy attentions which are paid to one who is at once a relation and a friend. Mrs. Knox is a lady, of whom you conceive still a higher opinion, the longer you are acquainted with her. Seeing her at Philadelphia, you think of her but as a fortunate player at whift. At her own house in the country, you discover her to posses wit, intelligence, a good heart, an excellent understanding. In the country, Mifs Knox lays afide her exceffive timidity, and you admire alike her beauty, wit, and cheerfulnefs. As for Mrs. Flunker, you find her interefting at a first acquaintance, and no lefs fo upon a longer familiarity. I fay nothing of the General. I have already faid he is one of the worthieft men I have known; cheerful, agreeable, valuable equally as an excellent friend and an engaging companion. With a heart warmly 3 Mgrateful

grateful for fo much kindnefs, I took my leave of this worthy family; and gratitude is the most pleafing feeling of which my prefent fituation leaves me capable. The whole family faw me depart, with the fame kind concern, as if I had been a near relation; and perhaps nothing could be more interestingly affecting than this fcene.

From St. George's to Warren the fettlers are not numerous. This diftrict extends to Thomastown, where the General refides. About twenty houses stand at the place, beyond which the tide ceases to rife. There are two or three fawing-mills, corn-mills, and waulk-mills, two or three fhops, and two or three fmall merchants. The river there ceafes to be navigable, on account of a number of rocks that rife in the midft of its channel. A canal is to be cut here, with the General's permiffion, by which the river will be made navigable for fixty or feventy miles farther than at prefent. It may be cut without any very confiderable difficulty, and will prove of the greatest advantage to the General and his posterity. The foil is moderately good, but its cultivation is neglected The back-parts I have not feen; but all the fettlers who live contiguous to the river, if they can fell their wood, think not, any more than the reft throughout the province of Maine, of applying themfelves to the tillage of their grounds, and the improvements of hufbandry.

# WALDOBOROUGH; BROADBAY; NOBLEBOROUGH; NEW-CASTLE.

The next diffrict is Waldoborough. It is a German fettlement, formed forty years ago by Brigadier-General Waldo. Three years afterwards, he brought hither fome German families, and affigned to each of them one hundred acres of ground. It is in a ftate of profperity. The families, which were, originally, forty in number, have increafed to two hundred and fifty. Fifty other planters, Irifh, Englifh, and Americans, live alfo here. But, it is requifite for thefe to underftand German, as this is the language commonly fpoken throughout the diffrict: though all the German inhabitants read Englifh, and have the laws and the proceedings of their

their courts of justice in that language. The German is, however, the common language of trade, and of familiar intercourse.

Broadbay is formed by an arm of the fea which here advances inland. A fmall river, the courfe of which is for fome thirty miles, falls into this bay. Like the other rivers of this territory, it is not navigable. Trees may be floated, fingly, down the ftream, but in no other way, from the diftance of ten or twelve miles above. The interior extremity of the bay lies about ten miles inland. Three or four veffels are annually built here. To this place belong eight fhips, of which only three carry three mafts. Thefe are almost all, either the property of the merchants of Wifcaffet and that neighbourhood, or elfe are, at leaft, annually freighted by those merchants. An Irish merchant, who has resided for these feveral years in Waldoborough, does business in this way, on his own account, and with good fuccess. A cargo of wood can be quickly procured at Waldoborough; but the price is here fomewhat higher, than in St. George's River, or the Bay of Penobscot.

The buildings are fituated on the declivity of the hills; on the edges of the bay; and are pretty numerous; but are fmall, and make as forry an appearance as any I have lately feen. The quality of the foil is moderately good. From fifteen to eighteen bushels of maize, twenty bushels of barley, fifteen bushels of rye, is the ordinary produce from an acre of ground; three hundred bushels is the usual encrease of potatoes from one acre. Each family keeps from fifteen to twenty head of cattle. The fear of the bears and wolves, which are numerous in thefe parts, does not hinder these people from driving out their cattle to feed in the woods. Though one part of the herd fhould be, to-day, devoured by the beafts of prey; the reft would, neverthelefs, be driven out, to feed in the woods, to-morrow : but fuch accidents are rare. There is no inftance of children having been attacked. I myfelf, in my journey of this day, and at the diftance of a mile from Waldoborough, faw a bear of a confiderable fize, running acrofs the road. I purfued him on horfeback, without leaving the road, and he ran away with great fpeed.

Broadbay is the boundary of Waldo-patent, and the centre of Waldo-3 M 2 borough.

borough. The houfes of this laft place lie feattered around the bay, the environs of which are much more populous than the territory through which I had travelled hitherto. I was told, that, fome miles inland, both the foil and the hufbandry are better, and the fettlements more numerous.

Waldo-patent lies in the county of Lincoln, which contains about thirty thoufand inhabitants. The county-courts are held at Hallowell, Pownalborough and Waldoborough. Thomaftown, where General Knox refides, lies alfo in the county of Lincoln, which, however, does not extend beyond Belfaft.

Nobleborough, the next township, is much more populous than the laft, and exhibits great diversity in the appearance of its houses, and the wealth or poverty of its different inhabitants. This diffrict has likewife its Bay of Damascobay, which extends ten or twelve miles inland. A few toises from the inmost point of this bay, is a lake of fresh water, not less than fifty miles in the extent of its area. Such lakes are frequent throughout this part of the country. They abound in fish, of which, however, the inhabitants make no use. The quantity is not fufficient, to make it an object of trade, to falt, and carry them to market; and these people are too negligent, to fish for the supply of their own tables. There are fome ships built in Damascobay; and of these the greater part are employed by the merchants of Wiscasset.

The diffrict of Newcaftle has, likewife, a bay; or rather, is interfected by the river Steepfent, which runs by Wifcaffet. At Newcaftle, this river is acceffible for fhips of burthen: it admits fmall veffels, for fome miles farther up. There are two fhips at prefent in building at Newcaftle. You crofs the river by a ferry, which is convenient and fafe. A bridge is about to be built here; and the ferryman is much lefs concerned for the probable lofs which it will occafion to him, of his prefent income, than pleafed, that he is to be thus releafed from that inceffant watchfulnefs and toil of the ferry.

The road along which I, this day, travelled, was rugged, obftructed by rocks and roots of trees, often miry, paffing over great inequalities of ground,

ground, and worft in the woods, through which a great part of it led. Worthy General Knox conducted me, eight miles on my journey, and directed me to the dwelling of an honeft German, a furgeon, who, in favourable years, gains from fixty to eighty dollars by his practice, and who told me, that, for twenty miles round, there is no other medical practitioner. This honeft man accompanied me, till I was no longer in danger of wandering from the way; and refufed to receive money for my dinner, which I earneftly offered him. He has fix children, all married, and a fmall farm of forty acres, which, as he told me, is not very well cultivated. But, he fays, he has enough, and does not covet riches. He, on a former year, remitted three hundred dollars to Philadelphia, to procure a German minifter, to whom he now pays thirty dollars a year, befides his juft thare of the congregational contribution. On the whole, this man is an eccentric character.

#### WISCASSET.

Mr. LEE, whom I faw at the house of General Knox, had afked me to take my lodging at his house, when I should come to Wiscasser. I did fo. He is a lawyer; and he appeared to me, to be one of the best employed ones in the whole country. He has an elegant house; is a very worthy man; gave me a kind reception; and expressed his concern that his wife, who went lately on a visit to Boston, was not at home, to make my entertainment better.

Wiscaffet, fituated on the bay of Penobscot, is the first place in the province of Maine, in which any confiderable business is transacted. The merchants are not very rich, but they are very numerous; and, as I have already mentioned, proprietors of almost all the vessels which fail from the neighbouring creeks and bays. Some individuals among them posses to the number of fix or seven some individuals among them posses to the number of fix or seven some individuals among them posses to the number of fix or seven some individuals among them posses to the number of fix or seven some individuals among them posses to the number of fix or seven some individuals among them posses to the number of fix or seven some individuals among them posses to the number of fix or seven some seven seven the seven seven the mericans, which they find to be very profitable, though not without its risks. Mr. Swan of Boston has hired a great quantity of tonnage, for the purpose of exporting corn and flour to France.

There

There belong fifty thips to Wifcaffet. Ten of thefe fail to Europe, on account of merchants living in this place. They export the products of the country, and bring back, in return, to Bofton, foreign goods, for which there is no fale in the province of Maine.

Wiscaffet lies at the distance of twelve miles from the fea; and for this reason, there live but few of ship-masters at this small port. These people have their dwellings along the coaft. They would lofe half their prefent gains, if they fettled at any diftance from it. This town is pretty compact, and confifts of about one hundred and fifty houses, some of which are very handfome. In the year 1789, the whole traffic of this district was carried on in thirty-five veffels, which did not carry, in all, above two thousand and ninety tons. In 1795, and not later than the 10th day of October, the number of fhips registered was one hundred and two, and their tonnage, nine thousand nine hundred and forty-four tons. These facts evince, to what an extraordinary pitch, even the fole business of ship-building is capable of advancing the trade and opulence of the people of these parts. The exports amounted, in the year 1791, to thirtyfive thousand five hundred and fixty-two dollars; in the year 1792, to thirty-nine thousand two hundred and fifty-three dollars; in 1793, to thirty-fix thousand four hundred and eighty-three dollars; in 1794, to thirty-two thousand three hundred and thirty dollars; in 1795, to thirtyfour thousand fix hundred and fifty-nine dollars. The smallness of the variations in the amounts of the money-prices of the total exports, in these fucceffive years; while the market-value of those provisions of which this exportation confifts, has been continually rifing; evinces the truth of what I affirmed concerning the fhips of Wiscaffet, as being employed chiefly in the carrying-trade, and taking in their ladings at other ports.

#### KENNEBECK RIVER.

The road lies along the interior extremity of the bay. As it advances towards Bofton, the appearance of induftry and bufinefs encreafes; the houfes become larger and handfomer. Volwick-bay lies not far from Wifcaffet. One or two fmall veffels have been built in it; feveral corn and

and fawing-mills ftand upon the fmall rivers which fall into it; and in thefe the upper rocks form a fort of natural dam to accumulate the water for the ufe of the mills. The land between Kennebeck-river and Wifcaffet, is ftony, yet fertile. It is everywhere inhabited, yet but in a moderate ftate of cultivation. Of ten miles journey, by this way, fcarce a quarter of a mile lies through woods. Kennebeck-river is to be croffed by a ferry. The river is here about half a mile broad; and the paffage is faid to be formetimes dangerous, though I found it fafe and eafy. Both the winds and tide were favourable; and, in five minutes, I reached the farther fhore. Both the ferryman and his boat are very good.

Kennebeck is one of the great rivers of the province of Maine. Its fource is two hundred miles diftant from its mouth, and it waters the fineft woodlands in this region. It is navigable to the diftance of fifty miles upward from its mouth; but, this navigation is greatly obftructed by rocks and fand-banks. There are fhips built at Hallowell, which ftands at the diftance of forty miles up the river: but, thefe receive their lading at Bath, fix miles below the ferry by which I paffed. The wood felled at Hallowell and places contiguous to it, is conveyed down to Bath in fledges or boats, and is, then, received on board the fhips. The entrance into Kennebeck-river is fo dangerous, that fhips failing with this deftination, if infured at London, pay a higher premium, than thofe bound for any other bay, harbour, or river, on thefe coafts; at leaft I was fo informed.

There belong forty fhips to this river. Thefe are, for the greater part, the property of merchants who have their counting-houfes in Bath, and their dwelling-houfes in either Bath or Hallowell. The reft belong to merchants refident in Wifcaffet or Portland. The banks of the river are inhabited to the diftance of one hundred and thirty miles inland. That tract of land which is watered by no other river, is, in one direction, occupied to the extent of eighty or one hundred miles.

Hallowell is, as I was informed, a town confifting of two hundred houfes. Another town of the fame name, and not lefs confiderable, is fituate two miles higher on the fame river. They afford, both, a market

ket for the produce of the lands; which is very abundant; for the foil is excellent, and wheat and other grains are cultivated upon it. There is alfo a great deal of wood brought down Kennebeck River ; but the wood contiguous to the fhores of the river, and adjacent to the plantations and dwellings, now begins, as may naturally be fuppofed, to be exhaufted. The large wood is cut, as I am told, at the diftance of twenty miles above Hallowell. Those who derive their principal means of support from the fale of this article, are wont to wander into the deep woods, in the month of November, with their families and cattle, often to the diftance of from forty to fixty miles from their ordinary habitations. They are previoufly careful to provide hay in the fummer, by going into these woods, mowing the grafs, and putting it up in ricks, for the use of their cattle, when they shall return in the winter. They now rear huts for themfelves; fell their wood; bring it, on fledges, to the river's fide; and there referve it, till the river is to much fwollen by rains as to convey it, eafily, floating down the ftream. They mark, each his trees with a particular mark, before committing them to the ftream, fo that the property of every different wood-cutter can be diffinguished at the place of fhipping, without difpute or miftake. Unlefs the exceffive feverity of the winter drive them from the woods, fooner than they intended, they return not until April or May; and they then apply themfelves to the cultivation of their lands. Bath is the feat of a cuftom-houfe, or a port of entry as they call it. Its exports amounted, in the year 1791, to the value of twenty-nine thousand four hundred and fifty-feven dollars; in 1792, to thirty-feven thousand and two dollars; in 1793, to forty-five thoufand three hundred and fifty-one dollars; in 1794, to twenty-three thousand fix hundred and forty-four dollars; in 1795, to thirty-four thousand fix hundred and fifty-nine dollars.

In the diffrict of Brunfwick, which borders on that of Bath, the foil is, in general, poor, and almost everywhere a dry fand. It affords no trees, but the white fir, the white birch, and the filver fir, none of which is of any very confiderable growth. It is but very imperfectly cleared and cultivated. Few habitations are to be feen. On the road, I found only two or

or three fmall villages, or rather hamlets. The first of them, at which I dined, confists of thirty or forty houses. Of these, some are pretty neat. The people who live at such a distance from the sea-coast, have no employments but those of husbandry, and some occasional hunting. The land usually yields, an acre, twenty-five bushels of maize, one hundred and fifty bushels of potatoes, eighteen bushels of rye. The culture which it receives, is but little. There is a little wheat, and some barley, likewise raised here.

The vicinity of the fea, and the high wages which failors have, for fome time, been wont to receive, produces, among the young people, a very general preference for a fea-faring life. Labourers in agriculture are, confequently, more difficult to be procured, and demand higher wages; they expect ten or eleven dollars a month. The meadows yield a good deal of hay. This is an article of primary neceffity; for the cattle muft be kept, for fix or feven months of the year, in the ftalls; and during this time, hay is their only forage. Each cow or bullock confumes nearly fix thousand pounds of hay, and feventy or eighty bushels of maize.

The other village in Brunfwick, which I paffed through, lies five miles farther. The thirty or forty families which live here together, at the mouth of the Amarefkoghin, are usually employed in ship-building, and fome little traffic. Three ships have been lately built here; and other ten belong, alfo, to this finall town. But, almost all the veffels built in these creeks, are the property of merchants who refide in the more confiderable neighbouring towns. Most of the houses of this small place, ftand on the fhore of the bay of Cafco. This bay, of which one arm is of great extent, advances, here, thirty miles inland. Ships built in Brunfwick, or belonging to it, take in their ladings at Brick Islands, ten miles farther down the bay. The bay of Cafco again attracts the traveller's notice near Trueport, a neighbouring township, in which the ship-building bufinefs is not carried on to greater extent than here, and of which the land is as dry and fandy as that of Brunfwick, in those places where the two townships are conterminous, but becomes better at a distance, from that border. and as evidentia

3 N

NORTH

## NORTH YARMOUTH.

North Yarmouth has the appearance of a small town. A number of houses, and of labourers of all forts, are here assembled upon one spot. It lies on a fmall creek of the bay of Cafco, where it receives the waters of Royal River; a stream of which the course is only fifty-eight miles from its head to the fea, and which is navigable only by fmall boats. This little fpot of earth is the scene of a great deal of business. Three ships, of which one was of one hundred and fifty tons burthen, were lately built here; not to reckon two others, which were begun in the prefent year, and are already in the water. Here are mills of different kinds. The land is fomewhat better cultivated, in this neighbourhood. The fea is too far diftant, to draw the people away from agriculture, to the fifhery. The houfes are of better structure than elsewhere, in that part of this district, through which the highway leads. Potafhes are now becoming an article of trade. Some few merchants have their dwellings in North Yarmouth. Three or four agree to build a fhip jointly, and trade with it: the captain adds his fhare: a cargo is shipped on board it, for the common account of the company: a voyage is then made, perhaps to the Antilles, or to Europe : and by the return of the veffel, a foreign cargo isimported to Boston. It is not, however, common for ships to fail for Europe, or the Antilles, from this port. For the most part, these veffels are employed in carrying wood to Bofton or New York ; though the price of wood be higher here than in the places before mentioned, and amount even to ten or twelve shillings a cord. The settlements extend about feventy miles backward from North Yarmouth, into the interior country.

## PORTLAND.

I came, on Sunday, to Portland; and was furprifed to find the inns fo decent and well kept, in a part of the country fo remote, and fo rarely vifited by travellers. The inn at North Yarmouth is fmall, yet good; and few hofteffes in France, are fo attentive as Mrs. Cota. Between North

North Yarmouth and Portland, the land is moderately fertile, and at the fame time confiderably populous. The many finall wooden houses to be feen, being conftructed, in no very ftrong nor elegant manner, of logs or deals, do not indicate, by their exterior appearance, either wealth or cleanlinefs. An European traveller is, therefore, not a little furprifed to fee a number of elegant women come out of these huts, all wearing fashionable hats and head-dreffes with feathers, handfome cloaks, and the reft of their drefs fuitable to this. Such is the flow which thefe females make, every Sunday morning, when the weather is fufficiently fair to encourage them to go to church. The men go equally fine. But those females who are prevented from going abroad in the morning, by their cookery, the washing of their kitchen-dishes, the milking of the cows, or the feeding of the fwine, attend the church only in the afternoon, and come lefs folicitoufly dreffed out in their finery. They are almost all tall and good-looking; fome of them, are even very handfome.

Portland is feated on a peninfula, which juts out into the bay. To reach it by the way of that ifthmus which connects the peninfula with the land, you are obliged, in coming from North Yarmouth, to go more than three miles about. But, a bridge is now in building acrofs that arm of the bay, which gives occafion for the prefent circuitous approach to the town. The bridge is built by fubfcription, and is half finifhed. When it fhall be completed, and fhall be found to have fufficient ftrength to endure the ordinary currents of the tide, its periodical overflowings, and the winds which often rage here with tremendous fury; it will then prove exceedingly ufeful. At prefent, I fhould doubt, whether fufficient folidity can be given to a bridge in this fituation.

adjoining are fpacious ftore-houfes for the reception of goods. The road is good and fafe. This road makes a part of Cafco Bay, a branch of which extends from Brunfwick as far as Portland; and in any part of this branch, fhips of any burthen may find good anchorage. The great inconvenience of this bay is, that it is acceffible at fix or feven different places, fo that, in cafe of a war, fhips lying in it, could not well efcape being furprifed by an enemy from one entrance or another. That opening into the bay, to which Portland is contiguous, is more than two miles wide. Of confequence, guns difcharged from the two opposite fides, could not project their fhots fo far, as to make them crofs each other; and the execution which could be done from forts would not be fufficient to guard the entrance.

They are at prefent, conftructing, on the fite of an old earthen breaftwork, a fortification which they expect to command the town, and to render it, at leaft, fecure from the invation of an enemy. This new fortification ftands at the extreme point of the peninfula on which Portland is fituate, and confifts of a battery of fifteen or twenty heavy cannon of large calibre, commanding that wide entrance of the bay which was above mentioned. This battery is to have, by means of a covered way, a communication with a fmall fort at the diftance of four or five hundred toifes, which it has also been thought neceffary to erect on the highest part of this isthmus. The fort is fufficient to hold two hundred men. If Portland were a place of greater ftrength, inacceffible without very confiderable difficulty, and if there were a ftrong garrifon always ready for its defence; this fortrefs, or a more confiderable citadel, in its fituation, and communicating with the town, might then be of great importance. But, fince the natural fituation of the town is fo little capable of defence, works like thefe can never become ferviceable in any due proportion to the trouble and expence. Portland is, however, a place which an enemy can never have an interest to keep possed fion of. If feized by an enemy, it would only be fet on fire, and then abandoned. Two or three fhips crews would be equal to the enterprife. When the garrifon are unable to maintain the batteries, they must then retire

retire into the fort; and there, what more can they do, except procure for themfelves the honours of a capitulation? I cannot, therefore, fee any ufe in these fortifications. In 1770, an English frigate burnt threefourths of Falmouth, of which Portland was a part. In 1786, the state of Massachufetts united the other remaining parts of Falmouth with Portland, giving to the whole the common name of Portland.

The trade of Portland is carried on in feventy fhips of various burthen, all belonging to the town. Many of them fail to Europe, though oftener to the Antilles. About twenty are engaged in the fifhery of cod, which are taken among the iflands at the mouth of the bay. The merchants in Portland are numerous; but none among them poffefs great capitals. As Portland, and the parts adjacent, are not equal to the confumption of the cargoes which the fhips import in return for the exports; thefe are generally carried to Bofton, which is the principal mart for foreign commodities. The want of money occafions a greater proportion of them to be fent to the capital, than is for the advantage of this place: and hence, while the flore-houfes of Portland are neglected, the goods, which might be here bought and fold at a more reafonable rate, are bought by the people of this neighbourhood, at an exorbitant price, in Bofton.

In 1785, the tonnage of the united townfhips of Falmouth and Portland amounted to five thoufand three hundred and forty-one tons in the foreign trade; fixteen hundred and twenty-eight in the fifhery and the coaftingtrade; in all, fix thoufand nine hundred and fixty-nine tons. In October 1795, the tonnage of the fhips, regiftered for that year, was eight thoufand four hundred and eight tons in the foreign trade, five thoufand three hundred and ninety in the coafting-trade and fifhery; in all, thirteen thoufand feven hundred and ninety-eight tons. The value of the exports from Portland, was, in 1791, feventy-four thoufand eight hundred and four dollars; in 1792, one hundred and five thoufand one hundred and ninety-two dollars; 1793, one hundred and forty-fix thoufand nine hundred and twenty-one dollars; 1794, one hundred and fifteen thoufand

thousand fix hundred and twelve dollars; 1795, one hundred and fixtyfive thousand fix hundred and eighty-two dollars.

There is, as yet no regular market for provisions in Portland. This finall, though handfome, town confifts of about three hundred houfes, which may contain two thoufand three hundred fouls. The Prefbyterians have here two churches; the Epifcopalians one. Schools have alfo been eftablished here, which are faid to be pretty good. Lots of ground, for building in the town, are at a price which may be reckoned high; and land, within a mile of the town, costs twenty dollars an acre. Portland is the principal town in the county of Cumberland, which contains about twenty-four thoufand inhabitants.

#### BIDDEFORD.-MR. THATCHER.

The nearer you approach to Bofton, fo much the more does the whole country appear to affume an air of bufinefs and induftry. Not a creek but fhips are in building, in it; not a river's mouth fo fmall, but merchant companies are there in poffeffion of fhips, which they either hire out or lade on their own account: No fituation where a mill could ftand, on which there has not been a mill crected. Falmouth, Pepperborough, Saga, Biddeford, Kennebeck, Berwick, carry on a trade far fuperior to that of the fmall towns through which I had paffed on my way hither. The land is, however, neglected; but the foil is worft in the immediate vicinity of the fea.

In Portland I lodged at the houfe of Mr. DAVRES, a young lawyer, whom, as well as Mr. LEE, I had feen at the houfe of General Knox, by whom he is much effecemed, on account of his agreeable manners, integrity, and fkill in his profession. At Biddeford, I stopped to dine at the house of Mr. THATCHER, another lawyer, whom I had seen at the court-house in Penobscot. Mr. Thatcher is, likewife, a member of the Congress. He lives at the distance of two miles from the town, in a small and mean house, which would be distanced by the pettieft avocat in all France. Opposite to his house, on the other fide of the

the highway, is another hut, not more than twelve feet fquare, very flightly conftructed of boards, carelefsly fixed at the foundation, and hanging over a declivity of the road, which is his confultation-room, his chamber for bufinefs, and his library. He has about two thoufand volumes, books of law, hiftory, morality, and general literature. He adds to it all new American publications, and procures from England every other new work, which he understands to be valuable, and cannot find in America. He reads a great deal, and is a man of extensive knowledge. There is a pleafing caft of originality in his conversation and in his whole behaviour : But his notions are excentric, and often falfe. He is fingular in his exterior appearance, ftiff and fantaftic in his principles, but liberalminded, hospitable, courteous, and kind. He cultivates a small piece of land, and lives with his numerous family in a hut in which they have fearce, all, room to breathe. His doors are never fhut; even his ftudy is always open; yet nothing is ever ftolen from him. These fimple, unfufpicious manners, have procured him the efteem of his neighbours, as being an honeft lawyer. He is, in political principles, a federalist, but unconnected with the intrigues of that party; and, in the Congress, he endeavours always to give his vote to rectitude, not to party. He is not rich : yet has more than would be fufficient to make him live more elegantly than he does at prefent, if his humour would permit. His land is fertile. It has been two years in cultivation. He gives it no manure; yet it yields, an acre, fifty bushels of maize, or forty bushels of barley, and two hundred bufhels of potatoes. The meadows, which are not in a very good ftate of prefervation and culture, yield, from each, fix thousand pounds of hay. His ploughs and harrows are of the fame indifferent make as those throughout the reft of the country. Mr. Thatcher complains, that little progrefs is made in the inftitution of good fchools in this country. When thefe fhall be fufficiently numerous, he expects that every improvement will advance with aftonishing rapidity.

Biddeford belongs to the fame commercial diffrict with Pepperborough. The value of the exports was, in the year 1791, twenty-fix thoufand fix hundred and forty-four dollars; in 1792, thirty-feven thoufand four hundred

dred and forty-fix dollars; in 1793, thirty-nine thousand and fourteen dollars; in 1794, fifty thousand four hundred and fourteen dollars; in 1795, forty-feven thousand fix hundred and forty-three dollars.

The River Saga, on which Biddeford lies, is navigable above the bridge, but has in its courfe many rapid falls, by which a number of mills are wrought, and which prefent a diverfity of picturefque and interefting views to the traveller. The way leads acrofs fome rivers, which, till we reach Berwick, are not very interefting. At Berwick, the River Salmonsfall is of confiderable breadth; and its channel is rendered much broader and deeper by the influx of the tide.

## BERWICK.

I arrived in this diffrict, which is very extensive, on Tuesday. That part in which (to adopt the language of the country) bufinefs is carried on, in other words, through which the river runs, lies feven miles from the place where I took up my abode, and yet thefe are not the two remoteft points. The town confifts of about forty houfes, which adjoin to one another : a great number of detached houses skirt the road fide, which I am told is the cafe throughout the whole diffrict. The country, as far as I had an opportunity of viewing it, appears to be in a better state than that through which I passed before, although the foil is very shallow and stony. The cultivation of maize, with that of gourds in the intermediate space, constitute the chief objects of agriculture. Rye and wheat are raifed in the more diftant parts. Mr. ROGER, a Quaker, keeps a very excellent inn at Berwick. The guefts who frequent his house are not promiscuously mixed together; each different company has its feparate fitting, eating, and fleeping rooms; every thing bears the appearance of the utmost cleanliness, care, and attention; the fervants are numerous, and are employed both upon the extensive farm and the bufinefs of the inn; the landlord and his wife are perfons of good fenfe, and very obliging in their manners; in fhort, this inn was a kind of phænomenon of which I never yet faw the counterpart. Mr. Roger does not eat at the fame table with his fervants, and his wife never goes into the kitchen

kitchen, except to give inftructions, without, however, doing any part of the work herfelf. They both preferve a proper authority over their fervants, and these entertain a degree of respect for them, of which I never met with a parallel instance fince I left Europe.

The county of York, in which Berwick lies, contains no more than four thousand inhabitants, and yet is confidered, in proportion to its fize, as the most populous, being the smallest in the whole province of Maine. Berwick is the last township in it. The entire track of country from Portland is in the most flourishing state, and yet the foil, in the general opinion, is not accounted fo good as that in the vicinity of Penobscot. But then this district has been longer cultivated and inhabited than any other part of the province.

If, unhappily, the troubles, which there is but too much reafon to dread, do not retard the progress of cultivation in this country, its improvement will be rapid and very great. The more I reflect upon this fubject, I am convinced of the importance to the profperity of this particular colony, that perfons of opulence, and those who posses a practical knowledge of agriculture fhould fettle in it. A country fo wretchedly and miferably cultivated, and the climate of which renders it neceffary to house cattle in stalls fix months in the year, stands in need of very great care and attention on the part of the colonist, and ought, by cultivation, to be made productive enough to yield the fupply of forage for the winter, which is neceffary to a numerous breed of cattle. The foil, therefore, must be well prepared, the labour maturely digested, and the planters must posses an adequate capital to carry their plans into execution. It is by thefe means alone that the difadvantage of the climate can be obviated; for climate alone is never the caufe of great injury to the farmers ; and those of the fettlers who now poffers little knowledge of agriculture, would profit from the example of the more experienced, and opulent.

GENERAL REMARKS ON THE PROVINCE OF MAINE,

Previoufly to taking my last farewell of Maine, I shall offer a few remarks on its history, and its prefent state.

Some attempts to fettle a colony in this place, in the vicinity of New-3 O caffle,

caftle, were made by the Dutch in 1625, and even at the early period of 1607, but without effect. In 1635, a Spaniard, of the name of FERDI-NAND GEORGES, was prefented, by the Council of the Plymouth Society, with a large tract of country between the Rivers Pucataqua and Kennebec. This was fhortly after augmented by the English Government, which extended the limits of Georges's jurifdiction to a greater compass than it had hitherto done in the cafe of any individual. Georges formed a kind of democratical government, which continued till his death, when this colony voluntarily fubmitted itself to the dominion of Maffachufetts. In 1691, under the reign of William and Mary, the whole of this diftrict to Nova Scotia was incorporated with Maffachufetts; the territories, which were then comprifed under the names of Maine and Sagadahock, did not extend to a greater diftance than one hundred and twenty miles from the fea. The more remote parts were referved to the crown. The American revolution has annexed the whole to the Maffachufetts. From the report of the committee appointed to deliver in a ftatement of the fale of lands fince the revolution, as well as of those which still remain to be difposed of, it appears, that feven millions four hundred thoufand acres have been already fold; that one million, which have been allotted, still remain to be purchased; and that, on an average, there are feven millions of acres which have not been meafured, exclusively of a number of illands. Befides these lands, which are the property of the State, upwards of three hundred and fifty-fix thoufand acres have been given to the fchools and public inftitutions.

The population of the province of Maine is computed to exceed, at prefent, one hundred thoufand inhabitants. According to Morfe, this province contains forty thoufand fquare miles, or twenty-four millions fix hundred thoufand acres, which gives but a very finall population of not more than two and a half inhabitants to each fquare mile; in all probability the great quantity of land, which is vefted in the hands of the fpeculators in the town, is a great drawback upon the increase of population. The best part of the province lies between the rivers Kennebec and Penobfcot, particularly in the district at the distance of ten or twelve miles from the fea.

466

NEW

#### NEW HAMPSHIRE.-DOVER.

On leaving the province of Maine, the traveller paffes through Dover into New Hampshire. The greater part of the houses in this very populous diffrict, are fituated on the River Cocheco, which empties itfelf a little below the town into the Piscataqua. Dover borders on a small ridge of mountains, extending between the Pifcataqua and the River Back, which command a profpect of a great number of rivers, bays, cultivated and inhabited promontories, terminating at a confiderable diftance in the mountains of New Hampshire. This prospect is beautiful and grand ; a fort erected on this fpot would very advantageoufly protect the entrance into the country. It is currently afferted, that the original inhabitants, who came hither in 1630, eftablished themselves on this eminence; but that commercial convenience induced them gradually to prefer their prefent refidence at Dover to this charming fpot. Dover is the capital of the county of Waterford, which contains twentyfour thousand inhabitants; Dover is reckoned to hold two thousand. There are two roads from Dover to Portfmouth; the one five miles fhorter than the other, and bordering on the fea-coaft. Those who travel this way crofs the river in a ferry-boat. The other road runs further up into the country, and paffes over a bridge across the Pifcataqua, which was completed only last year, and is, beyond dispute, the finest in all America.

This bridge is built of wood, in the form of an angle, the two fides meeting together on an ifland in the centre, and it is two thousand two hundred and ninety-one feet in length. Notwithstanding its extent, it has nothing remarkable, excepting this great length, and a width of five hundred feet. It refts upon piles, but one part of it, near the island in the centre, has an arch two hundred and forty-four feet nine inches in width, the pillars of which on the fides do not ftand on the ground, but are fupported entirely by a fcaffolding of wood. This arch, which gains great ftrength and ftability from its pillars and fupports, rifes at its higheft point one hundred feet above the bed of the river, and fifty feet above the

302

the ordinary water-mark. The bridge, befides the balluftrade on each fide, which enclofe as well this as the other parts of it, is interfected in the middle by pallifadoes, which run parallel with the balluftrade, and add confiderably to the ftrength of the areh, which rifes ten feet above the level of the bridge, and of courfe renders the declivity on each fide pretty fteep. The bridge is unqueftionably fine, but even the little architectural knowledge which I poffers convinces me, that the engineers in France would be able to improve upon and beautify it, without any detriment to its ftability. The reafon for conftructing this high arch is, to give the fmall veffels, which are built on the river, or which navigate it, the means of failing through it, for which purpofe it opens likewife in two other places.

#### PORTSMOUTH.

Portfmouth is fituated about five miles from this bridge, in a kind of bay, formed by the Pifcataqua before it difembogues itfelf into the ocean. On the arms of the bay, or on the rivers which fall into it, lie Dover, Exeter, and Derham, little towns in New Hampfhire, in which a few fhips are built, and fome trade carried on. Portfmouth is, however, the only harbour in New Hampfhire ; this province, on the fide of the fea, has not a greater extent than from fifteen to twenty miles. The harbour is remarkable for its fafe anchorage, and its great depth of water. The nature of its entrance, which makes it neceffary for all veffels to fail into it through a very narrow channel, renders its defence very eafy.

The commerce of Portfmouth has experienced very little increase fince the American revolution; on the contrary it has visibly fallen off within these last five or fix years. The very confiderable number of ships it formerly posses been fold to other ports, and more than half of those, which are annually built here, have the same destination\*. The trade in ships constitutes one of the principal branches of the commerce

\* For a more circumftantial account of the trade, the tonnage and exports from Portfmouth, the reader is referred to the Diary of the Journey of 1796.

of Portfmouth, which is univerfally acknowledged to excel in the art of fhip-building. Prior to the American war, many veffels were built here for England. Independently of the demand from the latter quarter being ftopped, wood is now become much fcarcer and dearer in Portfmouth, and the price of fhipping is of courfe confiderably advanced. Wood fetches now twenty dollars per ton from the timber merchants, and fifty-five dollars per ton when worked up into veffels.

Notwithstanding, however, this incontrovertible decrease of the trade of Portfmouth, the value of ground in the town is most extravagantly high. A lot of ground, forty feet in breadth, and eighty-four in depth (with a fmall quay), was lately fold for the fum of feventeen thousand feven hundred and feventy-feven dollars. In the vicinity of the town, land fetches, according to the nature of the foil, from thirty-three to ninety dollars per acre. The circumjacent country of Portfmouth is very fine; the eftates well parcelled out into meadows, although the land, which is the most appropriated to this use, is often encumbered with large rocks. In the remote parts, which, with the exception of a few diffricts. are faid to be very populous, land fetches from two to three dollars per acre, and I am told it is very excellent. An inhabitant of Portfmouth, whofe eftate lies about one hundred and fifty miles from that town. affured me, that it produced, the first year of its being cultivated, forty, and the fucceeding year thirty bufhels of wheat per acre. But as this perfon has a large quantity of land to difpofe of, it may perhaps be no more than prudent to receive his affertions with caution. Wheat cofts, in this diftant country, from five to fix shillings per bushel. In Hampfhire, as well as in New England, the dollar is valued at fix fhillings.

The common pay of labourers in New Hampfhire is from fix to eight dollars a week, and they are procured without much difficulty. The price of cattle is the fame as in that part of the province of Maine, which borders on this country. Provifions are very plentiful in Portfmouth, and are fold in a market, which is extremely well furnifhed. Fire-wood fells from five to fix dollars per cord.

In the province only one paper is published twice a week, and that in Portland.

Portland. It has a pretty extensive fale, and is read with avidity. In New Hampshire a great variety of newspapers are printed. Portsmouth has three, Dover two, and Dartmouth, on the river Connecticut, where the college is established, has one.

In Portsmouth every man is a politician, and a very warm one too. The majority are evidently averse to the treaty with England. The advocates for that measure, ascribe this hostile spirit to Mr. LANGDON, one of the ten fenators, who voted against its ratification. I cannot take upon myself to determine the extent of this gentleman's influence, and whether he has any control in this refpect over the public opinion, as to his political tranfactions; but it is very natural to conclude, that the number of arguments, which have been advanced against it, must have made a strong impression upon those, who have no interest in the measure. The people of America are, in this point, exactly in the fame predicament as the inhabitants of France fince the revolution, and as the English are, fince they have become apprehenfive of its confequences. They confider each other, whenever they difagree in politics, as jacobins, or rafcals; or as ariftocrats, or rafcals. Those who do not admire the treaty with England are looked upon by the one party as guillotinifts, whilft the oppofers of the treaty, on the other hand, decry every man as an enemy of public liberty, and as a penfioner to England, who does not execrate the meafure, and vote for the hanging of Jay, who concluded it. This violence of opinion, thefe political extremes, are to be met with in a greater or lefs degree in all cities. The country people, of all ranks, are very quiet, and with for peace, and the due obfervance of the laws and good order for the fecurity of their harvefts. The major part of the inhabitants do not beftow a moment's thought upon the treaty, ; and even among those who do take it into confideration, there are many, who, at the fame time that they avow "their diflike to the measure; that they place no confidence in " the English," &c. never fail to add-" but if we had not ratified the " faid treaty, we must, by all accounts, have been plunged into a war with " England, and, therefore, it is well the treaty took place." Still oftener do we hear : " Our aged father, the Prefident, understands this matter " much

" much better than ourfelves; we will, therefore, leave it entirely to " his management; he will not fuffer himfelf to be impofed upon." It muft, however, be acknowledged, that the character of the Prefident, which till very lately has never been attacked, is at prefent fubject to much animadverfion.

## MR. LANGDON.

I paffed two days with this fenator, who warmly oppofed the treaty with England. He gave me an invitation, whilft I was in Philadelphia. He is a man of the first importance in Portsmouth. He was originally mate of a merchant ship, afterwards captain, and then merchant. He has acquired a very large fortune, in addition to his paternal inheritances. He is allowed to poffefs great knowledge of fhip-building, in which he has fpeculated deeply. It was he who built the fhip, which the United States of America prefented to France. At prefent he has bade a farewel to trade, and invefted all his property in land. During the revolution, he was a friend to Hamilton, Jay, and Madifon; and in the debates, which took place on the fubject of the new conftitution, he went over, on the feparation of the two parties, to the opposition. Be his political character, however, what it may, it is impoffible for any man to difplay a greater attachment to his country, or better principles. He is extremely friendly, affable, and unaffected, and received me in the kindeft manner, as a ftranger ought to be received, without unneceffary form and ceremony. He is reputed to be very rich, and his ftile of living proves it. He has been married twenty years, and his lady appears ftill as beautiful and fprightly, as if fhe were only eighteen years of age. His daughter, Mifs ELIZA, is uncommonly amiable and pleafing.

General Knox had given me a letter of recommendation to Mr. SCHEEF, a merchant in the town. The known difference of their political opinions did not prevent Mr. Langdon from introducing me to that gentleman, with whom he afterwards breakfafted in my company. Mr. Scheef carries on more bufinefs than almost any merchant in Portfmouth; he was so deeply engaged, that I could only have his company for a few minutes.

There

There are a number of churches in Portfmouth, and, among the reft, a Quaker's meeting. Very few members of this fect refide in the town; they are almost all farmers in the circumjacent country, and, like all Quakers and farmers, honest, fimple, and well behaved.

The continued rain occafioned my remaining in Portfmouth a day longer than I originally intended. Hamptonfall, where I paffed the night, belongs to the province of New Hampshire, and constitutes the boundaries. Mr. Wells keeps an inn in this place, which stands in high repute for neatness.

# NEWBURY PORT.

Before you arrive at Newbury Port, you have to crofs the river Merrimack, by means of a bridge, which, prior to the building of that thrown over the Pifcataqua, was confidered as the most elegant in all New England. It is at leaft fhorter by one-third than the latter, and the arch, which measures only one hundred and thirty feet in width, is supported by a crooked piece of timber, meafuring twenty feet, which gives the bridge, at first fight, a heavy appearance. Along the banks of the river, before you come to this bridge, lies Newbury Newtown, a pretty extenfive village, where a number of fhips are built, which are afterwards equipped, and freighted in Newbury Port. Mr. Langdon had furnished me with a letter of recommendation to his friend JACKSON, from whom I flattered myfelf with the hopes of receiving fome information relative to the town and its trade. But this gentleman being abfent in Bofton, I was obliged to content myfelf with the intelligence I could procure from fome inhabitants, whom I found in the inn. I learnt that the trade of this town, which, as well as that of Portfmouth, had decayed very much fince the conclusion of the war, was, for the last years, confiderably on the advance; that it was of the fame nature with that carried on at Portfmouth, and other parts of Maffachufetts; that the quantity of tonnage now employed by this town, amounted to fixteen thousand tons; that the exports were valued, in 1791, at two hundred and fifty thousand one hundred and ninety-three dollars; in 1792, at two hundred and feventythree

three thousand five hundred and fifty-one dollars; in 1793, at three hundred and feventy thousand and forty-three dollars; in 1794, at four hundred and ninety-five thousand four hundred and five dollars; in 1795, at four hundred and ten thousand five hundred and eighty-fix dollars; that it has very few fifhermen; that the harbour and moorings are good, fafe, and deep, the quays commodious and very extensive. The town is almost as large as Portfmouth. Unfortunately there is a fhoal of quickfands at the entrance of the haven, which obstructs the navigation two or three times in the courfe of the year. To guard against the mischief, which otherwife might befall veffels, that have made long voyages, two light-houfes have been erected on the coaft, one of which is moveable, and capable of being always stationed behind the other, according to the actual situation of the pass. By fleering their course direct against that point, at which the fecond light-house is concealed behind the first, veffels are enabled to fail day and night into the harbour, without running the rifk of driving on the fand banks.

Newbury Port is built on the river Merrimack. It has ten public fchools. A fociety of inhabitants of the town, known by the name of the Sea Company, have eftablished a very benevolent institution, confisting of feveral small houses on Plumb Island, which lies in the mouth of the river, where perfons, who have fuffered shipwreck, find some provistions, fire-wood, and other articles of immediate necessity.

Newbury Port carries on a confiderable trade with the Antilles, and receives molaffes in return, which keeps from eight to ten boiling-houfes in employ. There are likewife fome breweries in the town, and a very large nail manufactory, which appeared to me to be very fkilfully conducted. Newbury Port contains about four thoufand inhabitants.

The road from Portfinouth to Bofton is one continued feries of houfes, fhop-booths, finall manufactories and villages. It is an uninterrupted garden. The road is in every part better than any I have ever feen in America. It would be confidered a delightful road, even in the moft beautiful diffricts of France and England.

3 P

IPSWICH.

## IPSWICH.

Ipfwich, one of the most confiderable villages on this road, is fituated on a river, to which it gives name, and on which fome ships are built. This finall harbour participates in the large trade carried on with Maffachufetts, but not fo extensively at prefent, as in former years.

Flax is pretty abundantly cultivated in all diffricts of the province, and feems to thrive well. But it is faid to be in greater abundance at a greater diffance from the coaft, at leaft every where more fo than hemp.

### BEVERLEY.

Beverley is another finall neat village, through which the road paffes to Bofton. Its harbour lies on the South River. It is fituated on a peninfula formed by that and the North River. The trade of this village is confined entirely to ftock-fifh, in which branch forty veffels are employed. The fifh are cured in the village itfelf, which renders it very unpleafant to pafs through. The number of veffels, which fail from this port to Europe or the colonies, is not confiderable. Salem engroffes almoft the whole trade.

## SALEM.-MR. GOLDHUE.

Salem is one of the handfomeft fmall towns in the United States, and is feparated from Beverley only by a bridge, fifteen feet in length. The number of its inhabitants, which increafes yearly, amounts to ten thoufand. The town, in reference to its trade, ranks with those of the fixth rank in America, and with those of the fecond rank in Maffachusetts. The uncommonly active and enterprising spirit of its inhabitants is the fole reason which can be afcribed for the great extent and rapid progress of its trade. This town has no cultivated land behind it to supply its exports, which in America is with justice confidered as one of the most effential articles of commerce. Its haven is but small, at ebb the quays are dry, and veffels of a larger fize muss even, at high water, unload a part of their cargo, in order to be able to reach these quays. Yet, notwithftanding

ftanding these inconveniences, the annual freightage from this port exceeds twenty thousand tons. The veffels employed in this fervice fail to all parts of the globe; twelve of them, for instance, are engaged in the East India trade, one of which arrived from Calcutta the day prior to my entering the town, after an absence of nine months and twelve days, of which thirty-two days were paffed at Calcutta. The number of veffels, conflituting the above mentioned rate of twenty thousand tons, amounts to one hundred and fifty, one hundred of which are in the foreign trade, twenty are coafters, and thirty follow the employment of fifhing. The exports amounted, in 1791, to fix hundred and ten thousand and five dollars; in 1792, to fix hundred and fifty-feven thousand three hundred and three dollars; in 1793, to eight hundred and twelve thousand and fixty-fix dollars; in 1794, to one million four hundred and fifty-two thousand four hundred and eleven dollars; in 1795, to one million five hundred and four thousand five hundred and eleven dollars. As Salem and Beverley have only one cuftom-houfe in common for both places, the exports from the latter form a proportion in this calculation, but it is very inconfiderable.

With the exception of two or three large fortunes of nearly three hundred thousand dollars, the opulence of the merchants is not very great; but all the inhabitants find themfelves in a flourishing condition, which is the lefs fubject to a reverfe, as the mode of living is very frugal, and as luxury is hitherto little known amongft them. Hence all the profits acquired by trade, are re-imbarked in trade; and this accumulation of intereft upon intereft infures them a large capital, by which they are enabled to bear up against any cafual loss. The major part of the shipping from Salem is freighted from Virginia or South Carolina. In thefe provinces of America, the land yields a greater abundance of produce, than the veflels employed in their ports will fuffice to export. The induftry of the northern ports, therefore, is here very valuable, the produce being in an inverse ratio to the shipping, compared with the southern ftates. Salem exports, however, annually from feven to eight thousand pounds of falt beef, and eighteen thousand barrels of fish. This latter 3 P 2 article

article has, for fome years paft, been greatly on the decline, the inhabitants of Salem, and the other ports, preferring the wholefale trade as more lucrative. The commodities imported from the Eaft and Weft Indies, form likewife a branch of the export trade of this port. Hemp, iron, Ruffia leather, are employed in the coafting trade. Few foreign veffels put in here. The inhabitants of Salem fay, that their own induftry leaves no room for the fpeculations of ftrangers.

An European, who fancies that a man cannot be qualified to act as captain of a fhip, till he has made a number of voyages, and paffed through a regular courfe of ftudy, is not a little furprized, when he is informed, that the merchants of Salem entruft their fhips to young perfons, who have frequently been only one year at fea. As they have grown up in the bufinefs of the compting-houfe, they are perfectly acquainted with the price, the quality, and the fale of each different commodity. The first year they are affociated with a fkilful fteerfmate, and act at once in the capacity of captain and fupercargo. Their veffels, whatever may be the caufe, do not fuffer fhipwreck more frequently than other fhips, which are more cautioully navigated. In the courfe of a few years thefe young people become merchants themfelves, the captain's profits being very confiderable. As they generally are appointed from the families of merchants, they receive affiftance from their employers.

The inconveniences which Salem experiences from the fhallownefs of its harbour, fecure them against all hostile attacks. The entrance to the haven is not in the flightest degree defended, nor is it, indeed, capable of defence.

I was upon terms of great intimacy with Mr. GOLDHUE, a member of the Congress, whom I had seen at Philadelphia. The friendly reception that gentleman gave me, and the patience with which he resolved my questions, entitle him to the same praise, as indeed all the persons are entitled to, whom I met with in the course of my long journey. Mr. Goldhue is a man of strong intellect, of very plain manners, and is very well informed. In his political principles he is a federalist, and of course an advocate for the treaty with England. The town of Salem entertains

tains the fame opinion as he does, in this refpect, chiefly on account of their dread of a war, which they confider as the inevitable confequence of the non-ratification of the treaty.

Before I take my leave of Salem, I must remark, that the day previous to my departure, a veffel arrived in this port from Bourdeaux, which brought a great quantity of filver diffues and plates, in payment for flour, which had been fold to France. The plate was valued by weight, and conflituted a part of the confiscated property of the emigrants.

Salem is the capital of the county of Effex, and contains, upon an average, fixty-nine thoufand inhabitants. It is a handfome town, the houfes are good, fmall, and neat, and perfectly accord with the manners of the inhabitants. The Senate Houfe is a fpacious, and even elegant building.

Salem has a fail-cloth manufactory, which employs a great number of fkilful hands.

This town is the fecond fettlement erected by the Europeans, in the Maffachufetts. It was begun in 1622, and was the principal fcene of the cruelties, which ignorance, fuperfitition, and the perfecuting fpirit of the priefts, and their deluded votaries, inflicted, in 1692, on the pretended forcerers.

## MARBLEHEAD AND LYNN.

On the fame bay with Salem lies another finall port, which, in refpect to its fhipping, is of greater confequence than Beverley. Marblehead, which is fituated in the midft of rocks, trades only in ftock fifh. All the men are fo entirely occupied in fifhing, that the town, to a ftranger, who paffes through the ftreets, appears to be folely inhabited by women and children, all of whom have a most miferable and wretched appearance. Marblehead has a custom-house, and the exports from this place confist in a variety of articles, the value of which, in 1794, amounted to one hundred and twenty-four thousand dollars.

Lynn, which is dependent upon the former place, is another fmall haven, lying nine miles nearer to Bofton. It is famous for its fhoe manufactory.

nufactory. There is fcarcely a houfe, which is not inhabited by a fhoemaker; four hundred thoufand pairs, most of them women's fhoes, are made here every year. This port carries on no other trade than the exportation of fhoes to Boston, New York, and Philadelphia, from which places a great number are fent over to England. A quantity are even exported directly to Europe from Lynn itfelf.

### BOSTON.

THE MONUMENT ERECTED IN MEMORY OF GENERAL WARREN-TONNAGE OF THE SHIPPING OF BOSTON-MR. JEFFERY DR. EUSTIS, &c.

At length, having paffed through the fine and flourishing village of Charlestown, I arrived at Boston. All the roads leading to this town display the prosperity and opulence of the inhabitants in a greater degree than the austerity of republican manners.

I faw this day the fimple and affecting monument of General WAR-REN, who commanded in the celebrated battle of Bunker's Hill, anno 1775, which coft the English fo dearly, and taught their troops not to hold the courage of the republican legions in contempt, whilst it infpired the latter with a just confidence in their own prowers. It must here be remembered, that General Warren was by profession a physician, and had never ferved in the army. He had no opportunity of giving proofs of his great talents, this being the first action, in which he was engaged. But his courage and patriotifm eminently diftinguished him, and that at a time, when there were very few of his countrymen, who did not difcover extraordinary energy.

This fimple monument is erected on the fpot where the fort ftood, the taking of which coft the English ninety officers, and fourteen hundred men, and in which attack General Warren loft his life. It was built by the direction and at the expence of the free-masons, of which order the General was grand master.

The civility of General Lincoln, commissioner of the customs for the state

ftate of Maffachufetts, furnished me with an opportunity of extracting from the register of the office the tonnage, belonging to the port of Boston, as likewise the amount of its exports. The tonnage will amount this year to ninety thousand tons; at least it amounted, according to the number of spire registered, for the first nine months, to seventy-three thousand five hundred and thirty-nine tons. The last quarter is not expected to run high, on which account I have estimated it at only seventeen thousand tons. In 1794, the whole year made but fixty-eight thousand nine hundred and fixty-feven tons; and in 1793, no more than fifty-three thousand and forty-two. Prior to this period, the law had not passed, which enacts, that all ships shall be registered in the ports to which they belong.

Of the feventy-three thousand five hundred and thirty-nine tons, which have been registered for the first nine months of the prefent year, fixty thousand two hundred and ninety-five tons are employed in the foreign trade, eight thousand four hundred and one tons are employed in the coasting-trade, and three hundred and nine tons confist of vessels under twenty tons each.

The exports from the port of Bofton amounted, in 1791, to one million one hundred and fifty-nine thoufand and four dollars; in 1792, to one million three hundred and fifty-five thoufand and thirty-eight dollars; in 1793, to one million eight hundred and thirty-four thoufand eight hundred and forty dollars; in 1794, to two million five hundred and thirtyfour thoufand and fifty-three dollars; in 1795, to four million two hundred and fifty-five thoufand fix hundred and eighty-eight dollars. In 1788, the exports amounted to one million one hundred and forty-feven thoufand three hundred and fifty-feven dollars.

It is difficult to give the imports with accuracy, becaufe the different commodities of which they confift, pay different rates of duty. The fum total of thefe duties will furnifh but a very imperfect idea of the extent 'of the importation. The number of veffels from foreign ports, that is to fay, from fuch as do not lie within the territories of the United States, will yield a better criterion. The veffels which put into Bofton from foreign

foreign ports, were, in 1793, four hundred and thirty-fix; in 1794, five hundred and fixty-feven; in 1795, feven hundred and twenty-five. In 1784, the number was four hundred and fifty.

In my first article relative to Boston, I have commented on the irregularity of the duties paid by the inhabitants of this town; of their diffatisfaction, and the mischief which refults therefrom. The votes are taken on this tax, (which is intended to defray the expences of the ftreets, the pavement, the watchmen, the maintenance of the poor in the hofpital, and the free-fchools), in a public meeting of all the inhabitants, held the beginning of May every year. It produced last year upwards of forty thousand dollars, making ten thousand dollars more than the preceding year.

Of the one hundred and fifty-nine thousand feven hundred and fiftynine dollars, which are collected in taxes to defray the expences of the government for the state of Massachusetts, Boston pays for its individual quota twelve thousand nine hundred and fifty-eight dollars.

Every male inhabitant of the ftate of Maffachufetts is affeffed in a tax, which is fixed throughout the whole ftate at twenty-eight centefimas, or the twenty-eighth of a hundredth part of a dollar. In Bofton it amounts to eighty-feven centefimas. The rife in the price of every article, is the principal caufe of this extraordinary advance.\*

Mr. JEFFERY, an English merchant, who has refided between fifteen and twenty years in Boston, in partnership with Mr. John Ruffell, requested, at the time of my first journey, that I would, on my return, take up my quarters at his house, where I passed my time very agreeably. He is an excellent, amiable man, a cheerful companion, who possible the frank and friendly carriage, fo natural to Englishmen. He is a bachelor, possible fortune, and entertains the best company in the town at his house, among whom Dr. EUSTIS deferves particularly to be noticed. The Doctor is a most amiable and well bred gentleman, possible great cheerfulness and equanimity of temper; his political principles are

\* For a more circumftantial detail of the duties, the conflitution, and laws of the flate of Maffachufetts, the reader is referred to the journey of 1796.

wife and firm; he is fuperior to prejudice, and his feelings are truly noble. Meffrs. Jeffery and Ruffel have established a very extensive spermaceti manufactory, and employ two ships in the whale-fishery. They employ likewise forty labourers in their beautiful rope-yard.

Bofton is one of the moft agreeable of towns to live in, and its inhabitants are celebrated through all America for their hofpitality to ftrangers. I met here again, to my great fatisfaction, Mr. Cabot, Senator of the United States for Maffachufetts. He ftands in high effimation among the Americans, on account of his well-informed mind and amiable character. I experienced from Mr. GORE, Advocate-General of the United States, and a man of talents; from Mr. SULLIVAN, Advocate-General of the ftate of Maffachufetts, a gentleman of great acquirements, whom the federal party accufe of differing from them in politics; and likewife from Mr. THOMAS RUSSEL, perhaps, the richeft merchant in America, and who is juftly celebrated for his great benevolence, a degree of attention, which I cannot refrain from particularly noticing, among even the diftinguifhed civilities which I received from every perfon in Bofton, to whom I was introduced.

## HINGHAM.-GENERAL LINCOLN.

General Lincoln, on giving me the cuftom-houfe report of the amount of tonnage belonging to Bofton, which I have inferted in my journal, ftipulated with me, that I fhould, in return for this fervice, vifit him in Hingham. In purfuance of my promife, I fpent twenty-four hours with him, on Sunday the 18th of October. General Lincoln is one of the oldeft Generals who ferved in the American war. He took a part in the whole of the conteft, was prefent in every action of moment, and acquired among the Generals a great military name, and throughout all America the reputation of an excellent and honeft man. After the conclufion of the war, he was entrufted with feveral negociations with the Indians; and with the appeafing of the troubles, which broke out in Maffachufetts in 1787. At length he has been placed at the head of the receipt of cuftoms; and this office, the moft lucrative in the gift of 3 Q the

the government, yields him an annual income of nearly five thousand dollars, he being allowed five-eighths per cent on the whole of the receipts. He has to keep five clerks, who do all the business; but for this drawback he is amply indemnified by other revenues which accrue to him from his fituation. General Lincoln is a member of the Academy of Sciences of the state of Massachusetts. I have read a memoir, written by him, which contains remarks on the natural history of America, made by him in various journies, with an account of his expedition against the infurgents in the year 1787. They bespeak him to be a man of great clearness of head, studious only of the public weal. His family lives in Hingham; and he himself resides there, whenever his official business will permit.

Hingham is famous for a number of finall fchools, which are here placed together, in a fort of college. They are about fourteen in number, and are attended by about four hundred fcholars.

The foil of the furrounding lands is almost all fandy. It yields, an acre, twenty-five bufhels of maize, and barley and rye, in a moderate proportion. The meadows afford from the acre, not more than forty hundred-weight of hay, even at the best. This land, too, costs from twenty to forty dollars an acre. The bufiness of this small village consisting in the manufacture of tubs, pails, and all other vessels of coopers' work, which are in common use as domestic utenfils. The packet-boat which fails between Hingham and Boston, conveys a confiderable quantity of these vessels to Boston; and of these, a part is thence exported to England. The wood employed is chiefly fir, from the province of Maine. General Lincoln possibles very extensive estates in this province.

I cannot avoid doing myfelf the pleafure of here mentioning, with due refpect, the name of Mrs. LINCOLN, the widow of the eldeft fon of General Lincoln: fhe refides in Hingham. I had an opportunity of being there in company with her, during my fhort flay with the General. I found her to be one of the most agreeable women in all America. She is no lefs admired for the excellencies of her mind, than for the charms of her perfon.

This diffrict makes a part of the county of Suffolk. It contains a great number of mills for fawing timber, grinding corn, and waulking cloth. Some of thefe are put in motion by the flux of the tide.

The highway between Hingham and Plymouth opens to the view no interefting profpects. The dwelling-houfes are pretty numerous, but are feattered between the rocks and the beach. Here is a want of money and agricultural intelligence to bring the county into that condition of improvement and opulence of which it is evidently fufceptible.

# PLYMOUTH.

The colonifts of this territory landed here in the year 1620. They were emigrants who had left England, on account of their religion, and were about an hundred in number. They arrived on this coaft, without any certain determination, where to fettle. It is faid that their choice was fixed, when, on a morning, they approached Cape Cod, and obferved a bay and a river, which reminded them of Plymouth in England. They landed, and obtained from the Indians the ceffion of fufficient territory; conftructed huts for their habitations; cleared a part of their lands, and fowed corn for their fuffenance. These fugitives from perfecution, had not been here more than two years, when they declared war against the Indians, among whom they had been received, and threatened to expel them out of their posses.

New emigrants, from time to time, reforted hither from Europe. Other fettlements were formed. Force or artifice extorted from the unfortunate Indians, new ceffions of territory.

The war with the Indians was not of long duration. These fimple people made no great difficulty of relinquishing a few acres, from which they had never derived great advantage. And, without any prejudices against the colonist, or in favour of the natives, it may be reasonably believed, that the greater part of the enormities and crimes attributed to the Indians, originated primarily from the conduct of the European encroachers on their posses.

The rock on which these first colonists landed, is still carefully 3Q 2 pointed

pointed out to ftrangers. The place they called Plymouth, in remembrance of their native land. The fea has, fince that time, thrown up fand over the rock to the height of twenty feet. But the tradition of the firft landing ftill preferved the knowledge of the precife fpot on which it took place. At the dawn of the revolution, the fand was cleared away from it. With no little toil, they penetrated at laft through twenty feet in depth of fand, to the very rock. The rock was fplit into two parts, as it was laid bare; and this circumftance was regarded as an unlucky omen of the political feparation of America from England. The largeft half ftill remains in its former fituation; the other was, with great difficulty, conveyed to the market-place of the town of Plymouth, where it now lies. Both are in the ftate of rugged blocks, without infeription, or any thing of monumental form, fuch as might indicate what is peculiar to them, and diftinguish them from the many other ftones which lie around.

This rock which, from the high veneration bestowed on it, naturally attracts the curiofity of strangers, is, however, the only thing particularly remarkable in that place. Its trade is confined to the fifthery. Seventy fchooners, of from thirty to forty tons burthen each, and two or three of one hundred tons, go to the fifhery upon the bank: fome fifh on the coaft. The largest of these veffels carry their cargoes of fish to fale in Europe, or in the Weft India Isles. The road is fcarce fufficiently sheltered from the north-east wind; and the harbour is left dry by the ebbing tides. In the beginning of the war of the revolution, all the veffels belonging to this port, were either captured or burnt by the English. Their number was greater than that of the veffels which belong to it, at present; and its trade was, then, more confiderable. I know not but it may be the remembrance of what then took place, which now, fo much exafperates the minds of the people of Plymouth against England. Artizans, labourers in hufbandry, failors, are all, here, in a rage, against the late treaty. Perfons of high rank likewife declare against it, though with lefs of open and indecent fury. It is the general voice, that America ought to form an offenfive and defenfive league with France, and to declare

clare war against England. But, on the other hand, I have been affured that the richer class of the people are, for the greater part, of opinion, that a treaty of commerce and political amity with England is indifpenfibly neceffary to the welfare of America.

In addition to the fifhery, the trade of Plymouth is in part produced by its forges and manufactures in iron. The works in which thefe manufactures are carried on, confift, in a confiderable proportion, of millmachinery, that is put in motion by the fmall river which here falls into the bay. As pit-coal and iron-ftone, are plentiful; from eighty to an hundred men are kept conftantly at work in thefe manufactures. The town contains about three thousand inhabitants; and their number is annually augmented.

The exports from Plymouth amounted, in the year 1791, to fifteen thousand eight hundred and forty-four dollars; in 1792, to twenty-eight thousand nine hundred and forty-five dollars; in 1793, to twenty-nine thousand four hundred and twenty-feven dollars; in 1794, to thirtyfive thousand four hundred and fifty-two dollars; in 1795, to fifty-two thousand fix hundred and thirty-eight dollars.

I had a letter of introduction to General WARREN, an old, grevheaded man, who was much employed during the war of the revolution, but rather for the economy of the army, over which he had great influence, than on account of any ability he could be fuppofed to poffefs for actual fervice in the field. He is now an old man, and very feeble. His wife is as old as himfelf, but much more lively in conversation. Like the other ladies of America, fhe has read a great deal on a variety of fubjects. She has even published one or two volumes of tales, which are much efteemed; and has written a hiftory of the American revolution, which her hufband and fhe have, with great prudence, refolved not to fend to the prefs while they live, but to leave for publication after their death: the truth may then, they fay, be fafely declared. In the mean time, this work has been read, in whole or in part, by feveral friends, who give it the character of an impartial and well-written work. This old lady, at the age of feventy, is truly interefting; for the has loft neither

ther the activity of her mind, nor the graces of her perfon; though fhe ftill laments the death of a fon fhe loft in the war, with the fame tendernefs and earneft forrow as on the day on which he fell. She ftill reads his letters, has his portrait conftantly in her view; but notwithftanding all this fond attachment to his memory, is equally affectionate to her furviving children. One of thefe, I faw at the houfe of General Lincoln, who had likewife fuffered, during the war, by the lofs of his leg, in a fea-fight, on board a frigate. This refpectable lady is defcended from a family who are like herfelf diftinguifhed for genius and literature. She is fifter to Mr. OTIS, a lawyer of great reputation in Maffachufetts, who had a confiderable fhare in the revolution, and is faid to be a man of great merit. He is father to Mrs. Lincoln, whom I mentioned above.

Plymouth is the principal town of the county of the fame name, a diffrict that contains twenty-nine thoufand inhabitants. The foil is rugged, and not very fertile; but it is full of iron ores, which fupply materials for very confiderable iron manufactures.

# DISTRICT OF NEW BEDFORD.

The road from Plymouth hither, is tedious and very imperfect. Plymouth lies at the diffance of not more than thirty miles from New Bedford; and both thefe towns belong to the fame flate. Yet, fo rare is the intercourfe between them, that no perfon in Plymouth could inform me of the direction of the road to New Bedford, farther than for the firft fix miles. Amidft continual enquiries concerning the road which is little ufed, and interfected by many crofs paths, I wandered out of my way. I was, befides, mifled by the mifchievous waggery of a dumb man, which fent me aftray five miles farther. But few houfes are to be feen in this tract, and thefe lie at wide diffances from one another. The ground is rugged, and the foil fandy. The woods, which extend all the way, confift chiefly of firs and birches, moft of which are likely to be burnt for charcoal. The burning of charcoal is the only fort of induftry in which the people are feen to be engaged, along the whole road. There is abundance

abundance of iron-ftone, fufficiently rich in ore for working, here as well as at Plymouth. There is every where an air of poverty, the effect either of a poor or of an ill-cultivated foil. I had great pleafure in falling in with two negro families, who live here on fmall poffeffions of their own, which they maintain in as good a ftate of culture, as those of their neighbours. Such inftances are not rare in the ftate of Maffachufetts.

A heavy and inceffant rain, by which I was wetted to the fkin, obliged me to halt at Middleborough, at a finall inn, the landlord of which was concerned in the iron-works. The iron-ore is found in Pond Allowamfet, in great plenty, either at the furface or at the depth of a fingle foot under water. This red ore fometimes contains a fourth part, fometimes not more than an eighth part of pure iron. The ore is dragged from under the water, in nearly the fame manner as oyfters are raifed from the bank. It is now, however, much lefs abundant than formerly. A man who, fifteen years fince, would have been able to gather two or three tons in the year by his own labour, can now fcarcely procure one ton. Another pond adjacent to Middleborough, yields this ore in greater quantity; but it is deeper, and confequently the ore is lefs eafily to be raifed from its bottom.

The mafters at this work earn forty dollars a month; the common workmen are paid at the fame rate as the labourers in hufbandry, which affords them feven or eight dollars a month. Land cofts two dollars an acre, unlefs when it is fuppofed to contain iron-ore; and in this cafe, the price is higher or lower, according to the degree of its richnefs in ore. This inn ftands at eighteen miles diftance from Plymouth. Its beds were full of workmen from the forges and nail-makers; but the landlord promifed me a bed as foon as the rain fhould ceafe. The rain continued to fall, till it was too late to reach New Bedford that night; I was, therefore, obliged to halt, after travelling five miles farther, at an inn of mean appearance, which hunger and fatigue made me regard as comfortable.

Next day about noon, I entered New Bedford. It is not above thirty years fince this town was founded. It was one of those places which fuffered

fuffered the most during the war of the revolution. Ships, warehouses, dwelling-houses, were all burnt by the English. The losses which the town fuffered, exceeded three hundred and thirty thousand dollars. Trade did not foon revive; but is now, however, at a greater height than ever.

The diftrict of New Bedford comprehends five fmall fea-port towns-New Bedford, Weftport, Rochefter, Wareham, and Dartmouth. The four laft of thefe are, properly fpeaking, only docks for fhip-building. Most of the ships built in them find immediate sale, either at New Bedford or in fome other harbour belonging to the United States. There belong, at prefent, to those few towns, twenty veffels, of from thirty to eighty tons burthen each, which are employed in the coaffing-trade, all except two or three, which go to the fishery upon the great bank. New Bedford is a place of greater trade than the others; builds more veffels; and has a good road, which is at least excellently sheltered from the eaft wind. The land round New Bedford is, in general, far from fertile; and there are many other fea-port towns on the coaft of Maffachufetts. The exports from this place are therefore confined to fruit, pulfe, maize, falted flesh and fish, with some coarfe iron-work. These veffels are not always freighted from this port, but are usually hired by the merchants belonging to it. Those from New Bedford are engaged chiefly in the whale-fifhery, which is confiderably fuccefsful nigh the ifland of Nantucket, at five and twenty miles diftance from New Bedford.

New Bedford employs, at prefent, twelve veffels in the fifhery, each from one hundred and fifty to two hundred and feventy tons burthen. Nantucket fends out thirty veffels; Bofton, two or three; Rhode-Ifland, one.

# THE WHALE-FISHERY.

Whales are found on the coaft of Brazil, and in the Pacific Ocean in the fame latitudes, in the Weft Indian Seas, and as far eaftward as to the Cape of GoodHope, from the eighteenth to the twenty-fifth degree of latitude.

489

of

tude. The mode in which they are taken, is well known; but I believe the information I am enabled to offer poffeffes fome fhare of novelty.

The defination of the fishing-voyages is fo fettled, that the return of the fhips is expected within the courfe of from ten to eighteen months after their departure. The fifting is not always alike fuccefsful. But, it never fails to afford the owners a profit of at least twenty per cent upon the adventure, the expences of fitting out which are very confiderable. Befide the coft of the veffel, there are also to be reckoned, the expence of two boats, of lines, harpoons, axes, kettles, barrels with iron hoops, and provisions for the crew, to the amount of five or fix thousand dollars. The crew receive no wages, but have a certain fhare of the blubber. The captain has a fifth part ; the pilot a five-and-fortieth, or a fixtieth part of what they take. A veffel of two hundred and fifty tons burthen will return with two hundred and ten or two hundred and twenty tons of blubber, befide the whalebone. In 1793, the medium price of blubber. or whale-oil, was fixty-five dollars a ton. The blubber of the fpermacetiwhale was at the rate of one hundred dollars a ton; that of other whales, fifty-five dollars a ton; these last are very plentiful in the feas. The price is now twice as much. The increase of price is owing to the extraordinary demand for train-oil and fpermaceti-candles, and to the fmall number of the fhips, which have lately gone from Europe upon the whalefishery. The captain's profits from a fuccessful voyage amount to between eight and nine hundred dollars for common years, but at prefent to between feventeen and eighteen hundred dollars.

A fhip of one hundred and fixty tons is manned with a crew of fifteen perfons. Of thefe, twelve man the two boats in the purfuit of the whales; while the other three remain on board. Larger veffels have a third boat and fix additional hands. The blubber, which has been barrelled at fea, is to be again put into frefh barrels, and cleared from a fediment that is formed in the barrels, before it be carried to market; for though the fediment be as fit as the reft for ufe in the foap-works, yet the oil in which it appears is regarded as of inferior quality in the European market. This fediment, and a fort of white flefh, which is found in the head and belly

3 R

of the whale, are then fqueezed in a prefs. A new quantity of oil of the beft quality is thus obtained. The refidue, which remains after the first preffing, is put again into the prefs, and more forcibly fqueezed than before. It affords a certain quantity of oil; and it is the produce of this last fqueezing which, after undergoing a boiling, is poured into moulds, and forms spermaceti candles. These are fold for half a dollar a pound. Those which are spermaceti-fiss yield this matter in great quantity. In their heads alone there are often five or fix tons of this matter; though the other whales have the head differently composed, and do not afford above a quarter of a ton out of each head. Thus all whales yield more or lefs of this matter which is fo much valued as a material for candles.

The veffels for the fifhery are built without any very remarkable peculiarity of ftructure. Only, there ftands, between the mafts, a great cauldron for the making of the oil, and the openings on the decks are made unufually wide, in order that the barrels may be the more eafily moved up and down. The oil, when it is hot, is apt to penetrate and injure the wood of a newly built veffel; and, on this account, it is ufual to fend fhips on a voyage or two to Europe before employing them in the whale-fifhery. Thofe merchants, who are concerned in this fifhery, are accuftomed to purchafe veffels which have been built two or three years. The alterations neceflary, to fit them for the ufe of the fifhery, are inconfiderable.

From all that I had heard or read, I was lead to think the whalefifhery to be a very perilous employment to the men who are engaged in it. They muft meet, as I fhould have fuppofed, with many unhappy accidents. I have, however, been affured of the contrary. The fleet from Nantucket, confifting of thirty veffels, did not lofe, laft year, a fingle man; this year they have loft but two men. People here can fcarcely recollect a fingle inftance of any perfon lofing his life from any accident in the fifhery. Neither here nor in Nantucket can any inftance be mentioned of a man's having been killed or hurt by any of the whales. The boats are indeed, often overturned by the whales.

Hudfon's Bay, and the feas adjacent to the coafts of Greenland and Labrador,

Labrador, abound more than the fouthern feas, in whales, and those of a larger fize, and fuch as afford oil of a better quality. But the ice, which floats there in vaft maffes, renders the fifting much more dangerous in these northern latitudes. One of these masses of ice striking against a fhip is fufficient to dafh it in pieces. Befides, the fhips cannot remain at fea, for a fufficient length of time, upon the coafts. Some American fhips repair to that fifhery as they return from Europe; but, in general, the whale-fifhery in the northern feas is abandoned to the European fifhermen.

Although the fishery on the coafts of Africa and the Brazils be still fufficiently fuccessful, yet it is thought that the numbers of the whales in those parts begin to be diminished. The reason affigned for this is, that fuch a number of the famales of this fpecies are annually deftroyed, without which the young ones can neither be produced nor nourifhed immediately after the birth. (The English call the males, females, and young of the whale,—bulls, cows, and calves).

Twenty years fince, whales were confiderably numerous on the coafts of America. Even within thefe fix or feven years, whales were to be found here, though not in fuch numbers as formerly. At prefent, it is thought a very remarkable occurrence, if one should happen to be seen in these parts. The whales have been frightened entirely away, fo that two or three fhips can hardly procure a tolerable freight for the feafon, by fifhing in thefe feas. The fpermaceti-whales have been found chiefly in the Indian ocean, on the coafts of Africa and Madagafcar, in the Pacific ocean, and on the coafts of Peru and Chili.

Train-oil and spermaceti-candles are brought into different fea-ports of America by fhips belonging to New Bedford, which has also two or three veffels employed in the trade to Europe. Twenty fhips belonging to the fame ports are conftantly engaged in the coafting-trade. But this laft trade is fo languid that the cuftom-house dues arising from ic, for the first nine months of the year 1795, did not exceed two hundred and nineteen dollars. During the whole year 1790, it yielded but one hundred and fifty-fix dollars. As to the amount of the yearly exports from New Bed-

3 R 2

ford.

ford; the value of these was, in the year 1791, twenty-fix thousand three hundred and forty-four dollars; in the year 1792, twenty-feven thousand one hundred and feventy-fix dollars; in 1793, twenty-feven thousand eight hundred and forty-four dollars; in 1794, eighty-two thousand and eighty-five dollars; in 1795, fixty-two thousand two hundred and two dollars.

The harbour lies at the diftance of eight miles from the mouth of the river Acchuffnet. The anchorage is excellent. That part of the breadth of the river, which is navigable to veffels of a certain burthen up to the town, is very narrow; the reft of the river being very fhallow, and full of rocks. The harbour is befides protected by a fort, beyond which fhips entering it cannot proceed more than a quarter of a mile. The river Acchuffnet pours its waters into the bay of the fame name. This bay has alfo a communication with Buzzard Bay, which is feparated from the bay of Cape Cod by an ifthmus of the breadth of three or four miles. There is a project for cutting a canal through the ifthmus.

The trade of New Bedford is almost all in the hands of Quakers. About one-half of the inhabitants are of this fect. They are, in general, an honeft, frank, orderly, fet of people. I received a pretty full account of them from WILLIAM RUSH. He is proprietor of fix veffels. His family has been, for fome generations, engaged here in trade. With the most obliging readiness to fatisfy any enquiries which are made of him, he joins an uncommon clearnefs of ideas. His father is one of those inhabitants of Nantucket whom M. DE CALONNE invited to Dunkirk, to introduce the bufinefs of the whale-fifhery into France. In 1786, Rufh began the bufinefs of the whale-fifhery at Dunkirk, with not more than two fhips; and, in the year 1793, no fewer than forty fhips failed from Dunkirk to the whale-fifhery. Certain it is, that trade and mercantile opulence were rapidly increasing in France, at the time when the revolution commenced, and the prefent war broke out. When liberty shall be fecurely and permanently established in France, that activity, which is a well-known characteristic of liberty, will be much more alive than ever, to the improvement of every branch of industry and commerce.

merce. Perfons of all ranks will then take a part in whatever can augment the honourable opulence of the land; and our country will be raifed to the highest pitch of prosperity.

This worthy Rufh, who is now fixty-five years of age, has all the activity of a young man. He went to France with ftrong prejudices againft it; yet, nothing lefs than the crimes and diforders which he there witneffed would have been fufficient to make him leave that country and return to America. He loves the character, the fprightly manners, the mode of doing bufinefs, which prevail among the French nation. He is pleafed with the integrity of the French merchants, and delighted with the climate of France. He fpeaks, in flort, as a Frenchman; but, he abhors the crimes which have attended the revolution. Of its exceffes he judges for himfelf with tendernefs, yet with difcernment.

# TOWNSHIP OF NEW BEDFORD; COUNTY OF BRISTOL; VALUE OF PRODUCTS, AND OF LABOUR.

In the country round New Bedford, where the foil is, in general, of moderate fertility, confiderable numbers of oxen are annually fattened for the fupply of provisions to the fhips in the harbour, and to those even which belong to Nantucket. Land cofts from twelve to eighteen dollars an acre. Beef is fold at the rate of fix-pence a pound. Flour is here fcarce, as well as in all the other fmall towns of Maffachufetts. It cofts at prefent from thirteen to fourteen dollars a barrel. The bread is commonly made of maize and barley; and this is indeed the ufual bread throughout the whole state. Bifcuit is the only wheaten bread to be found in the inns. The wages of all forts of ordinary labourers are at the rate of from eight to nine dollars a month. Ships coft from forty to forty-two dollars a ton. New Bedford lies in the county of Briftol, of which the head-town is Taunton. This county contains about thirtyeight thousand inhabitants, and is remarkable for the great abundance of iron-ore which it affords. A copper-mine was here lately opened for the first time.

RHODE

# RHODE ISLAND.-NEWPORT.-MR. ELEM.

The road from New Bedford to Rhode Ifland, like that from Plymouth, is rugged with rocks and loofe ftones, and leads through a hilly tract of country. You pass through the township of Westport, and near that part of the river where vessels are built, which take in their cargo at the distance of a mile below. Only two schooners belonged to this port; but of these one has been recently wrecked on the coast of Salem, on its return from a voyage to the province of Maine.

The boundaries of the ftate of Rhode Ifland commence at the diftance of three miles on this fide of the bay, at a place called ufually Eaft Paffage, where it is propofed to build a bridge for the purpofe of connecting the ifland with the main land. This paffage is not broad, and the depth of the water is thirty feet. But, the tide flows and ebbs with fuch a ftrength of current, that the toil of erecting the bridge cannot but be extremely difficult, and it will be no eafy tafk to give it perfect ftability.

This island exhibits a continued fucceffion of meadows and fields of maize. Barley is likewife produced here in confiderable abundance. The breweries of Philadelphia and New York furnish an advantageous market for this laft article. Formerly this ifland was extensively covered with fruit-trees and other wood. But these the English destroyed during the war. The foil is light, fandy, and, in general, unimproved by manure or fkilful tillage. The medium produce of the meadows is a ton of hay per acre; the ground under tillage yields, an acre, twenty-five bufhels of maize, or one hundred bushels of potatoes. There are instances of greater produce; but these occur only where particular land-holders have cultivated their ground with unufual intelligence and care. In the neighbourhood of Newport, where dung can be purchased for the eafy expence of half a dollar the ton, the land is more plentifully manured, and, in confequence of this, yields even to the amount of ninety bufhels of maize per acre. But, fuch inftances are rare, and occur only where the foil

foil is both naturally rich and well improved by manure and tillage. The common extent of the farms is feventy acres. Some finall number of them contain two hundred acres; and three or four, even four hundred acres.

The farm of SAMUEL ELEM, to whom I had a letter from William Rufh, is four hundred acres in extent. He is the only farmer in the island who does not perfonally labour upon his own ground. He is an Englishman, from Yorkshire. He came hither as a merchant before the revolution. The length of his neceffary ftay gave him a fondness for the country, and inclined him to fettle in it. He lives in a fnug fmall houfe, five miles from Newport, and near to East Passage. Agriculture is the only bufinefs that he now follows. He does not boaft of having found it, as yet, very profitable. But, he finds the condition of life agreeable, and fufficiently fusceptible of improvement from his turn for curious obfervation, and his attention to the proceffes of nature. This farm, on which he has been fettled thefe fix years, begins to be in a good state of cultivation. The ftone fences inclosing his fields are higher and better than any I have feen in Maffachufetts. His meadows are in a ftate of improvement and fertility, which is confiderably profitable. But the difficulty of procuring labourers ftands greatly in the way of all agricultural improvements in these parts. As Mr. Elem is the only farmer in the ifland who does not labour with his own hands, fo he often meets with a contradictory fpirit in his working-people, who are apt to think, that their toil must make them more skilful in husbandry than their idle mafter. His cows and oxen are diftinguished as superior to those of the reft of the ifland, which, however, are, in general, very good. His sheep are of the best fort. Their wool is eafily fold at the price of a quarter of a dollar the pound, and each fleece yields two pounds and a half. In fummer he keeps from one hundred to one hundred and fifty, but in winter reduces this number to fixty. From the first of December to the fifteenth of May, he keeps his cows and oxen in stalls; but that is not the general practice of the farmers in the island. Either from poverty or prejudice, most of them have no cow-houses. They put up their hay in the

the meadows; and give daily, in winter, a certain quantity of it to the cattle in the open fields. There falls fo little fnow in the ifle, that no great harm feems to refult from this practice. Only the horfes and the milch-cows are ftalled in winter.

The cheefe of Rhode Island is famous throughout all America; but the only cheefe which thefe parts now furnish for exportation is from the isles of Connanicut and Block, which make part of this state. On Rhode Island itself, few of the farmers keep such a number as to produce more cheefe than is necessary for their domestic use.

The following reafons are affigned for the poverty of the farmers of Rhode-Ifland. It is ufual for the young people, at the age of thirteen, to leave the family of their parents, and to go into the fervice of others. The parents find it vain to endeavour to detain them; for, if not permitted to do as others do, they will not work at home. In confequence, other labourers are to be hired; and that accumulation of ftock is materially hindered which might be beft produced by the joint labour of a whole family, without hired affiftance. Befides, fo many are difposed to become farmers for themfelves, even without any adequate flock, that labourers are not to be procured for any reafonable hire, even in cafes of the most urgent necessity. 2. It is a difadvantage also to the agriculture of this territory, that it is every where adjacent to the fea. The young people have, in confequence of this, been long accuftomed to prefer a feafaring life to hufbandry, becaufe the former affords higher wages in money, and is more grateful to the roving fpirit of inexperienced youth. Even the refident farmers are tempted to join the fifting with the toils of hufbandry, as the fifting affords, at all times in the year, a very plentiful fupply for the nourifhment of their families. They, confequently, take little care to improve the foil to its higheft pitch of cultivation. The fame thing may be faid of the inhabitants along all the fea-coaft of America. 3. There is a want of a regular and profitable market for the fuperfluous produce of the ifle. There is, indeed, a market-place in the town of Newport; but the farmers rarely bring their grain hither for fale; nor do those who are in want of it refort to this market to fupply themselves. The

The farmers bring their flefh, corn, beans, and peafe to the town, and there place it in houses for fale. When purchasers do not appear, as is often the cafe; the quantity is far from being fufficiently confiderable to become an object of commercial speculation for foreign export, to the merchants. 4. There is fuch an extreme fcarcity of wood, that no farmer who is in want of it, can fupply himfelf at a lefs price than four or five dollars a cord. In confequence of this want of trees, the whole ifland is too much exposed to the winds, which often blow over it with a very troublesome violence. There has been a remarkable difference in the produce of fruit upon the farms of this ifle, ever fince the great trees were deftroyed by the English during the war. 5. The elections to all places in the government, and to the legiflative reprefentation, are renewed every fix months; and the frequent journies and public meetings which thefe occafion, feem to withdraw the attention of thefe people, in too great a degree, from their hufbandry. 6. Laftly, the people of Rhode-Ifland are fingularly illiterate. Scarcely has the whole ifland a fingle well-conducted free-school; fuch is the opposition of prejudice to every thing of this nature. The public records of the fmall flate of Rhode-Island are in greater diforder than those of any one elfe; and this diforder is a primary caufe of the ignorance of its inhabitants: fo that all their defects in the respect of knowledge, are plainly to be charged to the mifconduct of their rulers.

The price of land varies, throughout this island, from five and twenty to five and thirty dollars an acre. It has remained the fame for thefe fix years; and its rife feems to be prevented by the exorbitant price of labour. In the township of Newport, land is fold fomewhat dearer than elfewhere.

Approaching Newport, you fee the heights where the English long remained, when they were masters of the town. They feized those heights at the moment of their landing.

Newport is accounted the chief town of the flate of Rhode-Ifland. It is the most ancient; the deputies of the state hold their assemblies in it: but Providence is more populous, and carries on a more confiderable trade.

3 S

trade. Before the war, there were in Newport ten thoufand inhabitants; in Providence, not more than one thousand. Providence now contains feven thousand; Newport, but five thousand inhabitants. Many of the richer inhabitants of Newport have deferted it. A number of families forfaking this town in the time of the revolution, while it was in the poffeffion of the English, retired to Providence, and fettling there, have never fince been induced to change their refidence. Those, on the other hand, who were attached to the caufe of England, went away with the English troops, when these were obliged to evacuate the island. Political diffentions, which long diffracted Rhode-Island, contributed farther to this defertion of Newport. It is only within these last two or three years, that its trade has begun to revive. It has twelve veffels of fome confiderable burthen, engaged in the trade to Europe; two or three which fail to the coaft of Guinea for cargoes of negroes, which they bring for fale to Georgia and the West-India Isles; forty more, which are employed in the coafting-trade, and fail only for the colonics. The coafting-trade is that which the people of this town chiefly prefer. The amount of the exports from Newport was, in 1791, of the value of two hundred and feventeen thousand three hundred and ninety-four dollars ; in 1792, two hundred and fixty thousand three hundred and thirtyfeven dollars; in 1793, two hundred and forty-feven thoufand eight hundred and fifty dollars; in 1794, three hundred and eleven thousand one hundred and ninety-five dollars; in 1795, three hundred and feventeen thousand eight hundred and fixty dollars.

Barley is the principal article of agricultural produce, which it furnifhes for exportation. The ifles of Connanicut, Patience, and a third that lies in the bay, are ufually fown with corn, in preference to any other article of crop. Some little wood from that part of the ftate which is contiguous to the main-land, as well as in an adjacent part of Maffachufetts; and large quantities of flax, an article much cultivated here; are annually exported out of Newport. The barley exported from Rhode-Ifland, is freighted rather on board the fhips from Providence, than in those from Newport. The fhips from Providence carry it chiefly intothe

the fouthern states, from which they bring, in return, other cargoes, either to fome port in the United States, to Europe, or to the West-India Isles.

The houfes of Newport are almost all very finall, and miferably bad: they are of wood, and not painted. In the town, every thing wears the appearance of decay; but the harbour has a fnew of opulence and active commerce. The vicinity of the fea, the fpacioufnefs and fecurity of the road, its eafinefs of accefs, and its convenient fituation, render it a very commodious shelter for vessels going from the southern parts of the mainland of America, towards the northern, or from the north fouthwards. It is indeed more frequented than any other port, by foreign fhips. Newport, with all thefe advantages, feems to be naturally deftined to become a harbour for thips of war, whenever the United States thall affume the confequence of a Naval Power. It will then, no doubt, be more carefully fortified, than at prefent. A fort on Goat-Ifland, and a battery on the opposite shore, are the only means of defence which it posses at prefent, and are certainly inadequate to protect its entrance. The first power with which the States fhould be at war, would find thefe unable to oppose any naval force which it should fend to occupy the harbour. Goat-Island has been ceded by the state of Rhode-Island to the United States.

In Rhode-Ifland there is the fame freedom of religious worthip and opinions, as in Pennfylvania. Baptifts and Quakers are the most prevailing fects; but the people in general, in this ifland, are far from being *religious overmuch*. In the whole ifland, which is fifteen miles long and three miles broad, there is no church, except at Newport; and to this the country-people do not refort above four times in the year. The people of this ftate are reputed to be indolent, quarrelfome, and litigious. Thefe faults of character, if juftly imputed, are fufficient to account for their poverty. There is faid to be a great uncertainty of political opinions in Rhode-Ifland: they were not unfavourable to the abominable tyranny of Robefpierre; they are far lefs friendly to France fince the guilt of that tyranny has been fupprefied, and order reftored. Before the war, 3 S 2

there were many opulent inhabitants in Rhode-Ifland: at prefent, only the ruins of their houfes, and the traces of their former inclofures, remain to be feen. The houfes are either defolate, or are inhabited in their leaft ruinous parts, by people who, on account of the fmallnefs of their capitals, their diflike to labour, and many other reafons, are much inferior in condition to the people of the other parts of New England.

In the high-church of Newport, there is a monument erected by the order of Louis the fixteenth, to the Chevalier de TERNAY. He was commander of the fleet which conveyed M. ROCHAMBEAU and the French army to America. He died at Newport in the year 1780. The infeription is in a very fimple ftyle, and fpeaks very much in honour of M. de Ternay.

The State of Rhode-Island is very proud of having given birth to General Green, one of the greatest, if not absolutely the greatest, of American generals. He was, by birth, a Quaker, and was a refpectable trader in Newport. But, for the fake of liberty, he quickly shook off. the prejudices of his fect, and abandoned his bufinefs. He went, in the very beginning of the war, to contend against British oppression. In the whole course of this memorable war, there was not a battle, not a skirmish, in which Green did not diftinguish himself by fignal valour, and extraordinary military talents. His found and difcerning mind rendered often the most important fervices in the Council. He is, above all, famous for his expedition into the fouthern states, in the year 1781. At the head of a finall force of not more than one thousand or one thousand one hundred men, fcarcely clad, raw, and animated by nothing fo much as by their confidence in General Green perfonally; he, by a variety of the most skilful stratagems, and plans of annoyance, and by the exertion of extraordinary courage, forced the English to retire gradually from the provinces of Upper Virginia, North Carolina, and almost all South Carolina; delivering the injured, harraffed, and fcattered inhabitants of those defolated territories, from the mifery and oppreffion under which they had long groaned. He reftored the unhappy fugitives to their habitations, and compelled the English to retire into York and Charlestown, where

where they were foon finally vanquifhed by the joint arms of the French and Americans. Green, no lefs humane in victory, than brave and enterprifing in warfare, ftained his triumph with no atrocities, notwithftanding the provoking example which had been fet by the English. He was the ardent friend of liberty, without laying afide, on this account, all respect to natural justice and humanity. His whole life was spent in a continued train of virtuous actions. After these illustrious deeds in the field, he was hailed as the deliverer of the fouthern states, and received the thanks of the Congress. He died within a few years after the establishment of American freedom. The Congress erected, at the public expence, a monument in honour of his patriotifm, his virtues, and his talents; and in so doing, gratified the carnest defire of all true-hearted. Americans.

The State of Rhode-Island had, likewife, another eminent perfonwhofe military talents and valorous activity diffinguished him, on the one hand, though not fo much as did his notorious perfidy and bafenefs on the other. This was the traitor A\*\*\*\*\*. He was, before the war, a trader and dealer in cattle, as I have been affured. He efpoufed, with great ardour, the caufe of his native country. He quickly diftinguilhed himfelf by the expedition into Canada, and by that famous and. daring march through the western parts of the province of Maine to the river of St. Lorenzo, a tract which had been, hitherto, accounted inacceffible to an army. A\*\*\*\* was one of the inferior commanders under General Gates, and had a share in the glory of the fortunate day of Saratoga. In many engagements, previous to the great and decifive events of that day, he had greatly diftinguished himself. Soon after, the unprincipled A\*\*\*\*\*, being corrupted by English gold, to his eternal infamy, became, towards the close of a war in which he had fo gallantly, fought, the worst enemy of his native country. He defired, no doubt,. to preferve his rank, and expected as much, as was clear from the confidence with which he folicited it. But the English government, though.

+ A\*\*\*\*\* is, however, well known to have been a native of Norwich, in Connecticut.—Tranflator.

they could avail themfelves of treachery, abhorred the traitor. A\*\*\*\*\* lives with a large or a finall penfion, God knows in what corner of England, covered with ignominy, and aware, that his name is never pronounced by his fellow-countrymen without abhorrence, and that he muft ever be detefted as the treacherous, though unfuccefsful betrayer of American freedom. "What will the Americans do to me, if I fall into their hands?" faid he once to a prifoner. "They will take away that leg from you, which you broke in their fervice, and bury it honourably," anfwered the prifoner, "then, by the other, they will hang you up as a traitor."

After fpending an evening at the houfe of SAMUEL ELEM in the country, and after halting for an hour in Newport, I went gladly on board a fchooner belonging to Bofton, to take my paffage to Providence. I was to return within the fpace of two days from that town; as I expected my horfe to arrive within this time; and proposed then to proceed towards New London, along the great bay by which Rhode-Island is feparated from the main-land. The wind, though fair when we fet fail, veered about within the space of an hour, fo that we were forced to return to Newport, after having been three hours tacking about at fea, without advancing two miles on our voyage. I passed the reft of the day in Newport, with my friend Samuel Elem, the best of Quakers, and the worthies of men. He is a bachelor, rich, fond of trade, and of rural life.

## BRISTOL.-WARREN.

Worthy Samuel Elem ftill infifted upon doing the honours of the country towards me. On Saturday, the 24th, he conducted me to the extremity of the ifland, where I might obtain a paffage to Briftol. His politenefs was joined to an engaging fimplicity of manners, extremely different from that roughnefs and drynefs of addrefs, which are ufually attributed to the Quakers.

Although I travelled by a way different from that by which I had entered the ifland, yet I could perceive no remarkable diverfity, in either the

the appearance of the dwelling-houfes, the cultivation of the foil, or the general character of the hufbandry. The profpect of the bay, of the iflets with which it is interfperfed, and the main-land contiguous to the bay, is extremely pleafing. The paffage from the ifland to Briftol is a mile in breadth; it is croffed in a ferry-boat with a fingle fail; it is large, deep, and fecure: the only inconvenience attending it is, that horfes cannot be eafily brought on board it; my horfe was confiderably hurt in the attempt.

On the opposite flore, as far as to Warren, a diffance of fix or feven miles, the land is more fandy, and more flony, than in the island: but, it yields great quantities of fruit and of pulse, that is reputed to be of very excellent quality.

Briftol is a finall fea-port town lying on the bay. It carries on fome trade to the Antilles. In the year 1775, the houfes were almost all burnt to the ground by Captain \*\*\*\*, who commanded a finall English fquadron. They have been rebuilt, and are now more numerous than before that difaster.

Warren is nearly fuch another port-town as Briftol; eight or ten fhips a year are built in it. Barrington, another fmall fea-port town, which is divided from Warren only by a river of its own name, was begun to be built in the year 1769, and confifts now of about one hundred and fifty good houfes. Some few merchants refide in thefe three fea-port towns; but the fhips belonging to them are for the most part employed in the trade from Providence. Thefe fmall villages are much better built than Newport. The value of land has rifen here to at least three times as much as it formerly was, according to an estimate founded upon the prefent amount of the taxes.

Two miles beyond Warren, the road turns to Providence in Maffachufetts. 'The land is there, for feveral miles, fo fandy and boggy, that no ftones can be found for fences. On the other hand, wood is fo fearce, and fo coffly, that it can as little be applied to this ufe as ftones. Yet the fields are enclofed with fences, which, to two-thirds of the height, are formed of turfs, with crofs-bars of timber above. In other places where

where ftones are not fo fcarce, the fences are formed one-half of ftones, one half of wood.

I know not whether it might be, that the information which I received in Newport, imprefied me with unfavourable prejudices against the people of Rhode-Island: but I could not help thinking, that, in the short part of my way which now led through the state of Massachufetts, I received much more obliging answers to my enquiries, than in the diftrict which I had left.

I had, however, no reafon to complain of my reception with Moses BROWN, to whom I had a letter of introduction from William Rufh. He lives in a farm not far from the upper bridge over Deacon's River, on the way to Providence. Mofes Brown is a very ftrict Quaker; became a Quaker upon conviction ; and has been fuch for the fpace of forty years. He acquired a confiderable fortune in trade, of which he has refigned the greater part to his fon; and he himfelf now lives in quiet ceffation from bufinefs, transacting nothing of that fort upon his own account. Notwith ftanding the ruftic fimplicity of his manners, he feemed to be a very worthy man. He preffed me to ftay with him for the evening, telling me, that he did not afk me in the way of empty compliment, but that if he had not defired my company, he would not have given me the invitation. I excufed myfelf, by mentioning, that as I had but very little time to fpend at Providence, and as the weather, though generally uncertain, was now fair, I must, therefore, avail myself of the prefent moment, and proceed on my journey.

The environs of Providence are more interefting than those of Newport: and they give to an approaching traveller, very favourable ideas of the town which he is about to enter. The hill at the foot of which the town lies, and over which you must pass into it, is interfected into two parts by a paved road, which has a flow and gentle defcent. The town lies on both fides of the river: a well-conftructed bridge affords a ready communication between its two divisions. Lofty, well-built and well-furnished houses, are numerous in this town, which is becoming continually larger: and the prospect of an encrease of wealth and populousness.

puloufnefs, has induced the inhabitants to fet apart a confiderable extent of the adjacent hill for new buildings. The trade of Providence, as I mentioned above, is four or five times as great as that of Newport. Its exports are partly from this ftate, and in part from Maffachufetts and Connecticut. A diffillery, perhaps the greateft in the American States, extensive manufactures of nails and of other forged iron-work, contribute much to the exportation from this place.

In the course of this last year, endeavours have been made to introduce the manufacture of cotton-yarn and stuffs into Providence. The author of this undertaking fays, that he finds it already profitable: But I should suffect this to be, rather the boast of fanguine expectation, and of felf-conceit, than the actual truth of the facts. All machines in America are indeed more or less profitable: but the machinery which requires workmen to be employed about it, is by no means to be compared with that of Europe, where a truly good workman gets one-half less than in America, effectively in its fea-port towns.\*

There are fome fhips from Providence engaged in the accurfed traffic of negroes, in contempt of the orders of Congrefs, by which it has been forbidden. The merchants concerned in this trade perfuade themfelves, that Congrefs cannot alter the Conflictution; and therefore think, that in fpite of whatever Congrefs fhall order, they may continue the flave-trade till 1808, the year fixed in the Conflictution for its final ceffation. They allege farther, that every flate poffeffes a right to decide for itfelf in regard to this traffic; and that the flate of Rhode-Ifland has not, as yet, made any enachment againft it. They therefore purchafe negroes, and carry them to fale in Georgia, where there is no prohibition of any fort againft the tradeom Nearly twenty fhips from the harbours of the United States are employed in the importation of negroes to Georgia, and to the Weft-India ifles.

I am furprised, that, while there is fo ftrong and general a disapprobation of this whole trade, and while it is in fuch direct contradiction to

\* Farther details concerning the trade of this place, with an account of the trade and conflictution of Rhode-Iiland, may be seen in the journal of the tour of 1796.

c are but for Tog to be maintained by public character,

the fpirit of freedom, and to the predominant fentiments throughout America, Congress should neglect to interpose, and entirely suppress it here. I was informed, that this is about to happen: But it is likewife to be owned, that the merchants of Rhode-Island carry on the flave-trade in a way less offensive to humanity, than that in which it is conducted by the merchants of Europe. They take but one negro for every ton of the ship; while the English merchants, it is faid, take from one and a half to two negroes a ton. Even in fetters, the negroes have more room, and fuffer less. The sugaged in this trade are usually not very large; and the negroes, as I was affured, commonly arrive at the place of their defination in good health.

There goes but a fingle veffel from Providence to the whale-fifhery. Ill fuccefs has occafioned fome others, which were formerly employed in the fame fifhery, to be withdrawn from it. The maritime traffic from Providence is principally that to China, and to Nootka Sound. The augmentation of the number of the fhips belonging to this port, the increafe, and the improved elegance of the buildings, is more the confequence of the growing wealth of the people of the place, than of any new refort of foreigners to fettle here.

This finall ftate, fituate in the middle of New England, differs much from that ftate, by peculiarity of cuftoms, ufages, and opinions, which, whether good or bad, have neceffarily a great influence upon the government. There feems to be a general defire for a change of the conftitution of Rhode-Ifland.

The population of this whole ftate amounts to about fixty-eight thoufand fouls. The higheft amount of the taxes is twenty-thoufand dollars in the year. When it is confidered, that the Governor's falary is only fix hundred and fixty-fix dollars and two-thirds; and that the members of the affembly receive no falary; this moderate fum will not be thought inadequate to the purpofes to which it is to be applied. Newport furnifhes three thoufand nine hundred and fixteen dollars, two-thirds of this fum; and Providence contributes feven thoufand one hundred and twenty dollars. The taxes paid by the country are nearly equal to those from the towns. There are but few poor to be maintained by public charity, in

in this flate. The roads are repaired by the common labour of the inhabitants. No extraordinary expence is ever applied to the improvement of the roads. The flate is fo fmall, that thefe people give themfelves very little concern about highways. In travelling, they call the roads good or bad, without farther care. When there is any thing of indifpenfible neceffity to be done to them, they then raife a voluntary fubfcription to accomplifh it.

The number of people really opulent in this ftate, is not confiderable; nor is the number much greater of those who affect the appearance of wealth ; for this last is prevented by the democratical spirit of the constitution, and by the tone of public opinion throughout the country. There are, befides, certain taxes imposed, particularly upon those who live in a fumptuous style. There is in Providence a college for the education of, youth in the different branches of learning; but fo far is it from being very eminent or in high reputation, that they who wish to give their children a good education, fend them to Maffachufetts or Connecticut. The funds for the fupport of this college were beftowed chiefly by Baptifts; in confequence of which it is fettled, that the prefident, and the greater part of the other teachers must belong to that religion; and they are, therefore, chiefly young perfons of the Baptist fect who are educated in it. The Quakers are not much in favour here. They have an aufterity in their appearance, an extravagance in their principles, and an oddity in their cuftoms, and even in their drefs, which, in my opinion, differ widely and difadvantageoufly from the amiable fimplicity of the character and manners of the Quakers of Philadelphia.

But here, as elfewhere, the Quakers ftrongly difapprove of flavery, and of the traffic in negroes. On this account they are looked on with an evil eye by the flave owners; becaufe the fmallnefs of the flate renders it exceedingly eafy for the flaves receiving any encouragement to that effect, to make their efcape from their mafters.

In Providence there are fome rich merchants, who expend their wealth by living in a confiderably fumptuous flyle. Such are Meffrs. CLARK and NIGHTINGALE. I had a letter of introduction to them. The former T t 2 received

received me very hospitably, and seemed to be a man of found intelligence, and confiderable information. By him I was introduced to an inhabitant of the town, who had lately returned from France. This man spoke strongly against the revolution, and the crimes to which it had given birth. He, at the same time, related, that at the Castle of Vincennes, he had obtained an excellent bargain of the property of an emigrant, and named others who had been as great gainers as he, by the proferiptions and confiscations; I know not the gentleman's name; if I did, I should think it my duty to make it public.

The richeft merchant in Providence is JOHN BROWN, brother to Mofes Brown, the Quaker above mentioned. In one part of the town he has accomplished things that, even in Europe, would appear confiderable. At his own expence he has opened a paffage through a hill to the river, and has there built wharfs, houfes, an extensive distillery, and even a bridge, by which the road from Newport to Providence is fhortened by at leaft a mile. He has fold many of his houfes. At his wharfs are a number of veffels, which are conftantly receiving or difcharging cargoes. In his diffillery he maintains a great number of oxen, the labour of which is extremely ufeful, and a great faving of expence to him. I had no letter of introduction to him; and my ftay in Providence was too fhort to admit of my becoming acquainted with him. I exceedingly regretted to find myself obliged to leave the town, without conversing with a man, the extent of whole establishments, and the fuccess of whole trade, evince him to be a perfon of extraordinary intelligence and enlargement of mind.

At Providence, and throughout the whole ftate, the produce of the land is nearly the fame as in the ifland. It yields of maize from fifteen to twenty bufhels an acre, and of other produce in proportion. There are two churches in Providence, one for Anabaptifts, another for Prefbyterians. They are diffinguifhed for the neatnefs and fimplicity in their ftructure and decorations.

The wages to fhip-carpenters and other labourers are nearly the fame in Newport and Providence, as in New Bedford. But negroes are almost the only fervants to be feen.

The flate of Rhode Island, and particularly the island, have fuffered a confiderable lofs of population by emigration to the newly occupied lands, and in particular to Canada. Fewer in proportion have gone from Maffachufetts than from this flate. Befides, Maffachufetts is receiving a continual influx of new inhabitants. There are banks in both thefe flates. That of Newport is of recent crection. Its notes are generally for one dollar each.

## SCITUATE AND FISH'S TAVERN.

Scituate is a townfhip. Fifh's Tavern, where I paffed Sunday, is at the diftance of twenty-fix miles from the town. The road thither, leads over hills, is ftony, rugged, and indeed as bad as a road can poffibly be. The farther you proceed on the way from the Providence, fo much the more barren is the appearance of the foil, and fo much poorer and more unfrequent are the dwelling-houfes. There is an extensive tract of wood, confifting chiefly of dwarfifh, oaks, firs, and birches. The meadows are indifferent, and unimproved by culture; yet fome pretty good cattle are to be feen upon them. Sometimes thefe meadows open in the midft of the wood; in other inftances they are only adjacent to it. Some of the fmall rivers put in motion faw-mills, and iron-works, which have been crected upon them; yet all has an air of poverty and meannefs. Some beautiful vales are feen as one travels along this road. The weather is fo rainy, that even the worft meadows difplay an extraordinary luxuriance of grafs for this time of the year.

On my arrival at the inn, I found there Mr. TRUMBULL, a member of Congress, who was on a journey with his family. I had seen him once before in Philadelphia.

### NORWICH AND NEW LONDON.

After paffing Fifh's Tavern, I found my way not quite fo bad, for about feven miles farther, ftill within the territory of Rhode-Ifland, and through a tract of country nearly fimilar to that by which I had come hither. When I had entered the confines of Connecticut, I found both the land and

and the roads in a better condition. On the borders the foil is nearly the fame, but in a better ftate of cultivation. The houfes, indeed, are not greatly better. Yet both thefe and the fields, the farther you advance, affume a more advantageous appearance. There are a good many ftreams of moderate breadth; and though along the whole road the land be light and fandy, yet the hay-ftacks are frequent and large, and the number of the cattle muft, of courfe, be confiderable. At Norwich are a number of mills, forges, and faw-works. This fmall town lies on a creek or river, which falls into the river Thames, juft where that river begins to be navigable. The harbour lies at about two miles diffance.

From Norwich to New London the foil is better, though ftill light. The furface of the country is diversified by feveral vales, through which various small rivers, creeks, and ftreamlets, difcharge their waters into the Thames. Clumps of trees, like those in England, are feattered over all the fields. The prospect is not extensive, but smilling and agreeable. The houses are larger, and more handsomely decorated. The inhabitants are better clad, and make as good an appearance as those of Maffachufetts. One part of the road is in a very good state of repair, and a toll is exacted for horses and waggons passing along it. The navigation of the river admits vessels of an hundred tons burthen to come up as far as Norwich; and this, with the trade of New London, gives an air of activity and animation to the whole country adjacent. You enter the town by a passing cut over the declivity of a hill; perhaps less carefully finished than that at Providence, yet not precipitous, and far from being bad.

New London lies on the banks of the river, at two miles diffance from the fea. Its principal ftreet is a mile in length. The houfes do not ftand clofe together; but the intervals between them are fmall, and are every day more and more filled up with new buildings. An adjacent ftreet, running parallel to the main ftreet, contains feveral confiderable and handfome houfes. New London was burnt in the year 1781, by the Englifh, under the direction of the \*\*\*\*\*\*\* ARNOLD; and the damage done on that occafion was equal to the fum of five hundred thoufand dollars. It is at prefent among the towns of the fourth order; and though it be environed with rocks, its afpect is fufficiently agreeable.

510

New

511

New London is reckoned the principal fea-port town in Connecticut. The anchorage is fafe; the depth of water confiderable; the entrance difficult. The harbour is protected by the two forts of—Grefworth, on the east banks of the Thames,—and Trumbull, on the opposite bank on which the town ftands. I faw only the latter, which is in a bad condition.

But, attention to thefe fortifications is the lefs neceffary, on account of the finallnefs of the river. Ships belonging to Norwich take in their cargoes at New London; those which exceed one hundred and twenty tons burthen, take their lading in Connecticut river, at Newhaven.

In regard to the cuftom-house, the district of New London lately extended to Connecticut river. The reprefentations of the merchants on the latter river, to the last feffion of Congress, procured the port of this river to be erected into a new commercial diffrict; and the diffrict of New London to be limited to the ports of New London, Norwich, and Stonington, a fmall port on the river Stoneg, in that part of Connecticut which is adjacent to Rhode-Island. The district of New London employs, at prefent, about fix thousand tons of shipping in the foreign trade, an equal quantity in the coafting trade, and fix or feven fmall veffels which belong to Stonington, and are engaged in the capture of flock fifnes. The veffels belonging to the foreign trade are, at an average, of one hundred and ten tons burthen each. Those in the coasting trade are veffels of eighty tons. The exports from New London were, in the year 1791, five hundred and eight thousand nine hundred and ninety-three dollars in value; in 1792, five hundred and nineteen thousand three hundred and thirtythree dollars; in 1793, five hundred and forty-eight thousand fix hundred and fifty-eight dollars; in 1794, five hundred and fixty-three thoufand four hundred and fixty-eight dollars; in 1795, five hundred and feventeen thousand eight hundred and fifty-eight dollars.

The exports from New London are fent, almoft all, to the Weft India ifles. They confift of horfes, dried beef and pork, mules, fowls, cattle of all forts, beans and peafe, timber, butter, cheefe, and falt fifh. Thefe articles are named here in the order of the quantities in which they are exported: that of which there is the greateft proportion exported, being named.

named firft; and that laft, of which the exportation is the fmalleft. Horfes and black cattle are reared in great numbers in this ftate; but a great proportion of those which are hence exported, come from the northern states of New York, Vermont, New Hampshire, and Massachusetts.

The negligence of the merchants of Albany, which fuffers a profitable trade to be carried away from them; and the activity of the failors and merchants of New London, in lading and unlading their veffels; are the principal caufes which enable the people of this port to engrofs fo much of a traffic fo advantageous. It is affirmed, that though the cattle be crowded together in the veffels, to an incredible number, not one out of an hundred dies in the paffage. The fhip-owner fupplies the fodder, which is always the beft that can be procured. The captain has a certain monthly hire, but no fhare in the profits of the freight; only, when he is intrufted with the charge of the fale in the iflands, he then receives five per cent commiffion.

All the cattle exported from Norwich, and often alfo those from Connecticut River, come by land to New London, and are there put on board fuch veffels as are ready to receive them. Salted pork and beef, butter and cheefe, are likewife exported from this harbour, in large quantities, to the other flates. Many of the fhips which convey these cargoes, take returning cargoes to Europe, or to the colonies. The whole exportation to Europe confifts of not more than a dozen fhip's cargoes a year, which go to England or Ireland, and confift of wood, lint-feed, potatoes, pearl-afhes, and fumac, which a merchant of this port prepares for exportation, by an invention of his own, for the fole benefit of which he enjoys a patent right for the fpace of fifteen years. The fumac grows in great plenty on the uncleared grounds. It is first cut into small pieces, and dried, then reduced to a coarfe powder, and in this condition applied to the purposes of dyeing. It is fold at the rate of eighteen dollars and one-third a barrel; and for these last two years there have been exported not lefs than two thoufand barrels a year.

As to the fifhery, the places where the fifhes are taken, is at fuch a diftance,

diftance, that the fifnes cannot be brought to New London to be dried. This bufinefs is carried on between the ifles adjacent to the province of Maine, and the coafts of Labrador; but, for ready fale, the fifh is brought to New London, and thence to the colonies, and to New York or Bofton. The veffels are then freighted, ufually to the colonies, rarely, if ever, to Europe. The merchants of Connecticut have not fufficient capital to enable them to await the flow return of money from the trade to Europe. The cargoes fent from Connecticut, are almost all deftined for Bofton or New York: There are, however, fome exceptions.

The veffels of this port do not all belong to the merchants of New London. Some of them are the property of merchants belonging to Hartford and New York. Few merchants in Connecticut trade to the extent of more than thirty thousand dollars, even including with their capital, their credit, which, indeed, does not go far. The capital of the merchants experiences here a much finaller annual augmentation, than in any other port of America. In the course of these last years, it has increased about a fifth part; and in this increment is included the improvement and increase of the buildings of the town. I received all these particulars of information from Mr. HUNTINGTON, collector of the cuftoms for this port; a man of integrity, differnment, and correct information.

The beft land in the whole diffrict, which lies in the neighbourhood of the town, does not coft more than twenty-five dollars an acre. Its average rate is one-third more than in Rhode-Island, including the isle. The price of labour is alfo higher here. Labourers in hufbandry receive here two-thirds of a dollar a day, or from thirteen to fourteen dollars a month. The winter, or the time in which the cattle must be supplied with dry fodder, lafts from four months and a half to five months. Many of the farmers never houfe their cattle. There is, on this account, a want of stalls and cow-houses; but the more opulent farmers are more careful of their cattle in the winter.

New London contains four thousand inhabitants. It has a bank that was established in the year 1782, and of which the capital is fifty thoufand dollars. It has, however, been augmented by other fifty thoufand dollars.

dollars. The management is the fame as that of the bank at Hartford, but I am not able to explain it. The notes are for a dollar. The dividend upon the capital is three and a half and four per cent., payable half yearly. New London is the principal town of the county of the fame name. It contains about thirty-five thoufand inhabitants, of whom five hundred are flaves.

#### CHELSEA.

Proceeding from New London to Hartford, I was obliged to travel back, by the way of Norwich. But inftead of paffing that town, I went by its fea-port, which is named Chelfea, and is faid to lie at the diftance of two miles from the most populous part of the town of Norwich. The river, which is formed by the junction of the Quinaboug and the Shetucket, begins here to take the name of the Thames. The Thames is faid to be every where twelve feet deep, and is here about an eighth part of a mile in breadth. There might be in it, as I paffed, about a dozen schooners, yachts, and brigs. On the two fides of the river there might be from one hundred to two hundred handfome houfes. Some of these houses were of a very good appearance; and there was a communication between the two fides of the river by a wooden bridge. A mile from the bridge on the way to Norwich, Quinaboug is feen to precipitate itfelf over fome pretty high rocks, with a cataract which is well worthy of being feen, particularly on account of its bold precipitous fituation, and the height of the rocks by which it is formed, as well as on account of the uncommon appearance which is occafioned by the fall of the water.

The bank of Norwich, which was eftablished in the month of May 1795, is formed upon the same plan as that of Hartford. Its capital consifts of from fifty thousand to two hundred thousand dollars; for by the conftitution of the bank, it may be augmented from the smalless to the largest of these same. The same one hundred dollars each; and the notes, of which there have not yet been many issue are for half a dollar.

515

Norwich and Chelfea contain, together, about three thousand inhabitants. Mills of all forts are fituate in the vicinity; and their bufiness is very confiderable.

Between Norwich and Lebanon, particularly in the vicinity of Norwich, there is a good deal of wood to be feen. Almost all the tops of the hills are covered with it. The declivities, and the vales within view of which the way leads, are, in general, under cultivation.

### LEBANON.

In Connecticut, the lands are, for the greater part, appropriated as pafturage for cattle. The environs of Lebanon yield more, in this way, than any other part of the State. The townfhip lies in the county of Windham, which contains about twenty-nine thoufand inhabitants, of whom one hundred and fixty are negroes. The population of Lebanon amounts to about four thoufand fouls. Those houses, which are fituated together, may be from one hundred and fifty to one hundred and fixty; they lie all in a fingle ftreet, which is between two and three hundred toifes in width, and ferves as a fort of common pasture for the cattle. The houses are, in general, finall, but neat; and, if they exhibit no shew of affluence, as little do they prefent any marks of the wretchedness of poverty. Such is, in general, the appearance of the houses throughout Connecticut.

ÊŚ

84

R

ti

Befide fheep and fwine, of which the breed is good, and the number every where confiderable, the people of Lebanon keep, in general, for every two acres of land an ox, a cow, and a mule. They fell off, every year, a fourth part of their black cattle, without diffinction of age. But horfes are not fold before they be three years old; nor mules, till they be two years old. The farmers purchafe mules for the work of their farms, at the rate of forty or fifty dollars a head.

A more fkilful hufbandry, a careful choice and culture of grafs-feeds, a judicious manuring of the lands, an attentive watering and cleaning of the meadows, might render the profits of the farmer feveral times greater than they at prefent are. The exceffively high price of labour may be 3 U 2 alledged

516

alledged here, as elfewhere, to be the great reafon of the prefent imperfection of the hufbandry of Connecticut. Yet fuch a reafon can have lefs force in the cafe of pafturage than in that of tillage. The true caufes are ignorance and a bigotted perfeverance in old practices. Very little of the land here receives the benefit of manure. No pains is used to collect the dung which might be eafily accumulated in large quantities. The labourers can earn from ten to twelve dollars a month. The beft land cofts twenty dollars an acre.

The houfe of Mr. Trumbull, member of the Congress has, like himfelf, an air of fimplicity and modefty. One finds it neceffary to make an effort of the mind, and to lay afide European prejudices, in order to reconcile one's felf to the idea, that this is the houfe of one of the richeft men in the State, a man who holds one of the most important places in the federal government. I cannot fufficiently praife the hospitality with which he received me, or the amiable qualities of his worthy family. Mr. Trumbull has a brother who is famous for his genius in painting. He has undertaken a feries of historical paintings of the most remarkable events of the war, by which his country's independence was established. Several of these have been already exhibited in England, fince the establishment of the prefent government of the United States.

### HARTFORD.

The land between Lebanon and Hartford is nearly in the fame ftate, as far as I have feen, with the other parts of Connecticut. The wood is chiefly fine oak and hickory. A few large trees are fingly fcattered here and there in the open fields. The wood has the appearance of having either been long fince planted, or elfe of belonging to the old native woods of America. The foil is light, and is very much covered with ftones; though, what is furprizing, the houfes are all of wood. The land is, every where, more or lefs hilly. It indeed expands into a fine plain for the fpace of eighty miles, along Connecticut River. The foil confifts chiefly of a hard gravel or fand. The meadows exhibit more of a lively verdure, and the dwelling-houfes, every where confiderably numerous in this

this ftate, become still more fo, the nearer you approach to Hartford. You are rowed across the river in a ferry-boat, in the immediate neighbourhood of the town.

I felt myfelf difappointed when I heard that Colonel WATWORTH was not in the town. I had become acquainted with him in Philadelphia ; and he had given me a preffing invitation to vifit him here. In the expectation of finding him, I had neglected to procure letters to any other perfon in this place. It was farther unlucky, that feveral perfons, whofe wealth and perfonal importance ranked them among the most eminent men in the United States, were, however, unable to give fatisfactory anfwers to those enquiries which I was the most defirous to make; and I thus faw myfelf likely to be difappointed in my attempts to obtain any particular information concerning a town that is accounted to be the chief place in the State of Connecticut. Yet, in two or three houses, into which I gained admiffion, and in an inn that was much frequented by the people of the town, I met with fome hospitable and intelligent perfons who refused not to favour me with answers to the questions which I put to them. The following is the fubftance of what I was thus able to learn.

1. Hartford contains about fix thoufand inhabitants. Their number is yearly increafing in the fame proportion as the population of New London increafes. 2. From fixty to eighty vefféis of from twenty to fixty tons each, belong to this port, agreeably to what I was told at New London. Some fhips of two hundred tons burthen are, at prefent, in building. Thefe muft fail, without a lading, down the river, as its ufual depth is not above fix feet of water. 3. The traffic of Hartford is, as to the exportation of provisions, the places to which thefe are exported, and the cargoes brought in return, of the fame fort with that of New London. 4. Land in thefe parts cofts, in the purchafe of a farm, from thirty to forty dollars an acre; and it yields crops of wheat. 5. The manufacture of cloth which had been, fome years, eftablished here, in which Colonel Watworth had a large concern, and which had been carried to no inconfiderable perfection, is now in the decline. Those who first

first engaged in this manufacture, have relinquished it. Their fucceffors are threatened with great loss, in confequence of the fearcity of workmen: for, it is fo much more profitable to go to fea as mariners; and there are fo many invitations to fettle in the country as petty farmers; that but few, in comparison, are disposed to remain in the condition of working artifans in a manufacture. These circumstances are adverse to the establishment of manufactures in the United States in general. Yet, fince machinery, applicable to almost all the arts, is fo easily moved by the force of water and fire, the fame quantity of human labour is no longer necessary to manufactures.

But, the neceffity for manufacturing eftablishments is not fo great in Connecticut as in many other places. For it is here usual for every family to prepare their own clothing ; fo that the expence of clothing from Europe is little felt by the poorer class of the inhabitants.

Hartford is a fmall town, regularly built, and interfected by a fmall river which defcends, in its approach to this town, through many beautiful meadows; and fuch meadows are very frequent in thefe parts. The houfes are fmall and neat; no one of them, being of a better appearance than the reft. A houfe is now in building for the reception of the meetings of the affembly of the reprefentatives of the State, which are held, alternately, in Hartford and Newhaven. The foundations of this houfe are laid with great folidity of ftructure, and are built of a fort of red ftone that is common in this country. Its two upper ftories are of bricks; and the whole is almost finished. Its appearance is very good; but it has a plainness and fimplicity, of which the French architects would, perhaps, not readily approve.

The appearance of the country round Hartford is charming. It exhibits a fucceffion of meadows which are naturally fo well watered, that they difplay, at all times, the lively verdure of fpring. Black cattle, horfes, and mules, in great numbers, are feen feeding upon them; and abundance of trees, effectially fruit trees, are difperfed around them. The land is not yet very completely occupied in this neighbourhood; and, by confequence, the houfes are not exceedingly numerous. Neither are the houfes

houses to handfomely painted and decorated as in the environs of Boston. But, fmall as they are, they easily contain every thing that is requisite for the prefent accommodation of their inhabitants; all, in short, that, according to their own expressions, is necessary to render them comfortable. The appearance of the opposite fide of the river is still the same. On both fides are fine meadows, skirted by pretty high hills which run parallel to the river.

During my ftay in the inn, I learned that, in those parts of Connecticut which lie along the river, and contiguous to Maffachusetts, there is a confiderable quantity of hemp produced, that supplies materials for a manusacture of fail-cloth in Springfield, in which twenty men are constantly employed, and which, during these feven years which have elapsed fince its establishment, has afforded large profits to the owners.

Hartford is the chief town of the county of the fame name. The county contains thirty-two thousand inhabitants, of whom about two hundred and fifty are flaves.

The bank in Hartford was crected in the month of May 1792, conformably to an act of the legiflature of this State. Its capital is one hundred thoufand dollars, and may be augmented to five hundred thoufand. The fhares are of four hundred dollars each. The directors are forbidden to circulate paper to the amount of more than fifty per cent upon the whole capital. This bank does but little bufinefs; and its rate of dividend is only three per cent for every fix months. Their notes, for a dollar each, are current in payment; along Connecticut River, and for fome diffance beyond. There is another bank which alfo accepts them in payment.

### MIDDLETON.

The country from Hartford to Middleton is chequered with frequent woods, and enlivened with numerous herds of cattle. The road leads along the bank of a river; fometimes approaching its edge, fometimes retiring, though never farther than half a mile, from it. After proceeding ten miles, I came to Weftfield, a fmall fea-port, where two or three fhips, three brigs, and two fchooners, were lying. The fhips were built at Middleton,

Middleton, this very year. Other fhips, befide these, belong also to Westfield, but the rest were out at sea.

Midleton is the market-town to which the farmers from the northern parts of New York, Maffachufetts, and Vermont, bring for fale, those horfes, mules, and black eattle which they can fpare, to be exported to the Weft India ifles. Some fmall veffels take on board their cargoes at Middleton; but, New London, as I have already mentioned, is the more ufual place for lading. Hartford fhares with Middleton in the advantages of this cattle-market. Middleton is a handfome town, not inelegantly built, and has trees planted along its ftreets, but is not one-fourth part as large as Hartford. This finall place has but few fhips. Middleton is, however, the feat of the cuftom-houfe for this diffrict, on account of its nearnefs to the mouth of the river, from which it is not more than twentynine or thirty miles diffant. When the tide has flowed in, to its greateft height, there is from nine to ten feet depth of water at Middleton.

At the diftance of two miles from this town, there is a lead-mine which is faid to have been wrought amid the neceffities of the late war. But, it is fo poor in ore, that the working of it would ruin the proprietor, even though the price of labour were cheaper.

The exports from Middleton amounted, in the year 1795, to the value of thirty-one thousand three hundred and feventy-five dollars. It was only in the year 1794 that the custom-house was established here. A bank was instituted in Middleton in the month of October 1795. Its capital confists of one hundred thousand dollars; and, by its constitution, may be augmented to four hundred thousand dollars. The regulations for its management are nearly the same as those of the bank of Hartford. No dividend has, as yet, been paid to the proprietors.

Middleton is the chief town of the county of the fame name. The whole number of inhabitants in the county is about nineteen thousand, of whom two hundred are flaves.

From Middleton, the highway leads on toward Newhaven, between the river and the hills which rife on each fide, in a parallel direction, and at no great diffance from its banks. The afpect of this tract of country

15

521

is little interesting; it is but thinly inhabited; its fields display no lively verdure; its cultivation is negligent; its general appearance is difagreeable. Here is a greater flow of wood, confifting chiefly of oaks, and exhibiting no pines. Such is the ftate of the country, to within ten miles of Newhaven. The way is fometimes ftony; fometimes merely fandy. When you come within ten miles of Newhaven, the hills gradually fubfide; and you pass along a tract of morafs. The pains requifite to make the road firm and dry, though it might have been eafily fuccefsful, appears to have been neglected. The tide rifes to within four miles of Newhaven; and often fo fwells the fmall river of the fame name, as to make it fpread over the highway. To-day it was diffufed to the diftance of half a mile. Were the land here lefs marfhy, and lefs frequently flooded ; yet the foil is fandy and incapable of fertility. Some filver firs are thinly fcattered over this tract, and make but a poor appearance. It has not the appearance of a territory fit for tillage, but may answer well enough for pasture-land.

## NEWHAVEN.

The town of Newhaven covers a pretty large space of ground; for, its houfes are detached, by confiderable intervals, from one another. A number of corn-fields lie in the very middle of the town. The ftreets crofs one another at right angles, and are fhaded with rows of trees. The houfes are almost all of wood, and there is none of them handfome. Two great flone buildings, belonging to the college, with the church and the affembly-house, standing round the church-yard, compose the principal part of the town.

But, the afpect of this town is, on the whole, pleafing. Its fituation feems to be a healthy one; and, it is believed, that the proportion of annual deaths is, at leaft as fmall here as in any other town belonging to the United States. Yet, the yellow fever made great havock in this place laft year; and, in the prefent year, many have been fwept off by an epidemic dyfentery, both here and in Hartford. Of one hundred and fifty perfons who died here in the months of August, September, and October,

3 X

October, out of a population of five thousand fouls, ninety-five died of a dysentery.

The harbour lies on an arm of the fea, about four miles in length, which is formed between Long-Ifland and the main-land: but it is dry, when the tide has ebbed; fo that, till a new quay fhall be built, fhips cannot conveniently take in their cargoes here. The flowing tide, however, fills this harbour with fix, and ordinarily with four feet of water. The anchorage, though worfe than that at New London, is, however, pretty good.

No fewer than fifty fhips belong to this port. Only one of thefe fails to Europe: Another makes its voyages to the Weft Indies, with cargoes of wood, oxen, mules and horfes, which are fupplied from the adjacent country to the diftance of forty miles round. The remaining veffels are engaged in the coafting-trade, particularly with New York. The exports from Newhaven amounted, in the year 1701, to the value of one hundred and fifty-one thoufand and forty-three dollars; in 1792, to two hundred and feven thoufand and forty-one dollars; in 1793, to one hundred and forty-fix thoufand three hundred and eighty-feven dollars; in 1794, to one hundred and feventy-one thoufand eight hundred and fixtynine dollars; in 1795, to one hundred and eighty-four thoufand and eighty-two dollars.

The whole of the veffels in the harbour does not exceed three thoufand tons. Eight packet-boats, failing regularly between Newhaven and New York, convey to the latter a great part of the imports from the ifles, together with a confiderable quantity of grain, which grows in the country about Newhaven, but cannot be here fold. The capitals of the merchants about Newhaven appear to be fmaller than those of the merchants in any other fea-port town of Connecticut. Not one of them is, alone, mafter of a whole fhip. The number of owners is fuch, that they never think of infuring a veffel. When any unlucky accident happens, the loss being divided among many owners, is but a little to each. Yet, within these last two years, the loss both by fhipwreck and capture, have been fo great, that the merchants of Newhaven begin, like others,

to

to find it prudent to infure. Trade has been, for these fome years, without either declining or encreasing, in this place; and the cafe has been the fame with the population. The foil is, generally, rich about Newhaven. When fufficiently manured, it yields fifty bushels of maize, an acre; and there is a great abundance of fea-weeds, which, in mixture with common dung, are used as a very fertilizing manure. Much land, in this neighbourhood, is covered with very old and indifferent wood, which makes it not eafily fusceptible of agricultural improvement. Near the town, the price of land is from fourteen to eighteen dollars an acre. Labourers receive four or five shillings a day, and in fummer, twelve dollars a month, or for the whole fummer months, eighty dollars as their wages. the cattle are of middling quality. The beft pair of oxen in the country may be had for fixty dollars.

The wealth of the inhabitants of this town is not great. Most of them have farms in the neighbourhood, which fupply provisions for their families. These finall possefions in the hands of the town's-people, make it impoffible for those who have a furplus of produce, to find a fale for it in Newhaven; it is, accordingly, fent to New York. A more ftriking confequence of this economy, is the neglect of improving agriculture.

Two opulent merchants, about a year fince, erected a cotton-work at the diftance of two miles from the town. The fpinning-engine is put in motion by water; but the weaving is performed entirely by human la<sup>2</sup> bour. A great number of people are employed; but the dereliction of this manufacture may be foretold, as its fuccefs is oppofed by all the obfacles common in fimilar cafes. Befides, the expence upon the buildings has been far too confiderable.

A bank was crected in Newhaven, in the month of October 1792. Its capital is one hundred thousand dollars; and is divided into two hundred fhares of five hundred dollars each. It began to transact bufiness, only in the year 1795. The first dividend upon the shares, is to be paid n January 1797. Shares in it are now at a premium of five dollars above the original price. Money is faid to have been fo fcarce, in this 3 X 2

place,

place, before the inftitution, that what can be now obtained at the interest of four dollars a month for the principal sum of five hundred dollars, was not then to be had for less than four per cent. a month, with fecurity.

The ravages of the English, during the war, ruined the people of Newhaven, who, to make up for their loss, turned usures. The establishment of the bank put an end to the trade of usury. The interest of money is now reduced to one or one one-half per cent monthly, to the money-lenders; and to them, none have recourse, fave such as have no credit with the bank.

Near Newhaven are ftill fhewn the rocks, among which GOLF and WADLEY, two of the judges that condemned Charles the first of Enghand, lay concealed from the fearch which was made for them, by the command of Charles the fecond. Here is, alfo, a bridge, under which they remained for fome days, while the foldiers, their purfuers, fought them backward and forward, above.

There is, in Newhaven, a college of confiderably old inftitution, which is faid to afford as good inftruction for youth, as any other feminary in the whole United States. To this college belongs a library of two or three thoufand volumes, with a cabinet of fpecimens of natural hiftory, and a finall mufeum, which receives, every year, great additions, and muft foon become very confiderable. There are in the town, one Epifcopal, and three Prefbyterian churches.

The town is affirmed to have been damaged by Commodore TRYON, in the year 1779, to the amount of more than one hundred thousand dollars. It is the head-town of the county of the fame name. The county contains about thirty-three thousand inhabitants, of whom four hundred are flaves.

## OBSERVATIONS ON CONNECTICUT.

The English colony by which Connecticut was first occupied, arrived in the year 1633. They had a patent, granted to the Plymouth company by the Earl of WARWICK, in the year 1630. They had to contend

. "a

tend with the Indians, who would not relinquish their territories to ftrangers without a struggle. In 1662, the colony of Connecticut obtained a charter, which fixed the form of their future government. The people were enthusiastic Presbyterians, and lived in implicit fubmission to their ministers. No perfor could be, here, a freeman, without belonging to the Presbyterian kirk; and none but freemen could have a voice in elections.

The most exceffive intolerance, the most violent perfecution, enfuedagainst the Quakers in particular, who were treated as the worst of heretics, were tortured, banished, abused with stripes, even put to death.

At prefent, the conflitution of the flate of Connecticut, is the fame as before the revolution. A flort act declaratory of the rights of the people of this flate, mentions, that the old conflitution eftablished in the reign of Charles the fecond, is ftill agreeable to the people; that the privileges of freemen, and the admiffion to them, fhall, therefore, remain fuch as they were before; that, in flort, there fhall be no change, except the abolition of regal authority. The Legislature confiss of an Under-house, or House of Representatives, and an Upper-house, or Council. These two houses united compose the fupreme judicial tribunal of the flate, before which all fuits at law may be brought by a last appeal, and which has power to mitigate or annul all fentences of inferior judges. The Governor and Deputy-governor are elected annually. The Governor prefides in the Council, and is also Speaker in the House of Representatives : beside which, he can influence the voices of feveral other members of the Legislature.

The meetings of the Affembly take place in the months of May and October. The members of the fupreme judicial court of the ftate, those of the county courts, and the juffices of the peace, are nominated from among the members of the legiflature. The first of these three classes of judges remain in office, for that precise length of time for which they are nominated by the legiflature : The two last can be nominated only for one year, but may be re-appointed at the end of that time. The Governor, and

and the Council name the fheriffs, who hold their office without limitation as to its continuance.

The laws of England are the foundation of those, as well of Connecticut, as of almost all the rest of the United States. Little alteration has been made upon them. The law concerning the fucceffion to the property of perfons dying inteffate, is entirely that of England; it is, now, in full force, throughout all the American ftates; and it provides, that a third part of the property of the deceased shall belong to his widow, and that the remainder shall be distributed in equal portions among his children; but with certain reftrictions; fuch as, that when one of the children dying leaves progeny, or in any fimilar cafe, his part is, of confequence, to be again diffributed. The laws relative to debtors, order the fale of the goods, moveables, and lands of the debtor, when a debt cannot, otherwife, be recovered from him, and even allow his perfon to be arrefted, in cafe of infolvency. The criminal law has all the feverity of that of England. One article (of which I know not whether it be at prefent in force in England, as it is one of the old laws of Connecticut) ordains, that whofoever shall deny the existence of God, or the mystery of the bleffed Trinity, or the divine truth of the Holy Scriptures, fhall be held unfit for any public office, till he repent and acknowledge his error; and that, in cafe of relapfe, after fuch repentance, he shall be put out of the protection of the law. The laws refpecting marriage authorife divorce, in the cafes of adultery, or marriage within the forbidden degrees of confanguinity. If a man and his wife have been parted for feven years, by the absence of one or the other of them beyond seas; or if either party go upon a fea-voyage that is to be of three months continuance, and in a thip of which news cannot be received within lefs than three months; or if there be reason to believe that either of the two parties has been loft upon fuch a voyage; then the other party, whether man or woman, gcing before a magistrate, and prefenting satisfactory evidence of these facts, may obtain from him, if he shall judge all the circumstances of the cafe to require it, a final diffolution of the marriage. This law condemns any perfon,

perfon, whether man or woman, that shall put on the dress proper to the other fex, to pay a fine of feventy-five dollars.

Adultery, till the year 1784, was liable to be punifhed with death: It is now punifhed only with public whipping, and with the fearing of a red-hot iron on the forehead. Rape is punifhed with death, upon the oath of the woman by whom it has been fuffered, and at her express requeft: but there is no inftance of the execution of this law; and the people of Connecticut fay, that fuch crimes can never happen in the ftate, or, what is more probably the truth, that the extreme feverity of the law deters both the fufferer from complaint, and the profligate from incurring fuch guilt.

The laws againft gaming, are exceffively fevere in Connecticut. One of thefe is againft horfe-racing: This it regards as an idle pleafure, which is attended with diforder and riot, that utterly fruftrate the end of its inftitution, as a means for improving the breed of horfes. The law for the hallowing of the Sabbath, forbids all profane diverfions upon that day, and is exceffively ftrict. It is probable, that the prohibition of journies on a Sunday might fall, infenfibly, into difufe, were it not, that an ill-natured *feleEt-man* has it now in his power to thwart and fine any perfon attempting fuch a journey; and that every one thinks it neceffary to avoid the danger of being teized by fuch impertinence.

The poor's laws have occafioned the difficulty which a ftranger paffing from one town to another, or coming from another ftate, finds, in effecting a fettlement in a new fituation. The only conditions upon which fuch a perfon can be domefticated in his new place of refidence, are, his either poffeffing a property of at leaft an hundred dollars, or having refided fix years in the place; and without thefe conditions, he will not obtain relief in diffrefs from poverty. The felect-men who are, in every townfhip, the directors of the police, are to prevent the fettlement of all ftrangers who cannot fatisfy them in regard to those conditions. Every town is obliged to provide for its own poor, and the felect-men have authority over the education and conduct of the children of poor parents, till they arrive at the age of one and twenty years. From this age,

age, they are no longer fubject to the particular direction of the Elders. The wandering poor, who are ufually wounded foldiers or fhipwrecked feamen, receive temporary relief, at the pleafure of the felect-men. What these bestow, is afterwards repaid to them, by the Union, by the State, or by the particular town, according to the circumstances of the cafe.

Befide the political division of the states into counties and townships, Connecticut acknowledges two fubdivisions into parishes and schooldistricts. In each town or fociety, the householders of the houses which stand together, have a right to assemble, and to make by-laws for the regulation of certain parts of their common interefts. They chufe their ministers; and impose, for their support, a general tax, at the pleasure of the majority, and which is to be paid by every one in proportion to the particular state of his fortune. The towns nominate the collectors of the tax; and it must be paid by the people, without evalion. But, when any perfon finds himfelf to be taxed, not in a due proportion to his property; he may appeal to the County Court, which will take care, that justice be done him. The collectors, as well of this tax, as of those for the expences of the ftate, are accountable for the money which they lovy, and punishable for embezzlement or malversation in office. Ministers for whom their parishes refuse to make adequate provision, can have recourfe to the General Affembly, which will give orders for the collection and payment of the proper fums. That Affembly has, likewife, the power of fettling minifters in fuch parifhes as have remained, for one whole year, vacant, and of ordering provision to be made for the support of the ministers thus settled.

A law enacted in the year 1701, permits perfors whole religious perfuation differs from that of the community in which they live, to affociate themfelves, as to the matter of religion, with fome community of whole form of worthip they approve, and to add their contributions to those for the fupport of their own religion only. But, this is permitted folely under these conditions; 1. That they make their intention previoully known to the felect-men of the town; 2. That the religion which they

they chufe, be fome mode of Chriftianity; 3. That they do not, afterwards, claim a voice in any parochial meetings, except when the bufinefs of the fchools is under confideration.

Prefbyterianifm is the prevalent religion throughout Connecticut. Its minifters, the zeal of its followers, and the appropriation of the places in the colleges to Prefbyterians exclusively, afford very great advantages, to prevent it from being fupplanted by any other form of religion. The Anabaptifts are, next after the Prefbyterians, the most numerous fect in the ftate. Although the letter of the law have established freedom of religious fentiments in Connecticut; fuch freedom is, however, far from being known here. Prefbyterianism reigns in all its rigour, despotism, and intolerance.

Another law long prior to the revolution, obliges every feventy families in Connecticut, to maintain a common school for eleven months in the year. Reading and writing are appointed to be there taught. If the number of families be under feventy, they are, then, obliged to maintain their fchool, only for fix months in the year. Every town forming a regular incorporation, must keep a grammar-school, in which English, Latin, and Greek are to be taught. The different focieties are to name, each, a deputation to vifit and regulate the fchools. For every thousand dollars of taxation to the ftate, two dollars are to be paid for the fupport of the schools. The teachers have falaries proportioned to the taxation of the diffricts to which they belong. Towns or communities entrufted with particular funds for the fupport of schools, can receive no interest from those funds, while they delay to erect the schools for which it was defined; and lofe the principal, if they shall attempt to divert it to any different purpose. Towns or parishes having no foundations for schools, must either support their schools, entirely out of the appointed tax, or must, at least contribute one-half of the means for the maintenance of thefe fchools, while the parents whofe children are educated in them, pay the reft. In very populous towns, the fupport of the fchools, continues to be left to the inhabitants.

It is provided by law, that the felect-men fhall, in every town, take 3 Y cognizance

cognizance of the ftate of the fchools. Upon their reports, and in the proportions in which there declare the falaries to be, refpectively, deferved,—the towns make payment of the money which has been levied for the teachers. Where there are no fchools, or but very bad ones; the proportion of the tax is withheld, in order that it may be beftowed where it has been better earned. There is, however, no inftance of a town or parifh, remaining, negligently, without a fchool. Many communities maintain their fchools for a greater part of the year, than they are, by law, obliged to do. The felect-men and the deputations from the communities manage the farms and other revenues of the fchools.

The teachers are commonly young men from the colleges, ftudents of law or theology. Their falaries are at the pleafure of the different parifhes, from two to three hundred dollars. Almost all those who now act a diftinguished part in the political business of New England, began their career as teachers in these schools; a fituation that is accounted exceedingly honourable. Sometimes, where the falary is small, women are chosen to be the teachers. Even these must, in this case, be well qualified to teach reading, writing, and arithmetic.

Every county must have a school for Greek and Latin. A fine of three dollars is exacted from parents neglecting to fend their children to school. The select-men have authority to levy it.

One natural confequence from the careful obfervance of this law is, that hardly a perfon can be met with in Connecticut, any more than in Maffachufetts, who is not qualified to read, write, and perform the common operations of arithmetic; and that the general manners are better, the laws more faithfully obferved, and crimes more rare, here, than in other places. The punifhment has not, as yet, been abolifhed in Connecticut. It is, however, referved for crimes of extraordinary atrocity; and, for thefe laft eight years, has been, in no inftance, inflicted.

An act, paffed in the year 1795, appropriates, for the fupport of the public fchools, whatever fums of money shall arise from the fale of those lands which are the property of the State, and are situate westward from Pennfylvania. These sums are to be put out at interest; and the annual revenue.

revenue, which they shall thus afford, is to be divided among the schools of the different parishes, according to the proportions in which these parishes, respectively, contribute to the public expenditure of the State. At the pleasure of a majority of two-thirds of the people of any parish, this fund may be applied to the maintenance of the minister, instead of that of the schoolmaster. Every parish is at liberty to make this particular disposal of its own portion of the money. But, in this case, all the different sects, within the limits of the parish, must receive their respective schools.

The fervitude of the negroes has not been abolished in this state as in Maffachufetts. It is here ordained by law, that every negro born in the ftate fince the year 1784, shall, at the age of twenty-one years, be declared free. It is allowed, that the interest of the law-givers had fome fhare in dictating the particulars of this decree. No old law exifted in favour of flavery; though it was, indeed, countenanced by fome judicial fentences of the courts, pronounced at the inftance of mafters of runaway flaves. The confiderations which moved the legislature to determine as they did in this bufinefs, were, refpect to property, and the fear of dangerous confequences as likely to arife from a fudden and general emancipation. But, fuch respect for property of this nature was flagrant injuffice; fince it was never before expressly acknowledged by the laws, and existed-but by dishonest sufferance. In regard to the dread of confequences; the number of negroes in the State of Connectieut, was too inconfiderable to afford any plaufible pretence for fuch alarm. The cafe of Maffachufetts, which in refpect to flavery, flood in the fame fituation with Connecticut, and in which there were, at the time of the general emancipation, a greater number of negroes in fervitude, fufficiently evinces the futility of this pretence. The community have there experienced no unfortunate confequences from the emancipation of the negroes. Few of these have made any criminal abuse of their liberty. Neither robbery nor murder is more frequent than before. Almost all the emancipated negroes remain in the condition of fervants; as they cannot enjoy their freedom, without earning means for their fub-3Y 2 fiftence.

fiftence. Some of them have fettled, in a finall way, as artifans or hufbandmen. Their number is, on the whole, greatly diminifhed. And on this account, the advocates for flavery maintain, that the negroes of Maffachufetts have not been made, in any degree, happier by their general emancipation. None of them has, however, returned into fervitude in those ftates in which flavery is still fuffered by the laws. None has died of want. Maffachufetts has delivered itself from the difhonour of the most odious of all violations of the natural liberty and the inextinguisticable rights of the human species.

The militia of Connecticut, confifts of four divisions, eight brigades, five and thirty regiments: of the regiments, eight are cavalry; five, light infantry. The legiflature nominate the commander-in-chief, the inferior generals, and all the ftaff-officers. The other officers are chosen by their respective regiments. They hold, all, their commissions from the government. The other neceffary regulations are nearly the same as in the other states. The legislature here exercises the same powers of regulation, which are, clfewhere, intrusted with the government. The mode of forming the militia, is the same as in other places. All males, from eighteen to forty-five years of age, are liable to ferve. The Governor is General, and the Deputy-governor, Lieutenant-general of the militia.

The high-roads are made and repaired, in Connecticut, by the labour of all perfons between the ages of fifteen and fixty years. An overfeer is annually named for the infpection of the highways, and for regulating the labour upon them: He is fubject to the controul of the felectmen. Care is taken to make those who are by law obliged, to do their duty. Yet, it must be owned, that the roads, in Connecticut, are ftill bad.

The laws refpecting taxation, have undergone many changes fince the revolution. All property is taxable in Connecticut; as well moveables as land. The fubjects of taxation are diffributed into ten claffes. Horfes, carriages, and capital belong to one clafs, and are taxed in a due proportion to the taxes upon real property. The commiffioners for fixing the proportions of every different perfon's taxation, are nominated annually in every

town, and have here the appellation of Lifters. It is their duty to procure, once a year, from every inhabitant, a flatement of his property; and from these flatements to form a general inventory to be transmitted to the legislature. The legislature, upon the inspection of the inventory, fixes the proportion of tax which the particular town must pay. The lifts of the commissioners, therefore, regulate the taxes. Though the taxes be already sufficient; the commissioners must not neglect to register any increase of property in their respective towns. Perfons deceiving the commissioners by false estimates of their property, are condemned to pay four times as much as their just proportion of the tax.

Thefe lifts ferve, alfo, to regulate the proportions in which other taxes are to be levied. The Lifters levy thirteen cents of a dollar upon every thousand pounds of property, befide one-half of that quadrupled tax which is exacted, as a fine for the concealment of property. The collectors are named by the towns, from one three years to another; and are allowed two and half per cent, on the money they collect, with a falary from the ftate. When they are obliged to compel payment from the dilatory, by actions at law; their allowance is augmented, on account of the costs of the fuits. The care of the Lifters, and the Collectors, procures a faithful payment of the taxes.

Though every poffible precaution feems to be here provided by law, to hinder any unfair flatement of property for taxation; yet, in Connectiout, as in other places, men find means to cheat the revenue. As the effimates of property are not given in upon oath, many who would feruple to fwear to the truth of a falfe flatement, make no difficulty of giving in their effimates, in the prefent cafe, with a carelefs inaccuracy that fails not to favour themfelves. However diligent, the enquiries of the Lifters are ftill infufficient to detect every little artifice. A thoufand things occur to render it impoffible that they fhould. Several of the wealthieft perfons in the flate, have owned to me, that the taxation which they actually pay, is not above a fixth part of what they ought to pay. One mode of evafion, commonly practifed in Connecticut, is, by placing in the loweft clafs, land that, on account of its fluation, its quality, its produce, ought

18

333

and the second second

ought rather to be ranked in the higheft; which make a difference upon the tax of five fixths or fometimes, even of twenty-nine thirtieths. A table of taxable property, by which the Supreme Court regulates the taxation, exhibits a proportion of lands of the loweft clafs which must appear far too great, to any perfon that has an acquaintance with the country. The whole amount of taxable property was estimated, in the year 1796, at the fum of five millions feven hundred and twenty thousand four hundred and eighty dollars.

These taxes have, for these feveral years, been but twenty-three thoufand dollars, regularly paid. The annual expenditure of the government amounts nearly to fifty thousand dollars. But, there is a tax upon written deeds, or, in other words, a stamp-tax, that yields from fix to eight thousand dollars a year. The State formerly lent three hundred and fifty thousand dollars to the Union, for which it receives interest at the rate of four per cent. And it has, likewise, some other sources of income, of which I could not obtain any distinct account. But, its income is, altogether, equal to its expenditure. The taxes imposed by the Supreme Court, are fixed in proportion to the necessities of the prefent year, and the economy of former ones. There are a number of banks in Connecticut.

The trade of Connecticut is, as I mentioned in fpeaking of New London, confined to the exportation of the furplus produce of the lands, to the Weft India Ifles, or to the other States of the Union. Cattle and mules from those parts of the State of New York, which are contiguous to Albany, are included in this exportation. New York is the emporium of almost all the trade of Connecticut, of which the state wont often either to take in their cargoes or at least to complete them, there, and to bring their returning cargoes thither.

The whole exports from Connecticut, were, in the year 1791, of the value of feven hundred and ten thousand three hundred and fifty-two dollars; in 1792, eight hundred and feventy-nine thousand feven hundred and fifty-two dollars; in 1793, feven hundred and feventy thousand two hundred and fifty-four dollars; in 1794, feven hundred and twelve thousand

thousand feven hundred and fixty-four dollars; in 1795, eight hundred and nineteen thousand four hundred and fixty-five dollars.

The tonnage of the fhips belonging to Connecticut, whether engaged in the foreign or the coafting-trade, amounts, in all, to thirty-five thoufand tons.

Connecticut is, after Rhode Ifland and Delaware, the fmalleft State in the Union; but, in proportion to its extent, the most populous. There are about one and fifty perfons to every square mile. As the lands are all occupied and in cultivation, more perfons emigrate out of Connecticut to the newly acquired lands, than from any other State in the Union. This will be more particularly evinced from the following statement of facts.

In the year 1756, the whole population of Connecticut, was one hundred and twenty-nine thousand and twenty-four fouls; in 1774, one hundred and ninety-feven thousand eight hundred and fifty-fix fouls; in 1782, two hundred and nineteen thousand one hundred and fifty fouls; in 1791, two hundred and thirty-feven thousand nine hundred and fortyfix fouls. Thus, in the courfe of the first eighteen years, the average increafe of the population, was three thousand eight hundred and twenty fouls annually; for the next eight years, it was but two thousand fix hundred and fixty-one fouls a year; during each of the laft nine years taken at an average, it has not been more than two thousand and eighty-fix fouls. Celibacy is not now more common than formerly : and it was never frequent in Connecticut. Young people marry early: and their marriages are very fruitful, augmenting the population very rapidly. It may, therefore, be calculated that two-thirds of the numbers which are continually added to the former population, leave the country, and go to fettle in the newly occupied territories. Many of the landholders in Connecticut purchase lands, at a very low price in the State of Vermont. Thefe they retain for themfelves till their children grow up; and then beftow them upon fome of the young folks, as their patrimony. Most of those who emigrate out of Connecticut, leave it, only because they cannot find in it, a place for comfortable and advantageous lettlement.

The inhabitants of Connecticut, are, almost universally, of English defcent, and are a fober, active, industrious people. Their diffinguishing qualities are nearly the fame, as those of the other inhabitants of New England. They are faid to be very litigious. And there are, indeed, fewdisputes, even of the most trivial nature, among them, that can be terminated elsewhere than before a court of justice. No ftate, perhaps no equal number of people in the universe, have such a multitude of lawfuits. There is, no where else, such a mob of advocates, as here. Is it the multiplicity of law-fuits that has engendered the lawyers? Or do not the lawyers rather give birth to the excess of law-fuits? Be this as it may; these lawyers have, at present, very great influence among the people of this state, especially in political matters. It is even faid to be greater than that of the ministers, who, in confequence of their mutual wranglings, and their fierce intolerance, have lost much of the high influence which they once possible.

The people of Connecticut are rigid and zealous in the difcharge of their religious duties. But, I have been told, that fincere devotion, founded upon thorough conviction, is rare among them. Their manners are ftrongly republican. They are, all, in eafy circumftances; few of them, opulent. Such as do poffefs extraordinary wealth, are very anxious to conceal their fortunes from the vigilant and invidious jealoufy of their fellowcitizens.

The prevalent political fentiments are full of attachment to freedom, and to the prefent conftitution. The people are rough in their manners; yet frank and hofpitable; though lefs agreeably fo, than the inhabitants of Maffachufetts, who are, however, certainly not the most polished people in the world.

In the year 1784, I had been honoured at Paris, with the freedom of the town of Newhaven. It was conferred in a very refpectful letter from the mayor and aldermen of the town. I knew not, to whom I was obliged for this attention. I received it with no particular notice; little thinking, at that time, that, in eight years, Newhaven would be the only place in the world, in which I might confidently expect to be owned as a citizen.

a citizen. On my arrival in Newhaven, I thought it my duty to make my acknowledgments for the honour I had received. But, it was probable, that the magistrates by whom it had been conferred, must have forgotten the little transaction, as I had never written to them, in answer to their letter. I went, however, to vifit them, as a freeman of the town. One of them had been for fome years in France, had, obtained a good place, and had alfo been at Liancourt. There, while I fat at table with a number of guefts, he had expressed a defire to fee the apartments. Permiffion was readily granted on my part; and he was asked into the dining-room, which was very large. But I had no opportunity to fhew him any other attentions than were paid to all those who came, almost daily, to fee my house and gardens. This worthy man, however, when he faw me, in my prefent humble condition, recollected, with lively gratitude, the civilities he had met with, at my feat, which I, as was natural, had quite forgotten. In confequence of this, I was received by the magistrates and principal burgefies of the town, with a warm and hearty welcome, fuch as men naturally fhew towards a perfon whom they fee with an agreeable furprize. Mr. HILLHOUSE, member of the Congress, with whom I had occasion to become acquainted in Philadelphia, was my conductor to them. He is a worthy, hospitable man, of true republican principles and manners; as, indeed, are all the people of Connecticut. Yet, I cannot help preferring those of Maffachusetts, who with the fame plainnefs, are, however, lefs precife, and more amiable in their manners.

## FAIRFIELD.-NORWALK.-STAMFORD.

The State of Connecticut extends only five or fix miles beyond Stamford. This tract is not in fo good a ftate of occupancy and cultivation, as that through which I had come. The land adjacent to the fea, is in the fame ftate as that which lies fomewhat farther back. From Penobfcot to New York, it is full of rocks. Yet, fome part of the country through which the road leads, is verdant, covered with rich crops, and agreeably interefting to the view. A confiderable part of it is covered 3Z with

with woods, confifting chiefly of pines, fpruce-firs, and birches. Thirteen miles from Newhaven, you crofs the River Stratford in a very good and fafe ferry-boat. At the ferry, the river is about half a mile broad. The road is uneven, and fo ftony, as to be not at all pleafant to a traveller. You crofs a number of fmaller ftreams, by paffing along tolerably good bridges. These are navigable, only when fwollen by the flowing tide. There are two or three finall veffels which trade from hence to New York and the neighbouring towns: and at leaft one goes to the Antilles. I faw one at Neuwied, that had cattle on board. It was bound for the Weft Indies; though its tonnage was, indeed, very fmall. All thefe fmall ports or creeks belong to the diftrict of Fairfield, the fmalleft of four into which Connecticut is divided. The exports from this diftrict, amounted, in the year 1791, to fifty thousand three hundred and fifteen dollars; in the year 1792, to fifty-three thousand three hundred and feventeen dollars; in 1793, to feventy-five thousand three hundred and eight dollars; in 1794, to feventy-feven thousand four hundred and twenty-fix dollars; in 1795, to eighty thousand one hundred and fortyfix dollars.

Between Fairfield and Stamford are frequent rocks. The inhabitants are not very numerous. Some villages of a pretty thriving appearance, are, however, to be feen from the high road. No culture but that of meadows, no tillage, appears. It is faid that the foil is, in general, fufficiently fit for bearing corn, but that the nature of the climate fubjects the crop to a blafting that never fails to fpoil it in its growth. Thefe difadvantages affect the whole territory lying along this part of the coaft.

## ENVIRONS OF NEW YORK .- PAULUSHOOK.

At the diftance of eight miles from Stamford, the traveller enters the State of New York. The quality of the land is ftill the fame. From Newhaven, the road ftill leads along the coaft, in the fame direction with that which goes to New London. From this place, the coaft of Long Island, is forty,—from Newhaven, it is not more than twenty, miles, diftance. But, the two coafts advance continually towards one another, as

as you approach New York, till, at laft, opposite to this city, the flores of Long Island are feen at no more than half a mile's diffance. Ships of finall burthen make their way through the Sound, to New York. The paffage, called Hell Gate, is so difficult to large ships, that it was attempted but twice in the time of the American war.

A finall part of the road has been constructed by perfons who undertook this bufinefs upon the credit of a toll that is now levied. This part was, for thefe two laft years, almost impassible, but is now excellent. Those fragments of rock which have been cleared out of the road, are piled up along its fides, and ferve to prevent any deviation beyond the just limits of its breadth. The passage to the island of New York, is, by King's Ferry, at the distance of fourteen miles from that city.

This ifland is feparated from the main-land by a narrow arm of the North River, which falls into the Sound, and extends in length, between the Sound and that noble river. It is, here, a mile and a half broad: And on its oppofite bank, are the rugged rocks of Jerfey. The foil of the ifland of New York, is a barren fand. Some not very productive farms lie along the road; and the ifle is covered with frequent countryhoufes belonging to rich inhabitants of the town of New York. The nearer you approach to the town, fo much the more handfome and numerous do you fee thofe country-houfes to become. By manure and laborious culture, the fields have been made to yield tolerable crops, and the gardens, with great difficulty, to produce pulfe and pot-herbs.

I knew, that the epidemical fickness was so far mitigated in New York, that the communication was again open between this city and Philadelphia. But, I went to Elizabeth-town, to visit Mr. RICKETTS; not knowing how extremely fearful both he and his wife were, left the infection should, by any means, be communicated to their children. I, there, determined not to halt in New York, as my acquaintance would, most probably, have left the town.

## MINERALOGICAL OBSERVATIONS.

Granite is the fpecies of rock most prevalent along the coasts of Massachusetts, New Hampshire, and Maine. The appearance of its fragments 3 Z 2 on

on the furface, is fufficient to enable any one to judge of the quality of the foil, even without examining into it, more particularly. Granite is not, however, the only fort of rock, here, to be difcovered. There is a great abundance of lime-ftone at Thomaftown, Belfaft, Ducktrap, and Waldoborough. A fand-ftone is there found in yet greater plenty. There is fome flate, of which a part is exceffively hard; though it be more commonly black and fcaly, effectially at the corner of Beatrix-hill.

The lime-ftone in General Knox's quarries at Thomastown is entirely cryftallized, and mixed with a glittering fand-ftone. Some beautiful pieces of talc are occasionally found among its layers. It is eafy to be burnt, and affords very good quick-lime. Farther towards the backcountry of Maine, I found the rocks to be the fame as on the coaft. Such at leaft did they appear, wherever the ground was opened to any depth. On the furface, there was a pure gravel, or, more commonly, a clay, a ftiff loam, or a rich vegetable earth. The cataract of Androfcoaggin, near the mouth of Kennebeck River, exhibits ftrata of a hard fchiftus. In Portland there is an intermixture of granite with fand-ftone and other glittering ftones. From the heights near Portland, are feen various white rocks, the higheft in New England. They are fituate in New Hampthire. They lie, in an affemblage together, behind the three foremost ranges which ftretch from north-east to fouth-weft. They divide Merrimack from Connecticut. They are feen from a great diftance eaftward. They are more than feventy miles diftant from Portfmouth. They are faid to confift of granite; but I did not fee them near enough to be able to determine. Of this fort are the mountains of New Hampthire in general. On the way from Salem, are large rocks of a vellowish red colour, which have, at first fight, the appearance of jasper, but are, in fact, only a very hard ochre. In the vicinity of Bofton, on the feafhore, and in the fields behind the town, are a great variety of ferpentines, feldspars, and different other stones, fome of which are exceedingly beautiful. Beyond Milton, a village at the diftance of two miles from Bol ton, is a tract of ground covered over with pudding-ftones; and the brooks exhibit, on their beds water-worn fragments of granite, Ichoerl, and fand-ftone. Strata of granite and fand-ftone are equally to be found

in

in the neighbourhood of Plymouth, in Rhode Island, and in the environs of Providence. In digging for wells near this laft town, there have been found an afbestine earth, and an impure lead-ore. Such is the general character of the strata along the coasts of Connecticut, and as far as to New York. The observations I made on the terraces of some places contiguous to Mohawk's River, and near German Flats, are still more applicable to that adjacent to Connecticut River. Sometimes only one, but more commonly both banks of the river confift of flat ground, which is, ever, more or lefs, under water, and of which the foil is a clay. At fome diffance backward, this level ground is bounded by a perpendicular elevation of the furface, to the height of from twenty-five to forty feet. Above this, is another level plain, the foil of which, is naturally dry. This plain is bounded by another abrupt elevation of the furface, which has the appearance of having been executed by art in fome period of very remote antiquity. Beyond it, is another fimilar work, apparently ftill more ancient. There are, in fome places, four alternations of thefe plains and perpendicular rifes, one behind another, which afcend with the regularity of terraces in a garden, to the fuminits of the hills. Where the hills defcend to the very brink of the river, thefe terraced plains are to be feen, only one fide. More commonly, however, they appear on both fides: And, in this cafe, the corresponding terraces, on the opposite fides, are of the fame level. Contemplating thefe wonderful appearances, one is naturally led to conjecture, that these heights were once the immediate banks of the river, which in defcending to its prefent channel gradually formed the fucceffive flats and perpendicular elevations that we now fee. This conjecture is farther confirmed by the fact, that thefe heights are composed of a very white argillaceous fchiftus, which crumbles into a powder, in the air, fuch as proves to be a fat earth, is excellent for vegetation, and is of the fame fort, as the foil of these interjacent flats. In opening the foil of thefe flats, people often find branches of trees, in a more or less perfect state of prefervation. These, in the moift state in which they are found, may be moulded with the fingers, like clay; but, when dry, they refume the compact, fibrous texture of wood. Stude

wood. I have not heard that whole trees have been found in this fituation: but, it is probable, that, in digging deeper, fuch might be met with.

I have found, here, no remains of marine animals. The ftones in the river exhibit no petrifactions of animals, at leaft, none that I could fee. In the interior country are found flates of various forms, colours, and qualities.

#### TREES.

The different trees in the province of Maine are nearly the fame as those in the province of Canada. Some, fuch as the thuya occidentalis, are not found farther fouthward. The filver fir grows in great plenty, in the neighbourhood of North Yarmouth. The red oak, the white oak, and another fort of oak that grows not above the height of fifteen feet, with no confiderable thickness, and is used only for fewel, are to be found there. The black fir, the Weymouth pine, the red cedar, the common fir, the red maple, the Pennfylvanian as the black birch, and the dwarf birch are, there, common. These trees are, also, found in Massachusetts, New Hampshire, and Connecticut. The fassaries is very common in the last mentioned state; but, rare in the province of Maine. The balmpoplar I have not feen northward of New Hampshire.

#### FOWLS.

Here is a wonderful diverfity of fmall fowls, particularly in regard to colour. I was in Maine, juft about the time when the wood-pigeons go fouthward. They are engaged for the fpace of a week in taking their departure. An innumerable multitude of thefe fowls, is then feen to darken the air, to hang upon the trees, and to light on the fields. In fpring and harveft, they are killed in thoufands, throughout all the United States.

#### SQUIRRELS.

Squirrels abound throughout all America; but, in New England, ftill more than any where elfe. They are of different forts, and various colours

lours. The fmall grey fquirrel is diftinguished from the flying squirrel. Some of the Americans eat their flesh.

### ELIZABETH-TOWN.

As I could fpend but little time here, and was unlucky in coming unfeafonably to the house of Mr. and Mrs. Ricketts, my information relative to this town, is, therefore, but inconfiderable. The territory of this township was purchased from the Indians in the year 1664, and was first occupied by emigrants from Long Ifland. At prefent, the town confifts of about two hundred well-built houses, two handsome churches,-of which one belongs to the Epifcopal perfuation, the other to the Prefbyterians, a decent council-houfe, and an academy. At the diffance of a mile westward from the town, is the course of Paffaik River, which paffes to the north of Staten Island, and falls into the bay of New York This convenience of fituation for water-carriage, renders Elizabeth-town a confiderable mart for those products of the back lands of New Jerfey, which are imported into New York. At the house of Mr. Ricketts, I met with Mrs. KEAN, whom I had been often in company with, at Philadelphia, on the preceding winter, and from whom I had experienced great hospitality. She now wore a mourning-drefs, having loft her hufband, who died, foon after my departure from Philadelphia, and who was one of the most respectable men in all America. Mr. Ricketts, a gentleman of English descent; long ferved as an officer in the English army; is frank and open in his manners; and bears the character of being a true English country-gentleman. He posseffes, likewise, a rich plantation in Jamaica, from which he brings all his negroes; the laws of Jerfey still permitting flavery. In the northern American States, fuch fervitude is far from being fo fevere as in the iflands. But, manners, not laws, produce the only difference. There is no law to hinder an inhabitant of Jerfey from beating, and otherwife cruelly using, his negro-flave. Should he mutilate his flave of a limb, or beat an eye out of his head ; the courts of justice may condemn the master to a temporary imprisonment, but have no power either to fet the injured flave at liberty, or to order him to be

Ster a

be fold to a different mafter. It is not, therefore, probable, that even a tyrannical mafter can be checked by fuch carelefs regulations. Such a fituation of things muft be fhocking in any country, but above all, in a free republican ftate. But, the negroes of Mr. Ricketts, are, in all refpects, as well treated, as any labourers who are freemen, can poffibly be. The liberty here allowed of keeping negro-flaves, and the general opinions of the country in favour of flavery, have brought into New Jerfey, a number of French emigrants from St. Domingo, who have fet many of their negroes at liberty. Thefe families have left moft of their property under the protection of the Englifh; a conduct of which they do not much boaft. Some of them are eager to diftinguifh themfelves by their principles and behaviour, more than the reft: But, even thofe are not altogether free from the prejudices of the planter.

During my fhort ftay at New York, I could not without great anxiety, fix my mind on the objects before me; for I was in earnest expectation of letters from Europe, which greatly agitated both my hopes and fears. In this ftate of mind, I could have made but little progrefs in any enquiries into the circumftances of a town of fo great importance, that a much longer time would have been requifite to enable one to know much about it. I have fince had occafion to make a longer vifit to this place : And I shall, therefore, delay making any remarks concerning it, till I come to fpeak of that journey. I have feen the leader of that which is called the Federalist Party. According to what I have heard of Mr. Jay from his friends, he himfelf would make as bad a Prefident, as his treaty makes a fystem, for the regulation of the intercourse between America and Britain. It is affirmed, that he liftened to every piece of new information, and in the unfolding of his reafons and defigns, availed himfelf of every political incident. How far he may follow out this odious fyftem of conduct, I know not; that it is, in truth, his fyftem, I have no doubt.

What I have heard from Mr. Hamilton himfelf confirms me in my previous opinion, that he could not but with for a better treaty. He is one of the ableft men I have hitherto known in America. He poffeffes a com-

a comprehensive mind, the energy of genius, clearness of ideas, a flowing eloquence, knowledge of all forts, lively fensibility, a good character, and very amiable manners. This praise rather falls short of his defert, than exceeds it.

Mr. KING, a Senator of the United States, and a leader of the party to which he belongs, is also a man highly diftinguished for his talents, and for the worth and amiableness of his character. Party-spirit infects the most respectable, as well as the meaness of men. All that I have remarked in New York, and whatever I have learned in other places, during the lass three months, leads me to fear, that America cannot long continue to enjoy its present internal tranquillity; a tranquillity effentially necessfary to confirm and extend that high prosperity which many other circumstances feem, at present, to confirm to bestow upon these United States.

While I was at New York, I made an excursion to the beautiful country-feat of Colonel BURR. The Colonel, in regard to politics, belongs to the Opposition. He is one of the most amiable men I ever faw.

The yellow-fever has raged for thefe laft three months in New York, and has cut off a great many lives, yet has been, in the whole, lefs fatal, here, at this time, than it was, laft year, at Philadelphia. It has confined its ravages to that part of the town, which is adjacent to the harbour. Its rage begins to be, for the prefent, fomewhat affuaged. But, medicine does not appear to have, as yet, found out any very fuccefsful mode of treating this diffemper.

Between Elizabethtown and New York, lies the town or village of Newark. It is one of the fineft villages in America. It confifts of one very long and very broad ftreet, the fides of which are planted thick with rows of trees, and which is composed of truly handfome houses. These are all of brick or wood, and every one of them has, behind it, a neat garden. Newark is the usual stage for the mail-coaches and for travellers paffing between Philadelphia and New York. There are, of confequence, a number of good inns in this place. This part of the country is particularly famous for its cyder; which is greatly superior to that produced

4 A

545

in

in the other parts of Jerfey; though even the reft of the Jerfey cyder be preferable to whatever is produced any where elfe in America,-even to the cyder of Virginia, which is reckoned exceedingly good. A fhoemaker who manufactures fhoes for exportation, employs, here, between three hundred and four hundred workmen,-almost one half of the inhabitants of the town. The number of these, has been greatly augmented by the influx of families which the late maffacres have driven from St. Domingo and the other French iflands. Newark lies on the river Paffaik. Coming from New York, we are obliged to pass through a tract of exceedingly fwampy ground. A road was, about a year fince, conftructed, for the first time, through this morafs. It confists of trees having their branches cut away, difposed longitudinally, one beside another, and flightly covered with earth : This road is, of courfe, ftill very difagreeable to the traveller, and very difficult for carriages. Though. on horfeback, I was little annoyed by this inconvenience: I was more difagreeably fenfible of its difadvantageous narrownefs, which is fuch, that two carriages cannot pass one another upon it, and that, even two perfons meeting on horfeback, cannot eafily avoid justling one another. This ill-conftructed, and far too narrow caufeway, has coft a great expence. It is three miles long, and has, at each end, a broad wooden bridge of ftrong and handfome conftruction. The toll exacted at the bridges is intended to defray the expence of the road.

The way between Newark and Elizabethtown, leads through an agreeable country, adorned with good houfes, and farms having a pleafing afpect of cultivation. The fields are planted with fruit-trees, particularly with peach-trees, which are very common in Jerfey. I fell in with a fox-chafe in my fhort journey on this road. It is a common diverfion with the gentlemen of Jerfey, at leaft in thefe parts; and here, as in England, every one joins the chace, who, either has a horfe of his own, or can borrow one. I fhould almost have thought, at the first fight, that I was in Suffolk : but, both dogs and horfes were of a much more indifferent appearance, than those I should, there, have feen.

WOOD-

### WOODBRIDGE.

From Elizabethtown to Woodbridge, a tract of ten miles, the land is, in general, in a good ftate of cultivation, but is more commonly laid out in meadows, and planted with maize, than dreffed for wheat. The foil is light and fandy. When moderately manured, it yields wheat. I faw fome fields green with wheat of a very good and promifing appearance. The ravages of the Heffian-fly greatly difcourage all the farmers in Jerfey from the culture of wheat. Nothing lefs than the prefent high price could overcome the diflike which, here, exifts towards it, as an article of crop.

Woodbridge is a long village, many of the houfes of which, lie at good diftances from one another. It is interfected by a fmall ftream, which foon after joins a greater one, called Arthurkill, that falls into the contiguous bay of Amboy. The road, as you approach Woodbridge, leads, thrice, acrofs the river Barray, on which lies the fmall village of Bridgetown. This is one of the most pleasing little places on the whole way, on account of the variously cultivated fields lying around it, its small but very neat houses, and its many fine orchards.

# BRUNSWICK.

Between Woodbridge and Brunfwick, the land is not fertile. The meadows are tracts of rough ground. Many uncultivated fields are to be feen, which yield no other produce than a coarfe grafs. But, even from the heights over which the road, at times, runs, the traveller has agreeable profpects of the river Rariton as far as to Amboy, of Amboy itfelf, and of Staten Ifland, with the adjacent expanse of waters. It is a rich and noble profpect, but one of which the eye foon tires. You approach the first houses in Brunswick by passing along a handsome wooden bridge that leads across the river Rariton. It is new, and just about to be finished; for a flood, last year, carried away a former bridge of too slight construction, that had been erected, the year before. Brunswick is the principal town of the county of Middlefex, which contains about 4 A 2

feventeen thousand inhabitants, of whom two thousand are flaves. This town contains, at prefent, about two hundred and twenty inhabitants; and its population is annually encreasing. The furrounding territory and the river lie exceedingly low. This small town is the mart for the produce of all the adjacent country, and for that of the back-lands—to the great hills, a tract of twenty miles in extent. By the river Rariton, it has a direct intercourse by water, and a confiderably brick traffic, with the town of New York.

### PRINCETOWN.

As you approach from Brunfwick, the adjoining territory is, for two or three miles, pretty agreeable. It, then, becomes rough, and of a very indifferent, reddifh foil. The land is covered, and even the road obftructed, with large maffes of fchiftus. The way paffes on, from hill to hill; and yet, no interefting profpect appears, to compenfate the toil of fuch a journey. Two or three fmall ftreams are to be croffed, which have mills upon them. Three miles from Princetown, the land becomes more level, exhibits a better fhow of cultivation, and is, in general, more agreeable to the eye. The houfes belonging to Princetown are, for the fpace of a mile, cluftered together, in what is called a town, which may confift of from feventy to eighty houfes, in all. Almoft all of thefe are furrounded with beautiful fhrubbery.

. Princetown is famous throughout America, as the feat of an excellent college. Here are from one hundred and twenty to one hundred and fifty students, from all different parts of the United States.

# MAIDENHEAD.

Eight miles from Princetown, lies Maidenhead, where I am, at prefent, writing, on this Tuefday, the 8th of November. I chofe this petty inn, to avoid falling in with the ftage-coaches, the paffengers in which, naturally engrofs all the accommodation, at the inns at which they ufually ftop, in preference to any folitary rider. I defired to obtain fome reft. In regard to the inconvenience from the ftage-coaches, at any other inn,

inn, I was very indifferent: but as to my reft, I was not indifferent; and in this fmall place I hoped to enjoy it. But the only bed-chamber in the houfe happened, when I alighted, to be occupied by a club of the labourers and other inhabitants of the neighbourhood, affembled from the diffance of two miles round. Thefe were joined by people drawn together on account of a horfe-race, which was to be run at the diffance of three miles from Maidenhead. Thefe people had foon a glafs of grog in their heads, and began to make a confiderable buftle in the inn. I was neceffarily obliged to retire with my table, into a fmall corner by the fire, to anfwer the queftions which they put to me, and to give them the ufe of my pen, to ferawl out their accounts. They were the beft folks in the world; only, in refpect to their writing, a little more of fcholars than was quite agreeable to me. I muft, however, do them the juffice, to own, that they did not hinder me from finoking my fegar.

### ARRIVAL AT PHILADELPHIA.

From Maidenhead to Trenton, the land is moderately good. At many places through which the way runs, it is ftill uncleared. Trenton is the principal town of the State of New Jerfey. It contains about three hundred houfes, most of which are of wood. Those of the high-street are fomewhat better in ftructure than the reft; yet still but very moderate in their appearance. Trenton poffeffes all the ufual public buildings. of the capital of a ftate. About a quarter of a mile beyond this town, is the paffage over the Delaware by a ferry, which, though ten stagecoaches daily pafs in it, is fuch, that it would be reckoned a very bad ferry in Europe. The river is one hundred and fifty fathoms broad. Here begin those rapid descents in this river, which interrupt its ascending navigation for all but flat-bottomed veffels of eight or ten tons burthen. On the farther fide of the river, the retrospect to Trenton is, in a confiderable degree, pleafing. The ground between that town and the Delaware is fmooth, floping, decorated with the flowers and verdure of a fine meadow. In the environs of the town, too, are a number of handfome villas which greatly enrich the landscape. Trenton is the headtown

town of the county of Middleton, which contains about fix thousand inhabitants, and, among thefe, between four and five hundred flaves. This county extends back towards the hills, and there is much of it as yet uncleared and unoccupied. Soon after croffing the river, the traveller comes to Morrifville. ROBERT MORRIS, proprietor of all the lands on which this town is placed, has here a fine country feat. He has eftablifhed here a number of forges : there is much iron in the neighbourhood, and other advantages for the manufacture concur: yet the establishment has not hitherto proved fuccessful. The extent of his speculations fomewhat difordered his affairs. Withdrawing, in confequence of this, from a part of that immense multiplicity of business in which he was formerly engaged; he will now be able to attend to the collecting of the taxes with an increafed vigilance, which can hardly fail to make them productive: for no man can bring more of intelligence, activity, and zeal, than Robert Morris, to the care of all that regards the public good, as he fufficiently evinced in the course of the Revolution.

Having croffed the Delaware, the traveller is within the limits of the province of Pennfylvania, and at the diffance of four and thirty miles from the city of Philadelphia. The road leading along the river, fometimes clofe to its banks, fometimes receding more or lefs from it, paffes through the beautiful villages of Briftol and Frankfort. The land does not feem to be very good; yet, is not worfe than fome other lands that are under culture, in Pennfylvania. The road is broad, and in a good ftate of repair. No one of the other ftates pays fo much attention as Pennfylvania, to its roads and bridges. A number of good houfes are feen from the highway. The nearer you approach to Philadelphia; fo much the more remarkably does every thing affume the appearance natural to the vicinity of a great town.

Paffing Kenfington, you enter that capital of Pennfylvania, and, in truth, of all America, where almost all their great trading ships, are built.

My arrival in Philadelphia, nay, in truth, even the fight of its fteeple, excited in my mind, fomewhat of that delight which one feels, upon returning, after long abfence, to one's own home. It was here I first landed

ACARS SHALLY

551

Ianded from Europe; here have I lived for the greater part of the time, I have been in America; here are my most intimate acquaintance, who, though but new, are the oldest I have in this part of the world. Among them are the respectable family of CHEW, by which I have been ever received with all the kindness due to a brother.

I thus terminated a journey of feven months continuance, on which I cannot reflect without feeling pleafure; and in the courfe of which I found few things but fuch as I have had occafion to mark with approbation; though the fatigues which I now feel, makes it neceffary for me to take fome time for refreshment and repose.

JOURNEY

# JOURNEY INTO THE SOUTHERN STATES.

00-2000

LTHOUGH exceedingly defirous to accomplifh my journey into the Southern States, before the coming on of the exceffive heats; I was, however, obliged to delay my departure from Philadelphia, till the end of the month of March. As the direct intercourse of trade between Charleftown and Philadelphia, is interrupted, during the winter; I could not fooner obtain a paffage to Charlestown. On Thursday, the 24th of March, I took shipping for Carolina on board a veffel of two hundred and fifty tons burthen, that fails conftantly, between Philadelphia and Charlestown. It is intended to ferve partly as a packet-boat; and the cabin is fitted up for the reception of a dozen paffengers. But, my fellow paffengers and I were twenty-five in number, not to fpeak of four negroes who were likewife on board ; and we were crowded together, in the most difagreeable manner imaginable. The owner of the veffel was to receive twenty-five times twenty-five piastres for our passage; the captain was to receive twenty-five times twenty piastres for our board during the course of it. It was, therefore, reasonable for us to expect, that we were not to be packed together, like fo many bales of goods; and that they would certainly not receive into the veffel, ten more than the ftipulated number of paffengers. Though we had, for two days, nothing but calms and contrary winds ; the whole paffage was, however, only of fix days duration. Nothing of confequence occurred to our obfervation, in the course of it. We met with not more than four ships, as we failed on.

One of my fellow passengers was Mr. ELLWORTH, of Connecticut, recently

cently appointed Chief Juffice of the United States. All the Americans who were with us, and they were almost all young people, shewed him no more regard than if he had been one of the negroes; though he be, next after the Prefident, the first perfon in the United States, or perhaps, indeed, the very first. Difrespect to their seniors and to perfons in public office, feems to be ftrongly affected among the Americans; fuch at leaft is the humour of the rude and ill-bred among them. This, furely, proceeds from miftaken notions of liberty : for, if ever the public officebearers have a right to general refpect; it must be, above all, in those free governments, in which they hold their authorities in confequence of the election of the people. It is even aftonishing, to fee, how disrefpectfully the people carry themselves, in regard to the courts of justice. They appear at the bar, with their hats on their heads, talk, make a noife, fmoke their pipes, and cry out against the featences pronounced. This last piece of conduct is universal : and there are, perhaps, fome petty inftances of injuffice in the courts, which make it to be not without its use. However, this deficiency in respect to the state officers who discharge the public functions, and administer justice-one of the greatest bleffings of focial life,-is actually feditious, and is utterly incompatible with the idea of a people living under a stable government.

We had five or fix Frenchmen from St. Domingo, on board. Two of them could not divert their minds from melancholy reflection upon the lofs of their property. They were, however, gentle, courteous, and agreeable companions. I paffed most of my time, in endeavouring to obtain fome previous knowledge of the country which I was about to traverfe. In this, I was agreeably aided by the conversation of Mr. PRINGLE, Attorney-general of South Carolina. He was returning from appearing as defender for a French privateer, in a cause before the fupreme court in Philadelphia. We fmoked our tobacco very often together, on the deck, in the cabin, and in the fmall after-cabin. I was aftonished at the careless of the perfons fmoking their fegars. But, my aftonishment became infinitely greater, when, on the day after our 4 B

arrival, I wished to take my baggage from on board, and faw two hundred tons of gunpowder brought out of the ship, in such a manner, that there was some of it scattered about in the ship. That gunpowder had been suffered to lie under our table over which we smoked our segars, and while the passage into the apartment below, was usually left open.

At the mouth of Charlestown River, is a fand-bank, extending from one fhore to the other. It is composed of pretty hard fand, on which a thip may eafily ftrike, but has four openings, by which veffels are navigated acrofs it. Of these the deepest has fourteen feet of water when the tide is flowing, and twelve feet of water when it has ebbed. At fpring-tides it is covered with water to the depth of twenty feet. This fand bank is never paffed in the night. To prevent veffels from the danger of fhipwreck, which would otherwife be, in this place, very great, both buoys in the water, and fuitable marks on land, have been carefully provided. Thefe are exceedingly neceffary; for though the fea was calm, and the water clear, we fhould not have diffinguished the proper place, if it had not been particularly indicated to us. Ships can anchor with fafety on good anchorage ground, immediately before the fand bank. But this they do not venture, unlefs the wind be faint, and the billows calm. After paffing the fand bank, fhips find good ground for anchorage, all the way up to Charlestown. The best anchorage ground is in the immediate vicinity of the town.

Charleftown lies twelve miles from the fand bank, at the conflux of the rivers Cooper and Afhley. A finall wooden fort on Fox Ifland, the remains of the old fort Johnfon, ferves but for a very imperfect defence to guard the harbour. The erection of another fort has been projected, which is to ftand on Sullivan Ifland, and of which the range of the guns will crofs that of those in Fort Johnfon. The government, to which the isfle belongs, gave permiffion, four years fince, for perfons to build upon it, on condition that they should hold themselves ready to remove, whenever it might require. This isfle is reckoned to be very healthy. The more opulent inhabitants of the town, therefore, have houses here, to which

which they refort in the fummer heats, that they may breathe a purer and cooler air, which is very folicitoufly defired by the inhabitants of the rice grounds contiguous to the town. It is eafy to forefee that the people who now refort hither in fuch numbers, will be difpofed to thwart the government, when it fhall refolve, for the fecurity of the harbour, to renew those fortifications which occasioned the loss of a great many lives by the English, when they feized this town in the year 1780. The government of the United States are exceedingly defirous to put this ifle into a fufficient condition of permanent defence, fuch as might give full fecurity to one of the most important harbours they posses. The general government wishes the constitution to be in this inflance obeyed, because the constitution confers upon it the power of this harbour : But the state of South Carolina, which would thus lose the command of the harbour, frongly opposes the defign.

Charleftown was, in the time of the Englifh, furrounded with fortifications. Of those only three or four batteries, part good, part bad, now remain. A French engineer has lately raifed another at a great expence, but, as is too commonly the cafe with things undertaken in America, this fort is very injudiciously conftructed. Towards that fide which is parallel with the river, the range of its guns cannot hinder the access of thips into the road. In that direction, too, its left fide extends too far, fo that the cannon cannot be levelled at any other object than the houses of the town. The battery is of wood, but there has not been enough of wood used in its conftruction. The engineer excuses himself, by complaining that he has not been fufficiently fupplied with money for the expence. Why then did he undertake a work, which he was not fully to complete? For this he can offer no excuse, but that he was defirous to be employed; and with fuch an excuse it is not cafy to be perfectly fatisfied.

R

n.

The town of Charlestown was founded in the year 1670. Like all the reft of South Carolina, it fuffered much in the war that ended in the revolution. It was three years in the possification of the English, who fpared no rigour of command, no cruelty of punishment, no spoliation 4 B 2 of

555

Carlo and Carlos and Carlos

of property, that could ferve to make their memory odious. Many of the houfes which they deftroyed were of wood; and, inftead of thofe, brick houfes have been fince erected. Still, however, fome of the more opulent inhabitants prefer wooden houfes, which they believe to be a good deal cooler than thofe which are of brick. Every thing peculiar to the buildings of this place is formed to moderate the exceffive heats; the windows are open, the doors pafs through both fides of the houfes. Every endeavour is ufed to refresh the apartments within with fresh air. Large galleries are formed to shelter the upper part of the houfe from the force of the fun's rays; and only the cooling north-east with one another, not who shall have the finest, but who the cooleft houfe.

The ftreets are not fo well contrived as the houfes, to prevent exceffive heat from the rays of the fun. Thofe are almost all narrow. They are unpaved, on account of the fcarcity of ftones; and the fand with which they are confequently covered, retains the heat to an intolerable degree, and fpreads it into the houfes. The fmalleft quantity of wind raifes and drives about this fand in the ftate of dust that is inexprefibly difagreeable; and any flight fall of rain moiftens it into a puddle. There are fome foot-paths by the fides of the houfes; but thefe are narrow, interrupted by the doors of cellars, and, therefore, of very little ufe. Nor are the ftreets all accommodated with thefe foot-paths. Only two or three of thefe ftreets are paved, and the ftones upon thefe were brought as ballast by fome fhips from the northern ftates. It is by fuch means alone that the ftreets of Charleftown can be paved; but the expence is fo great, that the object in view cannot be accomplified in this way within any given time.

Houfes, otherwife commodious and well furnished, make often but a poor appearance outwardly. They are indifferently painted, or perhaps not at all. The doors and railings are in a very bad state. The air being so thick and so faline, foon destroys the colouring. Although such a number of negroes be here kept, yet the houses are not preferved so clean on the infide as in the northern States.

The

The expences of the table are nearly the fame here as in Philadelphia. The expences of equipage are, at leaft, as to the number of those who bear them, greater. Here are few families who do not keep a coach or chaise. The ladies are never seen to walk on foot. However short the journey, the carriage must always be yoked. Even the men, too, make frequent use of their carriages. The expence of servants is likewise considerable. These, both male and semale, are negro and mulatto flaves. An inhabitant of Carolina, though not very opulent, rarely has fewer than twenty of these in his stables, in his kitchen, and attendant upon his table. A child has a number of negro children to attend him, and comply with all his humours; fo that the little white man learns, even before he can walk, to tyrannize over the blacks.

The inhabitants of Charleftown are obliging and hofpitable. They receive a ftranger with a kindnefs that watches to anticipate his wifnes. They have fignalized their beneficence and generofity in an extraordinary manner, towards the unfortunate exiles from the French Weft India ifles. With a liberality eager, refpectful, unwearied, they have fupplied them with money, linens, lodging. I am forry to fay, that the unhappy objects of this kindnefs have not conducted themfelves with due gratitude and prudence; but that, with their ufual lightnefs and want of reflection, they have derived little real advantage from the hofpitality of their entertainers, and have almost obliged the people of Charleftown to alter their conduct towards them; yet there is ftill a great deal of charitable contribution towards their relief. The Frenchmen, too, generally rail againft the Americans, curfe them, and are almost ready to affault those very perfons from whom they received the most benevolent relief, and who have, not without good reason, withdrawn from them their former kindnefs.

The rich do not here, as in Philadelphia, ftrive to improve their fortunes only by fpeculations and ftock-jobbing. Here they are, generally, merchants, and bufily engaged in actual traffic. The planter fells his produce, for the greatest price he can obtain, to the merchants by whom it is to be exported; and, excepting only that small part of his time which this bufiness demands, spends all the rest of it in company and pursuits of pleasure.

pleafure. Many of these planters live not upon their plantations, but go, from time to time, to vifit them; and have overfeers conftantly refident upon them. For the greater part of the year, the mafter lives in Charlestown. Even those planters who are more commonly refident upon their eftates leave them from the month of June to November, in order to efcape the dangerous fever with which white perfons living in the vicinity of the rice-grounds are very liable to be infected during that part of the year. The merchants of Charlestown have carried on a very active trade fince the commencement of the prefent war. They keep a greater number of fervants than those of Philadelphia. From the hour of four in the afternoon, they rarely think of aught but pleafure and amufement. The manners and habits of fociety are nearly the fame in Charleftown as in other parts of the American States. Frequent dinners, frequent parties for teadrinking. There are two gaming-houses, and both are constantly full. Many of the inhabitants of South Carolina, having been in Europe, have, of confequence, acquired a greater knowledge of our manners, and a ftronger partiality to them, than the people of the Northern States. Confequently, the European modes of life are here more prevalent. The women are here more lively than in the north. They take a greater fhare in the commerce of fociety, without retaining for this the lefs of modefly and delicate propriety in their behaviour. They are interefting and agreeable, but perhaps not quite fo handfome as those of Philadelphia. Both men and women foon begin here to lofe the bloom of youth and to feel the infirmities of age. At the age of thirty a woman appears old. You often fee women with children at the breaft, who yet have all the wrinkles and haggard looks of fixty. At the age of fifty, the hair becomes entirely white.

As to politics, both the State and the people, in general, are of the Oppolition. The hatred against England is almost universal. Here are few opulent planters who have not formerly fuffered much from English hoftility. The number of the negroes who were flain, or cfcaped from their masters, during the war, was not lefs than thirty thousand, including between fix and feven hundred whom the English carried away with them when

when they left this place. All here agree to cherifh an inveterate hatred againft England, and by confequence to difapprove the treaty. At table warmly federalift toafts, fuch as, "Permanency to the Union!" "The Confidence of the States to the Prefident!" are very common.

It fhould feem, that any feparation of the Northern from the Southern States would be very little agreeable to the inhabitants of South Carolina. Setting afide every political confideration, the neceffity of an increafed commercial intercourfe with the north, in order to augment the fhipping, and enlarge the general wealth of the people of the Southern States, makes it their unqueftionable intereft to maintain the Union. To this neceffity of intereft, the Northern States afcribe the prefent partiality of the Southern for the federal government. But then they alledge, that their neighbours will, with the greateft alacrity, abandon the Union, as foon as they fhall have acquired fufficient ftrength to ftand by themfelves. There are, however, obftacles that ftrongly oppofe their rifing fpeedily to that degree of profperity; and fome of thefe I fhall mention.

Sir WALTER RALEIGH, in the year 1584, and Admiral Coligny, in the year 1590, attempted, without fuccefs, to establish colonies in Carolina. Inteftine diffensions and contests, destroyed the colonies which they introduced. The first effectual settlement of colonists, in this territory, was in the year 1662. Charles the Second, after his reftoration, beflowed a grant of this region, from the thirty-first to the thirty-fixth degree of latitude, upon eight English noblemen. Those were the Earl of Clarendon, the Duke of Albemarle, Lord Craven, Lord Derby, Lord Afhley, Lord Carteret, and Sir ---- Carleton. Thefe noblemen employed the celebrated Locke to frame a conftitution for the colony which they were about to establish. He gave them a constitution, in which the people were divided into nobles and commons; the nobles into landgraves, caciques, and barons. The colonial territory was divided into counties. The first class of the nobility were to posses each fortyeight thousand acres of land; the fecond class twenty-four thousand acres; the third class twelve thousand acres. A fifth part of the whole lands was to be parcelled out among the plebeians. A parliament, composed

pofed of the nobles or their reprefentatives, in conjunction with the reprefentatives of the commons, was to compofe the legiflative body, under the direction of the eight proprietors, who were to form themfelves into a council, in which the eldeft, with the title of Palfgrave, was to prefide. In the year 1667, the first colonists came out hither from England. Within a few years after, there followed fome other emigrations from England, France, Holland, and New York.

This perplexed form of government; the continual wars among the Englifh, French, and Indians; diffentions among the colonifts themfelves, arifing from the exclusive inflitution of the religion of the Church of England; brought the colony, at length, into a flate of fuch confusion and diffrefs, that it was entirely ruined. The proprietors, at the requeft of the inhabitants, now refigned the government of the colony, but not the territorial property, to the Crown of England.

In the year 1729, the King of England bought also the property of the lands, from the feven proprietors, for the fum of twenty-two thousand five hundred and ten pounds sterling; and the province was, by an act of the British Parliament, divided into the two parts of North and South Carolina. Lord Carteret alone chose to adhere, in respect to his part of the property, to the conditions upon which the dominion had been formerly ceded to the government. The two colonies received a charter of constitution, which was much more similar than their former one to the English constitution, and to those of the other American colonies.

Since that time, Carolina, and efpecially its fouthern division, has become continually more populous, more cultivated, and more commercial. At the time of the revolution, it was confidered as being, in wealth, and every other advantage, one of the most important provinces of America.

By its new conftitution, this ftate is divided into diffricts and parifles. The diffricts are nine in number. The conftitution was framed in the year 1790. The legiflature is composed, as in the other states, in a council of seven and thirty members, and a house of representatives of an hundred and twenty-four members. To be qualified for being chosen a member of the council, a man must be thirty years of age, must have refided

relided for five years within the boundaries of the flate, must possifies a clear land-eftate of three hundred pounds fterling, or one thousand five hundred and forty-three dollars revenue, if a refident in the diffrict for which he is nominated; or of twice that value, if he do not refide within the diffrict. The fenators are chosen for the term of four years : but one-half of their number go out of office at the end of every two years. To be qualified for election into the house of representatives, the candidate must be twenty-one years of age, must have been three years refident in the state, must have a clear estate of five hundred acres of land, or ten negroes, or one hundred and fifty pounds fterling, which is equal to feven hundred and feventy-two dollars. If not an inhabitant of the diftrict he wifhes to reprefent, his fortune must then be twice as great. The reprefentatives are elected for the fpace of two years, and go out all at once. To be qualified for the office of governor, a man must be one and thirty years of age, must have been ten years refident within the state, must posses a fortune of one thousand five hundred pounds sterling, or seventeen thousand feven hundred and fifteen dollars, free from debt. The Governor is elected for the term of two years; and, after an interval of four years, from the time of his going out of office, he may be rechofen. The Governor and Lieutenant-governor are nominated by the legiflative body, and both at the fame time. The judges are likewife nominated by the fame body; and their continuance in office is to be during their good behaviour. The commissioners of the revenue, the secretary of state, the commander in chief, the fheriffs, are likewife named by the legiflature; and they hold their offices for the fpace of four years. All charges against members of the legislature, or members of the ftate, are to be produced only before the houfe of representatives. The fenate pronounces sentence. The only punifhment, however, that it can inflict, is deprivation of office, with incapacitation for any future public employment. The courts of justice are more fevere.

Electors must be of the age of one and twenty years, must have been two years refident in the state, and must be proprietors each of fifty acres of ground, or of a building-lot in some town, free from any burthen of

4 C

debt.

debt. If not poffeffed of this property, the elector muft at leaft have refided fix months within the electing diftrict, and muft be a contributor of three fhillings fterling annually to the revenues of the ftate. Alterations in the conftitution can be made only with the confent of two-thirds of the actual members of the two houfes of legiflature; and even after this are not to be carried into final accomplifhment without the approbation of an equal majority at the next fubfequent meeting of thefe bodies. This conftitution confifts of a declaration of rights in ten articles, extremely fimple, and very intelligible.

At prefent, those who are to vote for South Carolina, in the election or the Prefidents of the United States, must be named by the two houses. Those inhabitants of Carolina, who have posseful fillings in different districts, are at liberty to vote in either of them at their pleasure. Every member of the legislative body has an allowance of seven shillings a day from the state.

The law of England is received as the common law as well of Carolina as of almost all the rest of America. Few instances occur of departure from it.

The law for the difpofal of the property of perfons dying inteftate allots to the widow of a man dying without children one half of his eftate; to the widow of him who leaves children to inherit from him, only a third part of his fortune. The children receive equal fhares. In general, however, every man is at liberty to difpofe of his property by will, as he pleafes. He, however, who lives in open concubinage, may not devife away from his wife and children above one-fourth of his property, otherwife his will is liable to be fet afide. Baftards, whofe fathers cannot be difcovered, are brought up at the public charge. But he whom a young woman with child, in fornication, names as the father of her infant, is compelled by law to pay the fum of fixty pounds fterling, or two hundred and fifty-eight dollars, for the fupport and education of its childhood.

There is in Charlestown an establishment for the relief of the poor. It is called a work-house, but no work is done in it. It costs the State the sum of five thousand pounds sterling, or twenty-one thousand four hundred

dred and twenty-eight dollars a year; and feems to ferve only as an afylum for idlenefs. The recovery of debts gives rife to many actions at law, in this ftate. The process is, in these cases, so tedious, and the fentence of the courts fo long delayed, that the bufinefs of an advocate becomes, of courfe, very lucrative. It is faid, that the corruption of the fheriffs, who are eafily bribed, contribute greatly to the prefent delays of the law. These diforders are the natural confequence of the smallnefs of the fortunes of the inhabitants of Carolina, and of their love of expence. Meffrs. CHARLES PINCKNEY, EDWARD RUTLEDGE, PRINGLE, HOLMES, and one or two other advocates, earn, in their offices, each from three thousand five hundred to four thousand five hundred pounds fterling a year, or from eighteen thousand to twenty-three thousand one hundred and forty-one dollars. Eight or ten others earn from ten thousand to twelve thousand dollars, or from two thousand to two thousand five hundred pounds sterling a year. This is a liberal calculation of their gains. Perhaps, they may not always receive the most punctual payment.

ill'

The criminal law of South Carolina is exceffively fevere. The punifhment of hanging and whipping are inflicted in many cafes, in which the governments of Europe use lefs feverity. Death is the punishment for the theft of horses or mules. This severity the people of the country endeavour to excuse by observing, that the horses are commonly left in the fields, and prefent a very strong temptation to these to the unprincipled and needy. But, such local reasons afford no fatisfactory excuse for such atrocious severity. Why should convenience be thus preferred to justice and humanity?

For the theft of horned cattle, the punifhment is only a fine of ten pounds fterling, or if the thief be unable to pay the fine, a whipping of nine and thirty lafhes. Another criminal law of extreme feverity has been enacted against the breaking down of the dyke of the canal that forms a communication between the rivers Santee and Cooper: death is the punishment for this crime. For the fame breaking down of the dykes of two other canals in this state, the punishment is only feven years im-

4C 2

prisonment.

prifonment. The importance of the canal in question can never justify a criminal law of fuch barbarity. Nor is the difference between the utility of the canals here mentioned fufficient, to account in a fatisfactory manner for the differences of punifhment.

It is faid, that the feverity of thefe laws is generally mitigated by recommendations to mercy, addreffed from the juries to the Governor. But, the neceffity of fuch mitigation is a reproach to the laws; as it evinces, that thefe have not eftablished a due relation between erimes and punishments. There is, befides, reason for supposing, that however humane the members of juries, horfe-stealing will more feldom find mercy than murder. In a well-governed state, the only mode of acting towards bad laws is, not by compromises with them, but by reforming them.

The laws refpecting the negroes are derived from an English inftitute of the year 1740. A justice of the peace, with three freemen. of the neighbourhood, examine into, and decide upon, the crimes of. negroes. No defender is allowed to the poor wretch accufed; and his judges have power to condemn him to whatever mode of death they shall think proper. Simple theft by a negro is punished with death ... When the crime is not fuch as to deferve capital punifhment, a justice of the peace, with a fingle freeman, may, in this cafe, condemn to whatever lighter punishment they shall please to inflict. For the murder of a negro with malicious intent, a white man pays a fine of three thousand fix hundred and eighty dollars. If he have only beaten the negro, without intention of murder, till his death enfued, the fine is but one thousand. five hundred dollars. He who maims a negro, puts out his eyes, cuts off his tongue, or caftrates him, pays only a fine of four hundred and twentyeight dollars. In all thefe cafes, the white man is imprifoned till the fine be paid. It is eafy to fee, that a white man can, in fuch cafe, feldom be convicted; as negroes are incapable by law of giving evidence; and no white man will readily offer his testimony in favour of a black, against a perfon of his own colour. A negro flaying a white man, in the defence of his mafter, is pardoned. But, if he do the fame thing, or even but

565

but wound a white man, in the defence of his own life, he will eventually be put to death. A more diligent examination of these laws might discover many other odious things in them.

The moft enlightened people in Carolina fee the neceffity of an alteration of thefe laws; and it is faid, that the next meeting of a new legiflature will take up this matter. I am afraid, that any reform will not be fuch as it ought to be. It fhould feem, that those who mention this fubject are ftrongly impressed with the idea of the necessity of the meafure.

I have vifited the prifons of Charlefton, which, it is afferted, are the beft in the State of South Carolina; they form one fingle building, which is feveral ftories high. The rooms are pretty fpacious and airy, but few in number. Debtors are in a feparate room. Felons, either imprifoned on fufpicion or convicted, are confined with the police-prifoners, and all are treated on the fame footing. They are all in irons; a dreadful treatment, but which is the neceffary confequence of the fmallnefs of the prifon, and of the facility of plotting mutinies. The prifoners are permitted only to walk about in their room; the prifon having no court, where they might take exercife. The jailor is allowed one fhilling a-day for the board of each prifoner, for which money he gives him a pound of bread every day, and meat three times a week.

'n

.

Criminal offences are very numerous in Carolina, and their number is faid rather to increase every year, than to decrease. Thirty-four prifoners were to be tried last fession in the district of Charleston only, which in 1791 contained twenty-eight thousand three hundred and fifty-one inhabitants, and its prefent population comprises from thirtytwo to thirty-three thousand fouls. The negroes have their peculiar courts, and distinct prisons, whither they are fent by fach masters, as chuse not to inflict any punishment themselves, to receive a certain number of lastes. The negroes in the district of Charleston amount to fifty-five thousand; their total number in the State of South Carolina is estimated at one hundred and twenty thousand. At the time of the last computation in 1790, the state contained one hundred and feven thoufand.

fand one hundred flaves, and one hundred and forty-one thoufand nine hundred and feventy-nine white people. Lawyers and judges have informed me, that the white inhabitants of Carolina commit more criminal offences, in proportion to their number, than the negroes. Some mafters may perhaps, from avaricious motives, fhelter their flaves from punifhment, as they receive only one hundred and twenty eight dollars for an executed flave; but this can only take place in regard to crimes perpetrated in the midft of plantations. Few people, affaulted, robbed or injured by the negroes, would refrain from profecuting them, merely to fave their mafters the lofs of one hundred and twenty-eight dollars. The refult of this comparifon is, therefore, clearly in favour of men, for whom the flavery and contempt, in which they live, would powerfully plead, if it were otherwife.

The military regulations, which until 1794 were extremely incomplete, were in that year rendered more perfect. They divide the whole ftate into two parts, one of which comprehends five brigades; and the other, four. The two majors-general, who command the two divisions, and the nine brigadiers, under whofe orders are the different brigades, as well as the adjutant-general, are appointed by the legislature. Each brigade is divided by the commanding officers into as many regiments as the population will admit. The officers are nominated by the regiments, battalions, and companies, to which they belong; but they are promoted in the order of their fervice.

Every male inhabitant, as foon as he has attained the eighteenth year of his age, is apprifed by a non-commiffioned officer, in the name of the captain of the diftrict, that he belongs to the militia. This notice, which is given before witneffes, is the only formality obferved in this cafe. The companies affemble one day every month, and the regiments or battalions two days a year, to go through the exercife. Abfentees, whether officers or foldiers, who have no lawful pleas to offer, are punifhed by a fine, proportionate to their rank, or imprifoned, if they cannot raife the fine. In cafe of a difobedience of orders, heavier penalties are inflicted. Officers, in cafe of mifconduct, are tried at the inftance of the Governor,

567

nor, by a court of enquiry, confifting at leaft of three members, one of whom muft hold the fame commiffion as the offender, who, if he chufe, may demand a court-martial.

All white apprentices or fervants muft be armed and equipped by their mafters, who are refponfible for them to the courts-martial. For every fault they commit, in regard to the military fervice, they are obliged to terve their mafters a fortnight beyond their time.

The brigadiers are at the fame time infpectors of their divisions, for which they receive two hundred and fifteen dollars, in addition to the pay attached to their rank. The commanders of battalions are bound, on the first notice of disturbances having broken out in the province, to affemble their corps, and immediately report to their fuperiors the reafons, why they have done fo. In cafe of danger of an attack, or a confiderable revolt, the military are obliged to fire three mufket-fhots as a fignal, which is repeated by all who hear it, and upon which every officer must affemble his men at the appointed rendezvous. The Governor is invefted with the right of affembling the troops on all occasions. If they are obliged to march beyond their ufual places of rendezvous, they receive the fame pay as regular troops, and the fourth part of each company remain armed in the diffrict for the patroling fervice. The foldiers are allowed to find able fubftitutes, who may march in their ftead, but no one can be exempted from the patroling fervice. In cafe of an inturrection, the officers poffers a diferentionary power of making the best use of arms, ammunition, and veffels, wherever they find them. The Governor, or in his absence the Lieutenant-Governor, has the right of mitigating or annulling the fentence of a court-martial. The fines are applied to the purchase of arms for the use of the companies, in which they happen to be levied.

These are the chief articles of war. General Pinckney, brigadier and inspector of the first division, is an officer of great merit; he devotes all his time and attention to the fervice, and derives much additional authority from the confidence, and respect, which he universally enjoys. The regulations for the exercise are distinct and good; but the militia are, upon the

the whole, badly armed, and fome of them have no arms at all. The ftate has few or no cannon, no powder magazine, and no balls. A law was enacted in 1795, ordering two thoufand mufkets, thirty-fix cannons, five hundred brace of piftols, five hundred fwords, and twenty thoufand pounds of gun-powder, to be provided. Thefe finall flores, which are bought by command of the Governor, will not be completed for fome years. This abfolute neglect of all means of defence is common throughout America; and If you mention it to men of property, moft of them will return in anfwer—" America was ftill more defitute of every thing at the commencement of the Revolution." This anfwer is pleafing enough, as it befpeaks the fame energy which America difplayed in the war of the revolution; but to provide proper means of defence is by no means inconfiftent with energy.

The taxes in South Carolina are affeffed on lands, poffeffions in the towns, and monied capitals, employed in trade, banks, or otherwife. Free enegroes, as well as flaves, pay a capitation, in regard to which all men or women of colour are effecemed negroes.

The land is divided by the law into nine claffes, from the rice-fwamps, which are watered by the flood, to the foil which, in the general opinion, admits of no cultivation. According to this gradation the land is rated from twenty-fix dollars down to twenty cents the acre, and pays onehalf per cent. The poffeffions in the towns, and monied capitals, are affeffed in the fame proportion. Free negroes from fixteen to fifty years of age pay a poll-tax of two dollars each, and flaves of whatever age or fex one dollar. Carriages kept for amufement pay three-fourths of a dollar for each wheel.

The tax-gatherers are appointed by the legiflature, and continue in place, until they obtain their difiniffal. Thefe officers of the ftate are bound, in general, to find fecurity for the fum of four thoufand two hundred and eighty dollars, and thofe of Charleston for forty-two thousand eight hundred dollars. On a notice from the tax-gatherers, all the inhabitants must make a declaration upon oath of their taxable property in land, town-fhares, flaves, and carriages. A falfe declaration fubjects to a penalty

penalty of five times the amount of the fum concealed, and in cafe of a declaration being refufed, the collectors make out an eftimate, and the defaulter pays double his fhare of taxes. In cafe of any inhabitant thinking himfelf aggrieved by the affeffors, he is bound to declare his whole property, and is believed. Thefe affeffments are, however, generally fpeaking, very moderate, as on the largeft property they fearcely amount to five hundred dollars.

The tax-gatherers transmit to the treasurers of the flate (one of whom is appointed for Upper Carolina and another for Lower Carolina) the lifts of the inhabitants then taxed, as well as of those who have refused to make their declaration, and a general table of the amount of the taxes. These lifts and tables are fluck up in the chief places of the district, and every perfon, who pays not his taxes according to the lifts within ten days after their publication, may be profecuted and confined. Taxes must be paid in preference to all other debts. The inhabitants may chuse the parish, where they intend to pay. The collectors are in general allowed five per cent on the amount of their receipts, but in Charleston only one and half per cent.

ee

10

T

These taxes are adequate to the expenditure of the flate, which in the year 1797 amounted to one hundred and twenty thousand three hundred and eighty-eight dollars. But delays, inconveniencies, and confiderable deficiencies, frequently arise from the circumstance, that the collectors and affestions are the fame perfons, that no checks upon them are kept, and that the inhabitants have the right of paying their taxes in which parish they chuse.

The roads in South Carolina are kept in repair by the negroes, who are obliged conftantly to work at the roads, which border upon the plantations to which they belong. White people, who have no flave, muft do the work themfelves. The ftate pays the expence for all public buildings; of confequence there exift no county-rates. The poor are fupported by a tax on flaves, and on white people who have none. Town-rates are levied on the fame principle; in Charlefton they amount to fix thoufand four hundred and thirty dollars. This town

4 D

raifes

raifes nearly two thousand dollars a year by licences for felling wine and brandy.

The public debt of South Carolina is of two forts. One part of it was contracted at the time of the revolutionary war, to meet the expence caufed by it, and which the Union has taken upon itfelf, under the name of the general expence: the amount of this debt is from one million and one hundred thousand to one million and two hundred thousand dollars. The Union pays to the ftate feven per cent on this debt, until it be difcharged, and this interest it pays again to its creditors, and acts, therefore, merely as a depositary or trustee. But in case of the state paying any part of this debt, the Union remains neverthelefs its debtor, for inftance, if the ftate fhould fell land, to pay fuch debt. It claims at prefent the fum of one hundred thousand dollars for forts, erected on the Indian frontiers, and other expences, relative to thefe works of defence. If this claim should be admitted, as probably it will, the money will be expended for the fame purpofe, but without leffening the debt of the Union; the interest or capital paid by it will ferve to ease the burthen of the taxes, or be employed for fome other useful purpose in the state. The reft of the public debt is that, which, although for the major part contracted during the war and on its account, has not been acknowledged by the Union as a general debt, and remains therefore at the charge of the ftate. Its amount was from two hundred and fifteen to two hundred and twenty-five thousand dollars, but it has been paid off to the fum of one hundred and ten or twelve thousand dollars. A tax of a quarter of a dollar on every negro, and fome other imposts on distilleries, tobacco, &c. are appropriated to the payment of this debt, ten per cent being yearly paid of the capital. The whole debt will be difcharged in ten or twelve years, and these taxes cease accordingly. The fum which yet remains due originates merely from a frigate, and was contracted under the following circumstances.

In 1778 or 1779, Commodore GILLON, of Carolina, being commiffioned by South Carolina to procure a frigate, proposed to the Prince of Luxembourg, to deliver a ship of that description. The bargain was concluded

concluded in this manner, that for the expence incurred by fitting out this frigate, the Prince was to have a fourth of the neat proceeds of all the prizes taken by the ship, and in case of her being taken, the whole value of the frigate. She was built in Holland, and mounted forty-cight guns. Some months elapfed, before the could be of any fervice, becaufe the Prince engaged the crew in France. At length the put to fea, and took feveral prizes, but was afterwards taken off the American coaft, and, as the Prince afferted, through Gillon's mifconduct, whom he charged with having furrendered her to the English for a confiderable fum of money. The flate acknowledged a debt of thirty thousand pounds fterling, all the prizes being previoufly deducted, in addition to the fixty thousand pounds sterling which the Prince had already received. After the death of the Prince his heirs fent Dr. CUTTING, an American, one of the phyficians of the army, to facilitate the payment of that fum. The Marshal de CASTRIES, from an opinion, that the frigate had been built for French money, that the Prince had only acted as a fecret agent of France, who wifhed to affift America, before the had publicly declared herfelf in her favour, claimed this debt, as being the property of the royal treasury. The French conful opposed therefore in 1795, the claim of the Prince's heirs, adding, that even in the cafe of its forming a lawful demand of the late Prince, it was now efcheated to the French Republic; all his own eftates, as well as those of his heirs, having been confiscated on the ground of emigration. The payment is, therefore, deferred, and the state of Carolina, which has the money ready, is only waiting for the fentence of a competent judge, as to the perfons to whom the is to pay the debt. In the meanwhile Mr. Cutting has received from the flate four thousand pounds sterling, the amount of his difbursements, on condition of refunding this fum, if the law-fuit fhould be decided against the heirs.

The ftate of South Carolina pays its officers better, than any other ftate of the Union. The Governor's pay is two thousand feven hundred and fifty-two dollars; the Chief-juffice has three thousand three hundred; the other judges two thousand five hundred. This pay being 4 D 2 nearly

nearly equal to that paid by the Union, is the reafon why, in Carolina, places under the Union are not eagerly fought after.

South Carolina was reduced to the utmost distress by the devastation of her poffeffions by the English, and the entire stagnation of her trade. The utmost fcarcity of species prevailed throughout the state, and this was the reafon why neither any public or private debt was paid. From thefe confiderations the legiflature refolved, in 1785, to introduce paper-moncy, opened for this purpose a loan for one hundred thousand pounds sterling, for five years, and paid in paper-money double the value of the gold, filver, and other precious effects, which were deposited by the creditors. This money was received by the treasury of the ftate in payment of old debts as well as of taxes. If the borrower did not, at the appointed time, reimburfe the fum borrowed, together with the annual interest of feven per cent, the effects deposited were fold for the benefit of the state, until the entire difcharge of the debt. This fort of loan, which was to cease in 1791, has been prolonged until 1801; and the interest is employed for the fervice of the ftate, to make up any deficiency which may take place under the head of taxes. This paper-money, which no law forced into a compulfory circulation, was fo frequently offered in the courfe of private transactions, that it could not be refused. It fuffered a depreciation of twenty per cent, but at prefent it is fcarcely below par, except in purchasing foreign bills, when it is at ninety-nine per cent, otherwife it is at par with bank notes and fpecies.

To two banks, inftituted in Charleftown three or four years ago, is chiefly to be attributed, that a period has been put to this depreciation of the paper money, and all commercial operations are now carried on with greater facility; the moft fubftantial houfes were formerly obliged to pay five per cent intereft a month for hard cafh. This is more or lefs the cafe in all the trading towns of the United States. It is yet very common for planters to borrow money on mortgage at the fame, nay, higher intereft. This may, however, in part be occafioned by the general fearcity of fpecies, and, in peculiar cafes, from the circumferibed fortunes of the planters,

planters, perhaps alfo from their prodigal mode of life, by which they are obliged to refort to fuch refources.

This notorious fearcity of money, as well as the poverty to which the inhabitants of Carolina were reduced by the defolation of the English, induced the legislature in 1788 to grant the debtors an indult for five years, on condition of their paying yearly a fifth part of their debt, and giving fecurity for the whole.

In South Carolina there are two banks. One is a branch of that of the United States. Its feat is at Philadelphia, and its capital belongs to that of the chief bank. It was inftituted in 1790, and is managed in the fame manner as all the other branches of that bank. The dividend is at prefent one half per cent.

In 1792 another bank was eftablished by feveral merchants of the town, under the name of the South Carolina bank. The capital confifted at first of two hundred thousand dollars, or five thousand shares of forty dollars each; but the following year it was increased to three hundred thousand dollars, by two thousand five hundred new shares. Last March it was raifed to five hundred and twenty-five thousand dollars, by five thousand new shares, of twenty-five dollars each. Those new shares were raifed five dollars on very just grounds, fince the holders of the new fhares participate in the benefits arifing from the dividends not yet paid. This bank is not yet incorporated; the fecurity of the ftockholders, and of those who accept their notes, depends therefore entirely on the capital of the bank, and on the private property of the directors, as far as it is known. It will be incorporated, it feems, during the next feffion of the legiflature. This bank regulates the dividends every three months. In the years 1792 and 1793, thefe amounted to nine per cent; and in 1794, 1795, and the first fix months of 1796, to fifteen per cent. The directors alfo flate, that they have kept back and laid by fixty thoufand dollars out of the profits. The bank transacts business in the fame manner as the other banks in America, but it is faid to have exceeded, in the circulation of its notes, that proportion to its capital, which prudent directors of a bank altry band on any man i lider

bank generally obferve. But fuccefs has juftified the management of the directors, as its credit is at prefent more firmly eftablished than ever. The increase of the capital stock enables the direction to enlarge the business of the bank, without overleaping the bounds of prudence; and the capital is intended to be increased to one million of dollars within two years.

The inflitution of thefe two banks has been attended in Carolina with the fame effects, which banks generally produce in all trading countries; nay, the refults have been rather more beneficial in this country, becaufe the fearcity of money was here uncommonly great. Trade and commerce have been greatly enlarged by means of the money advanced to the merchants, and by other circumftances. The trade to India, in which Charleftown yearly employs fome fhips, has been increafed, and agriculture raifed by fums of money advanced to diffreffed planters, whofe fettlements would otherwife have been fold. The bank has alfo affifted the company of the Santee-canal with confiderable fums, and thus promoted this work, which is generally deemed highly important for the agriculture and trade of South Carolina. Its notes circulate alfo in Georgia.

Few planters poffefs any confiderable fortunes, excepting a Mr. Bligh, who refides in England, and is proprietor of fome very fine and valuable plantations in South Carolina. He has from twelve to fifteen hundred negroes, and raifes yearly from three thoufand five hundred to four thoufand five hundred barrels of rice. They feel yet the confequences of the war, though in a lefs fenfible degree ; most of them are ftill involved in debt, and owe confiderable fums to merchants, either for negroes, fince the time when it was ftill lawful to import them into Carolina, or for the yearly fupplies of their plantations with provision, for which the harveft is intended as a fecurity, without being at all times applied to the payment of their debt. Speculations in the public funds form alfo a confiderable branch of commerce to those who fpeculate with judgment and prudence. The ftocks of the Union are, from the fearcity of money, always at a lower price in Charleftown than Philadelphia.

In 1788 the importation of negroes into Carolina from Africa was prohibited. This prohibition was occasioned by the debt, which the plant-

ers

ers had contracted ; and by the neceffity under which the legiflature found itfelf, to fecure the payment of it by postponing the instalments, and to prevent the opening of a new fource of debt, before the old was difcharged. The prohibition extended only to 1793, but was afterwards enlarged until the end of 1796; it has however always met with ftrong opposition on the part of the planters, which increases in proportion as their eftates are cleared of debt. It expires on the 1ft of January, 1797. Violent debates are expected, but the friends of the prohibition are likely to prevail, efpecially as the demand of Carolina indigo has decreafed, and the back country, which produced a confiderable quantity of this article, and for this purpose stood much in need of negroes, now needs them less for the culture of Indian corn, wheat, and tobacco, which has pretty generally been substituted in the stead of indigo. As to the confequences of this prohibition, it is allowed, on all hands, that the negroes, who were formerly treated with great cruelty, have fince experienced a much milder treatment. The negroes are fold in the market of Charlestown like bullocks and horfes; the day of the intended auction being previoufly advertifed in the newspapers. They are exposed to fale on a fort of stage, turned about, and exhibited, from all fides, by the common cryer, put up and adjudged to the higheft bidder. This spectacle, which is offered four or five times a week, renders the fpectators callous. Population, which in well managed fettlements, increafes in the proportion of fix per hundred, cannot in this state be averaged higher than at two per cent. A negro, who works well, cofts from three hundred to three hundred and fifty dollars, a common negro two hundred dollars, and a common negrefs from one hundred to one hundred and fifty dollars.

South Carolina is divided by nature into two parts, Upper and Lower Carolina. Along the coaft, and more than one hundred miles weftwards, the country is flat and level. Here are the fwamps, partly formed by the tide, which are called *tide-fwamps*; and partly watered out of large refervoirs, which being at a greater diftance from the fea than the former, are known by the name of *inland-fwamps*. About one hundred miles behind them the country fwells into hills, and rifes in progreffive gradation, until

until at length it terminates in the Alleghany Mountains, which feparate the waters that fall into the Atlantic Ocean from those which discharge themselves into the Miffifippi.

From this natural division of the country arises a twofold mode of cultivation. In the low country rice is cultivated, and the neceffary corn for the fubfiftence of the negroes. The land, fituated between the fwamps, which feems fandy, and bears nothing but pines, might be fown with corn, but it remains uncultivated from want of hands.

The iflands along the coaft of South Carolina, and even fome tracts of the coaft, were, until thefe late years, entirely devoted to the culture of indigo; but cotton is now cultivated in its room. In the upper country, where the cultivation of cotton alfo begins to gain ground, tobacco is raifed, together with all fpecies of grain. The most opulent planters only refide in the lower country; people of lefs property, or of no property at all, live in the upper country, where they endeavour to raife a fortune by clearing land, which is generally fold them, on credit, for one or two dollars per acre, and which they may eafily fell again for four or five times as much, after they have cleared the ground, and paid the purchafe-money out of the produce of the first years.

The climate in Lower Carolina is warm, damp, unfettled, and unhealthy. The inhabitants fuffer feverely, every autumn, from malignant, bilious fevers, which cut off great numbers; even they who are moft accuftomed to the climate cannot preferve themfelves from fome fits of the fever. In the upper country the climate is lefs warm, more dry, and, of confequence, more healthy. As to the back country, no meteorological obfervations can be given, as the very ufe of the thermometer is there utterly unknown. In regard to the lower country, they are very regularly taken in Charleftown, by the Medical Society of that place, which was inftituted in 1791. Since that time the mercury fell but once under twentyeight of Fahrenh. In the year 1752 it was at eighteen of Fahrenh. By thefe obfervations the higheft degree of heat was, in 1701, ninety of Fahrenh. (twenty-five feven-ninths of Réaum.); 1702, ninety-three of Fahrenh. (twenty-feven one-ninth of Réaum.); 1703, eighty-nine of Fahrenh.

the state of the state

(twenty-five one-third of Réaum.); 1794, ninety-one of Fahrenheit (twenty-fix two-ninths of Réaum.); and 1795, ninety-two of Fahrenheit (twenty-fix two-thirds of Réaum.). In 1750, the thermometer ftood at ninety-fix of Fahrenheit (twenty-eight four-ninths of Réaum.); 1751, at ninety-four of Fahrenheit (twenty-feven five-ninths of Réaum.); and in 1752, at one hundred and one of Fahrenheit (thirty and twothirds of Réaum.)

The higheft degree of cold was, in 1791, twenty-eight of Fahrenheit (one feven-ninths under nought of Réaum.); 1792, thirty of Fahrenheit (eight-ninths under nought of Réaum.); 1793, thirty of Fahrenheit (eight-ninths under nought of Réaum.); 1794, thirty-four of Fahrenheit (eight-ninths above nought of Réaum.); and 1795, twenty-five of Fahrenheit (three under nought of Réaum.); in 1751, the thermometer ftood at twenty-three of Fahrenheit (four under nought of Réaum.); and in 1752, at eighteen of Fahrenheit (fix two-ninths under nought of Réaum.).

The temperature of fpring-water, in Charlefton, is fixty-four and half of Fahrenheit, and, confequently, twelve degrees warmer than in Philadelphia. Rain-water, kept in cifterns, is one degree and half warmer than in Philadelphia. These observations have been communicated to me by Dr. RAMSAY, Vice-president of the Medical Society; and I have been affured, that they are exact.

The great quantity of land, which has been cleared within thefe laft forty-fix years, and is now under cultivation, cannot but have produced confiderable changes in the climate, yet no certain opinion can be formed on thefe obfervations, which have only been taken thefe laft five years paft, prior to which none had been made fince 1752. The fudden alterations in the thermometer at Charlefton are very confiderable; and although, by the affertion of the Medical Society, they are lefs fo than formerly, yet, by their own obfervations, they are fufficiently important. Thus, for inftance, in 1793, on the 28th of October, the mercury fell from feventy-four to thirty-feven of Fahrenheit (from eighteen twoninths to two three-ninths of Réaum.); confequently thirty-feven degrees in the courfe of one day. In 1751, on the 1ft of December, the 4 E mercury

mercury fell from feventy to twenty-four of Fahrenheit (from fixteen two-thirds above to three five-ninths under nought of Réaum.), or fortyfix degrees.

Winter is, in Charleston, the most pleasant feason. At the feverest frost the foil freezes fearcely two inches deep, and the frost continues not three days. Yet the intense heat of the summer renders the human frame so fensible to cold, that, in Charleston, five or fix months together, they keep fire in the rooms; and that, to the best of my information, one family uses more wood in that town, than two families in Philadelphia.

North-wefterly winds prevail in Charlefton in winter, and fouthwefterly in fummer; for which reafon, and in order to procure as much frefh air as poffible, houfes are generally built fouthwards, in preference to all other pofitions.

It rains much in South Carolina; at times a drought will happen, which continues three months, and then is followed by a fall of rain for three weeks, or a whole month. By the observations of the Medical Society, the rain, which fell in 1701, amounted to ninety-fix inches, in 1792, to eighty-eight inches, in 1793, to one hundred and fourteen inches, in 1794, to one hundred and eighteen inches, and in 1795, to feventy-one inches.

Although Charlefton ferves as a place of refuge to the cultivators of rice, yet it is not free from autumnal fevers; intermittent and bilious fevers, the epidemic diftempers of this country, are not unfrequent in this town. The warmth of the blood, increafed in South Carolina by the ufe of wine and fpirituous liquors, engenders a difposition for inflammatory diftempers, which manifest itself in fummer. Confiderable numbers were cut off by the fever in 1702 and 1704. The yellow fever, it is afferted, raged with great violence fix times between the beginning and the middle of this century, but has not made its appearance fince 1748. Some phylicians are, however, of opinion, that the fever of 1702 and 1704 had feveral fymptoms in common with the yellow fever. However this may be, it has at least, fince the fever of 1703, in Philadelphia, shewn itfelf every where; and it is a circumftance peculiarly remarkable, that the malignant difeases, which carried off fuch great numbers in New York and Philadelphia,

Philadelphia, fpared foreigners, and efpecially Frenchmen, in those places; while, on the contrary, in Charleston, they frequently fell victims of these cruel maladies. Upon the whole, however, Charleston is supposed to be far more healthy than any other place; and its falubrity is likely to increase, according to refearches and observations made by the physicians.

The police of Charlefton is extremely deficient in those measures, which should not be wanting in any populous town, fituated in so hot a climate. Cleanlines in the streets, as well as houses, is greatly neglected. Offensive smells are very frequent; several burying-grounds are in the midst of the town, and carcases are frequently suffered to lie uninterred. A bird, which in point of plumage and shape is much like a turkey, and is known in the country under the name of *turkey buzzard*, foon devours the carcase, and merely leaves the bones; but the voracity of this bird cannot excuse the indolence of the police. It is very common all over South Carolina, and, in some measure, worshipped by the inhabitants of the town. No law, it is true, has been enacted, which prohibits to kill this bird, but the public opinion, nevertheles, carefully attends to its prefervation.

Meafures tending to avert or indemnify loss by fire are equally neglected. Three-fourths of the buildings are conftructed of wood; and the few which are built of ftone, are roofed with fhingles, though numerous tile-kilns are in the vicinity of the town. It would be extremely eafy, and, at the fame time, highly prudent, to introduce a fafer mode of building, at leaft in regard to fuch houfes as are either new built or thoroughly repaired. From the conftruction, which has hitherto prevailed, and the heedleffnefs of the negroes (whofe number amounts to thirteen or fourteen thousand) conflagrations are very frequent in this town. During the time of my refidence, feventy-feven houfes, forming a whole fquare, encircled by four ftreets, were burnt down to the ground, without one fingle building having been faved. Shortly after my departure another fire broke out, which was still more dreadful. The regulations, relative to the extinguishing fires, are as bad as the measures to prevent it. Every one haftens to the fire as a looker-on. There are none who command, and and the states 4 E 2 and bernul one enclosed out and

5.79

and none who obey, either at the fire-engines, which are not only few in number, but also in a very bad condition, or at the demolition of buildings, by which a fire might be prevented from fpreading farther. The negroes alone are employed to extinguish the fire, with the addition of few whites. They work with zeal and spirit, but without much use, from want of a proper direction. What a contrast between this confufion, and the regular activity obferved in fuch cafes in the northern states, where every inhabitant is member of a fociety, formed for this benevolent purpose, and hastens to the fire with two leather buckets, which are to be kept by every house. The fire-engines are attended by men, who understand the business, and work them with the utmost zeal and judgment. The leather buckets with water pass without interruption from hand to hand, along a row of men, drawn up from the house on fire to the engine.

So far from any free-schools existing in the townships of South Carolina, as in New England, there are not even fchools where children can receive inftruction for money. In hopes of earning a comfortable livelihood, inftructors now and then establish themselves in the most populous towns and villages. Two or three fchools, where the inftruction is extended beyond reading and writing, have been inftituted in South Carolina; three colleges have also been formed by the legislature within thefe last three years in Charleston, Columbia, and Beaufort, where education is to be finished. The inhabitants of South Carolina formerly fent their children either to the colleges in the northern ftates, or to England; but now they begin to difcern, how pernicious it is, to fend children to fo great a diftance from their parents, at an age when they have so much need of their care and advice, and to expatriate them during a period, in which all their habits, fentiments, and feelings are formed, and when they frequently adopt principles and manners, altogether different from those of the country, in which they are to refide for life, nay fometimes diametrically opposite to the customs of their native land. It is on these grounds that the legislature has refolved to inftitute three colleges, which, however, are not yet finished. That of Charleston, which begins to exercise its functions, is not completed. From the small number of masters, the fcholars are hurried through the course of their studies, fo that a youth,

youth, fcarcely fifteen years old, has gone through all the claffes. He has thus finished his studies at a time, when he should spend three or four years more to complete them, and engages in the business of life, unfurnished with any means of defence against the depravation of morals, with which he is threatened in South Carolina. These inconveniencies may perhaps be redressed ; but nothing has yet been done in South Carolina to provide means of instruction for the multitude, nor are the inhabitants feemingly aware of the necessity of providing them.

No manufactory has hitherto been eftablished in South Carolina, excepting a few corn-mills in the back country, which have been conftructed on principles so very indifferent, that they cannot furnish any flour for exportation, but merely grind fufficient corn for the confumption of some families in the lower country. The opulent inhabitants of Charleston, as well as rich farmers, use only the flour of Philadelphia or Baltimore. A mill, built near Camden, one hundred and twenty miles from Charleston, after that erected at Brandywine, begins at prefent to furnish good flour.

In different places of this flate tile-kilns have been erected, which yield their proprietors a confiderable profit. The tiles coft eleven dollars a thoufand.

Although Carolina is furnished with live oak, cedar, cyprefs, and pine, in fhort with the best timber in the utmost abundance, yet not ten ships are built in the course of a year, and these only by workmen of the northern states, as industry lies yet dormant in Carolina, and the merchants find it more profitable to purchase their ships in the north, or to get them built there of timber, sent thither from Carolina.

The price of fhips, completely fitted out and ready for fea, is at prefent feventy-feven dollars a ton. In Beaufort or Georgetown they are about feven or eight dollars cheaper: and in time of peace they coft in general a third or fourth lefs than in time of war. Iron and great quantities of hemp are drawn from Sweden and Ruffia, though the latter article is already cultivated in tolerable quantities in the back country. Their fail-cloth comes from Bofton or England.

A fhip,

A fhip, conftructed of Carolina timber, is extremely durable, if it be repaired in time; the price of oak timber is thirty-two cents of a dollar the cubic foot; oak planks, fix feet in length, half a dollar; fir timber, four dollars the hundred cubic feet; mafts, from eighteen to twenty inches diameter, and from fixty to feventy feet in length, from forty-four to forty-eight dollars. You feldom meet with any of a large fize. The fouthern pine, from its great weight, can be ufed only for lower mafts. Cyprefs planks coft two dollars and half; fir, two dollars. Carpenters' wages are, for white people, two dollars and half, and for negroes one dollar and half a day.

The market of Charlefton is, generally fpeaking, but very indifferently fupplied with provisions. Butchers' meat is in general very bad from the heat of the climate, and from the feed of the cattle, which are turned into the woods to graze. In winter, the bullocks, which are defined for the market, are fed with the ftraw of Indian-corn. This beef is fomewhat better; but not fo good as in the north. Since a great many families have migrated hither from the French Weft Indian iflands, who fubfift upon gardening, good culinary plants and roots are more frequent than formerly.

The price of beef is one-eighth of a dollar the pound, mutton and veal one-fourth of a dollar, flour from the north twenty dollars a barrel, and Carolina flour fifteen dollars. Salt is imported from Turk's Iflands, Portugal, or England, and cofts one dollar a bufhel; fire-wood, without any diftinction, is five dollars the cord. Houfe-rent amounts, upon an average, to three hundred dollars; there are houfes for which thirteen hundred dollars a year are paid.

The abovementioned Medical Society is the only fcientific inflitution in South Carolina. It was eftablished five years ago. Several members feem anxiously defirous of rendering it useful. But indolence and inactivity prevail in this country in fuch a degree, that there is reason to doubt the extent of their exertions, until the results shall show, that it was fufficient to produce any beneficial effects. This indolence in regard to science is a matter of severe reproach against all the states of the

the Union. But on confidering their finall population, and the profitable employment in which the major part of those inhabitants are engaged, who poffers the largest share of knowledge and information, we shall find little reason to wonder, that the sciences make fo flow a progrefs in this infant country. But a circumstance, well qualified to excite aftonishment, is this, that the different literary focieties, which under a variety of names have been formed in the United States, have not yet adopted any means for diffusing the knowledge of useful machines. of agricultural improvements, &c. as for this purpofe it would be fufficient to translate certain articles of European books or journals. Again, it is a matter of furprife, that these focieties should not correspond, and communicate to each other their observations on epidemic diseafes, on the most proper treatment of them, fanctioned by experience, on the beft preventatives, and many other fubjects of great national importance, which might fo eafily be done in the United States. These focieties are alone able to effect this useful purpose ; and were they composed of members as deeply learned as those of the Royal Society in London, and of the Academy of Paris, this profound erudition would prove perfectly ufelefs. for a confiderable length of time; that is, as long as America shall only ftand in need of that plain and fimple inftruction, which is fo indifpenfably neceffary to the profperity of the country, and the prefervation . of the inhabitants.

Phyfical and meteorological obfervations, carefully taken in all the United States, could eafily procure information of a certain defcription, namely, fuch as concerns the influence of the fudden clearing of wood lands on the temperature, falubrity, and unfettlednefs of the weather, and on the change of the wind, which is fo effentially important for the fciences and the interefts of humanity.

A library has been formed in Charlefton, and is fupported by the voluntary contributions of a great number of the inhabitants. It was burnt down to the ground at the time, when the Englifh were in poffeffion of the town, and has fince been confumed again by fire. This library, which is not yet very large, confifts of well-chofen books, and is yearly encreafed

encreafed by purchase as well as donations. Although the fubscribers, by the fubfifting regulations, enjoy but a very limited right of making ufe of the books, yet they, who wish it, can easily obtain them. The rooms of the library contain fome very good prints, and curious machines. You also find there bones of an extraordinary fize, which were found on digging out the canal of Santee. They confift chiefly in bones and jaws, much of the fame fize and fhape, as those which are found in feveral parts of America, fuch as Kentucky, the banks of the Ohio and Miffouri, and the north-western territory; they are, it is supposed, bones of the mammoth, an animal which feems fabulous to the learned, fince none of that fpecies have hitherto been found in any part of the globe. In the opinion of fome they are elephants' bones, and their existence in America is explained according to Buffon's fystem. But many of these bones exceed in fize those of elephants. Shin-bones have been found of ten inches in diameter, and teeth upwards of two feet in length. I have feen one, to which the lower part of the jaw was yet joined, and which weighed upwards of fifty pounds.

Charlefton is full of Frenchmen from St. Domingo, and of commanders of privateers. Some of the former have brought money with them; at leaft they have not all fpent their fortunes; and many earn a livelihood by letting negroes, whom they brought from St. Domingo. The French planters and commanders of privateers differ widely in their political opinions; but the love of gaming reconciles them all, and in the French gaming-houfes, which are very numerous in Charlefton, Ariftocrats and Sans-culottes mix in friendly intercourfe, and indiferiminately furround the tables. It is afferted, that they play very high.

The principles of the French demagogues predominated long in Charlefton. For feveral years a Jacobin club exifted in this town, of which Mr. HARPER, at prefent a violent Federalift, was member. The French conful MANGOURY, predeceffor of the prefent conful, was a conftant member of this club. But, although he was conful and agent of the French nation, and prefident of the club, yet he was denounced by a common feaman on

on account of his uncivic conduct, and was obliged to fubmit to the humiliation of hearing his exclusion proposed by the daring feaman, which motion, however, fell to the ground, through the eloquence of a barber. At the alteration of the French conftitution this club fhared the fate of all other Jacobin meetings; at the time of its diffolution it confisted entirely of Frenchmen, all the Americans having withdrawn prior to that event.

Among the emigrants from St. Domingo Dr. POLONY holds a diffinguifhed rank. He poffeffes an uncommon flock of profound learning, and is member of feveral literary focieties in Europe. Repeated travels in the northern and fouthern flates, and his extensive information, enabled him to communicate to the Academy of Paris a great variety of useful obfervations. As naturalift and chemift, he was peculiarly effecemed by Count Buffon. He has a complete work on St. Domingo ready for the prefs; the little I have read of it, appeared to me replete with found argument and luminous philosophical difcuffion. In regard to what he fays on the diftempers incident to hot countries, I am no competent judge; but it feems to contain a great variety of profound refearches, and keen, elaborate obfervations.

1 met in Charleston with a school-fellow of mine, Mr. de la CHA-PELLE, a man of uncommon worth, and of the noblest and most generous mind. He has faved no more than fifteen hundred Louis d'or; and yet from his frugal mode of life he is able to do much good to others, by whom however his kindness is frequently abused.

## GOOSE CREEK.

During my refidence in Philadelphia in the winter of 1795, I promifed Mr. ISARD to pay him a vifit at his country-feat, if I fhould ever come to South Carolina. He was member of the Congress at the time, when the conftitution was framed. Since the beginning of the revolution, when he entered on his political career, he has constantly performed his functions with that honesty, zeal, and diffinterestedness, which form the con-4 F fpicuous

fpicuous features of his character. His private concerns, which had feverely fuffered from the devaltations of the English, were still more deranged by his long absence, and his family is very numerous. From these motives, as well as from his love of a retired life, he refigned his fhare in the administration of public affairs, from which neither honour nor profit can be derived in this country. He fettled accordingly in South Carolina, where he intends to fpend the remainder of his days, partly in the country and partly in town, furrounded by a numerous family, by whom he is evidently loved and refpected. He is a fincere and zealous partifan of the federalist fystem, which is far from being popular in South Carolina. But they who differ from him in opinion on this fubject, at the fame time do justice to his character; and having travelled much in Europe, the information he possefies is of a more pleasing cast, than is generally acquired by Americans. His lady, who is univerfally refpected in the country, poffeffes a cultivated mind; fhe is amiable and polite, and has paffed fome years in Europe with feveral of her children.

The eftate of Mr. Ifard confifts almost entirely of rice-fwamps; he owns three or four plantations, very conveniently fituated for that purpose, and by all accounts well managed; his flaves amount to five hundred. His mansion is, properly speaking, only a country-house, built by his great grandfather, who arrived from England at the time, when the first fettlements were formed in this country. It is very feldom that eftates continue here fo long in the fame family, as from a natural propensity to change, the barter of eftates is common among the inhabitants of Carolina.

This fettlement, which Mr. Ifard has named Elms, from a fine plantation of elm trees, which he planted himfelf, contains about fourteen hundred acres. He cultivates only three hundred, and keeps on this effate from twenty-five to thirty negroes. Indian-corn, barley, and potatoes, are its ufual produce. A fwamp of about one hundred acres is well fituated for the culture of rice, and is already in part applied to it; he is now bufied in felling the remaining trees, to devote it entirely to this purpofe.

I have feen here the commencement of the process of clearing. The part, deftined for the culture of rice, is furrounded with a wide ditch; the earth, dug out of the ditch, ferves to raife a dike, which on one fide has one or two openings, fhut up by locks, to let the water on the rice-field, fome being conftantly kept in a refervoir on more elevated ground for this purpose. Were it not for this dike the water would inundate the fwamps at certain periods of the year, and fweep away the rice, which has just fprouted. When the ditch and dike are finished, the trees are cut down, but stumps are left in the ground as high as in the northern fettlements. The fmall branches are burnt, the foil is fomewhat loofened, and the rice planted amidft thefe large trunks of trees, which are not burnt or cut into fire-wood till fome years afterwards. Mr. Ifard has affured me, that the produce of the first and fecond year, notwithstanding the trunks of trees thus partly covering the foil, is equal to that of any other ground, no part of which has been loft. This is the method of clearing the ground, univerfally obferved in America. The produce of the culture of rice, as variable as that of any other branch of agriculture, fluctuates between two and four barrels per acre; Mr. Ifard obtains three; the barrel weighs fix hundred and twenty-five pounds. Mr. Ifard's land yields from fifteen to twenty bufhels of Indian corn, and one hundred bushels of potatoes an acre. A negro cultivates five acres of rice-field, and three or four of provision, as they are called, that is, Indian-corn and potatoes.

Mr. Ifard is a zealous advocate for flavery; from all the accounts, he has been able to collect, it is his firm belief, that a free negro is more indolent and vicious, than a negro flave. But he makes not any ill use of the unlimited authority, which by the laws of South Carolina the planters enjoy over their flaves. The mildness of his disposition is observable in his conduct towards his negroes, as in fact it is in every action of his life, unless the vivacity of his temper is wrought up by his peculiar opinions, especially on political subjects.

the

Mrs. Ifard has made feveral experiments of rearing filk-worms, which thefe last two years have proved uncommonly fuccessful. Whether in this country, which is fo well qualified for this species of culture, any

4 F 2

587

more

more attempts of that nature have been made, I know not, but Mrs. Ifard was induced to engage in them, from an earneft defire of promoting the profperity of the country.

Goofe Creek is the name of the parifh in which Mr. Hard's eftate is fituated. It contains about three hundred fquare miles, was feveral years without a paftor, and has but very lately obtained one. As the pay of the clergy is raifed by fubfcription, fuch planters only contribute towards their fubfiftence, as refide in the vicinity of the church. Devotion is not a prevailing fathion in this country. The prefent certain income of the paftor of this parifh exceeds not fix hundred and forty-three dollars per annum. One Sunday, which I fpent with Mr. Ifard, I went with him to church, where I found fifteen white people, and about thirty negroes and negreffes, who occupied the aifles; for in the fouthern ftates the negroes are not fuffered to mix with whites.

The road from Charleston to Elms runs through Dorchester ; it is fandy like all the other roads in South Carolina. In the vicinity of the town the fand has lefs compactnefs, and, of confequence, fatigues both men and horfes more, than at a greater diftance from the town, on account of the great number of waggons, which, as the phrase here is, plough the country. For the first three or four miles the houses stand pretty close together, but farther on you find only fcattered plantations, the buildings belonging to which feldom ftand near the road. The only inn on this road, which is feventeen miles in length, lies ten miles from the town. In the courfe of the laft war the English had, during their refidence in Charleston, either from motives of military precaution, want of fire-wood, or luft of devastation, cut down every tree within ten miles of the town. Vegetation is fo very powerful in this country, that all these trees are not only grown up again, but have also attained a confiderable fize. The luxuriance of the woods stands unrivalled; there are eighteen different species of oak, particularly the live-oak, palmetto or cabbage-tree, cucumber-tree, deciduous cyprefs, liquidambar, hickory, &c. In fhort, all the fpecies of trees, which are fo exceffively dear in Europe, ten of which are bought to fave one, for which both fituation and foil are carefully felected, and which yet never attain any confiderable height, are here the natural produce

duce of the country, and thrive most excellently. Equally striking to Europeans is the pleasing luxuriance of shrubs, plants, and various species of grass, which diffuse most of them an exquisite stragrance. My first rambles through these woods afforded me, therefore, an uncommon pleafure.

Some parts of South Carolina, where the fand is lefs fertile, bear no other trees than pine, and for this reafon are called *pine-barrens*. But even on these lands grows a species of grass, which, though inferior to that produced on a good soil, ferves both winter and summer for the feed of horses, bullocks, and cows, which graze in the woods. This grass is called *crab-grass*.

At fome diftance from the road lies a garden, where a French botanist, who is paid by the French government, raifes the trees of the country from the feed as well as layers, and fends them to Mr. THOUIN at Paris, with whom he maintains a literary correspondence. The name of this botanist is MICHARD; he has refided in America these fifteen years, and traverfed every part of the country, to enrich France with the fineft productions of the United States. He was just returned from the Illinois with a rich collection of beautiful plants and herbs. He peculiarly extols the vegetation in the Teneffee, where he has difcovered a tree, from the root of which a beautiful pale yellow colour is extracted. He claffes it among the fophoras, but has not feen it in bloffom, and confequently judges only from the growth, leaves and feed. He has given the latter to General Blount, who has offered to return him the plants. During his absence two negroes took care of his garden, and kept it very clean of weeds. This garden answers extremely well the views of Mr. Thouin, to domefticate in France the greatest possible number of the productions of all countries, for which purpose he has formed nurferies in the French dominions, under different degrees of latitude, to accustom exotic plants to the French climate by infenfible degrees. Mr. Thouin is, in my opinion, one of the brightest ornaments of France.

ry,

0

11

The day I returned from Mr. Ifard, my very obliging friend, Mr. Pringle, proposed to me a trip to the banks of the river Ashley. I availed myself

myfelf with much fatisfaction of this opportunity, to enlarge my acquaintance with the interior, and to view the country-feats, in those parts which enjoy the greatest celebrity.

Charleston being feated on an ifthmus formed by two rivers, under an angle which is very acute, the road is for the first feven miles exactly the fame, whether you intend to proceed to Georgia, North Carolina, or any point of South Carolina. We made our first stop at a small plantation, but very lately purchased by Dr. BARON, a Scotchman, and physician of great celebrity in Charleston, where, it is afferted, he makes thirteen thousand dollars a year. He is a man of extensive learning, and an excellent companion. This fmall plantation, named Fitteraffo, confifts of four hundred acres, and coft him four thoufand two hundred and eighty dollars; it is fituated on a fmall eminence near the river. The fite for the house, for none has hitherto been built, is the most pleafant spot which could be chosen in this flat, level country, where the tedious famencfs of the woods is fcarcely variegated by fome houfes, thinly fcattered, and where it is hardly poffible to meet with a pleafant landfcape. His garden is feparated from the river by a morafs, nearly drained; the whole extent of the northern bank of the river is nearly of the fame defeription. Dr. Baron intends to purchase this intervening space, and to convert it into meadow-ground. This alteration will improve the profpect, without rendering it a charming vifta.

Hence we croffed the river, and ftopped at a plantation, lately purchafed by Mr. Pringle, the former name of which was Greenville, but which he has named Sufan's Place, in honour of his lovely wife. This plantation is likewife without a houfe, that of the former occupier having been confumed by fire; on the foundation of this building, which remains unhurt, the new manfion is to be crected, which will be finifhed this fummer. The plantation, which confifts of four hundred acres, has coft him one thoufand two hundred and eighty-five dollars. The fituation is much the fame as that of Fitteraffo, except that the moraffes, covered with reeds, lie on the other fide. The river flows clofe to the garden, and the fhips, which continually fail up and down the river, may anchor here with

with great convenience. Yachts of one hundred tons burthen fail as far as Bacon-bridge, twenty miles from Charleston.

We made another halt at a houfe, formerly the property of Commodore GILLON, who died in very deranged circumftances, bordering on infolvency. This plantation, which has accordingly been made over to the creditors, is in the very worft ftate. The Commodore died three years ago. The houfe is tolerably handfome, and the garden is laid out with a more refined tafte, and cultivated with more care than gardens generally are in this country. But the foil is fterile to fuch a degree, that the Commodore was obliged to fupply his table with culinary plants, and his ftable with fodder, from another plantation, which he poffeffed three or four miles farther diftant.

Half a mile from Batavia, the name of the Commodore's plantation, ftands Middleton-houfe, the property of Mrs. MIDDLETON, mother-in-law to young Mr. Ifard, which is effeemed the moft beautiful houfe in this part of the country. The out-buildings, fuch as kitchen, wafh-houfe, and offices, are very capacious. The *enfemble* of thefe buildings calls to recollection the ancient Englifh country-feats. The rooms in the houfe are finall, and the outfide, as well as the infide, is badly kept. A peculiar feature of the fituation is this, that the river, which flows in a circuitous courfe, until it reaches this point, forms here a wide, beautiful canal, pointing ftraight to the houfe. The garden is beautiful, but kept in the fame manner as the houfe; the foil is very bad, and, in my opinion, the whole plantation is altogether undeferving the celebrity it enjoys.

We ftopped to dine with Dr. DRAYTON, at Drayton-hall. The houfe is an ancient building, but convenient and good; and the garden is better laid out, better cultivated and ftocked with good trees, than any I have hitherto feen. In order to have a fine garden, you have nothing to do but to let the trees remain ftanding here and there, or in clumps, to plant bufhes in front of them, and arrange the trees according to their height. Dr. Drayton's father, who was alfo a phyfician, began to lay out the garden on this principle; and his fon, who is paffionately fond of a coun-

try

try life, has purfued the fame plan. The profpect from the garden is like all other views in this part of the country, but the occupier finds it lefs tedioufly uniform than travellers do. He pointed out to us, and fpoke much, con amore, of a little hut in the woods, which is fcarcely vifible, and of a turning of the river, yet no village is to be feen, not the fmalleft eftates, nay no huts. All South Carolina contains fcarcely five or fix villages, if four or five compact houses deferve this name. The planter refides, throughout the whole country, in the midft of his negroes. It is a matter of general cenfure, that Charles II. divided this country among three men, without confidering that, divided as it is at present, perhaps among fifteen or twenty thousand people, it is yet far from procuring the ftate and fociety at large the advantages, which it might produce. Every one works with his own negroes ; he has no opportunity of hiring others, as every one has full employment for his flaves, and stands in need of many hands for little work. In regard to the northern states, the period may be determined with some degree of certainty, when the whole country, which has been wrefted from the Indians, will be cleared; but not the leaft idea can be formed how it will be poffible in South Carolina to clear only double the quantity of land, which is at prefent under cultivation. This observation, however, applies merely to the lower part of South Carolina, for the country on the other fide of the mountains is inhabited by white people, who work, as every where elfe, and whofe number, it is afferted, increases yearly by new colonists, who are emigrating thither.

On our journey we met a *drove* of negroes (you cannot use a more proper term), who were fent from Cambridge to the market of Charlefton. Their master, an advocate of Cambridge, one of the districts of the state, has relinquished his plantation, to employ his money in some other branch of business. Planters of small fortunes do this very often; and from the high price of negroes it is at present done more frequently than at other times. They were about one hundred in number, men, women, and children. The fale of the husband is not necessfarily connected with that of the wise, nor is the purchaster of the mother obliged to buy the child,

593

child fuckling on her breaft. The advantage of the buyer is the only binding law.

That part of the foreft, which I did not traverfe, on my way to Mr. Ifard, abounds alfo, it is faid, with trees and bufhes. Two fpecies of the forrel tree, (andromeda, Linn.) the azalea, the fnow-drop tree or fringe tree (chionanthus, Linn.); honey-fuckle with red bloffoms, which grows in a fwampy foil; the faffafras; and the myrtle of which green candles are made. The berries are boiled in water; the fubftance, which fwims on the furface, is the oily matter or tallow. A bufhel of berries yields eight pounds of candles, which coft twenty cents. The red paria, or Carolina horfe-chefnut tree, which, when inoculated on a common chefnut grows up in Europe to a very high tree, is here a fhrub of a middling fize.

To feveral trees adheres a yellow grey mofs, which hangs feveral feet down, like a beard, and is known by the name of *Spanifh beard*. It retains the fame colour, both in winter and fummer, and bears fmall blue flowers in fpring. It clings efpecially to oaks and elms; plantains, maples, cucumber trees, and pines are generally free from it. This mofs injures only the beauty of the trees, but alters neither their growth nor leaves. In gardens which are well kept, it is taken off with iron rakes; the negroes frequently pull it off the trees in the woods with their hands, and fell it to the upholfterers of Charlefton, who ftuff with it mattraffes and chairs. For the fame purpofe, pretty large quantities of it are tranfmitted to Philadelphia, New York, and even to the northern ftates; for though it conftantly preferves a certain unpleafant fmell, yet it is much ufed, from its being cheaper than wool or hair. In winter it affords good food for cattle.

## SANDYHILL.

After a refidence of twenty days in Charlefton, I fet out for Georgia. From the exceffive heat, it becomes neceffary to make this tour before the beginning of Junc, in which month the heat grows intolerable; and the dangerous difeafes, occasioned by it, fpare but few men, especially 4 G ftrangers,

ftrangers, who travel through thefe peftiferous fwamps. I fet out in company with Mr. BEAUVOIS, a Frenchman, a botanift, paffionately fond of his feience, and a good, worthy man. In order that we both might retain our full liberty, we hired each a *cabriolet*, and a little negro. We purfued the fame road, which I travelled with Mr. Pringle, on my excursion to the banks of the Afhley, until we reached the other fide of this river, that is, ten miles from Charleston. To this point the road is much the fame, fand and woods. The fand, however, is not fo deep, and feems to be more mixed with earth. The woods are equally beautiful, and, for fome miles, the plantations lie more compact. Rice is the chief article cultivated in this part of the country.

Eight miles after you have croffed the Afhley, you pafs an arm of the river Stono. The bridge, by which you crofs the river, has been built by General WASHINGTON, who poffeffes an eftate in the neighbourhood, which, however, is not that on which he refides. The toll is confiderable. I was obliged to pay a quarter of a dollar for a cabriolet and a horfe; and yet the farmer, who takes the toll, pays the General no more than four hundred and twenty-eight dollars two thirds. This road is, therefore, in all likelihood, not much frequented; a fuppofition, which was much corroborated by the finall number of travellers we met on our journey. And yet this is the great Savannah-road, which we did not leave but fix miles from the General's eftate.

All the inhabitants of South Carolina are more afraid of the rattlefnake, than those of New York and Pennfylvania. These fnakes, it should feem, are more dangerous here than in the northern states; as inflances are known of people having died a quarter of an hour after they were bitten. According to the affertion of the faculty, the bite is mortal only when a lymphatic vessel has been hurt, because in this cafe the poison mixes more rapidly with the blood; every other bite is easily cured. The intense heat of the climate renders the poison more deftructive than in the northern states; for it can hardly be fupposed, that among the great number of people who are bitten there, there should be none whose lymphatic vessels were injured, and yet none are known to have

have died of the bite. The juice of plantago virginiana, Linn. or the root and branches of mahuba bruifed, are the remedies most commonly applied. Either of these plants is fufficient, but they are deemed more efficacious when they are applied jointly. A tobacco leaf fteeped in rum, or a fingle leaf of one of the above plants, takes off the pain and fwelling. CESAR, a negro, difcovered this means in South Carolina; he proved its efficacy to the Affembly of the States, in 1780, by caufing a rattle-fnake to bite him; and obtained for this arcanum his liberty, and a penfion of one hundred guineas a year. The rattle-fnakes are as peaceful in Carolina, as they are in the north; they never bite but on being touched. However great the fear of these snakes may be in this country, yet they are not, it fhould feem, very frequent, as in this cafe the planters would undoubtedly, from motives of felf-intereft, furnish their flaves with the fame thick worfted spatterdashes, which in the northern flates render the bite harmlefs, by abforbing the poifon; and which, for this reafon, are there in general use, instead of fuffering the negroes to work barefoot in the fwamps as well as the woods.

W

能

General Washington's friends having prevailed upon me to call at the General's, I did fo; and from the genteel reception I experienced on his part, we foon got acquainted. General Washington is of the same family as the Prefident, but they are only diftant relations. He ferved in the war of the revolution, and is generally refpected. He is now one of the most opulent planters, and possefies from four to five hundred flaves, by whofe number wealth is juftly eftimated in South Carolina, as it is through their labour that riches are amaffed in this country. The information which I obtained from him, in regard to the culture of rice, appears to me complete, yet I shall not infert it in my journal, until it be corroborated, and rendered still more perfect by the accounts of other planters. I shall, therefore, here only observe, 1. That the General's rice fields are inland fwamps; 2. the General fows one bushel and a half of rice on an acre; 3. the medium produce of an acre is two barrels of rice; 4. every negro cultivates four or four acres and a half, befides two or three acres of provision; 5. by his calculation a third only of his ne-4G2 groes

groes work in the fields, the reft either confift of old people, children, and fick, or are employed about the houfe; 6. the number of negroes increafes every year by a twentieth; 7. every negro earns annually, all expences being deducted, about two hundred and fifty-feven dollars; but the rice which, prior to the war, was fold for two dollars and a half, cofts now fix or feven dollars and a half; 8. the expence for a negro, including duty, board, clothing, and medicines, he effimates from twelve to thirteen dollars; 9. he intends to creft a mill, to fave the trouble of grinding and fifting, which is generally done in the plantations by hard labour.

These mills fave confiderable time and work; the negroes are relieved from the most painful toil, and able to work more in the fields. Another great advantage is, that the rice is more regularly husked, which causes a confiderable difference in the produce. An able husker delivers nineteen parts of large rice, and one of rice-dust; but an indifferent workman only ten. Rice-dust, or small rice, that is, such as is too much ground, is not marketable, or fetches only half the price of good rice.

By all the observations which I have been able to collect, the culture of rice is in an improving flate; the beft proof of which is the greater number of furrows in a given space. The planters had formerly only fiftyfive in one acre and a quarter, inftead of fixty-five or feventy, which are made at prefent, without the least prejudice to the fertility of the foil, or the richnefs of the ears. Another improvement concerns the mode of watering the fwamps. Upon the whole, the planters, more enlightened on their true interest, seem determined to perfect the culture of rice by all poffible means. The rice, from this plantation, is transported twelve miles in carts, and frequently the diftance from the next creek is still greater. The planters are now raifing a fum by fubfcription, for the conftruction of a canal, which is to crofs the fwamps, and on which the rice may, without the least difficulty, be conveyed to Charleston. This canal is to be ten miles in length, and the expence is eftimated at thirtyeight or forty thousand dollars. I affisted at a meeting of the commissioners, relative to the best means of constructing it. For this purpose it has been propofed,

proposed, either to cause every planter to work at the canal with a certain number of negroes, proportionate to the greater or lefs diftance of his plantation from the canal to the extent of his fwamps, or the number of his flaves, or to charge one planter with the construction of the whole canal, and make every planter contribute to the expence in the above proportion. Good planters are of the latter opinion, becaufe the adoption of the former would leffen the number of their workmen, and, of confequence, their gain. The meeting deliberated on these questions, but came to no determination. That one fingle planter should be able to undertake this work, may be explained by the circumftance, that there are many bad planters, who let their negroes at a high price. The meeting terminated in a dinner, like all fimilar meetings in England, with this difference only, that this dinner was given, not in a good tavern, but in a miferable inn, where, from the ruinous state of the stair-case, the guests were under the neceffity of working up their way to the dining-room by the aid of a ladder. It was a cold dinner, and the liquors ferved up were rum, brandy, and geneva, which the gentlemen of the meeting quaffed, as if they had been the most delicious champagne. The General, whose turn it was to entertain the company, had provided the whole dinner. The culture of rice will undoubtedly be greatly increased by the construction of this canal. By General Washington's account, as many swamps remain ftill uncultivated as are under cultivation.

The

00

His own plantations are all fituated in the vicinity of his manfion, without joining each other. One director has the fuperintendance over all the plantations, and under him fpecial infpectors are appointed for every plantation. He cultivates two hundred acres with Indian corn or potatoes; the average produce is from twelve to fifteen bufhels of Indian corn per acre.

The rice-planters cultivate no more Indian corn and potatoes, than they want for their own confumption, and that of their negroes. By cultivating more, they would, in their opinion, wafte their time in a lefs profitable labour; and many planters would rather purchase all their provision, than raise it in their own fields, were not the carriage fo very expensive.

597

Carlo Carlo Carlo

All the planters keep great numbers of oxen, cows, and pigs, which procure their food eafily, and without the leaft expence, in the large forefts, which belong to the plantations. Horfes are alfo frequently turned into the woods; but the true amateurs of horfes, many of whom are found among the planters, fend them rather to graze on a field, which the year before was fown with Indian corn and rice, and on which the fpecies of grafs, called *crab grafs*, grows in great plenty. In woods, where the grafs of the preceding year is not entirely confumed, and where this grafs might ftifle the new growth, it is burnt at the beginning of fpring, and the young grafs thrives better than it otherwife would do.

The price of fwamps is here from twenty-one to forty-two dollars an acre. The fituation in regard to the watering of the fwamps occasions the difference in their price. Uplands cost from five to fix dollars an acre, but are feldom fold. Indian corn costs one dollar and a half the bushel, a cow from fix to nine dollars, and a yoke of oxen forty dollars.

General Washington is one of the planters of Carolina, who, in order not to relinquish to the merchants of Charleston the great profits on the fale of rice, have transmitted it themselves to England. The refults of this operation are not yet known. All the planters are highly pleafed with the high price of rice, yet the most prudent of them adopt not a more expenfive way of living, but convert their gains into capital. They are fond of refiding on their plantations, and thus fave much of their houfehold expence. Yet you must be accustomed to such a refidence to be pleafed with it. Not the leaft variety, as to foil and culture; furrounded on all fides with mud and water; few or no neighbours; and in addition to these unpleasant circumstances, the planters are deprived of the greatest pleafure of cultivators, to fee every thing grow in their fields. In the month of June, when the fwamps are watered for the first time, the planters retire for four months into the town, for fear of the peftiferous effluvia, and during this time the rice ripens and is mowed. The white director of the plantation, who remains on the fpot, must the first fummer pay for this refidence either with his life, or at leaft with a dreadful fit of illnefs; and, fhould he furvive this, yet he is every fummer attacked by

by a fimilar difease at least for a fortnight. The negroes suffer not from all these noxious exhalations.

In the General is united to his other excellent qualities that of a benevolent mafter to his negroes. They are not overburthened with labour, and they are at liberty to cultivate for themfelves as much land as they choofe.

Mrs. Washington seems less pleased with a plantation-life than her husband, whom business frequently calls away, and whom a pipe or a good dinner often retains in the place, whither he is obliged to go.

The General's plantation lies in St. Paul's parifh, which contains fifteen fquare miles. Although four or five remains of churches are to be found in this parifh, yet there exifts in fact but one, where a congregation can affemble. The reft were burnt down in the courfe of the war,. and they are in this country not very anxious to build them up again.

The road from Sandyhill to Dr. PRINGLE's, brother of my friend Pringle of Charlefton, is as fandy as that which we have travelled, but the fmall bridges, you frequently meet with, grow worfe and worfe. We croffed in a ferry the river Edifto or Pompon, which rifes two hundred miles higher up the country, and on which the timber from the forefts of further Carolina, that are one hundred miles diftant from Charlefton, is floated to this city.

Dr. Pringle refides in the township of St. Bartholomew, and cultivates, of nineteen hundred acres, which compose his effate, two hundred acres of fwamps, and forty acres high land. If he had more hands to dispose of, he might cultivate more; but he possesses only a small fortune; and planters thus circumstanced can very feldom raise the necessary moneyfor the construction of machinery. He has explained to me the whole process of the culture and preparation of the rice; and the information I received from him on this subject, agrees so perfectly with that which I have collected in three or four other different places, that I think myfelf fully informed on this head. Rice is commonly fown about this time; fome have already done it, and others commence in a fortnight.

The

The country is full of that species of crocodile, which by naturalists are called caimans. We faw a finall one at the General's, which had been killed by his huntfman. On a walk we took with Dr. Pringle, we faw two, which lay alleep near a large fwampy ditch; both were of confiderable fize, and one meafured from the head to the extremity of the tail upwards of twelve feet. We observed them perfectly at our ease, at the distance of twelve paces. The noise we made, after five or fix minutes, having roufed them from their fleep, they jumped into the water. This animal very feldom touches a man, however near it may be to him; it conftantly flees, when on land; but in the water it is faid to be fiercer. A few years ago, a caiman bit off the leg of a woman, while she was bathing. It more frequently attacks dogs, which at times it carries off in the prefence of men. Sometimes, when hounds in purfuit of a ftag fwim through the water, they feize both hounds and deer, and pull them down to the bottom, without their ever appearing again. The fcales, with which the caiman is coated, render it invulnerable, unlefs the wound be inflicted in the interffices of the scales, or at the extremities.

The rattle-fnake is as much dreaded in this country as the caiman. No perfon has of late died of its bite, which proves frequently mortal to dogs, cows, and horfes, although cafes of its being cured are more numerous. On the whole, the number of these noxious animals appears very inconfiderable. By Dr. Pringle's account, who has feen many of them, they are here much larger at the fame age, than in the northern ftates. Those which have come within my observation, are of the same fize as in Geneffee, but of more vivid colours. The bite of the water rattle-fnake is alfo poifonous, but lefs fo than that of the land. The derivation of its name is not known; for this animal has neither rattles, nor is it furnifhed with the two fangs, which render the rattle-fnake fo extremely dangerous. There are those, who imagine, that it is the female of the rattle-fnake, while in the opinion of others it forms a diffinct fpecies; but all this refts on fupposition, as in fact do many things in natural history. The black ferpent is pretty common in Carolina ; it is very long, and purfues those who attack it; but its bite is harmles.

Panthers

Panthers are fometimes found in the woods, but they are few in number; the affertion of their having attacked men is contradicted. Tigercats, wolves, and foxes are here frequent, and fometimes carry off fowls, theep, and calves from places contiguous to inhabited buildings. But the planters, who affemble their live-flock twice a year, to count the young, and pick out those which they intend to fatten, charge lefs the wild beafts with the deficiency they difcover, than the petty planters, negroes, and other workmen. The winter is here never fo fevere, as to prevent the cattle from remaining in the woods, where they find plenty of food; fome of the planters feed them with the ftraw of Indian-corn and rice, but most kill them, as they come out of the woods. Mr. Pringle, who keeps from feventy to eighty negroes; and, of confequence, is no great planter, has from two to three hundred head of cattle.

To judge from the acquaintance I have made among the planters, their converfation is not very interefting. Their time is chiefly taken up by the chace and the table, by gaming and doing nothing, the few excepted, whofe parents were fufficiently rich to fend them to Europe for education and inftruction.

118.

m,

SI.

Mr. Pringle holds a diffinguished rank among well-bred farmers. He finished his education and studied medicine in Europe; for some time he followed this profession, but now practifes it only from motives of compassion, to preferve his independence. He is in every respect a worthy man, amiable and communicative, plain, and so happy, that his equals are but feldom found. He is an excellent master to his negroes, and afferts, against the opinion of many others, that the plantations of mild and indulgent masters thrive most, and that the negroes are more faithful and laborious. He is beloved by his flaves. The cultivated part of his plantation is in the best order, and the number of his negroes encreases yearly by a tenth.

In the neighbourhood are a few very fmall plantations, the property of white people, who keep no flaves, and who of fifty acres, which form the neceffary qualification of an elector, cultivate about twenty with their oxen. This clafs is poor, and, by what I have been told, feems not

and the second and the second second

to deferve much refpect: But thefe planters evidently prove, that even in this fcorching climate white people can perform the labour, for which it is generally deemed neceffary to employ flaves; though it must be confeffed, that they neither work much in the hottest feason of the year, nor toil in the fwamps. White people may perhaps not be able to accustom themselves to the neceffary labours in the fwamps, yet it is of importance to know, that they are capable of working in the upper country at the culture of grain, potatoes, and turnips. From this fact hopes may be entertained, that the large tract of ground which sparates the fwamps from the upper country, and the fertility of the foil of which is apparent from the numerous trees it bears, will be cultivated.

Mr. Pringle prefented my fellow-traveller, Mr. Beauvois, with a petrified oyfter, found in the vicinity of Columbia, one hundred and twenty miles from the fea. Its length amounts to eighteen inches, Englifh meafure. From the circumftance, that in that part of the country there is a confiderable ftratum of fimilar petrified fubftances, it becomes highly probable, that this whole tract was once covered by the fea, and that the ridge of mountains, which runs from Florida to Canada, formed its original limit.

In the township of St. Paul a free negro, who from his early youth carefully flored up the produce of his industry, possesses a plantation of two hundred flaves. Instances of this kind are not rare, I understand, in St. Domingo; but such a plantation is here a phenomenon. The feverity excepted, with which this emancipated flave treats his negroes, his conduct is faid to be regular and good. His name is PINDAIM, and he is eighty-five years old. He has married a white woman, and has given his daughter, a mulatto, to a white man.

# RUPELMONDE, ON THE RIVER BEAUFORT.

As long as the roads continue of the fame quality, as I have hitherto found them, fince I left Charlefton, I fhall not make any mention of them. I am not yet tired of thefe fuperb forefts; but on traverfing them, you cannot but regret, that a foil, which bears fuch trees, fhould not produce

duce any thing elfe, and that nineteen twentieths of that foil may, perhaps, remain for ever uncultivated in Carolina, which might be fown with oats, rye, and barley, and thus remove the unhealthinefs of the climate, and the poverty of the country. Nature invites this country to a high degree of profperity, the non-attainment of which can only be owing to the neglect and mifconduct of men.

We travelled in company with Mr. ROBERT PRINGLE, a worthy brother of John Pringle of Charlefton; he intended to introduce us to his numerous friends at Beaufort. The plantations along the road are few in number and infignificant. The people were every where bufied in fowing rice.

I had a letter to Mr. THOMAS FULLER of Sheldon. He was not at home, but his lady received us with great kindnefs. She is very handfome, and endowed with excellent qualities.

the

It is frequently the fate of travellers to contract obligations; this we experienced the fame evening, in regard to a lady who refides on the coaft of the Ifland of Beaufort. The veffel, intended to carry us over, was too fmall for our two *cabriolets* and horfes. We were, therefore, obliged to wait; and feeing us walking up and down the fhore, fhe invited us to ftep into her houfe, and at length offered us a night's lodging. Mrs. RAPPEL refides with her daughter in the neighbourhood of the ferry, which belongs to her. The mother was, fifteen years ago, the firft beauty of Charlefton; and even yet, though thirty-five years old, and frequently indifpofed with nervous difeafes, fhe is handfome and amiable. She generally refides in Charlefton, whither fhe returns at the beginning of June. Whatever praife may be due to our European gentility, yet in no part of the globe fo much hofpitality is practifed as in America, or can it any where be better exercifed, than in South Carolina.

We this day croffed, by a very bad bridge, the river Combabee, which feparates the diffrict of Charlefton from that of Beaufort. The only remarkable thing we met on this journey was a large caiman, which lay dying on a ditch. He was wounded in the head with an axe, and was at a greater diffance from the water than they generally are. We dif-4 H 2 patched

603

the second second second

patched him, and found that he was eleven fect and half in length. Thefe animals, whofe afpect is as frightful as the accounts of their fiercenefs, are no objects of fear with the inhabitants of this country; travellers, therefore, have either exaggerated their accounts, or are more timid than the inhabitants. They are killed, wherever they are met with, and extremely numerous in the frefh waters of Carolina and Georgia.

The ftate of Georgia, the worft regulated part of the Union, is a compound of natives of all European countries, and of all the other parts of the United States. Its recent hiftory is a tiffue of continual difputes among the inhabitants as well as with other ftates, without the leaft mark of public fpirit. This moral picture muft neceffarily admit of exceptions; I have myfelf, during my fhort refidence in Savannah, found men, who would do honour to any country. But the exceptions, I apprehend; are few.

As late as the laft feffion, a more regular administration of juffice has been eftablished; but it is not yet in force, nor will it be for fome time to come. The feffions are not regularly held; the empannelling of the juries meets with great difficulties, and yet the business of a lawyer is one of the most lucrative professions.

Agriculture is much the fame as in South Carolina. Cotton is cultivated by all the inhabitants, who confider it as a principal branch of their trade, without paying any more attention to the beft mode of cultivating it, than they do in South Carolina. Candid planters allow, that they are far from having attained the higheft degree of perfection, the attainment of which will, in my opinion, fooner be effected in South Carolina than Georgia. The machinery for cleaning the cotton is here more frequently employed than in Carolina; but the planters, convinced of the difadvantages attending it, relinquish the use of it, and expect another from the Bahama islands, which compleats the operation fooner, without injuring the down.

The back country, which begins behind Augusta, is far more populous, and exports tobacco, Indian-corn, rye, and wheat. Slaves, as is afferted, are more numerous on the other fide of Augusta, than on this fide

fide. There is no planter, who keeps a confiderable number of negroes; but the fmalleft planters buy fome as foon as they can, leave off doing any work themfelves, and grow lazy, for which the mafters of flaves generally feel a ftrong difposition, encouraged by the heat of the climate and the habits and manners of the country.

The law of the land permits the importation of negroes, and this is the only ftate, the ports of which are not yet fhut up against this odious trade. They are not, however, imported in great numbers in Savannah; in the course of last year arrived about fix or feven hundred; during the first four months of this year four hundred and fifty have been landed, and two or three thousand more are expected. Savannah employs no ship in the flave-trade; but it is carried on in fhips belonging to New England, and especially to Rhode-Island. The cargo, however, is constantly carried to Savannah, without the leaft certainty of a profitable fale, on account of the fearcity of money which generally prevails, and becaufe foreign merchants are as little fond of giving credit to those of Savannah, as these are of crediting the planters. For the fole purpose of cultivating fuch fwamps, as are fitted for cultivation, ten fucceffive years from eight to ten thousand negroes should be annually imported. A third of those who are imported, are, in fpite of the prohibition, every year fmuggled into Carolina. These African negroes cost three hundred dollars each; those of the Gold-coast are the best of all, and next to them are those of Congo and Ibo. The latter are the best labourers, but frequently perifh within the first two years.

11

I witneffed an auction of negroes in Savannah; and although it was a fhocking fight, yet I was not fo affected by it as when I faw the one hundred negroes in Charleston driven to market. These were grown perfons; but the others were children, unacquainted with the horrors of their fituation.

Almost all the land in Georgia is good; but different in quality according to its fituation; for at the distance of one hundred miles from the fea it continues rising as far as the Apalachian mountains, which are connected with the chain of mountains that intersects the whole of North America,

605

1. 如果是了一些心下的现在分子之间的 1.

America, proceeding from Canada, difappears at the Gulf of Mexico; and, under the name of Tapinambourg, rifes again in South America, after having firft fhewn itfelf in the Antilles: at leaft this is the opinion of feveral naturalifts. The lands appear better here than those fimilarly fituated in Carolina; and from the Apalachians to the Miffifippi they appear ftill better.

None of the ftates is better watered than Georgia. The rivers Savannah, Oconee, Alatamaha, and St. Mary which divides it from Eaft Florida, run through it from eaft to weft; and in their courfe receive a great number of creeks and fmaller rivers, by means of which the products of the inland parts, if they were inhabited, might eafily be conveyed to the fea. The great rivers Appalachicola, Mobile, Peare, Palcacola, and Governanti, which interfect West Florida, and empty themfelves into the Gulf of Mexico, have their fource in Georgia. The river Miffifippi, by which it is bounded on the weft, muft, fince the laft treaty with Spain, be a certain and extensive means of disposing of all its products, which might be fent to the Antilles. All the parts of the coaft fouth of Savannah are, without comparison, more healthy than Savannah, or than the coafts of Virginia or the two Carolinas; becaufe they lie nearer the trade-winds, and partake of the advantage which thefe afford. The climate, which in the interior of Georgia is not fo hot as in Carolina, is much milder in winter. There is feldom any fnow here, and where there is, it foon melts away. Except in the fwampy parts, fewer difeafes prevail here than in Carolina; and fresh springs of water are to be met with every where.

To thefe advantages may be added the facility in paffing between the continent and the iflands that lie along the coaft, the communication with all of them being perfectly fafe, and there being no occafion to go out into the open fea. Thefe iflands are for the moft part fpacious and healthy: they have an excellent foil, which yields very fine cotton, almoft all kinds of corn, and abundance of live-oak, which is of fo much value in fhip-building.

In that part of Georgia which borders on West Florida, there are many

many fields of rice along the rivers; particularly on the banks, and between the two branches of the Mobile. Oaks of every kind, hickories, faffafras, mulberry and chefnut trees, grow here in the greatest possible perfection. There are few live-oaks, and fcarcely any cypreffes or cedars. The white pine grows here only; the fpruce-fir is feldom feen. It is faid that the three branches of the river Alatamaha, with the ifland of St. Simon, which lies facing them, form the beft, deepeft, and fafeft harbour on the American coaft, below the Chefapeak. Few of the United States are defined to greater profperity than Georgia. But there must be hands to work this gold-mine; and their labour must be rendered valuable by good order, by refpect for the government, and a due administration of the laws. These objects will certainly be accomplished fome time or other, but in the prefent state of things, it is difficult to fix upon the period when it shall come to pass. The inhabitants of the back country are more idle, drunken, and diforderly, than those who refide in the back parts of any of the United States. It is only to the government that these vices can be imputed. Land which produces rice, and is furnished with the buildings requisite for its cultivation, fetches, when in good condition, from fixty to fixty-five dollars; and that which is not fo, fells at feven or eight dollars.

They carry on a trade with Georgia, with deer, otter, and beaver fkins. But the Indians, who fupply them, find a more advantageous and furer fale in Weft Florida; and therefore carry all their fkins to Penfacola. This trade is therefore confined to furs procured by the people of the back country; and thefe are inconfiderable in number and value.

2.

er

The Cherokees, the Chactaws, and Creeks, who are the moft numerous and warlike of all the Indian nations, inhabit the borders of Georgia. Those capable of bearing arms are supposed to amount to the number of twelve thousand, fix thousand of whom are Creeks. There are about thirty-five thousand Indians altogether in Georgia. It is faid that the Creeks, contrary to the general case, are encreasing in numbers. Although these people are held in aversion, and endeavours are made to drive them beyond the Miffifippi; yet it is allowed on all hands, that in the continual

nual quarrels which they have with the white people on the boundaries, the latter are in the wrong four times out of five. It is admitted by every body, that there cannot be a more vicious fet of people than the whites who dwell on the boundaries: they rob, murder, and betray the Indians; who in return frequently deftroy their perfecutors, together with their families; and when they perhaps take a dreadful revenge, they only defend themfelves againft unprovoked attacks: thefe Indians are all as good, as generous, and as faithful as thofe of the northern flates. Even when they are in the greateft flate of diffurbance, they live in the utmoft familiarity with the white families who refide amongft them, and who find more protection from them than from the white borderers: thefe fealp their prifoners, as well as the Indians. This conflant flate of petty warfare is a new fource of diforder in the flate.

The State of Georgia, in conjunction with the federal government, thinks of concluding a general treaty with the Indians, the negociations for which are to be entered upon in lefs than a month. The confequence of this treaty will be, that the Indians, in confideration of a fum of money, will retire a hundred miles farther back. Meanwhile the borderers will purfue them, and will never be reftrained, by any treaty, from making their unjuft attacks; as long as there is no government to reftrain them by rigorous punifhments, and of courfe to prevent the reprifals of the Indians.

Thefe Indians cultivate the land with more care than those in the northern states. They keep such negroes as they carry away in their petty wars, or those who defert to them. They treat them as flaves, but behave well to them; are sparing of them in labour, and share with them their own food. I have been assured, that there are some Indians who have no fewer than thirty negroes: these carry the produce of their husbandry to Pensacola, by which means Georgia is deprived of considerable advantages.

I have heard an anecdote of one of these Indians, which, I believe, will give a clear idea of their manner of thinking. The Creeks had occation to affemble fome years ago concerning a treaty with the United States:

States: one TALASKING, a famous warrior amongft them, who had always declared himfelf a friend to the United States, oppofed every act of hoftility againft them, and was confequently well known, came to New York, the place of meeting, after the Affembly had already been opened. He there found, that one MALASKY, who had diftinguifhed himfelf by his inveteracy againft the United States, and by the mifchiefs he had done them, was well treated, and even carefied by the American commiffioners. This circumftance raifed his indignation to fuch a degree, that, although he was himfelf well-treated, he left the Affembly after two days, and became an enemy to the States. This indignation has its foundation in a ftrong fentiment of honour, which muft make civilized ftates blufh for the falfehood and depravity of their policy.

The avaricious Georgians are not contented with grafping at the country of the Indians; many of them look on Florida already as their lawful property; and think that by a war, they would eafily gratify this ambition of theirs; as the fouthern ftates are much more populous than this province. It is to be confidered how little Spain can be interefted in this fmall tract of country, how many difputes it may occafion, and what a natural boundary the Gulf of Mexico would form for the United States. It cannot but be wifhed that Spain, with a fort of political magnanimity, may give up this country, which is not an advantageous pofferfion to her, and which in all probability fhe may not be able to retain.

The law concerning negroes is milder in Georgia than in Carolina, where it is of English origin. But here it is thirty years younger, and therefore breathes that humanity, which characteristics the latter half of the prefent century. It appears to me in fome respects as mild as any law can ever be when flavery is permitted. It is faid that there are few fevere masters here : but the negroes are worse cloathed and fed than in Carolina; and even there their cloathing and food are not remarkably good.

Until 1794 Augusta was the chief town of Georgia: next to Savannah it is the largest, and the only place that carries on an inland trade. 4 I Louisville,

610

Louifville, the prefent feat of government, confifts only of about thirty houfes.

Savannah is famous for the defeat of M. d'Estaing in 1778, when he made an unfuccefsful attack upon it. After every thing I have heard from eyc-witneffes concerning that affair, 1 am politive, that M. d'Eftaing might have furprifed the town without waiting for his heavy artillery: 1. As the town, at his arrival, was defencelefs. 2. That he fhould have properly finished the regular fiege, as he had once entered upon it. 3. That M. d'Eftaing would certainly have rendered himfelf mafter of the town, if, after the first fummons, he had not granted General PRE-VOST an armiftice of two or three days; during which time the latter had procured reinforcements from Beaufort, and doubled his means of defence. 4. He would have fucceeded in the attack, if, instead of directing all his force against one strong redoubt, he had penetrated through the other feattered works which were ill defended. The English in that cafe would have been forced to quit their entrenchments, and an engagement would have enfued, in which the French and Americans, on account of their numbers, would have been victorious. The inhabitants recollect with gratitude the pains which M. d'Eftaing had taken to deliver them from the hands of the English. They praife the valour of the French; but lament that M. d'Eftaing, on granting the armiftice of twenty-four hours, refused to let General Prevoft's lady leave the town.

The fever which I caught in Savannah obliged me, againft my will, to relinquifh an excursion into the back country of Georgia and Carolina, which I had previoufly planned.

I departed with pleafure from this town, the climate, and fituation of which on a burning fand render it fo uncomfortable; and where the fpirit of diforder and anarchy muft difguft every man to whom liberty is dear, and who knows that it can be maintained only by refpecting and obeying the laws.

SPANISH

## SPANISH SETTLEMENTS IN NORTH AMERICA.

I believe that this is the proper place to give the accounts which I collected in Carolina and Georgia concerning the Spanish fettlements, that border on the United States. The river Apalachicola, runs between East and Weft Florida : the Miffifippi divides Weft Florida from Louifiana. East Florida is thinly inhabited. When it belonged to England, feveral rice-plantations were established on a large scale, and with fuccess. There are also plantations of cotton, which are very productive. It appears, that a great quantity of land is applied to these uses, and that even pine-barrens might be improved for this purpofe, though many inhabitants think, that the fandy foil would not be able to produce cotton. Most of the planters left East Florida after the peace of 1783, when it was ceded by England to Spain. Some trifling culture is however yet carried on by a few English families, who have not left the country. Few Spanish families live in Florida. The best rice-land lies north of the province, near the river St. Mary. There are also good fwamps on the banks of the rivers towards the fouth, especially on the river St. John. This river runs along the coaft, parallel with the fea, from fouth to north; or rather confifts of feveral lakes. It is navigable from one end to the other; and of courfe can carry away the wood which grows here in abundance, and which can eafily float into it on the fmall creeks. The trees that grow in Florida are live-oak, red and white oaks, cyprefs, hickory, red and white cedar, and the cucumber-tree: they are all very large. The river St. John can be even united with the fea, on the fouth-west coast of the peninfula, in Charlotte Bay, by means of the river Coloofehatche, and of a canal eight or ten miles in length, which would run through the marshes. By these means a direct passage from the Atlantic into the Gulf of Mexico would become practicable and eafy; and the wood which fhould not be used in Florida, might foon be conveyed to the islands.

St. Augustin is a very finall town, which has but one street. It lies on a better foil than Charleston or Savannah. Vessels drawing more than ten feet water cannot anchor in the harbour. The tide rises only to thirteen

4 I 2

611

or

or fourteen feet. The climate is healthier than that of Charleston, on account of the trade-winds, which constantly cool the air. It carries on its principal trade with Savannah and Charleston, to which places it fends the products of the Havannah, which are deposited here. It is supplied with English goods from the Bahama Islands.

The Lemencluka Indians, a finall tribe of Creeks, have a village of about one hundred houfes in Tufcavilla on Polycreek. They have fome finaller ones on the fea-coaft, on the other fide of Eaft Florida. The fhore of Weft Florida rifes perpendicularly over the fea, and is healthy. It is confidently faid that the land at the mouth of the Mifflifippi has increafed to the diftance of twelve or fifteen miles, fince the first fettlement of the French in that place. This land, however, which is becoming firmer every year, is not yet fufficiently fecure. South-weft winds generally blow here. Hurricanes feldom happen; and they come from the fouth-eaft.

The land between the Miffifippi and Betekfoha is excellent. The natural products are a fort of large reeds, hickory, cedar, and cyprefs, which are very large: it has excellent meadows, which yield very ftrong grafs; and it is fit for every kind of cultivation. From Betekfoha to Pearl-river the land is not fo good. It has the fame kind of trees, with oaks of different forts; but few live-oaks. From Pearl-river to Eaft Florida, the country confifts of a rich land, which might be cultivated to advantage. It produces many trees, particularly live-oak, which grow here to a very large fize.

I give this fketch by way of introduction, in order to be better underftood. It is, upon the whole, correct; though not fufficiently diffinct in every particular. All the land that lies on the rivers is of the beft quality.

There are many habitations along the Miffifippi. Some French families still dwell in the vicinity of the Bay of St. Louis. There are confiderable fettlements along the river Mobile, at the Bay of Penfacola, and on the other rivers. Although these provinces have belonged to Spain for thirteen years, yet there are very few Spaniards here. Such is alfo

alfo the cafe with Louifiana. Except the military, cuftom-houfe officers, and perfons holding places under government, there are not perhaps a hundred Spanifh families throughout this large plain. The bulk of the inhabitants confifts chiefly of French, who had fettled here originally, and of Germans, who have remained here, after the ceffion of the country to Spain. Some French, Englifh, and Spanifh families, are proprietors of lands, but they are few. Almost all the lands belong to the Crown, which neither fells nor grants them for a ground-rent, but always gives them away at pleafure. This power refts in the hands of the Governor, who receives money for it, but who infures the possefilion only fo long as he holds his fituation.

There are few monks or priefts in Florida and Louifiana. From every thing I have heard, religion does not appear to be predominant. It has, however, fome influence; and French philofophy would find here many opponents.

The rivers all flow from north to fouth, and not very rapidly. The tide comes up a confiderable way into them. Veffels can fail fixty or feventy miles up Pearl-river. The weftern branch of the river Mobile is navigable for one hundred miles; and the eaftern two hundred: the Appalachicola two hundred. All thefe rivers rife in Georgia, where, with the exception of a few obftructions, they are navigable.

The harbour of Penfacola is one of the beft in all North America. The entrance is fafe; and the water, even at the keys, is always five fathoms deep. At Mobile the water at ebb is ten, and at flood-tide fourteen feet deep. At New Orleans there is between fourteen and fixteen feet of water; but the navigable channel is narrow, and the entrance difficult. On every part of the coaft there are numbers of finall bays.

It is not fo hot in Weft Florida as in Carolina, notwithftanding its fituation being fo much more foutherly. Between the Miffifippi and and Mobile intermitting and bilious fevers prevail in autumn. From the river Mobile to Eaft Florida the country is very healthy.

In many parts of West Florida, and particularly in the Natches, which lie within the territory of Georgia, and to which place the richness of the.

the foil has invited many inhabitants from Florida, rice, cotton, tobacco, and indigo, are cultivated. The indigo, which is known by the name of New Orleans indigo, is of a very good kind; it is inferior to that of St. Domingo, but much better than that of Carolina. It is faid, that, if more care were taken in the cultivation of it, and feed brought more frequently from Guatimala, this indigo would be almost as good as that of St. Domingo.

It muft be a matter of furprize, to find that the whole of Weft Florida, which belongs to Spain, is fupplied with European goods from England. This, however, is true; and can only be attributed to the lazinefs of the Spaniards. The Crown has granted to two English houfes, one of which trades under the firm of PENTON and ERMER, the exclusive privilege of fupplying the inhabitants of the country, as well as the Indians, with European commodities; which puts into the hands of the English the whole of the peltry trade, even in the parts which border on Augusta. They deal much more honourably in their barter than the Georgians, are better fupplied with commodities, and, on that account, the Indians readily trade with them. This privilege does not extend to New Orleans. Every year fome fhips, which fupply the Havannah, come to New Orleans, but they bring very inadequate cargoes, fo that the Spanish fettlements on the Illinois get all their European goods from Montreal:

There is a fact fiill more recent, which points out the bad policy, whereby the Spaniards give up all power into the hands of the English. The Governor of New Orleans has given to the English house of TODE and Co. (who carry on the peltry trade on the other fide of the Miffifippi, below the lakes) the exclusive privilege of trading for skins with the Indians, along the left bank of the Miffiouri; by which means the English are in possession of the most important part of this river, and they have opened a trade with feveral nations. This privilege has been purchased from the Governor of New Orleans for the fum of twenty thousand pounds sterling. From this circumstance an idea may be formed of the fluggishness and avarice of the Spanish government and its agents, which the activity of the English fails not to turn to their profit. It is high time that

that this country, even for the benefit of Spain, fhould come into the poffeffion of France. Should Spain keep it much longer, England will foon obtain it. In fact, fhe partly poffeffes it already, there being feveral English garrifons stationed upon the Spanish territories along the Missisppi; and the numerous inhabitants of the Indian territory throughout this immense district, fo rich in skins, are unacquainted with any but English traders. When the English shall have established themselves still more firmly in this trade, they will become more important, and then the rich Spanish fettlements in Mexico will not be long fecure. This opinion, which to me appears very clear, fhould be eftablished beyond a doubt by Frenchmen, who penetrate farther into the country than I have done: It is fufficient here to fay, that, contrary to the affertion of fome Americans, the Miffifippi is navigable as far as Kentucky and the Illinois; and that the veffels, which carry the products of these countries to New Orleans, may take back European commodities, which, by this means, would be cheaper than those brought from the ports of the Atlantic.

The commercial advantages, which Louifiana holds out to an active and intelligent nation, are uncommonly great. It might furnish the most durable wood of every fort, for fhip-building and mafts. I have been informed by an engineer, who had been in the English fervice during the last war in Florida, and who was defirous of demolishing a fort that had been built by the French at Penfacola in 1680, that he found the wood of it as free from injury, and as found as if it had been felled the preceding day; and that he could make use of it all in conftructing a ftronger fort. Louifiana could fupply the French colonies with entire houfes in frame, which will be much wanted there on the return of peace; and which might be had at an eafier and cheaper rate from that country than from the province of Maine, or the North river. They could have fhingles of cyprefs and cedar longer, thicker, and fix times more durable than those of fir, that are brought from the north-east part of America, which are not able to refift the frequent hurricanes that happen in our iflands, and often, in one night, carry away the roofs of many houfes. From Louisiana might alfo be brought hemp, flax, and, confequently, ropes

ropes and fail-cloth in abundance; and likewife tiles, which are already manufactured in the neighbourhood of New Orleans. They might get abundance of tar from the firs that grow here in great numbers. Saltpetre, it is afferted, may be found in many places; and there are many lead and iron mines, the working of which would not be attended with much difficulty. The rice in Louifiana is very good; it is cultivated to a confiderable extent near the Miffifippi; it is even faid that they plant it there on dry ground. Wheat, Indian corn, and grain of every fort, grows alfo here in great quantities. The depôt to be formed at New Orleans of all these products of the western states of America would necessarily fecure the fupply to the islands; and the barter carried on with these states, which fhould furnish themselves with European goods at New Orleans, would form a political connexion, which no nation, to which Louifiana belonged, ought to neglect. This large colony would fupply the mother country with finer tobacco than that of Virginia, and with all the fkins which are now collected by the English companies. In short, the productions of Louisiana, and its trade to Europe lying constantly open, would give rife to a barter with the Spanish colonies, from which it would be eafy to receive cochineal, log-wood, chocolate, vanilla, tanned leather, Havannah tobacco, Guatimala indigo, &c. To this lift of productions many more might be added. But the above articles will ferve to give an idea of the great refources of Louisiana. Oil and wine might certainly be cultivated to great advantage. Finally, the pofferfion of Louisiana by the French would fet bounds to the childish avarice of the Americans, who wilh to grafp at every thing : an avarice arising more from a reftlefs character, than from political views, which prevents them from fixing themfelves in any new ftate, which injures their real ftrength, and diffurbs their neighbours. Befides, it must be confidered, that the United States, on account of their weaknefs, will always continue more friendly to a nation, that has the power of injuring them, than one that has not, and that can only offer them advantages. A generous nation will never abufe fuch a power, which it would feel itfelf interefted in turning to the real advantage of the United States.

616

One

One word more concerning the Indians. All of thefe, who have had any dealings with the French, prefer them to any other people. The French behaved to them with fuch magnanimity, benevolence, and honour, that the Indians use ftill to fay to the English—" You are our brothers; the French were our fathers." This fentiment is not yet extinguished, although it is fo long fince they had any transfactions with each other. At prefent they almost all depend on England; but upon the flightest favourable occurrence, they might easily be gained over to France. This is the prevailing fentiment among the Creeks and Cherokees, who call Florida the French country.

The Spanish government in Louisiana and Florida is not so intolerant as usual, but is deficient in strength, as the military force confists of no more than three or four thousand men, who occupy some forts from St. Louis to New Orleans. Indians and Americans are on good terms with the Spaniards; but none of these parties effect the other as important friends or dangerous enemies. The prevailing opinion of the weakness of the Spaniards, and the want of support which the inhabitants experience, beget a predilection for England, under the government of which country they would not be left without support: but in reality they wish for the protection of France: they are Frenchmen, and as attached to their country as if they formed a part of it.

France, therefore, is in the most favourable fituation of any country in the world, to obtain Louifiana from Spain. Spain gets nothing thence but timber, and in fact only gives a wider range to English activity. Nay, the English would disposses her of Louifiana, if the thould with to retain it, and they should not change their political fystem, which is highly improbable. France is, on the contrary, rich, active, abounding in manufactures, and would speedily organize all these establishments. Many families who are in want of every thing in France, and whom the revolution has rendered restless and uneasy, might be fent hither. By lands granted them, their fituation would be rendered comfortable, and their mind easy and virtuous; which is the case with many foreigners, who come every year to fettle in the United States; who, when they become 4 K

possefield of property, forget the vices, which caused many of them to emigrate.

For all these accounts concerning Florida and Louisiana I am indebted to general officers, merchants, and engineers, who have become Americans; but who, until the ceffion of Louisiana to Spain, were in the English fervice. One of them was furveyor-general, and posses the most perfect map of West Florida that can be wished for. He has projected it himfelf, on a large scale.

# RETURN TO CHARLESTON.

On the 2d of May, I embarked on board the Savannah Packet, one of the brigs that are conftantly paffing between Savannah and Charlefton. These veffels generally belong to the Captains. They make about thirtyfive voyages in a year; are always laden; and yield very confiderable profits. The freight for a bale of cotton, or a hogshead of tobacco, is three dollars. The captains man these veffels with negro flaves, that belong to them; and confequently their crew is flow, unmanageable, and bad, according to the known qualities of negroes. Their food, throughout the whole year, confifts in bad peafe, which are meafured out to them with the utmost parfimony. On confidering their fluggish manner of working the ship in fair weather, the idea of being at fea with fuch perfons cannot but be frightful, when the fafety of the veffel depends upon the quickness of a tack. We were two days upon our voyage, which was long for this feafon: part of the time, we were becalmed; and when we reached the bar of Charleston on Monday at funfet, we were obliged to wait till the following day, before we could pass over. The bar at Savannah, where there are always four fathoms of water, can be paffed by fmall veffels at any time.

On my return from Savannah, I fpent three weeks more at Charlefton, and added confiderably to the information, which I had collected on my first journey. The inhabitants, who were in a condition to give me any intelligence, did it faithfully. I also made fome excursions into the furrounding

rounding country, which enabled me to afcertain the truth of my former information.

South Carolina is by nature divided into the Upper and the Lower, by means of the Appalachian, or Alleghany mountains. The fame division takes place in Virginia, North Carolina, and Georgia; a division, which is foon diffinguished by the quality of the foil, and the climate.

I believe that the whole of Lower Carolina has been covered with water. My reafon for this opinion is, that there are no ftones to be found any where in the ground; and upon digging it up, there are layers, of fea-fhells, and often petrified fifh, in the middle of the fand. Entire oyster-banks lie at fuch a distance (fixty or eighty miles) from the sea, that it cannot poffibly be fuppofed they were placed there by men. One of thefe banks is more than fifty miles in extent, and contains a kind of oyfter, which is much larger than any that are found on the coaft, and entirely different. It lies in a fouth-western direction from the river Santce in South Carolina to the river Oconce in Georgia acrofs the Savannah.

There is fresh water ten or twelve feet below the surface of the earth : and fuch wells only as are funk very near the fea, contain fome faltwater, which may have found its way into them from the fea.

The land in Lower Carolina is alfo divided into fwamps, marshes, and high land. The fwamps, as has already been obferved, are of two kinds, namely, either fuch as are watered by fresh water, and by the flood-tide; they both ferve for the cultivation of rice and hemp. The foil of thefe is a rich blue clay, or a fine black earth : on digging ever fo deep you find conftantly the fame earth. Immenfe trunks of trees are often found in the ground, which appear to have lain there for ages: you cannot however dig very deep, on account of the water oozing through it every where. The fwamps, before they were cleared, produced cyprefs, fir, and reed.

The rice, which is principally cultivated here, is fown in April and May. The ground is turned up eight or nine inches deep in furrows; into which the rice is thrown by a woman, in the fame manner as corn is

is fown, and the negroes fill them up. These three operations take place at the same time. The seeds woman affords employment to twenty-five labourers, many of whom are women.

The feed fhoots up in ten or twelve days, according as the ground is more or lefs wet. When the blade is from fix to feven inches high, and after the negroes have cleared away the weeds, the water is made to flow over the field, fo that no more than the tops of the blade can be feen. The rice then grows, but the weeds ftill fprout up. In three or four weeks more the water is let off, and the negroes take away the remaining weeds. They cover the field again with water, which is drawn off before the crop is cut. The yellow colour of the ear and the hardnefs of the ftalk, denote the ripenefs of the rice. It is then cut, and kept in ftacks till winter.

It is afterwards threshed, and put into a small wooden house, which is fome feet high, and refts upon four pillars; and in the ceiling of which is fastened a large fieve. The rice is thrown into the fieve, which separates it from the other parts, and the wind cleans it perfectly before it falls to the ground. The rice, after being thus cleaned, must be freed from the first shell that furrounds it. For this purpose it is carried to a mill; the grinders of which are made of fir, and are about four inchesthick and two and a half in diameter: one is moveable, the other fixed. They are both fcooped out in an oblique, yet concentric form : against the edges thus formed the rice is preffed, and by that means feparated from the hufks. These mills are turned by a negro. On account of the rapid motion, and the foft wood of which they are made, they do not last longer than one year; during which time they require frequent repairs. The rice is winnowed as foon as it comes from the mill. But ftill it has a fecond shell which must be taken off; and this is done by the negroes pounding it with clubs; a work as laborious as that of turning the mill. Several of these clubs are put in motion by a kind of mill which is turned by oxen. After the rice is more or lefs pounded, it is winnowed again, in order to cleanfe it from the fecond fhell; and it is put into another fieve, for the purpose of separating the small from the larger

mail in the

el

Pt

larger grains. The laft only are faleable. Whether thefe are well feparated or not, muft depend on the honefty of the planters : who themfelves acknowledge, that fince the price of rice has been fo high, and the demand fo great, they have not been very ferupulous in this refpect. In South Carolina, as little attention is paid to the good quality of rice as of tobacco. The rice deftined for fale is packed up in barrels, offered to the infpection of the officer appointed for that purpofe, and then exported.

I have mentioned General Washington's machinery: this is but little known in Carolina, and too dear for the planters; who for a long time to come will only be able to proceed in the manner just described.

Before the blade grows up, it is attacked by finall worms, which gnaw the root. It is alfo frequently injured by little fifnes, that live in the water which covers the fwamps. The rice is then only defended by the heron (ardea alba minor), which feeds on thefe little worms and fifnes; and on this account is fpared by the planters as much as the turkey buzzard is by the town's-people.

When the rice is ripe, it is affailed by innumerable quantities of fmall birds, which are known in Carolina by the name of rice-birds. The young negroes, who are conftantly kept there, frighten them away: this is a better method than fhooting them; yet these voracious birds cannot be entirely kept off. The rice may be preferved a long time in the fhells; and without them it is liable to be attacked by the corn-worm.

The fwamps yield between fifty and eighty bufhels of rice an acre, according to the quality of the foil. Sometimes one hundred and twenty bufhels have been produced from an acre; but inflances of this kind happen feldom. Twenty bufhels of rice, with the fhells, weigh about five hundred pounds. Without the fhells, thefe twenty make but eight bufhels, without however lofing much in weight. The ftraw is given to oxen and horfes.

The marfhes, which are the fecond kind of land in South Carolina, produce nothing but very coarfe grafs, but in great abundance. They lie frequently under water; but they could be well drained, and then they

they would yield a better grafs. Some of them lying in a high fituation produce hemp, Indian-corn, and barley.

The high land is of various kinds; and, according to the quality of its foil, produces hickory and oak, or only fir; and this laft fort of land is commonly called pine-barrens. Hitherto this land has been neglected, but unjuftly; for it might be turned into corn and meadow ground. The tall firs and thick grafs, which grow there, leave no doubt of the goodnefs of the foil; which is unqueftionably proved by fome places that have been cultivated. The richnefs of the fwamps, which can be applied fo advantageoufly to the cultivation of rice, and the want of hands to clear new lands, caufe the moft unfavourable prejudices in favour of the pine-barrens; which in other refpects are of various kinds, and few of which would have remained in Europe uncultivated.

The rice can only be cultivated by negroes; and the population of white people muft decreafe in a land of flavery, where it is a degradation for a white man to work. Slavery, therefore, confirms the planter in his prejudice for rice; and the cultivation of rice, on the other hand, attaches him to flavery.

It will appear fomewhat paradoxical, when I affert that the cultivation of rice is the worft, and the leaft productive species of agriculture in Carolina. The conftant wetness of the land is the cause of the great mortality which prevails there; and the treasures of Peru would be purchased at too dear a rate, for one-tenth of the difeafes caufed by the fwamps. But laying this afide, the culture of rice is not very productive. Not the present, but the usual price of rice must be taken into calculation. Three years ago a hundred-weight was worth between feven and eight shillings. I take it at ten shillings, and thus raife the price by a fifth. In a plantation of feventy negroes, no more than forty of them work; the reft are old, fick, children, fervants, &c. Every black labourer, on an average, produces scarcely seven barrels of rice. A barrel is worth four pound ten shillings, or nineteen dollars twenty-eight cents. The value of feven barrels, therefore, is thirty-one pounds ten fhillings, or one hundred and thirty-three dollars ninety-fix cents. From this must be deducted

ducted the wages of the overfeers. At the loweft calculation this amounts to fixteen pounds, or eighty dollars: add to this, as the expence attending the difeafes of negroes, thirty pounds, or one hundred and twentyeight dollars; the tax of one dollar for every negro, feventy dollars; laftly the cloathing, which, at one pound for each negro, amounts to feventy pounds, or three hundred dollars, which must be deducted from five thousand three hundred and fifty. There remains a neat overplus of four thousand feven hundred and feventy-two dollars; which, divided by feventy, the number of negroes, yields a clear profit of fixty-eight dollars per head; for the fields with Indian-corn, which are cultivated befides the rice fwamps, ferve merely for the fubfiftence of the flaves. The forty working negroes, or feventy flaves, cannot cultivate at most above three hundred acres of fwamps; and, of confequence, land of the very beft quality is fold for not quite fixteen dollars the acre. It will not be denied. that well cultivated land generally yields more; that for every fort of crop, indigo and cotton excepted, a fingle labourer can cultivate more than feven acres; and that, if labourers were hired, their wages would not exceed the aggregate amount of the intereft on the purchafe-money, with the fubfiftence and taxes for negroes. The justness of this calculation becomes more evident, when the labour of flaves is compared with that of freemen, and efpecially when a parallel is drawn between the culture of rice and that of any other species of produce. The former exhaufts the foil, and demands more hands ; confequently, while it is cultivated, a fmaller quantity of land, even of fwamp, can be cleared,of land which, if drained and cultivated in a different manner, would produce more, and yield higher profits. Moreover, this draining of the fwampy foil would render the climate of Carolina perfectly healthful. White people might perform the labour in the fields, and every ground for the continuance of flavery would be removed. Again, all the high lands might thus be cleared, which at prefent, merely for want of hands, remain uncultivated. Add to this, that the old fwamps, being dried up by the fun and the wind, decreafe every year, without growing lefs peftiferous by their effluvia.

This reafoning, however irrefragable it appears to me, will hardly conquer the irrefiftible force of habit, efpecially at the prefent period, when rice fetches three times its ufual price, and the planters indulge in a hope, that it will not fall again, although this appears highly improbable to all impartial men.

The rivers in South Carolina, which have their fources among the mountains, frequently overflow their banks. Thefe inundations, which the Americans call freshes, often fweep along the harvest, together with the woods, which furround the rice fields; they are attributed to the great quantity of rain in Carolina, to the numerous rivulets and brooks which fall into the rivers, and laftly to the great declivity of the ground, through which these rivers flow. They have become extremely frequent of late years, which is imputed to the great quantity of cleared land, where that water used to stagnate, which is now falling into the rivers. The quantity of mud is at the fame time augmented by the earth, mixed with the water; and while the ftream is encreased, the bed of the river is narrowed. No certain mode of remedying this evil has, hitherto, been difcovered; but a hope is entertained, that, by conducting thefebrooks and rivulets in a straight direction, by enlarging the mouths of the rivers, and cutting off their numerous windings by fmall canals, it may be poffible to fecure the upper country against inundations, and to leffen the danger of the low lands, fituated nearer to the mouths of the ftreams. There is, however, reafon to fear, that this remedy, which has not yet been applied, will fall fhort of a complete cure.

Although Upper Carolina differs widely from Lower Carolina, both in point of culture and climate, yet the fame prejudices and manners prevail in both countries.

The original fettlers of Lower Carolina were Europeans, who eftablifhed themfelves in the vicinity of the fea; the culture of rice was foon introduced. This is a product which fuits not every foil, and which can be cultivated only by flaves. The new fettlers availed themfelves of this affiftance, but were ignorant of the climate being rendered infalubrious by this fort of culture. It was accordingly commenced, and has fince

fince been continued, but will probably be suppressed in the process of time.

Upper Carolina was fettled much later by emigrants from Pennfylvania, but efpecially from Virginia and Maryland. The latter introduced into this country the culture of tobacco, to which they were accuftomed, and fettled near the rivers, on fuch foil as appeared to them most proper for this branch of agriculture. The Pennfylvanians cultivated wheat, the chief produce of Pennfylvania, but the quantity raifed was inconfiderable, becaufe the emigrants from Pennfylvania were the least numerous; and tobacco was for a long time almost the only commodity cultivated in the country, until the low price of tobacco, and efpecially the circumftance, that it exhausts the foil, opened the eyes of the cultivators, and induced them to encrease the cultivation of grain and cotton, and to improve the grafs-lands.

This change has taken place but very lately, nor has the ancient practice completely ceafed. The population of Upper Carolina is not numerous, and the emigration from that country is not inconfiderable. It is for this reafon that the best land only, which confists of a rich clay, is cultivated, while the reft remains covered with firs, which are of a much larger fize, than in Lower Carolina. This order of things will continue, as long as the population shall not obtain more confiderable additions, and a period be put to the emigration of the inhabitants. This reftleffnefs of disposition prevails here as much among the planters, as it does in Georgia. A family cuts down the trees on fome acres of land, loofens the furface of the foil, fows as much Indian-corn and potatoes as is neceffary for its fublistence, and makes up the deficiency with game or pork. They frequently quit their fmall tract before it is completely cleared, and remove farther into the forest, where, less furrounded by planters, they can live more to their tafte. These people are a fort of favages, more greedy and vicious than the Indians, and merely diftinguished from the latter by the colour. Such of them as dwell on the confines live, however, on better terms with the natives, than those who refide on the borders of Georgia.

Inftances

Inftances of planters continuing long in the fame place where they first fettled are more rare here, than in Pennfylvania. They generally emigrate from South Carolina to Teneffee, Kentucky, and the western countries, but fome remove also to the back part of Georgia.

By the computation of the inhabitants of South Carolina in 1791, the population amounted to one hundred and forty-nine thousand nine hundred and feventy-three fouls, one hundred and feven thousand nine hundred and ninety-four of whom were flaves. More than two-thirds of this population belong to Upper Carolina, the inhabitants of which, especially the white people, have, fince that time, confiderably encreased in number. Lower Carolina, it is afferted, is not in this condition.

The trade of North Carolina has been more enlarged than that of any other ftate. Charlefton is in fact the only trading port of South Carolina, as Beaufort carries on no maritime trade, and that of Georgetown is very triffing, In future all the produce of the country is to be conveyed to Charlefton on the Santee-canal; it is at prefent transported down the river by Georgetown, and fometimes unfhipped there; which change of conveyance cannot but greatly injure the trade of this town.

E Amount of the Exports of Charleston, and Tonnage of the Shipping employed in this Trade, during the Years 1792, 1793, 1794, 1795, and 1796. R. C.

It has not been poffible to learn the value of other articles exported in the first fix months of 1796, or the tonnage of shipping employed within this period,

F 4 5 4 4 3

The commodities, comprifed under the denomination of other articles, are timber, hemp, tar, fome deer-fkins, &c. and alfo provision for the Antilles, which is re-exported from Charleston.

On examining this table, you find, that the extraordinary increase of the export trade of Charleston, in the four years and a half in question, originates entirely from the value of the exports, while in point of quantity the exportation has rather decreafed than increafed; for although more of cotton and rice has been exported, yet the quantity of exported. tobacco and indigo is lefs. This is still more evident from the quantity of tonnage; for in 1795 there were employed one thousand feven hundred and eighty-five tons of shipping less than in 1792, although the value of the exports in 1795 exceeds that of 1792 by two millions ninehundred and forty-nine thousand four hundred and ninety-one dollars, and is nearly double the amount of the latter year. It will be eafily conceived, that the war, in which Europe is engaged, and which has raifed the price of the commodities of Carolina, as well as other ftates, has alfoconfiderably increased the re-exportation of provision for the Antilles; for the value of the latter amounted in 1795 to two millions nine hundred and thirty-one thousand two hundred and fixty-four dollars more than in. 1793, that is, to four times as much.

The following flatement relative to the exportation of the three principal commodities of South Carolina from the port of Charleston for the years 1783, 1784, and 1785, affords a comparative view of the agriculture of these different periods.\*

	Rice.	Tobacco:	Indigo.
1783,	61,974 barrels.	2,680 hogfheads.	2,051 chefts.
1784,	63,713	2,303	1,789
1785,	65,857	3,929	2,163

The trade of Charleston, which is extremely active, has proved highly beneficial to America, as becomes evident from the circumstance, that inftead of feven thousand fix hundred and fixty-five tons of American ship-

\* At this period cotton was not cultivated in South Carolina.

ping, employed in this trade in 1792, fifteen thoufand fix hundred and fixty-five, or three times as many, were employed in 1793. The decreafe of foreign fhipping during the fame period by twenty thoufand and eighty-one tons is an additional proof, that the increafe of the trade of Charlefton is chiefly owing to the war in Europe, which greatly obftructs the trade of the powers at war, fo that this increafe is but temporary. At the conclusion of peace thefe nations will refume their fhare of the American trade, and probably greatly reduce the participation of American bottoms in their colonial traffic.

I was not able to procure from all trading ports as ample and correct information as I obtained in Charleston; but I am certain, that the refults must be every where the fame, and must lead to the fame confequences.

In addition to the fixty thousand two hundred and two tons of shipping employed in the foreign commerce of Charleston, the coasting trade and fishery occupies many small vessels from twelve to seventy tons burthen.

The increase of tonnage has not been attended with any augmentation of the fhip-building in Charleston. From 1791 until April 1796, no more than twenty-fix fhips were built, carrying in the whole two thousand feven hundred and eighty-five tons. They are most of them either floops or fchooners; fome are brigs; and two are three-mafted veffels. The reafon why the thip-building has not kept pace with the export-trade is the fcarcity, or rather the great want of workmen, a confequence of which is the high price of fhips, which are here dearer by fifteen dollars per ton, than in the eaftern ftates, which have not fufficient commodities to load their veffels, and fend them accordingly to the fouthern states for fale. Thus the merchants of Charleston augment the tonnage of their fhipping by purchafing fhips in the eaftern ftates; and this state of things will continue as long as the population of Carolina shall continue as small, as it is at prefent, and labouring people can earn more by working in the fields, than by any other employment. Ships built in Carolina with the timber of the country last three times longer,

longer, than those constructed in the eastern states; for although these employ timber of the fouth in the building of ships, yet they are not entirely constructed of it, and consequently they cannot be as durable as vessels built in the fouthern states.

For the fame reafons, which obftruct the building of fhips in Georgia and Virginia, no feamen can be found there for manning the fhips, which belong to Charlefton. Thefe are likewife furnifhed by the eaftern ftates, and many of them arrive in that port, either on board of fhips engaged in the foreign trade, or in coafting veffels, which in winter carry to Charlefton the produce of feveral parts of Carolina and Georgia, and on account of the higher wages engage on board of fhips in foreign trade. Few of thefe feamen continue in Charlefton after the time, for which they have hired themfelves, is elapfed, becaufe every thing is there twice as dear as in their own country. Some negroes ferve alfo on board of trading veffels; they generally form a third of the crew, and are free negroes. But on board of coafters, and fuch fhips as trade within the diftrict of Charlefton, they conftitute three fifths of the fhip's company, becaufe the mafters are in general alfo the owners of the fhips, and thus can man them with their own flaves.

The articles, which form the exports of Charlefton, are conveyed to this port either on the different rivers and the Santee-canal, or by land-conveyance, of which more ufe is made than of that by water, on account of the difficult navigation of that part of the river Santee which is next to the fea, of the paffage from Georgetown to Charlefton, and of the rapid ftream, on working up the river. There are alfo parts in Upper Carolina, which are fo remote from any navigable waters, that a land-conveyance becomes abfolutely neceffary. Cotton, indigo, and hemp, are transported in large waggons with four or fix horfes. The hogfheads of tobacco are not removed in waggons, but in a fort of fledges. The carriage is not expensive, as the horfes never enter a ftable. They continually remain in the woods, which at all times abound in grafs of the beft kind. The waggoners carry their Indian-corn, their falt-meat, and their cheefe, with them, and enter the inns, to drink a few glaffes of whifky. The businefs of

631

of waggoners is, I underftand, very profitable in Carolina. The carriage for provision from the back country amounts toone dollar and one-third the hundred-weight; in fpring it is fomewhat dearer than in autumn. The carriage to Columbia on the river Combahoe, amounts to two fhillings and fixpence.

The Santee canal, which is to connect the river Santee with the river Cooper, and which is twenty miles in length, will greatly facilitate the communication by water, and of confequence confiderably leffen the conveyance by land. This canal will foon be finished; fome locks have already been built, and, it is confidently faid, that it will be completed about the year 1797, or at latest the year following. It meets the river a little below the point where the tide turns. The return-passage is, therefore, much facilitated by the flood-tide. Veffels of any burthen will arrive here fase, by means of this inland navigation, from all navigable creeks, which empty into the river Santee; and moreover, the passage is fhortened about twenty miles.

如

The canal is conftructed by a company, incorporated in 1786, by an act of the legiflature, by which all the land, not yet difposed of at that period, were granted to this company, together with the privilege of levying a toll for an unlimited length of time. The Santee-canal is not the only one, the completion of which is promoted by the legislature of Carolina; it also encourages the construction of others, where the face of the country and the course of the rivers will permit.

I cannot clofe this long article on Carolina, without mentioning with deferved praife the kind reception I experienced in Charlefton. This is a duty, which I owe to the inhabitants of all the parts of America which I have traverfed, but efpecially to this place. In no town of the United States does a foreigner experience more benevolence and hofpitality, or find to more agreeable manners and a more entertaining fociety, than in Charlefton; no where will he pleafe himfelf better, and no place will he leave with more regret. I fhould be obliged to name almost every perfon I have feen in Charleston, were I to do justice to my feelings; this, however, would render me too diffuse. I shall therefore only name Mr. JOHN PRINGLE.

PRINGLE, whofe houfe, during my refidence in Charlefton, I confide ed as my own; Mr. ISAAC HOLME, receiver of the cuftoms, an excellent man, poffeffed of extensive knowledge, to whom I am indebted for the major part of the information I have been able to collect; Mr. ED. RUTLEDGE, a man of uncommon parts, of a cheerful and amiable temper, of profound learning and the most liberal fentiments, who has affisted the unfortunate emigrants of St. Domingo in the most generous and difinterested manner; General PINCKNEY, who by his talents, prudence, and honourable conduct, has defervedly obtained the confidence and respect of his fellowcitizens; 'lastly, the worthy Mr. MAN, and his partner Mr. FOLTZ, to whom I had a letter of introduction, and who enjoy a distinguished reputation for benevolence, prudence, and restitude.

I could have wifhed to make a tour through North Carolina, before I returned to Philadelphia. But the time, when I was obliged to be in that city, not allowing me to carry this wifh into effect, I fhall here fubjoin the information, which I have received, relative to North Carolina, effectially from Mr. IREDWELL, member of the fupreme tribunal of the United States, an inhabitant of that country, and a man of diffinguifhed talents, and the most respectable character.

# NORTH CAROLINA.

The coaft of North Carolina was vifited as early as the beginning of laft century, but the first permanent fettlements were formed in 1710, by emigrated inhabitants of the Palatinate. The proprietors of Carolina encouraged these fettlements, and granted to the new fettlers the tract of land between Albemarle-found, formed by the river Roanoe and Bathbay, which is formed by the river Tar. This fettlement was almost completely deftroyed by the Tuscarora Indians in 1721, from motives which remain unknown; for the history of North Carolina is involved in greater obscurity than that of any other state. About one hundred and twentyfeven inhabitants were murdered, and the furvivors demanded vengeance from the Governor of South Carolina, to which the country at that time belonged. A war ensued, in which the Indians fustained very fevere loss.

loffes, and wherein the finall army of South Carolina received a powerful affiftance from feveral other Indian tribes. The Tufcaroras, who did not perifh in the war, left North Carolina, to join the five nations on the Great Lake. The colony, which remained tolerably quiet fince that time, increafed in populoufnefs and profperity until 1729, when the feven proprietors transferred their right to the Crown. The country was at that time disjoined from South Carolina, and by the order of George the Second erected into a diffinct province, under the name of North Carolina.

In 1776 the conftitution of North Carolina was formed, on principles much refembling those of the other states. The House of Representatives confists of two members for each county, the whole state being divided into fifty-eight counties, and of two members for each confiderable town, such as Edenton, Newbern, Wilmington, Salisbury, Hilfborough, Halifax, and Fayetteville. The representatives must have refided a twelvemonth in the county, by which they are elected, and poffessed fix months an estate of one hundred acres. The Senate is composed of one member for each county; no inhabitant can be elected a fenator, without having resided a twelvemonth in the county, and poffession the state of a twelvemonth in the county, and poffession the state of a twelvemonth in the county, and pof-

0

Those who elect the fenators must be twenty-one years old, and have inhabited twelve months within the ftate, and posseffed fix months an effate of fifty acres. The electors of the representatives must be of the fame age, and refided as long in the ftate; but it is fufficient, that they have paid the taxes for the last year, without posseffing any property.

The Governor, as well as his council, composed of feven members, are elected by both houses. The neceffary qualification for the place of a Governor are, an age of thirty years, a five years residence in the state, and the possession of a property to the amount of one thousand pounds sterling, or two thousand five hundred dollars. (The money of North Carolina is like that of New York, worth only eight shillings the dollar.) All places under government are in the gift of the two houses; the fecretary of state is appointed every three years. The judges, as well as the attor-

4 M

ney-

ney-general, are nominated in the fame manner; but they receive their appointment from the governor, and keep their places as long as they conduct themfelves in a proper manner. The governor bears no fhare in the execution of the laws. The conftitution declares unworthy of being appointed to any public place, or elected reprefentatives, all perfons who believe not in God, in the truth of the Protestant religion, and the divine origin of the Old and New Testament.

The public expenditure fluctuates from thirty-feven thousand five hundred to forty-five thousand dollars.

The taxes are as follows, viz. eight pence, or two-thirds of a fhilling, for every hundred acres of land, without the leaft diffinction in regard to quality and fituation,—they begin as foon as the occupiers of the lands enter upon their poffeffion; two fhillings for every hundred pounds taxable property, or two hundred and fifty dollars in town-lots; two fhillings for every white inhabitant or negro, whether a freeman or flave, from the twelfth to the fiftieth year of age; ten fhillings for every ftallion ; forty fhillings for the licence to keep a tavern, or for felling fpirituous liquors; and from eight to twenty fhillings for every fentence or decree, according to the different courts by which they are pronounced.

The ftate, in regard to the collection of taxes, is divided into fifty-eight diffricts, which may be altered by the county-courts. The juffices of the peace are, by virtue of their places, collectors of the taxes; they are appointed by the county-courts, and receive fix per cent on the amount of the taxes, which they collect, and fixpence for every mile which they travel for this purpofe. In 1795, the taxes amounted to fifteen thoufand fix hundred and eighty-one pounds fterling, or thirty-nine thoufand two hundred dollars; the taxes on town-lots two thoufand five hundred dollars; on lands, fix thoufand three hundred and eighty-fix pounds ten fhillings fterling—(the number of taxable acres amounts to one million three hundred and ninety-nine thoufand fix hundred and feventy);—the poll-tax, twenty-five thoufand four hundred dollars; the taxes on lawfuits, billiards, and horfes, two thoufand five hundred; making in the whole

:634

whole forty-fix thousand one hundred and eighteen dollars. Deducting from this fum the expence of collecting the taxes, and the loss arising from defaulters, there remains a neat furplus of thirty-nine thousand two hundred dollars.

The public debt confifts in bills of credit to the amount of one hundred and fifty thousand pounds sterling, or three hundred and feventy-five thousand dollars, which are either in the treasury or in circulation. By the determination of the commissioners the debt, which the Union owes to this state, amounts to five hundred and one thousand eight hundred and eighty-two dollars.

The Apalachian or Alleghany Mountains divide the state into two parts, which, in point of climate and foil, widely differ from each other. The low lands, which might be cultivated in as advantageous a manner, as those of the fame description in Virginia and South Carolina, are far from having attained the fame degree of culture. The great difficulties by which the river navigation is obstructed, and especially the want of harbours, which impedes the exportation of commodities, cannot but check the progrefs of cultivation, and bar the profperity of North Carolina, efpecially as, from want of money, thefe impediments cannot poffibly be removed. The greatest obstacle of the navigation of the rivers confifts in their mouths being fhut up by large fand-banks, originating either from the rapidity of the ftreams, from ftrong currents of the Gulf of Mexico, or perhaps from both thefe caufes, and which probably will prevent North Carolina, for a confiderable length of time, from enjoying all the advantages, which fhe might otherwife derive from her foil and fituation.

10

W0

01

ery .....

1117-

The entrance of those places which are called harbours, is fo very difficult, and the depth of water in the narrows fo inconfiderable, that, properly fpeaking, there exift no ports in North Carolina. The best of them is Wilmington, thirty-five miles from Cape Fear. Ships of three hundred tons burthen may enter this port; but the entrance is rendered extremely difficult by a large shoal, known to seafaring people under the name of the Rocks of Cape Fear. The north-eastern branch of the river Fear

4 M 2

is navigable as far as Fayetteville, one hundred miles beyond Wilmington, for veffels of eighteen or twenty tons burthen. This navigation, which is of a much greater extent than any other river-navigation in the ftate, contributes much to enliven the trade of Wilmington. The commodities of the back country are fent thither, as well as the produce of the Antilles, and European manufactures. Fayetteville derives fome importance from this state of things, and its commerce is daily encreasing. Wilmington chiefly trades to the Antilles. European goods are fent thither from Charleston, Baltimore, and Norfolk. The exports of Wilmington amounted, in 1791, to two hundred and fifty-eight thousand feven hundred and twenty-eight dollars; in 1792, to two hundred and fixty-two thousand four hundred and ninety-eight dollars; in 1793, to one hundred and feventy-one thousand five hundred and fixty-nine dollars; in 1794, to one hundred and thirty-three thousand one hundred and fixty-feven dollars; and in 1795, to two hundred and fifty-four thousand one hundred and fifty-one dollars.

The most confiderable parts, next to Wilmington, are Edenton and Newbern. Newbern is feated on the river Nufe, at its confluence with the Trent, one hundred miles from the fea, from which the coaft of North Carolina is feparated by long and fmall iflets, from Cape Lookout to the borders of Virginia. Ships coming from fea pafs between thefe iflets to enter the large bays, into which all the rivers of Carolina empty themfelves. Ships from one hundred and eighty to two hundred tons burthen fail as far as twelve miles above Newbern, and the river is navigable for fmaller veffels one hundred miles farther up the river. Veffels of upwards of one hundred tons burthen are frequently obliged to unload. The exports of Newbern amounted, in 1791, to one hundred and five thousand fix hundred and eighty-five dollars; in 1792, to one hundred and one thousand three hundred and fixty-feven dollars; in 1793, to fixty thousand fix hundred and ninety-five dollars; in 1794, to fixty-nine thousand fix hundred and feventeen dollars; and in 1795, to feventythree thousand fix hundred and fifty-two dollars.

Edenton is fituated on the river Roanoke, near the point of Albemarle

marle-found, and one hundred and fifty miles from the ifland of Roanoke, one of the above iflets. Ships of one hundred and fifty tons burthen can fail as far as Edenton, and fome miles farther up. Thence to the rapids, that is, to the diftance of feventy miles from Edenton, the river is only navigable for *batteaux* of twenty or thirty tons burthen. The Roanoke waters the moft fertile parts of North Carolina. The exports from Edenton amounted, in 1791, to ninety-two thoufand three hundred and fix dollars; in 1792, to eighty-feven thoufand two hundred and three dollars; in 1793, to fifty-nine thoufand five hundred and feventyfix dollars; in 1794, to fifty thoufand fix hundred and forty-eight dollars; and in 1795, to feventy-feven thoufand nine hundred and feven dollars.

The produce of the country above the rapids is unfhipped at the fpot where they begin, and transported by land to Petersburgh in Virginia. When the projected canal through Difmalfwamps shall be finished, which is to connect Albemarle-found with the river Elizabeth, all the commodities, which are at prefent exported from Edenton, will be tranfported to Norfolk, as the communication with Albemarle-found becomes more and more difficult. The county of Camden, fituated on Albemarle-found, and nearer to the fea than Edenton, has a cuftom-houfe, as well as the town of Wilmington, feated on the river Fear, one hundred miles from the ifland Ocrecok. Their fituation being lefs favourable, than that of the three former, their exports are in confequence lefs confiderable. From the books of these five custom-houses it appears, that the exports from North Carolina amounted, in 1791, to five hundred and twenty-four thousand five hundred and forty-eight dollars; in 1792, to two hundred and twenty-feven thousand eight hundred and ninetynine dollars; in 1793, to three hundred and fixty-five thousand four hundred and fourteen dollars; in 1794, to three hundred and twenty-one thousand five hundred and eighty-feven dollars; and in 1795, to four hundred and ninety-two thousand one hundred and fixty-one dollars. These exports are almost entirely drawn from the lower parts of North Carolina, and confift in tar, turpentine, refin, balks, boards, fhingles, staves,

ftaves, deer and calf fkins, tobacco and rice, (of the laft two articles but fmall quantities are exported), pork, bacon, tallow, bees-wax, myrtle-wax, &c. The productions of the upper parts of North Carolina are exported to the eaftern ftates, which in return fupply Carolina with flour, cheefe, hides, potatoes, hardware, hats, and European goods. The high price of labour and difficult navigation obftruct the building of fhips, although the country produces the fineft fhip-timber in the greateft abundance.

The lower parts of North Carolina are as unhealthy as those of South Carolina; nay more fo, although there are not as many rice-fwamps in the former, as in the latter province. In winter fevers and pleurifies are very frequent. The climate of the upper parts is very healthful; they are washed by many rapid streams, and not liable to the fame dangers. In both, but efpecially in the upper parts, the woods are full of pigs and calves, which furnish confiderable articles of exportation. The population of North Carolina amounted, in 1791, to three hundred and ninetythree thousand seven hundred and fifty fouls, one hundred and five thoufand and fixty-one of whom were flaves. The exactness of this estimate is, however, doubted, and the population, it is afferted, was already in 1791 more confiderable, than it appears by this effimate. Since that period it has been encreased more from its own stock, than by emigration from other states; for though colonists arrive from these parts, yet on the other hand many fettlers emigrate again to Georgia, South Carolina, Kentucky, and Teneffee. Since 1788, Raleigh is the capital and feat of government, which, previoufly to that time, removed from one place to another. The towns in Carolina are few in number and infignificant. Most of the proprietors reside on their plantations, and live there like Virginians, but not quite fo well, as in general they poffers not fo much wealth, as the Virginia planters. They are bufied, it is faid, in perfecting their mode of agriculture, and are good and mild mafters to their flaves. I have not been able to obtain either the regulations concerning them, or any other law.

The

638

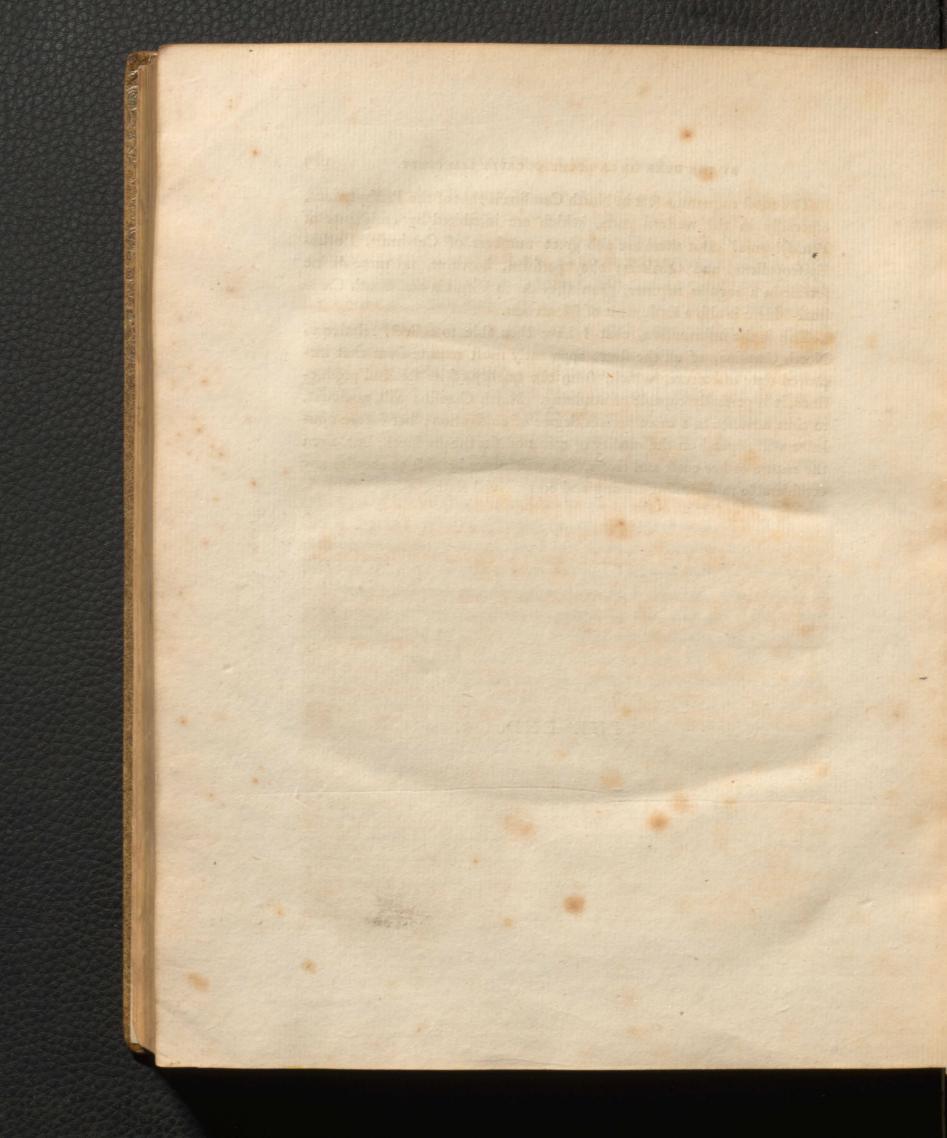

NAMES AN A

630

The most numerous sect in North Carolina is that of the Presbyterians, especially in the western parts, which are inhabited by emigrants of Pennfylvania. But there are also great numbers of Calvinists, Luthe-Episcopalians, and Quakers; they perform, however, no more divine fervice in a regular manner, than they do in Virginia and South Carolina. Here is also a fettlement of Moravians.

This is the information, that I have been able to collect, relative to North Carolina, of all the flates apparently most remote from that improved flate of culture, which, from the quality of its foil and productions, it is perfectly capable of attaining. North Carolina will, no doubt, in time advance to a more perfect degree of cultivation; her future opulence will depend on the quality of commodities fle produces; but, from the nature of her coast and rivers, fle will never be able to acquire any confiderable rank among trading and commercial flates.

THE END.

# POSTSCRIPT.

( 641 )

and the contract

[Since the fheet was printed off which contains the remarks on the policy of the Lieutenant-Governor of Upper Canada, the following authentic Document has been put into the hands of the Editor, who, in justice to the character of the respectable General, has here presented it to the Reader.]

# SPEECH

OF HIS EXCELLENCY

JOHN GRAVES SIMCOE, ESQUIRE,

Lieutenant-Governor of the Province of Upper Canada, &c. &c. &c. Upon proroguing the Fifth Seffion of the Provincial Parliament of Upper Canada.

# Honourable Gentlemen of the Legislative Council, and Gentlemen of the House of Assembly !

THE public business of the seffions being brought to a conclusion, it is with pleafure, I confider your proceedings therein, have been marked with the same attention to the welfare of the province, which has diffinguished your conduct throughout the whole of this, the first provincial parliament of Upper Canada; and which draws near to its termination agreeably to the laws.

It is not poffible for me, without emotion, to contemplate, that we have been called upon to execute the most important trust that can be delegated by the King and British Parliament, during a period of awful and stupendous events, which still agitate the greater part of mankind, and which have threatened to involve all that is valuable in civil society in one promiscuous ruin. However remote we have been happily placed

4N

from

### FOSTSCRIPT.

from the fcene of thefe events, we have not been without their influence; but, by the bleffing of God, it has only been fufficient to prove, that this province, founded upon the rock of loyalty, demonstrates one common fpirit in the defence of their king and their country.

In the civil provisions for the eftablishment and maintenance of our conftitution, and the benefits flowing therefrom, we shall, I trust, always recollect with great fatisfaction, that we have been actuated and guided by a fair and upright defire to lay the foundations of private right and of public prosperity.

I humbly believe that his Majefty, the father of his people, and the beneficent founder of this loyal province, will accept our endeavours to perpetuate these bleffings, which it is his wish should attend his faithful subjects and their remotest posterity.

# Honourable Gentlemen, and Gentlemen!

It is our immediate duty to recommend our public acts to our fellowfubjects by the efficacy of our private example; and to contribute in this tract of the British empire, to form a nation, obedient to the laws, frugal, temperate, industrious;—impressed with a stedsast love of justice, of honour, of public good; with unshaken probity and fortitude amongst men, with Christian piety and gratitude to God!

Confcious of the intention of well-doing, I fhall ever cherifh, with reverence, and humble acknowledgement, the remembrance, that it is my fingular happinefs to have borne to this province the powers, the privileges, the principles, and the practice of the Britifh conftitution; this perpetual monument of the good-will of the empire, the reward of tried affection and loyalty, can beft fulfil the juft end of all government, as the experience of ages hath proved, by communicating universally, protection and profperity, to those who make a rightful use of its advantages.

## A.

A DAMS, Mr. character of, Prefident of the United States, 407.

# Interesting Books published by R. PHILLIPS, No. 71. St. Paul's Church-Yard.

# A NEW AND IMPORTANT SCHOOL-BOOK.

This day was published, price 4s. 6d. bound, with the usual allowance to Schools, embellished with a beautiful Frontispiece,

THE BRITISH NEPOS; or YOUTH'S MIRROR: Being felect Lives of illustrious Britons, who have been diffinguished by their virtues, talents, or remarkable progress in life, with incidental and practical reflections. Written purposely for the use of Schools, and carefully adapted to the fituations and capacities of Youth.

# By WILLIAM MAVOR, LL. D.

# Vicar of Hurley, Berkshire, and Chaplain to the Earl of Dumfries.

# The following CRITICAL APPROBATIONS cannot fail to fatisfy Parents and Tutors of the Propriety of placing Dr. Mavor's British Nepos in the hands of their respective Child en and Pupils.

" In prefenting this work to the Public, Dr. Mavor has made a valuable and much wanted addition to the School library. To British History, Chronology, and Biography, the attention of the British Youth ought to be awakened; and while we give Dr. Mayor the praife and credit which are due to him for his agreeable Biographical Manual, we would recommend it to the Masters of ail our refpectable Schools. It is pleafingly written, and the reflections interfperfed are calculated to in-fpire a love of pure and generous principles. Embracing the most eventful and important periods of Englith Story, this rich variety of biographical matter must prove acceptable to young readers, and to fuch as thirst for knowledge. The example of the good and wife has always been confidered as conducive to virtue, and Dr. Mavor's mode of studying biography must give it peculiar efficacy."

Monthly Review, June.

ST. BURNESS

" The Biography of illustrious men deferves a more diffinguished rank than it has hitherto occupied in the fyften of British education. We think Dr. Mavor's Nepos has many advantages to recommend it to extensive circulation. It is compendious, and includes those prominent characters of British excellence with which it is chiefly desirable for our Youth to be acquainted. The flyle in which the Lives are written may juftly be commended." Critical Review, April.

" I cannot close this paper without expressing my great fatisfaction at having lately met with a publication professedly adapted for Young Perfons, which promises well to check the evil I have been complaining of respecting other School-books. From the plan and execution of it, I am warranted in giving it a ftrong recommendation, as being most admirably calculated to cherifth the beft and most tried principles in young minds. The book which I have in my eye is Dr. Mavor's "British Nepos, or Lives of Illustrious Britons." The performs whole memoirs this judicious Biographer has felected for the improvement and entertainment of Young Perfons, are those who have filled up the most important stations in Society, with the greatest glory to themselves and advan-tage to the State. The actions of these great men are told in a plain and pleasing manner, and, what is no finall difficulty in a work adapted for juvenile capacities, the incidental reflections fuggefted by particular circumftances or traits of character, are to naturally made, that the reader cannot but feel the effect of the example, with a force equal to the pleafure excited by the flory.

# Interesting Books just published by R. PHILLIPS.

An AUTHENTIC NARRATIVE of the Journey of the Dutch East India Company to the Court of the Emperor of China, in the years 1794.5 (fublequent to that of the Earl of Macartney) by Van BRAAM; with a Chart of the Route, 2 vols

Critical Approbations of this Work. "The prefent narrative of the recent Dutch embaffy to China bears evident indications of veracity, and will be a valuable addition to our literary flock of writings in this clafs. M. Van Braam, as the fecond perfonage in that miffion, had better opportunities of making obfervations, than those of inferior rank who were attached to it: the French Editor would have this account confidered as demi-official; a claim to which, probably, there will be no exception. Van Braam was, for the fpace of fix and thirty years, perfonally acquainted with China; and had made frequent enquiries of well-informed men concerning the hiftory, manners, and particulars of their native land, before the opportunity of travelling through that empire prefented itfelf. He was thus enabled principally to fix his attention on fuch objects as were really curious, or imperfectly known in Europe; and his work accordingly throws much light on a variety of very interefting fubjects.

# Monthly Review, March.

"The work before us is highly intereffing in refped to the agriculture and manual arts of the Chinefe, for both of which fubjects the author feems to have a tafte. He is alfo anxious to defcribe every thing that tends to the extension of the commerce or manufactures of that great empire. The imagination of the author does not appear to have been milled by the romantic defcriptions of his predeceffers: on the contrary, his information frequently affumes the appearance of a contradictory intrution upon their reveries, and diffolves the fpell of their enchantments. The translation feems to be executed with more than ufual attention." Analytical Review, February.

"We must here close our review of this interesting journal. The extracts we have given will fhew its fpirit and execution. We must confess that the style is tolerably free from any admixture abundantly competent to his tafk. Prefixed is a map, which adds to the pleafure and convenience of the reader." of foreign idiom; it is always neat, and fometimes elegant; and we think the English translator

In One large Volume Octavo, Price 8s. 6d. in boards, with Thirty engraved Portraits, a New Edition, revifed and corrected, of

# PUBLIC CHARACTERS of 1798-9:

Confifting of copious and interefting Biographical Memoirs of Eighty of the most diffinguished Public Characters of the prefent Period, written with accuracy and candour.

In Two Volumes Duodecimo, Price 10s. in boards, embellished with Three Copper Plates,

BIOGRAPHICAL ANECDOTES of the FOUNDERS of the FRENCH REPUBLIC, and of other Eminent Characters, who have diffinguished themfelves during the progress of the Revolution.

### Critical Opinions of these Anecdotes.

"We have only to observe on the present volumes, that they are generally written with an elegance and vivacity of fivle which are peculiarly pleafing; that the Anecdotes are mingled with many indicious and fenfible reflections; that the politics are free, but temperate; that the effimate of characters is apparently impartial; and that it abounds with the most interesting and entertaining Analytical Review, November.

"This very ampling collection of original Anecdotes has anticipated, by its fale, the neceffity of our tardy approbation : it will fuffice if we felect fome paffages, that are characteriftic of the fpirit of the work, and of fuch men as are likely to preferve a perpetual importance after the foam of the Revolution fhall have fubfided." Monthly Review, December.

"We can promife to our readers, whatever their political principles may be, confiderable amufement and information from these volumes, which contains anecdotes of above two hundred of the most eminent perfons who have "ftrutted and fretted their day" upon the grand theatre of French politics. The author appears to have taken great pains to collect materials from the beft fources."

Critical Review, May.
