

CONSIDERATIONS

ON THE DEPENDENCIES of GREAT BRITAIN. WITH OBSERVATIONS ON A PAMPHLET, INTITLED,

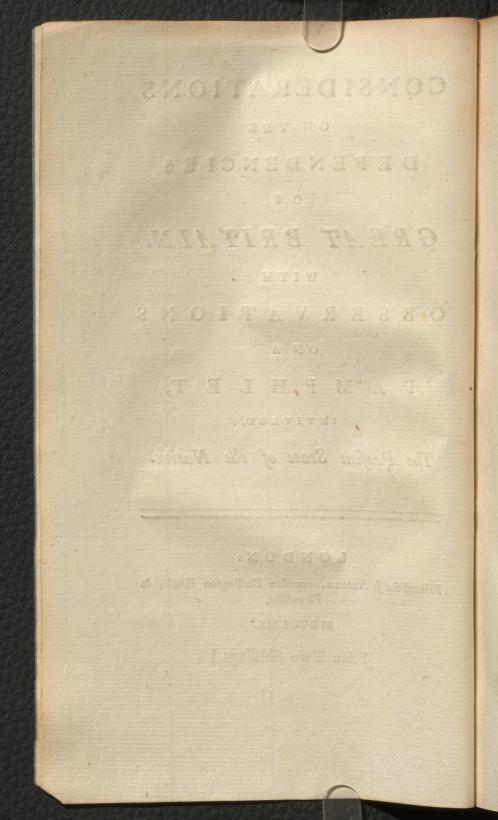

The Present State of the Nation.

LONDON:

Printed for J. ALMON, opposite Burlington House, in Piccadilly.

MDCCLXIX.

[Price Two Shillings.]

[5]

Confiderations, &c.

THE Pamphlet, intitled, " The present State of the Nation", is certainly worthy of public attention, and tho' I am far from agreeing with the author in feveral of his leading principles, I am very ready to admit the merit which he may claim as a man of abilities, improved by industry. I do not mean to combat, but animadvert ; and whilft I alledge that this Pamphlet fuggefts fome fchemes contrary to justice, and others inconfistent with practicability, I am willing to allow, that it alfo communicates useful information; and I beg leave to express my entire approbation of fuch a detail of our circumstances for the confideration of the public, at a time when a course of mismanagement, and a state perplexed by a multitude of difficulties, require fome interpolition, above that of temporary expedient. And indeed, from the ftate this author gives of the weight of taxes in England, and the infufficiency of the ordinary revenues to defray the ordinary ex-B pences.

pences, without annually breaking in upon that fund appropriated for difcharge of the debt, it is evident, that fomething more than the qualifications of High Birth. Fortune, or even Virtue itfelf, is neceffary to regulate the great concerns of the Britifh Empire : fome improvement of Difcipline, fome reftoration of Oeconomy, fome difcovery of Refources must take place, in order to prevent the deftruction of England.

It appears that the regular expences of government at this time of tranquility, amount (exclusive of the interest of the national debt) to little less than four millions; and that the standing Ways and Means produce about 2, 322,000 l. confequently that to make up the supply for the year, it is necessary to borrow above a million and an half from the Sinking Fund, which certainly ought to be facred to the payment of our immense debt.

That the debt of the nation (after the reduction of the feven millions fince the peace) amounts to about 141,000,000 *l*. the annual interest of which is about 4,500,000 *l*.

That the laft war encreafed the debt no lefs than feventy-five millions; the annual intereft interest of which is stated at about 2,600, 000 l. which added to an encrease in the peace establishment of 1,500,000 l. makes an annual additional charge on the nation of above four millions, in consequence of the last war; and therefore on the plainess principles of calculation, another war, under a continuance of the present mode of management, must end in the ruin of England.

That of this debt 52,000,000 *l*. are due to foreigners, the intereft of which is above 1,500,000 *l*. this fum is to be deducted from the ballance of trade, which is not, according to this author, above two millions and an half in favour of England.

These great national points are stated in this pamphlet with great clearness, and I do believe on good grounds. I agree therefore with the author, that this view of things calls for the most ferious attention; but I disagree with him in his plan of remedy, as inadequate to the end, and inconsistent with policy, justice, or indeed practicability.

The ftate of Great Britain is this. The peace establishment, with a little re-B 2 formaformation, may be reduced to The national debt 141 The intereft of which is

3,300,000 141,000,000 4,500,000

£ 7,800,000

This 7,800,000*l* is the fum to be provided annually for the expences of England. To the accomplifhment of which the author of the ftate of the nation propofes, that Ireland fhould contribute 100,000*l*, and the Colonies 200,000*l* making together 300,000*l* which is just the difference between 7,800,000*l* and 7,500,000*l* per annum.

This extra-British contribution to the British Establishment, is the principal object which I propose to confider.

First, then, as to Ireland, let us enquire, whether this would be reasonable or practicable; and examine how far the relative condition and abilities of Ireland have been justly stated by this author; even supposing this 100,000 *l. per annum* an object of weight enough in the scale of Britiss of Britiss expence to demand such consideration, or justtify such an expedient.

I have this moment before me the national accounts of Ireland, which were laid laid before parliament the last feffion, and shall from them state the annual sum raised on that kingdom in taxes; and then examine into its means, its resources, and the proportion it bears to Great Britain, in its ability and its exertion.

In the year ending Lady-day 1766, the produce of the l. s. d. Hereditary revenue was 671,649 13 5 The additional duties 245,954 8 11 $\frac{1}{4}$ The loan and other appropriated duties 73,141 1 11

£ 990,745 4 34 The amount of the whole is nearly one million of money, actually raifed every year on Ireland. And when I add to this, that on comparing the expences of government with this produce of the revenues, it was apprehended by the Irish parliament, that this fum might turn out inadequate to the expences, and therefore they paffed a Clause of Credit in the bill of fupply, empowering government to borrow 100,000/. if it should be found necessary, in the interval between that and the next feffion of parliament ;--- and this, tho' fome additional taxes were granted, and all the old ones continued; tho' Ireland already owes a debt of

[9]

of near 700,000! which not only has not been diminished fince the peace commenced, but has been every feffion encreafing in confequence of votes and acts of credit, befide paying a penfion lift equal to the interest of a debt of 2,275,000%. All this being confidered, I shall not be accused of facrificing much of accuracy, if, for the fake of perfpicuity and facility of comparifon, I state the annual fupply raifed on the kingdom of Ireland at one Million ; and when we take into our calculation the new tax on absentees, and probable increase of the revenue from the reduction of duty on tea, by which that commodity will be reftored to the Cuftom-houfe, from whence it has been banished by exceflive duties, I am convinced, if I state the revenues at a Million, I do not exceed the actual produce of this prefent year.

[10]

It appears from the full calculation of this author, that the fum to be raifed annually in England is 7,800,000 l. which for expence of management, and eafe of calculation, I fhall call 8,000,000 l.

Thus we fee Great Britain pays eight times as much in taxes as Ireland.

Let us now examine, whether England has

[11]

ot

g

t,

1-

is

of

le

-

n

d

V

f

1

2

e

has more or lefs than eight times the ability of Ireland to pay; then we shall be able to judge, whether Ireland pays more or lefs than her proportion to the general caufe. England contains thirty-fix millions of acres; of which those who have taken the latest furveys, admit twenty millions to be in perfect cultivation, and well worth one pound per acre; which with the other 16,000,000 under pasture, sheep, wood, &cc. valued only at Ss. per acre, make a rental of 26,400,000 l. to which, in confideration of the infinitely advanced value of land and ground-rent in and about London. York, Briftol, and all the other cities and trading towns of England, we must at the lowest computation add 3,600,000 /. more ; and this brings the rental of England to thirty millions.

I have frequently known it flated at 40, and fometimes at fixty millions; therefore I am certain of not exceeding in my valuation at thirty millions.

As for Ireland, it is by nature in fo great a proportion marshy and mountainous, and fo far deficient in culture and population, that the eleven millions of Irish plantation acres which it contains cannot possibly be estimated effimated at more than three millions.

[12]

Thus England is in this respect ten times as great as Ireland; notwithftanding the taxes of the former are only eight times as great as those of the latter. As for the perfonal property of England, it exceeds that of Ireland still in a much greater proportion, including many articles, which that country either has not at all, or in a proportion below all comparison with the fuperior country; fuch as plate, jewels, furniture, ships of war, merchant-ships, &c. &c. fo that, at the lowest computation of the wealth of England by any political arithmetician, it will, I believe, be univerfally admitted, that the real and perfonal property of Great Britain united, are fixteen times as much as those of Ireland : and yet it pays but eight times as much. There is another method of comparing the wealth of the two countries, namely, by the expences of each individual. The expences of every inhabitant of Great Britain, from the king to the beggar, are estimated at 101. per head. Those of Ireland do not exceed 21. 10s .- Computing then Great Britain at eight millions of inhabitants, and Ireland at two, the confumption of the one is

-

,

is eighty millions, of the other only five; fo that Great Britain spends (and consequently has) fixteen times as much as Ireland. Thus there refults a reciprocal confirmation from the agreement of thefe two mediums of computation; each individual of England having four times as much as each perfon in Ireland, ought to pay four times as much; otherwife they are not taxed proportionably. But, as England pays only eight millions, whilft Ireland pays one, each perfon in England pays only twice as much as each perfon in Ireland, and confequently but half as much as he ought. And here I cannot avoid fubjoining an observation on this subject, made by a perfon of the greatest eloquence and abilities: "Bread and beer are the necessaries " of life in England, milk and falt the lux-" uries of Ireland; and it is their luxury, " and not their poverty, that difables the " people of England to bear more taxes; " for, if they would live but as the inhabi-" tants of Ireland, and reduce their annual " expence from 10l. to 2l. 10s. each, their " annual expence would decrease from " eighty millions to twenty; which would " make a faving of fixty millions each year. .s. So

"So that the whole rational debt of Eng-"land would be paid off, if the people would confent to live but two years and a half, as the people of Ireland are condemned to live perhaps for ever."

These disproportions are amazing, yet they certainly subsist; and if it be in a great degree difficult for the people of England utterly to alter their manner of living, let them retrench, in *fome degree*, or at least let them cease to call on frugality and indigence to supply, not their wants, but their luxuries. It may indeed be irkfome to men to substract any thing from superfluities, to which they have been accustomed, but to fubstract from the necessaries of life is impossible. Frugality is a resource, which has not yet been tried in England—in Ireland it has been tried as far as it will go.

If lands in Ireland have of late riten in their value, it is in a great meafure owing to the avidity of the landlord, and the parfimonious habits of the tenant, who pays the former the whole of the advance, and fill referves no more than existence to himfelf. Provisions too are growing very nearly as dear in Ireland, as in England; but in the latter, as this dearness proceeds from the

the plenty of money, in Ireland it is the confequence of the fcarcity of provision .- For let a country be ever fo fertile in itfelf, if it have not a refource against superfluity by foreign trade, it never will be able to fupply itfelf;-and accordingly, with all its natural advantages, Ireland has always been obliged to import from other countries a great proportion of her confumption of Corn; and at this day, with all her boafted improvement, industry, and falutary laws, she is yet unable to feed her own inhabitants, but is obliged to fend near 150,000 l. per annum out of the kingdom for different kinds of grain. And by a paper lately published by the Dublin fociety, it appears, that of two millions of money fent abroad, for foreign articles, one million is for commodities which Ireland might provide for itfelf. Is there not almost a rebellion in England when the people cannot eafily get the best white bread ?

How different is the cafe of Ireland ! The tumults which lately were raifed in that kingdom, were the irregular discontents of a desperate people, who, through the rapacity of landlords, and variety of extortion exercifed by dealers in tythes, found it almost impoffible by the hardest labour to procure potatoes.

C 2

[16]

potatoes. This was downright rebellion! The common people of England generally feed on wheaten bread, butter, cheefe, bacon, and beer; whereas in Ireland, the northern people live on oaten bread and milk; thofe of the fouth and weft univerfally on potatoes; to which fcarcely any of them afpire to add milk, the whole year round, but really and truly (however improbable it may be to an Englishman) do frequently support themselves by nothing but potatoes and water.

The wages given throughout Ireland to labourers are as univerfal at 6*d. per* day, as they are throughout England at a fhilling. What is the reafon of this difference? Is it that 6*d*. in Ireland will produce as much as one fhilling in England? that is impoffible! For I have this moment the Englifh and Irifh News-papers before me; by which I find, that the medium price of meat and Corn is not much above one twentieth higher in England than in Ireland, and the commodities are certainly one twentieth better, which makes the prices in fact equal *. The

* There is no particular in which the people of England are more miftaken, than in the prices at which they rate the feveral articles of Irifh confumption; they think Ireland the ekcapeft

cafe

cafe is, the English labourer will not be fatisfied unlefs he feeds on white bread, cheefe, bacon, and beer, which he cannot do for much lefs than a fhilling; whereas the Irish labourer is contented to fubfift on potatoes and water, or efteems himfelf happy, if he can procure himfelf potatoes and milk; and all this he can do for fix-pence. Thus the grievance

cheapeft, whereas the fact is, that it is the most frugal country in Europe; the generality of things are as cheap in England, and very many are and must, from the nature of their trade and reftrictions on the Irish commerce, be much cheaper than in Ireland; of which I shall mention fuch as occur to me, tho' I shall not be able in my catalogue to comprehend every article. Woollen-drapery almost of all kinds, iron, tin, copper, coals, hops, bark, earthen-ware, hard-ware, all kind of mechanical-tools, gold, filver, Bruffels and all kind of laces, lamp-black, white and red lead, liquorice, faffron, fugars, tobacco, cotton, indigo, ginger, fpeckle-wood, Jamaica-wood, fuffick, and other dying woods, rice, molafies, beaver skins and other furs, pitch, tar, tnrpentine, tea, coffee, chocolate, fego, pepper, cloves, cinnamon, and all manner of spices, stamped and stained linens, madder, needles, linfeed and train-oil, paper, pewter, toys, timber of feveral kinds, all manner of drugs both for manufacture and medicine, china-ware, porcelain-earth, pearls and all preciousftones, ivory, taffatees, and in fhort every thing which is brought either from the East or West-Indies ; and finally, as to the great article of human fubfistence Corn, let me observe, that there is no year in which a great quantity is not imported into Ireland from England, which would not be the case if Corn bore in any great degree an higher price in England; for tho' there is a bounty of five shillings per quarter paid on exportation of wheat, and fo in proportion for other grains, yet hazard, freight, damage, insurance, commission and delay, are all fuch deductions from this bounty, that they would fcarcely be at the trouble of exporting their Corn, to fell it at a price much lower than that which their own markets afford.

grievance of England does not fubfift in the bigh price, but the bigh use of provisions; and if the time shall ever come, in which the labouring man shall change his bread and cheefe for roaft-beef, there must then be an end of the trade of England; for no commodity can be merchantable, manufactured at the expence which that must induce. Thus the wants of England are artificial, or the effects of extravagance; the neceffities of Ireland are natural, and proceed from meer poverty. - When Mr. Poftlethwayt fays, that labour is cheap in Ireland in confequence of the cheapnels of provisions, he mistakes the cause; and when the people of England complain, that the price of provisions is exhorbitant, they mean (as the author of the farmer's letters observes,) by provisions the superfluities of life. And the fame excellent author has made an exact calculation of the expence at which a labouring man, his wife, and three children, can fubfift comfortably, at the prefent price of things, provided he is industrious and lives as a labouring man ought. He is not allowed the best wheaten bread, nor does his wife drink tea, yet twice in the week he has meat made into a good foup, good bread, beer, e

1,

beer, cheefe, or rice milk at the worft. The whole expence of this œconomy being deducted from their earnings, and allowing one pound for ficknefs or cafualty, there remains a ballance at the end of the year to this family of 13*l*. 13 s.

The extravagant manner in which the labouring people actually do live, reduces that ballance to 31. 10s. It is not then the high price of provisions or taxes that really do tender them oppreffed : this they may fee by turning their eyes to their neighbours the Dutch. With them the manufacturer muft pay, if he will confume it, for fuch bread as the Englishman would eat, 3d. per pound; and for flefh-meat od. He pays one third of his earnings in taxes, and the Englishman not much above one tenth ; yet the Dutchman's wages are only 14d. per day, which is at a medium about the price paid in England, and yet this frugal and industrious people manufacture the products of various countries, and under-fell them all, at their own markets.

In France, the taxes are peculiarly oppreflive on the poor, yet labour is there three times as cheap as in England; and, on the other hand, we may fee that Birmingham, notwithnotwithstanding the high price of provisions, has not only rivalled Geneva, the most plentiful and frugal part of Europe, but has entirely taken from her the enamelled and lacquered trade, which she was in possession of. And as for Ireland, what an Englishman would call the neceffaries of life, are within a very fmall degree as dear there as in England ; yet as I before observed, the price of labour is but one half as high But the author of the State of the Nation fays, the people of Ireland may afford to make this annual contribution of 100,000% because they do not pay Land Tax, Malt Tax, Houfe or Window Tax, no duties on Soap, Candles, Salt, or Leather.

Good God ! what matters it under what titles or denominations it is that money be raifed on the people, if it be actually levied ? There are abilities and difabilities to bear particular taxes peculiar to every country. A tax upon bread would be the moft oppreflive tax in England, upon potatoes in Ireland; the Hearth-money was difcontinued in England foon after the Revolution, as a badge of fubjection; and the extensive Land Tax, which this author recommends, is a judicious tax for England, but would be an oppreffive 3

five one in Ireland. Almost the whole lands of Ireland being in the hands of the Proteftants, and two thirds of the inhabitants being Papifts, a Land Tax fo far as it operated would be, at least in the first instance, partial, and therefore injurious : For tho' I would not with on account of religious differences to fubject men to any feverities, I would not, on the other hand, confer immunities on noncomformity, or give two thirds of the community an exemption from a tax, to lay a penalty as it were on the eftablished religion. The fum raifed on the people of Ireland is one million ; on England eight millions. As the confumption of England and Ireland is different, the object of their respective taxes must be different .- The revenues in England are raifed by Customs, Excise, Land Tax, Malt Tax, Window, Stamp, Salt, Candle, Leather Duties, &c. In Ireland by Cu/toms, Excife, Quit, Crown and Composition Rents, Hearth-money, Ale and Wine Licences, Cafual Revenues, &c. &c.

The queftion is on the *fum raifed*; the means must always differ according to the circumstances of the country:—otherwise Ireland might retort the argument of this author and fay, " the people of England can D " bear " bear still more taxes, because they do not pay Hearth-money, or Quit-rent" *.

Let us however make a clofe examination into the reality of those exemptions from taxation, which have been attributed to Ireland.—And first as to the *Land Tax*.

This tax, when it is flated at three fhillings to the pound, does not at an equal and exact affeffment exceed + one fhilling in the pound, on every acre of land in England; in Scotland not three-pence in the pound. Ireland, it is true, does not pay a Land Tax, at leaft under that denomination, but it pays a Quit Rent of above 2d. $\frac{1}{2}$ per acre. Now allowing throughout the kingdom three acres to the value of a pound annual, which every one who knows the country knows is as little as can be allowed, there is an ac-

• The author of the Prefent State of the Nation fays, " the "net produce of the public revenues of Ireland in 1766, " arofe altogether from Port-duties or Cuftoms, an Inland " duty or Excife upon Beer, Ale, or ftrong Waters, made " for fale, and a tax upon Fire-Hearths". Was it by accident that this author, who feems fo intimately acquainted with the flate of Ireland, has omitted to mention in his recital of Irith Taxes, Quit-Rents, Crown-Rents, Composition-Rents, Port-Corn-Rents, Wine-Licences, Ale-Licences, Cyder-Licences, Cyder-Excife, duties on Hawkers and Pedlars, on Cards, and Dice, on Coaches and other Carriages, prizage of Wines, Light-houje-duties, Cajual-revenue, &c. &c. &c.

† If the rental of England be 30,000,000 *l*. one fhilling in the pound is 1,500,000, which is the exact amount of the Land-Tax when stated at three shillings in the pound.

tual

tual Land Tax of 7d. in the pound; which is not fo very much inferior to what England really pays, and almost three times as much as Scotland pays. But without having been at the trouble of mentioning a corresponding impofition, or concealed Land Tax, I might have stated the prohibitions of Irish trade as a series of Land Taxes, as fo many difcouragements to cultivation, which alone makes land valuable, and actual deductions from the value of whatever the land does produce. Is it to be imagined, that fo little as 3s. in the pound is deducted from the landed property of Ireland, by depriving it of the market of universal commerce? Would not an Irish farmer readily advance his rent 3s. in the pound to his landlord, if he could in return give him every market in the world open to what he has to difpose of? He certainly would. But the cafe is in Ireland, that home confumption being in the general the ultimate refource, fuperfluity is the terror and the fcourge of the farmers ; and the confequence of universal plenty, may be with them universal poverty. Let us only confider, so far as the tillage lands of England extend (which are twenty millions of acres) what a repeal or indemnification of the Land Tax is the D 2 liberal

liberal bounty on exportation of Corn. Whilft wheat even bears an advantageous price to the farmer until it be 48 s. per quarter, there is a bounty paid of no lefs then 5s. on exportation of a quarter, which is not above 32 stone: fo that when the year is fo plentiful as to produce fix of those quarters per acre, there will be a bounty received of thirty fhillings on the produce of each acre of wheat. This law not only gives this great bounty to corn lands, but must, if not defeated by mifmanagement, convert all the lands of England into fuch .- There is an humble imitation of this law in Ireland, but it is utterly ineffectual; the bounty not taking place until wheat be of fo low a price as 30s. per quarter, which quarter confifts of forty ftone. If that plenty should ever happen, the bounty to be paid on exportation is only 3s. 4d. for every 40 stones of wheat, which is little more than half the bounty England would pay at the fame time. This law therefore never has been, nor probably ever shall be executed in Ireland. - I do however think, that much acknowledgment is due to those who procured that law, tho' at prefent inoperative, as it is founded in the out in a long to the to beft

[24]

[25]

best principles of cultivation, and may be the object of future improvement *.

V

It is true, that for thefe two or three years paft, artifice, or the terrors of imaginary want, have frequently fuspended the operation of those admirable bounties, by utterly prohibiting the exportation of grain.---But these are temporary cautions, the wifdom of which is controvertible ; or rather (if I were to fpeak my opinion) the abfurdity of which is incontrovertible; for nothing will produce uniform plenty, but uniform demand ; and farmers will by degrees ceafe to till the ground, if they find they are not at any event to derive from foreign neceflities indemnifications of their feveral loffes by bad harvests. Besides, there is not any manufacture fo profitable to the nation as agriculture ; it is, as Montesquieu calls it, " a manufacture " which must be established before any o-" ther can." And it appears, that in five years from 1745 to 1750, there was exported out of England corn to the amount of 7,405,7861. fo that I am entirely convinced that the exportation of corn, under the bounty, if it were not fo frequently to yield to the impa-

* That law was paffed when the Earl of Hertford was Lord Lieutenant of Ireland.

tience

tience and ill policy of the populace, would be more advantageous to England, than almost all the other trade of that country, their fuperiorskill and superior encouragement, join'd to the regularity of their feasons, would enable them to fupply feveral countries with grain cheaper than they could raife it themfelves, and fifteen millions of uncultivated acres would be improved and enclosed ; population would encrease in a great degree, and the people would be employed in the manufacture of a commodity, every article and rudiment of which is British ;- the immense demand would produce plenty, and the prices at home would be lower than they are at this moment, tho' the exportation of corn is prohibited. And the truth of this affertion is proved by a view of the Windfor table of grain, by which it appears, that notwithftanding the universal advance in the value of all other things, yet wheat has been cheaper for these last 75 years than it was before; and the price had been regularly rifing before the bounty was granted, and has as regularly been on the decline ever fince. If this be not a proof, there is no certainty in nature.

In fhort, if, upon the failure of any foreign harvest, there is regularly to be a prohibi-

hibition at the English market, every country will be under a neceffity at all events of applying themselves to agriculture for their own existence, as they can no longer hope to be fupplied in their fcarcity from England. But what I have endeavoured to urge on this occafion is not, it feems, the fashionable doctrine at prefent. If a few drunken artificers in London cannot procure by the labour of three days, as much of the best wheaten bread as they can confume in fix, they are up in rebellion ; and then must be bribed by a shortfighted administration into peace by an embargo ; the natural fruits of which are future wants and future rebellions. In fhort, it is now the policy to facrifice the farmer to the mechanick, which must end in the ruin of both; for it is laid down by a judicious writer as an invariable maxim, " that whatever " encreases the fale of a production, encreases " the quantity of it; and therefore if you " would have the bread cheap for your ma-" nufacturer, you must fuffer the exporta-" tion of corn to be certain and unobftruc-" ted." I shall, in addition to this, only remind England, that the formerly fupplied Sweden with corn, but that this fupply became fo precarious from wanton prohibitions, that

be noA c fu. in'd en. with em. ated poand nuruife ces his 0is of hof er 10 16 ly e

4

that felf-prefervation forced them into agriculture, and at present not one ship-load of corn goes from England to Sweden. And here I cannot but lament the present prohibition, which in its operation extends to Ireland as well as England, and that to its great injury. In fhort, the continent are told, once for all, " You must apply yourfelves " to agriculture, for you shall see, that " whenever you are in fcarcity, we shall " ftop our ports, let our plenty be what it " may. You must either follow the exam-" ple of the Swedes, and at all events raife " corn for yourfelves, or apply yourfelves to " fome other market, more regular and ra-" tional". The confequence to England will be, that foreigners must do fo. England will lofe this most valuable of all her branches of trade; and when corn is no longer to be exported as a commodity, it will not be to be found as a necessary. And the peculiar misfortune of Ireland is, that tho' fhe is now possessed of more grain than ever she had before, yet the English redundance will, for the lake of the bounty, and convenience of navigation, be fent to Ireland in great quantities, to the destruction of their farmers and agriculture. And this is not mere furmile

mise. I have this moment a letter in my possession, from the most eminent corn merchant in Ireland, informing me, that great cargoes of corn are daily expected from England.

The next tax under confideration, from which Ireland is exempted, is the Windowtax. But let it be remembered, that Ireland pays Hearth-money, a tax more oppreffive, and on a more indifpenfable neceffary, and one which, in proportion to the circumftances of the two kingdoms, is of much greater amount.

They have not a *flamp duty* in Ireland; yet even that I cannot fay they are *totally* exempted from, as the ultimate decifion of all law proceedings has been transferred to England; and great is the tax which Ireland pays in defraying the various expences of folicitation, and attendance on appeals and writs of error in England : and whatever proportion of this Englifh tax neceffarily falls on the fubjects of Ireland, is an addition to the taxation of Ireland, and a deduction from the taxation of England.

In fhort, whether the taxes of Ireland be confidered collectively or in detail, they will be found heavier than those in Eng-E land;

11 oad And ibireeat. old, ves hat hall t it mife to: ra. nd g. ler)11-101 :11-15 he ce at ers

[-

land; for however people difagree, as to the minute materials of calculation, yet it must be admitted, that Ireland pays one eighth of the fum that England pays, and it is impoffible to doubt, that England is ten times as rich. These are two facts. upon which there can be no difference of opinion, and the conclusion is certain and obvious. Let me likewife add, that the taxes are particularly oppreffive in Ireland, because they are paid by about one fourth of the community, three fourths living without the use almost of any one taxable article, for potatoes are not yet excifed; and hearth-money and tobacco duties are the only taxes to which they can be liable : whereas the taxes in England are not only in quantity lighter, but in equality more imperceptible. We must, however, acknowledge, that the proposition, which this author makes to Ireland, is conceived in terms of liberality, and, I really believe, with fair intentions towards that kingdom: but he argues from a remote view of a country under circumstances of depression, which are inconceivable to him ; and the advantageous enlargement of commerce, which he would confer on Ireland, both juffice and

and policy require that the thould poffers, s to merely to enable her to fupport her prefent ti contribution. But when the is already ON ftrained beyond her ftrength, when Engand land, with all her complaints, is diminish-Idi ing her national debt, and Ireland encreafing 101 hers; when the former is mending, tho' 2 01 flowly, in her circumftances, and the latter and not flowly growing worfe, even in a time the of peace, of laying up, or at least of recond, vering, it would be fomewhat hard to urto expect that fhe fhould purchase, by a cering tain incumbrance, a probable alleviation; ble and for a precarious rivalship with France ed in the woollen trade, or fome fuch comare mercial lottery, fend away fo great a prole portion (even one fifth) of the current cash nly of the kingdom, over and above the im-910 menfe fums already remitted to England ac. from that country. his

Ireland is an Ifland, which may certainly boaft of natural advantages, but they have hitherto been generally either unimproved or unemployed; with fine harbours, but little commerce, and a fruitful foil, but little affifted as yet by cultivation. It contains about eleven millions of Irifh plantation acres; not above two thirds of which are E 2 inha-

ch

ice

inhabited, and not one half under any reafonable degree of cultivation, which is evident, from its never yet having been able to produce corn nearly equal to the confumption of a country, which has the feweft inhabitants, and those too a people who confume lefs than any people perhaps in the world; taxed in a greater proportion than Britain, with a great majority of its inhabitants too miferable from their poverty to contribute to the fupplies, and about two thirds debarred by religious policy, from almost every opportunity of contributing to the wealth, or ftrength of the country. Who, because they are not supposed to be attached to the government by principle, are not to be bound to it by intereft ; and by the evil conftruction of well defigned laws, are not fuffered to deposite with the state, even hoftages for their loyalty .- Who are not allowed either incitements to industry, or pledges of fidelity, by being precluded from enjoying fecurity for their money, or any valuable poffeffion in their land .- Who are kept by the laws in a ftate of preparation for revolt, with their properties as transferable as their perfons, without bazard, attachment or obligation to reftrain them ; in fhort, withrei.

without any interest in the public prefervation.

There is one branch of trade, which Ireland enjoys in a very perfect degree, that is the linen manufacture. This is infinitely advantageous to Ireland, and, let me add, highly fo to England too; for the money the fends thither for linens only takes a progrefs fpeedily to return again ; whereas the money fent to purchase foreign linens never returns. This I do admit to be a valuable branch of trade; however, the utmost attention of the legiflature of that country has not been able to extend it, in any degree of confideration, beyond one of the four provinces, and it feems impoffible in the nature of things that it should be made univerfal in that kingdom.-And when we examine the Cuftom-houfe entries, we are much deceived as to the value of the exportations under this head .- As linen pays no duty, oftentation and exaggeration of capital induce the merchant to make his entry greater than his exportation. And still this manufacture is of fo narrow extent, and bears fo fmall a proportion to the demands of England, that over and above what the imports from Ireland, (which is

is valued at 500,000 l. per annum,) she imports Flax, linen, thread, lace, cambrick, lawn, and linen, from Ruffia, Silefia, Switzerland, Hambourgh and Bremen, to the annual amount of a million and a half. It is however a flourishing and advantageous branch of commerce, fo far as it extends; but it is, as I before obferved, almost entirely confined to one fourth part of the kingdom.-The fele commerce almost of the other three parts, is the victualling trade .--As that country is circumftanced and reftrained, this trade is certainly profitable; it brings a good deal of money into the fouth of Ireland, and is certainly better than no trade at all, or the live-cattle trade; and at prefent there is no other trade for which to commute it; therefore it is an object of Irish regard. - I must however fay (tho' I combat local advantages and private partialities) that of all kinds of trade it is the least advantageous; it operates against population and tillage, which are particularly defective in that illand; for half the country is really inhabited only by cattle; and a great majority of those who inhabit the remainder, live in extreme poverty, and are obliged to other countries for a great propor-

proportion of their corn. Thus they export those commodities which employ the fewest hands to prepare, fuch as Beef, Pork, Butter, Hide, and Tallow; and they import Corn, which of all commodities employs the greatest number of hands .- A ruinous exchange! - I do not fay, that the exportation of Corn is always prohibited in Ireland, or that the importation is enjoined; but the great bounty in England in fo great a proportion exceeds that of Ireland, that whenever exportation is allowed, England must undersell Ireland, not alone in foreign markets; but as the great and populous towns in Ireland lie on the eastern and fouthern fea coafts, the convenience of navigation and greatness of the bounty enable England to underfell Ireland in Corn at ber own markets.

Having examined the great objects on which the commerce of Ireland can be employed, let us enquire into the objects upon which it cannot be exercised; and that appears from a review of the several restrictions which have from time to time been imposed upon it by the English parliament.— By the English statute of the 15th of Ch. II. no production of Europe is to be exported ted to the Colonies, unlefs the fame be fhipped in England, Wales, or Berwick on Tweed, except falt for New Foundland, wine from Madeiras and Azores; from Scotland and Ireland provifions, fervants, and horfes.—This act was amended, in favour of Ireland, by the act of 3d and 4th of Q. Anne, by which that kingdom was allowed to fend white or grey linen cloth *directly* to the plantations.

By the 7 and 8th of King Willliam, " no " plantation goods can be landed in Ireland, " unlefs first landed in England".

By the 10 and 11 of W. III. no manufactured wool is to be exported from Ireland, nor wool, under an heavy time, unlefs to England.

By the 7th of Geo. I. no commodity, the produce of the East Indies, is to be imported into Ireland, but from England.

An act was paffed in the 4th of Geo. I. in fome little degree of alleviation of the 7th and 8th of King William; by which Ireland is permitted to import *direstly* from the plantations any goods, not *particularly enumerated.*—But I cannot avoid mentioning the articles exempted by name from this indulgence. "Sugars, tobacco, cotton, wool, " wool, indigo, ginger, fpeckle, and Ja-" maica wood, fuffick, or other dying-" wood, rice, molaffes, beaver-fkins, and " other furs, copper-ore, pitch, tar, tur-" pentine, mafts, yards, bowfprits". They are not by another act to import from thence " hops" and by another to export " glafs or filk", &c.

Does this great indulgence amount to much more than this! " The former act " faid, Ireland shall import nothing; this " act permits her to import every thing from " the Colonies, except what the Colonies " have to export of any value". For really after the before-mentioned exceptions the plantations do not produce any thing of very great value except Corn and timber; the first whereof is imported to the discouragement of agriculture, and the fecond is better imported from Norway; beside fome denominations of that are prohibited.

It appears then, from a review of these laws, that the only trade of any degree of confideration which is to support the million annually raised by taxes, and the sevetal drains and incumbrances which I shall hereafter in part mention, is the *linen Manufacture*, which only extends to one fourth

e

],

of

of the kingdom—and the Vietualling trade chargeable with the objections I before made to it.

What the profits of this trade, are to the kingdom, let us in the next place enquire. Upon examining the Cuftom-houfe books it appears, that the value of the exports of Ireland for the year ending Lady-day 1767 (a remarkable year of exportation) amount to,

Imports for the fame time, Ballance that year in favour \$42,599 2,147,079 ballance that year in favour \$4. 695,520

But on a medium of fix years laft paft by the most accurate calculation, the ballance in favour of that country amounts only to, 485,925l.

I will however flate the ballance of trade one year with another at 500,000 *l*. as for the illicit trade, whatever it may be, it is all against the kingdom, except the wool fmuggled to France, which is a pernicious trade, and fome camblets, ferges and coarse stude, and fome the west of Ireland to Portugal, But the latter have for fome time been reduced to fo fmall a quantity, as fearcely to deferve confideration; and the whole

whole of those exportations are far from being equal to counterballance the illicit importations of tea, Spirits, tobacco and fuch like. Let the ballance then fland at 500,000 %. which is above 14,000 %. higher than it appears on the books; and confider on the other hand, what various deductions, and ruinous drains are operating against this trade of 500,000 l per annum value. Every article, as I before observed, that the East Indies or America produce, must be purchafed in England; and all the profits of commerce, freight, infurance, and feveral exaggerations of value, are added to them when the Irifh purchase them. Whatever they buy, they buy at the dearest rate; and they have nothing to fell (linen excepted) but the fimple, native commodities of beef, pork, hide, tallow, and butter-fimple commodities I call them, for the operations they undergo to prepare them for exportation, do not deferve the name of manufacture.

It has been obferved in " the State of the Nation", that fifty two millions of the national debt of England are due to foreigners, fo that the interest, being 1,500,000 l. annually remitted to the several creditors, must

he

Let us then examine fimilar deductions from the fmall ballance of Irifh trade.

A pamphlet has lately been published in Ireland under the direction of the Dublin fociety, specifying each particular person and article from whence the general conclusion is drawn—by which it appears, that the fums remitted annually to England out of the Irish estates of persons who live there, amount to \pounds 381,900 Out of the pension list, the whole of which amounts to 91,207 l. 70,275

From places and employments, 143,000. Travelling expences of merchants

and traders, who annually go to England to buy and fell various commodities, Education and inns of court, 35,000 Law-fuits and folicitation, 19,000 Military contributions of feveral denominations as therein particularly fpecified, 142,207 ticularly fpecified, 40,000 Infurance of fhips, 30,000

If we were to attempt deducting this fum from the ballance of trade, we fhould not • only annihilate this ballance, but create one against that country of 369,382 l. per annum.

In Mr. Prior's publication, about thirty years ago, he stated his absentee list at 621,000 *l. per annum*.

But I shall be contented to avoid all poffible controverfy with the authority of Mr. Postlethwayt, one of the greatest names in commerce, who cannot be fuppofed a very partial advocate for Ireland; who only fpoke from what he knew, but who could not poffibly know all. He, in his differtations on the British commerce, states the expence of Absentees, Pensions, Employments, and Troops abroad, at 486,000 l. per annum against Ireland. Even if this were the amount of that charge, which it certainly is not, deduct it from the ballance of 500,000 l. and it reduces the real national ballance to 14,000 l. per annum. Thus I am contented to state the ballance as high as possible; and contrary to the testimony of their own evidence to take the authority of an Engglish writer. When the author of the State of the Nation has confidered the feveral materials -

[42]

terials that I have laid before him, he will, I am convinced, have candour enough to confess, that there is not a country in Europe, to unimproved and unpeopled----of fo fmall a capital and limited a commerce, which is fo heavily taxed as the kingdom of Ireland ;-and that it is a matter of aftonifhment how the contributes as much as the does, rather than of reproach that she does not contribute more; especially, as half of the cash of Ireland is brought up to the metropolis, and there fpent in foreign luxuries, upon foreign guefts ; who are thereby taught to conceive an erroneous opinion of the condition of Ireland; and imagine the magnificence and plenty of Dublin extend themfelves over the whole country. But they are miftaken-the fplendor of the city is not fo much the fign of Wealth, as the caufe of poverty : and this must be obvious, not only to every man who has travelled through the country, but who has been at the trouble of making calculations on the commerce, manufactures, and population of it.

However, under all these disadvantages, a national loyalty, and fortunate situation have rendered Ireland a more profitable appendage

[43]

pendage to the British monarchy, than Gaul, and Spain, and Germany united were to Rome, when they were provinces of that Empire.-The fituation of Ireland is fuch, that whatever defence England affords her is eventual, and confequential to her defending herfelf; there are no fhips of war regularly stationed in her ports, nor fleets cruizing along her coafts; nor is England at any extraordinary expence in the protect tion of that kingdom, And tho' Ireland derives a fecurity from the alliance, it cofts the country that confers it nothing, and is recompenced and requited by ten thousand advantages to England .- Her internal defence (fuch as it is) composed of an army of officers, is supported at her own expence; the modification of it is the work of English councils, and every body knows it. is the weakest imaginable; the payment belongs to Ireland, and that is exorbitant. But befides this, the furnishes fix entire regiments, and pays them for the protection of those very colonies with which she is fcarcely permitted to trade; and remits the money for their pay regularly to London. The civil contributions of that country are very confiderable. The representative of the

[44]

the king is maintained there in great fplendor, propagating the influence, and encreafing the dependancies of British authority; all at the national expence. And above two thirds of the fums granted for the civil lift are remitted to England under different heads. For the fupport of the Royal Family, in penfions of all denominations, and falaries to absent place-men, of which there are not a few. Add to this, that Ireland is not only a nurfery but a college of foldiers for England; from whence they relieve their garrifons by entire regiments, and replenish their army by perpetual drafting. But this is not all. From the laws I have recited, all that the Eaft and West produce must be bought at London market, fo that two thirds of the whole imports of Ireland, are from England; and the currents which carry money from Ireland to England are for powerful and uniform, that not fo little as one third of their acquisitions, be they great or fmall, must ultimately center in England : and it is very remarkable, that the actual current cash of Ireland (which independent of paper, does not very much exceed 500,000 /.) was of as great amount foon after the revolution, as it it at prefent. Another

Another important article is, the acceffion to the British navigation, which refults from Ireland. Mr. Postlethwayt, who made his calculation fome years ago, computes that the tonnage of ships employed in the Irish trade was 286,594, of which fo great a proportion were English and Scotch, as 236,634; Irish only 33,312. And the fame author not only afferts but proves, that from the revolution to this day England has not profited by Ireland in a lefs annual fum than a million and a half; and it must be remembered, that the " State of the Nation" proves, the whole ballance of trade in favour of England to be no more than two millions and a half.

Befide these several pecuniary advantages, the patronage of promotions, ecclesiastical and civil in that country, is in a great proportion applied to English purposes; as appears from a review of the present occupancy of some of their principal offices.

The heads of the *Church*, the State, the Army, and the Law, in that kingdom have for a courfe of years been of another country; of the 22 right reverend Prelates, the natives only furnish feven; and their connections must necessfarily direct feveral of the G benebenefices in their disposal into foreign channels-of the feven chief judicial offices, two only are occupied by Irifhmen - of the forty two regiments on the establishment, feven only are commanded by Irishmen. Of the fourteen great officers on the ftaff, five only are of that country; and befide all this, feveral of the principal employments are granted in reversion, out of the Kingdom. So that wherefoever you turn your eyes, or direct your observation, you find Ireland administering to the advantage of England. When we have fummed up the catalogue of benefits (many of which I have omitted) how different do we find the prefent from the antient relative fituation of Ireland to England! At a time in which Ireland could fcarcely make any one return, it was thought worth while to fend over great fums from England for the prefervation of that kingdom to the British empire. In the reign of Henry VI. Richard Duke of York was fent Lord Lieutenant to Ireland; we have the conditions transmitted down to us on which he would accept that government : they are as follow.

"That he should be Lord Lieutenant for ten years, and have the whole revenues

" at his difpofal without account. That he fhould likewife receive out of England 4000 marks the firft year, and 2000 every year after. That he might let or farm any of the King's places; levy what men he pleafed, and appoint his own deputy."

In the reign of Edward III. Sir William Windfor Lord Lieutenant engaged and indenced with the King to govern Ireland for 11,213 l. 6s. and 8d. per annum; and Sir John Davis observes, that Queen Elizabeth fent over to Ireland for the suppression of the three great rebellions of O Neal, Defmond, and Tyrone, a million of money. It is likewife certain, that Lord Strafford was the first, who attempted to support the government of Ireland, without being a charge to England. Can it be imagined, that those expences were fultained thro' knight-errantry, or from proximity, or any relation of that nature? By no means ! England could not justify it, nor was Ireland intitled to it. It was on principles of found policy, and national advantage.

If Ireland then in times of barbarifin was thought of fuch moment to the British monarchy, what care and cultivation is she at

G 2

this

this day intitled to, in confideration of the infinite benefits she confers on England? I am aware that it may be faid (for indeed any thing may be faid) that in reciting the great expences England has formerly incurred for the prefervation of Ireland, I have established to England a just title of indemnification from Ireland. If that were really the cafe, has fhe not had already an indemnification ample beyond the utmost extent of her hopes ? Could fhe have formed an imagination that her efforts should have been rewarded by a million and a half of money every year, and the enjoyment of the benefits which I have before recited, without interruption for almost a century ? It would be ridiculous to call this only indemnification. But the fact is, that from the fituation of Ireland, it was worth to England the application of all her powers, to annex it to her empire; for as it has been observed by the judicious Sir Francis Brewester in his effays on trade, " fince Ire-" land is above water, England cannot be " fafe, if that kingdom should be in any " hands but her own". And therefore the Kings of England, who are likewife Kings of Ireland, without having the leaft idea of

el

of the immenfe commercial and pecuniary advantages which have fince refulted to them, must have used their utmost endeavours to preferve the connexion and co-operation of Ireland.

No title then can be founded in those feveral expences which England has incurred for that purpose, except only that of obedience to the mutual fovereign, for which they on the other hand are intitled to protection, and liberty. And let me further obferve, that the defence of Hanover in the last war, cost England more, than the protection of Ireland, has done for almost an bundred years ; and yet in that time Ireland has conferred on England not lefs than an hundred millions of money. It has not however been proposed, that Hanover fould make a contribution to the British Establishment. I do not talk of obligations * between countries; they are often

* When the people of Ireland fpeak on the fubject of obligations, they flate them thus.—" When England received nothing from Ireland except the allegiance of her inhabitants, fhe expended her treafure, and her blood, to fecure that allegiance to herfelf, and to protect her from her enemies; and in doing fo, the acted according both to policy and juftice; for by retaining the dominion of Ireland, the purchafed her own ftrength and her own fecurity; and by protecting her, the but paid a debt which the owed; protection being always due, where allegiance is paid. In protecting Ireland the cannot be faid actually to have conferred an obligation upon her, fuppofing even that protection to be the moft ten chimerical, and almost always tranfitory. Nations of their own free will feldom

most expensive, and the most vigilant ; for as Ireland neither makes war for her own account, nor peace for her own advantage, but follows the fortunes of England without partaking of her councils, fo it is just that Ireland should be protected in a danger to which for the fake of England fhe is exposed. And as Ireland by the allegiance which the pays is exposed to injury, if the has not a right to indemnification and reward, fhe has at leaft a right to be protected." It may be objected, " If Ireland were feparate from England would the not be exposed to injury-would the not have wars upon her own account ?" The answer is obvious, " then they would be upon her own account". If we engage in a conteft at our own difcretion, and for our own advantage, we have no right to the protection of others. But if we engage for the fake and at the pleasure of another person, that person should protect us from injury, to the utmost of his powers. Therefore the national allegiance of Ireland may be flated as an equivalent for the national protection of England. And to prove that it is an equivalent, we have great authorities in our fag vour-the policy of the whole world and of all ages : even France pays the establishment of her colonies, and Rome protected, not only her provinces, but every nation that bore the name of ally to the Romans. Let us now confider what Ireland gives to England, befides her allegiance; and what England gives to Ireland, befides her protection.

First then Ireland has a large demand against England on this account, that the pays the principal expence of her own protection-fhe pays the army that is to defend her ; fhe even pays a part of the army that protects the dominions of England; and exhibits the first instance that is to be found in the annals of mankind from the beginning of history to this day, of a dependant nation giving protection, instead of receiving -it. Let us then confider the advantages which England receives from the application of the Irifh revenue, from penfions, employments, &c. Let us confider her profits by the restrictions of the trade, and the abridgment of the natural rights of Ireland ; or rather let us compute what Ireland fuffers, than what England gains by them : for the charge against a perfon who deprives us of any thing, is to be rated not at the amount of his gains, but of our loffes; and if, added to this, any injuries have been done to our liberty and our conftitution, at what shall we estimate them ?

OF

dom do any thing but for their own advantage. The contributions of Ireland to England.

)f

Of all thefe articles the ballance due to Ireland is compofed; for we do not take into our estimate the blood which she has expended, the lofs of all the rights of fovereignty, the absentees which drain her of her riches; all these are the fair and natural confequences of her national allegiance to England; and if England gives her perfect protection in return, we esteem them to have been paid for. But on the other hand, if at any time England has given her no protection whatfoever, but what the fecurity of her own coafts required, the blocking up the harbours of the enemy, and the intercepting fleets of uncertain deftination. If England not only did not provide for the internal defence of Ireland, but when the had provided for it at her own expence, has deprived her of a part of her defenders .- If even when invation was threatened, the has applied the army of Irealnd to the defence of other territories, not either equal in their importance, nor exposed to equal danger.-If this has been the cafe, it must certainly be taken into the account, in flating the national ballance.

What on the other hand has England to counterballance this demand? " She has permitted Ireland to adopt her laws and conftitution. But it would be abfurd to flate this an obligation : had Ireland no connection with England, the might have done fo. Any nation may imitate the conflitution of England, that purchases a correct edition of her statutes, and chuses to adopt them. To fuffer a nation to adopt our laws is no benefit, but to prevent their doing fo if they pleafe would be an injury. But the king of England made a charter of a compact with Ireland conferring freedom, and therefore advantageous. He was king of Ireland as well as of England; but flate it as you pleafe, in that compact the interest of England was confulted at least as much as that of Ireland : but being a compact, whilft it is observed on both fides, nothing is due by either; but if England at any time has invaded that freedom, fhe is then the debtor Thus much for the benefits which England has of Ireland. conferred. If the protected to the utmost of her power, the has received an equivalent in the allegiance of Ireland, and a large account remains yet unballanced. But if the has omitted to do fo, we shall find nothing but an imperfect protection where a perfect one was due, and a compact conferring a free conflitution, which compact has frequently been violated.

land, I will fuppose confequential to their reciprocal relations, and in many inftances more the fruits of circumstance than of liberality : the protection England affords in return cofts her little, and is in a great degree the refult of protecting herfelf. Mutual advantage is the union of nations. And private communication the bond of affection. These in the nature of things are the only relations that can be permanent between bodies of men. And thus may Great Britain and Ireland be to the lateft times united, by the indiffoluble ties of general intereft, and a conftant communication of good offices: and he deferves to be efteemed an enemy to both, who should attempt to weaken that constitutional dependance fubfifting between them. Whatever may be the original and incontrovertible rights of Ireland as a kingdom, fhe, with the other appendages of Britain, yields to the circumstances of the times, and complication of the British Empire ; by which it has in fome measure become necessary, that " a

ted. But let this be forgotten, Ireland feels no refentment, demands no recompence; fhe acknowledges as much dependace as is confiftent with liberty; but with fuch a ballance in her favour, fhe has at leaft a title to use the words of a poor French nobleman to his monarch, "All that a poor fubject *afk. of* your Majesty is—that your majesty would *afk nothing* of him. Or to be fill more moderate, the makes this request, "do not do me an injury, when by doing fo, you do yourselves no fervice."

" general

" general fuperintending power should be " fomewhere deposited, for the arbritation " of commerce, and for directing, reftrain-" ing, and regulating the external relations " between the different members of the em-" pire." This power cannot refide any where with fuch propriety, as in the British legiflature. It is indeed a great power ! Tho' it cannot abridge the internal liberty of a fingle man, it can reftrain the external operations of whole kingdoms, and if it were to be exercifed to the utmost extent, would in many inftances effect the purposes even of internal coertion. The legiflature of Great Britain will I dare fay make a prudent, and just use of it; in former times they did not. It is most true that their first and greatest object should be, the commerce of the principal country; and no trade should be permitted to any part of his Majefty's dominions, injurious to England : but where they have prohibited the trade of a whole nation for the partial benefit of a particular county, town or village, they have been unwife, and unjuft. Of the laws that I have recited relative to the Irish trade, feveral have been framed in this principle. There was a law paffed formerly

H

112

in England, prohibiting the exportation of live-cattle from Ireland, left that trade should interfere with fome breeding farms in the west of England. This law turned out (contrary to the intentions of those who made it) advantageous to Ireland : the confequence was, that immediately the breeding-lands were converted into sheep walks, and wool was cultivated. England then, purfuing the progress that she had begun, prohibited the exportation of that wool manufactured, or the wool itfelf, unlefs to England. The refult of which has been, that Ireland being deprived of the woollen-trade, and a competition arifing in that branch between France and England, by the eftablifhment of a great manufacture at Abbeyville, the frugality of France has enabled her to give an higher price for Irish wool than England can, and yet underfell her at foreign markets. It cannot then be doubted that Ireland, unable to manufacture her own wool, would fell it to the bigheft bidder ; and accordingly they have fmuggled into France every year fo confiderable a quantity as 26,250 ftones, which have enabled France to work up 78,750 ftones of wool :

wool; for one third of our wool is neceffary to the working up two thirds of theirs.

In fhort the fact is at this day, that the convenience of getting wool from Ireland (which no law can prevent) and the cheapnefs of labour in France, have concurred entirely to deprive England of a moft valuable part of the woollen trade; yet ftill, to ufe the words of Mr. Poftlethwayt, " this fear, or rather infatuation " in regard to the value of our lands, makes " us prefift in a prohibition, that not only " injures the Irifh and ruins ourfelves, but " enriches and aggrandizes the French; " for as the cafe ftands, Ireland or France " muft have the woollen manufacture.

The fame policy takes place with regard to molaffes and fugar. Ireland cannot import them from the plantations *directly*, but muft first enter themin England; wherefore the Irish, to avoid the costs, danger, and loss of time of two voyages, fail directly to the French ports, and furnish themselves with their brandies and fugars, without attempting to meddle with the produce of the British plantations, and this to the amount of a sum, which, so long ago as Sir Matt. Dicker's time, was 150,0001. per H 2 annum. All this being the worft policy imaginable, why is it not altered, if it were only for the fake of England? Ireland defires no advantage over England in commerce, but over France; and is fhe to pay England a flipend for obtaining that?

Would it be reafonable of England to fay to Ireland, " The French, our natural ene-" mies and rivals in trade, have, from the " cheapnels of their labour, beat us out of " the woollen trade. You, from your " frugality and industry, are certainly, on " the other hand, able to underfell them; " to withold from them the material by " which they work, and finally to wreft " this trade out of their hands. However, " notwithftanding that whatever you ac-" quire would be an acquifition from the " enemy, and an addition to the wealth and " navigation of the British empire; and a " great proportion of it must immediately " center in England; though we have, to " all intents and purposes, lost this trade " ourfelves,-in fhort, though retaking this " prize from France would be to the laft " degree advantageous to us, yet you shall " not be permitted to do fo, unlefs you " pay

t

ir

1

20

2

" pay us, in return, a large fum of money " yearly for it." Can any thing be imagined more abfurd, or more unjuft? No power has a right to impofe a prohibition, except for the good of the whole; what can we fay then of that prohibition, which does an injury to ourfelves and our friends, to do a benefit to our enemies? Yet fuch is the inference on The State of the Nation, and fuch is the policy of England on this fubject.

But whilft it is an incontrovertible fact. that withdrawing the prohibition on certain woollen manufactures from Ireland would be injurious to France, and therefore advantageous to England, it is not a matter inftantly to be determined, in what course of time Ireland fhould fo far profit by this trade, as to be able to pay out of the kingdom any thing near 100,000l. per annum for it; for, though this is not the fole, yet, as it is the principal object of commercial indulgence proposed by this author, as an indemnification for this annual contribution, I shall make it a principal object of my examination. And here let me observe, that all that France would lofe, Ireland would not

not gain. Suppose the wool heretofore exported to France amounted, as has been faid, to 26,250 ftone. If this were manufactured in Ireland, Ireland would gain the manufacture of 26,250 ftone of wool. But it must be remembered, that France would thereby lofe the manufacturing of 78,750 ftone ; for France cannot work without one third mixture of ours. By this it is evident, that France would lofe exactly three times as much as Ireland would gain, which is at least as much the concern of England as Ireland; or, if the French were after this to manufacture, they must purchase their wool at fo high a price, that England might reaffume a share of this trade. Every circumftance in the laws and policy of Ireland has, for fome years, tended to diminish the quantity of wool in that kingdom. The propagation of the linen manufacture, the feveral laws for encouragement of tillage, and the great profits of the Victualling trade, have all had fo great an operation, that above one third of the quantity is diminished fince the year 1711. To which must be added the increase of people ; which, eftimating them as the author of

of " Differtations on the British commerce" has done, only at 1,666,000, the quantity of manufactured wool necessary for their cloaths, furniture, and burials, would amount, according to that author, to 1,061,250 l. per annum. Now this author fays, that if Ireland were to manufacture fully every ftone of wool over and above that employed in their own confumption, and not fend, as they now do, yarn or worsted to England, it would amount in value to only 378,750 l. per annum. Now if the generally received computation be just, that the people of Ireland amount to two millions, the confumption of 334,000 perfons must be deducted out of this 378,750 l. According to the calculation which he has laid down with respect to the other million fix hundred and fixty-fix thousand, of about 12s. 9d. per head, this confumption amounts to 212,925 l. which being deducted out of 378,750 l. would reduce the value of the whole poffible exports by this trade to 165,825 l. provided, as I before obferved, we admit the ufual and most accurate computation of the numbers at two millions; a computation which I admitted when

٦

T

0

I

A

when it was unfavourable to me. But as it always shall be my object to investigate truth, rather than to avail myfelf of an authority favourable to my argument; I will not therefore allow the full extent of Mr. Postlethwayt's calculation, altho' it be in my own favour; but I will admit the confumption of every inhabitant of Ireland to be only at ten shillings per head; two shillings and nine-pence lefs than he fuppofed it. In this I am certain that I have not over-stated; and if this be admitted, the confumption of the inhabitants of Ireland will be one million only; confequently, as he computes it at 1,061,250%. I deduct 61,250 /. from the confumption of Ireland, and add it to her export. But as this 61,250 pounds worth is to be exported, I suppose it to be highly manufactured, which I would not suppose it to be, were it to be confumed in Ireland. This fuperior degree of manufacturing being conferred upon it, it would be encreased in its value one third, and would therefore be worth 81,6661. 13s. 4 d. I add therefore this 81,666 l. 13 s. 4 d. to the fum of 378,750 %. at which Mr. Poftlethwayt computes the value of all the wool

wool of Ireland that could be exported, if manufactured *fully*; the fum then of 460,416 l. 13 s. 4 d. is the utmeft value of the wool that could be exported from Ireland, fuppofing that every fleece of wool, not made use of by the inhabitants themfelves, were *compleatly* and *fully* worked up, that is to fay, made up into fine dyed cloath. Thus 460,416 l. 13 s. 4 d. is the value of that whole commodity highly wrought up for exportation. From whence you must deduct the value of the wool, which before was a vendible commodity, and the proportion of that is one fifth.

T.II. CI. C.	le s. d.
Take then from this fum of	460,416 13 8
One fifth	92,083 6 8
sauscur ag camanan an	368,333 6 8

Dye Stuffs of all denominations, oil, and drugs, neceffary for this quantity of cloth,

It

It appears then to a certainty that this fum of 358,333 l. 6 s. 8 d. is the greatest possible profit to the nation from this exportation, supposing every article of it fully manufactured.

Now that it should be fo manufactured, is impoffible; the competition of England in fine Spanish cloths would make that impracticable, and indeed Ireland could not reasonably expect it. But even tho' the laws and rivalship of England did not interpofe (which they certainly would) the manufacture for exportation would not, under a courfe of years, make fuch a progrefs, as to exceed in any confiderable proportion coarfe cloths, ferges, camblets, &c. And this degree of manufacturing diminishes the value of what I stated before by one third at least, which one third making 119,444 l. 8 s. 10 d. 1 being deducted from 358,333 l. 6 s. 8 d. reduces the highest possible ballance in favour of Ireland to 238,8881. 17 s. 9 d. 1/2.

But

But in flating the whole poffible balance to the nation on the woollen trade at £238,888 17 9[±] per annum, I have fupposed every fleece of wool not confumed at home, to be wrought up in the manner I before defcribed for exportation ; which is really fuppofing an absolute impoffibility : Factors would still be employed to purchase wool, woollen yarn, and worsted, for English use, which England will always have an interest in purchasing, and which, according to Mr. Postlethwayt, would very little diminish, though the exportation of manufactured wool were allowed. His words are thefe.* " There will be always " in England and Ireland as many people on " the trade of buying the wools and yarns, " for which we (meaning the English) pay " ready money, as there will be purchafers " of their wools fully manufactured, which . if fent here to be fold for exportation, "must be on long credit; and, if fent a-" broad on their own accounts, will be " fubject to uncertain fales, and as un-" certain payments." This confideration induces him to deduct from his balance in favour of Ireland, which he states at £378,750, no lefs a fum than £300,000 and

* Dift. Vol. II. Page 844.

and finally concludes (page 843, vol. II) "That all the woollen goods Ireland can "*fully* manufacture for exportation, will "amount to no more than £78,750."

That the greatest liberty of exportation which Ireland could enjoy, would not entirely prevent England from purchasing raw wool, worfted and yarn, is certain : For though to manufacture fully is more a national object, yet to the perfon who has the wool or yarn to fell, it is a matter of indifference, whether he fells it to an Irifhman, to manufacture himfelf, or to an English factor to carry to England ; it is the price that must determine with him, and that will be generally in favour of the latter. However, though it would ferve my argument, I will not agree with that author in stating the export of wool and woollen yarn to England on that contingency, as great as it is at this day; on the contrary, I think it is not to be imagined, that England fhould purchase as much from Ireland, when the has competitors in that market, as at present when she has none. But I am sure. if this judicious writer has, on account of the wool and yarn that would continue to be sent to England, deducted 300,000%. from

from his Irish balance, I shall be within all bounds of moderation if I fuppofe it 100,000/, which is three times as little as that author fuppofes it, and this fum being deducted from the balance which I have calculated of 238,888/ 17 9x will reduce the whole poffible balance in favour of Ireland by the exportation of manufactured wool, to 138,888/ 175 9d's. But to prove beyond the poffibility of doubt that the liberty of exporting woollen cloths, &c. would not prevent the Irifh from felling to England great quantities of wool, yarn, and worfted ; let us look into the cuftomhouse books, and we shall find, that though a great linen manufacture is eftablished in Ireland, yet she fells England annually, above 30,000 Hundred weight of linen yarn ; which, as fome of it is fine working thread, cannot, at a medium, be valued at less than 16d per pound ; at which price it amounts to 240,000/.

[63].

If then Ireland fends fo great a quantity of the material of an eftablished manufacture to England, where that manufacture is in its infancy, is it not certain that she will fend in a greater proportionable quantity of wool and woollen yarn, the materials of a I 2 manumanufacture yet in its infancy in Ireland, but established in England? It is incontrovertible.

And after all these deductions from this branch of commerce, I must observe, that the efforts of France to procure wool from Ireland, rather than make a total refignation of this trade, would be fo vigorous, that neither national advantage, nor legal restriction, neither policy nor penalty would prevent (at least for some years) the farmer from selling his wool to the highest bidder, who will certainly be the French merchant; and it must be remembered, that for every stone of wool sent to France, there must be a deduction from this $1_{38,8881.17s.9d_{5}}^{I}$ of no less a some than forty shillings.

I will now fuppofe, for the fake of argument, that the 200,000*l* which is propofed as an indemnification to Ireland for paying a tax of 100,000*l*. were *immediately* to be received by the individuals of that kingdom, in confequence of the free exercife of the woollen trade, which I think I have proved to be impoffible.

The advantages arifing to a nation from the introduction of a new manufacture, are of of two kinds: First, it employs the idle, and by finding employment for them, it is a cause of its population; but this effect is not felt immediately, and though it will in time encrease the numbers of a nation, and confequently its ability to bear taxes, yet that encrease must be the work of years.

The other advantage is, that it occasions to the nation either a faving of money, which it otherwife would export, or a greater return of money from foreign nations; and thus in proportion to the extent of its operation, it turns the balance of trade in favour of the nation ; and this effect is felt more immediately. If Ireland were to manufacture her wool, fo as to add 200,000/ to the value of the commodity, it does not follow from thence that the would receive 200,000/. of clear benefit or acceffion to her wealth; or that the balance of trade would be turned in her favour in fo large a fum as 200,000/. For though fome would be employed in that manufacture, whobefore its introduction, were entirely, or almost entire ly idle, yet many would be employed in it, who before were industrious, though poffibly not employed in fo profitable an induftry

duftry. Now, whatever was gained by their former induftry, was a benefit to the nation, and, upon their induftry being converted to the manufacturing of wool, that former benefit ceafes : whatever they carn by agriculture, or by other manufactures lefs profitable than the woollen, from which they are diverted, is as certainly loft to the nation, as what they gain by the woollen, is gained to it : confequently the *former* muft be deducted out of the *latter*, in computing the national benefit, and the clear gain to the nation, is only the exceeding of the profits of the one, over the profits of the other.

If the hands, who earn 200,000 /. in the woollen trade, did before earn 50,000 /. in agriculture, the clear profits of the woollen amount to but 150,000 /. becaufe by its introduction, that50,000 /. becaufe by its introduction, that50,000 /. which was before gained to the nation, is gained no more. Thus it appears, that though Ireland fhould encreafe the value of her wool 200,000 /. by manufacturing it, fhe would not really gain 200,000 /. but a large deduction must be made in our computation, of the benefit arifing from it to the nation: It is impossible to compute beforebefore-hand, how great that deduction fhould be, but it is evident that it must be confiderable.

[67]

I will now suppose that Ireland were immediately to gain by the woollen trade, or any other additional branch of commerce, 200,000 /. free from all manner of deductions; that her inhabitants should receive it guite clear, and should actually have 200,000 l. to fpend, more than they had before, and that every farthing fhould be fpent in Ireland; it does by no means follow from thence, that the would be thereby enabled to pay 100,000 l. more of taxes, or revenue. Were indeed the whole of this 200,000 l. to go immediately into the Exchequer, it would then enable the flate to pay 200,000% more than it did before; but the fact is, it would notit would go into the pockets of individuals, to be fpent by individuals. Now, from the money which individuals spend, there can be extracted but a certain proportion, and that a fmall one, for the revenue. Every thing almost is taxed, and therefore, in almost every thing which he purchases, he pays fomething to the state; but this is a fmall proportion, not above one fifth : for, in Ireland, the proportion of the money fpent by the people, and of the money extracted from their expenditure, for the purpofes of the ftate, is about five to one,—the firft, five millions; the latter, one *. If, therefore, there fhould be an acceffion to the individuals of the clear fum of 200,000 *l*. which, I have proved, they could not poffibly have by the woollen trade,—If that acceffion were to happen *in an inftant*, and if it were to be *all* fpent in Ireland, it would not enable the ftate to pay above 40,000 *l. per annum* of revenue, more than it pays at prefent.

Thus I have proved that this manufacture never can arrive at the higheft degree of perfection in Ireland; that if it did, it could not poffibly add 200,000 *l. per annum* to the wealth of the nation; and that, if by this, or any other indulgence, they could acquire this addition, it would not enable them to pay an additional 100,000 *l. per annum* in taxes.—But though these facts were dubitable, which they certainly are not, can any thing equal the abfurdity of imposing a tax, at the time you are only fowing

* This is a greater proportion than England pays. England, fubftracting from her expenditure for taxes, at the higheft, not above one eighth. fowing the feeds of its fupport? It is like laying a burden on the fhoulders of an infant, becaufe, when he becomes a man, he may be able to bear it.

[69]

I have flated, with the utmost care and fidelity, the proportionable *powers* of Ireland to England; its exertion and its abilities; the benefits it confers, and the returns it receeives; and I think it is, on the whole, impossible to deny, that Ireland does, at this moment, pay at least as great a proportionable tax, as any nation, under difadvantages which no other people experience.

The ordinary revenues of

Thus proportioned and circumftanced in burdens and difabilities, it is impofible that Ireland can engage for any new grant, of a confiderable amount at leaft, until fhe fhall have for fome years reaped the fruits of future acquifitions. With a balance of trade in favour of that country fo ridiculoufly low, as that every conceffion that can be made, cannot raife it above 14,000 *l*. K per annum, and which, in all human calculation, has been greatly exaggerated, by artifice or vanity, by the arbitrary entries of linen merchants, to propagate their own credit. With fuch a balance, I fay, and a currency of little more than 500,000 l. Ireland cannot try experiments, the introduction of which is to be, the annual remittance of 100,000 l. into another country, an additional revenue to be raifed on its inhabitants,

As for the Colonies, it is eafy to fay, "they are *abundantly able* to contribute to "the expences of England 200,000 *l. per* "*annum*;" but, I am fure, at this time, it is not eafy to determine in what manner; and, by the accounts we have of the revenues lately collected by the commiffioners of the cuftoms in America, it is evident, that this is not the harveft-time there for a rapacious minifter.

If the Colonifts incurred a debt of 2,600,000 l. during the laft war, it is, at leaft, as ftrong a token of their liberality, as of their wealth, and rather more, as this was an anticipation only of their revenues, among themfelves, a great part of which was not raifed in money, nor liable to intereft, nor to be paid by funds, But, be that as it may, this is not a time to ring new impositions in their ears : when they shall be reftored to order and tranquility, then, if we may judge from the testimony of this 2,600,000 l. they will not be deficient in their contributions.

And certainly every part of his Majefty's dominions ought to contribute to the general prefervation of the British Empire; at the fame time proportioning their contributions to their *abilities*, in the first place; in the next, to *the advantages they derive*. For, as it is impossible that men can exceed their means, fo it is unreasonable to expect they should make the same exertion in support of a good or a bad constitution, to confirm bondage, or defend their liberty.

" Burdens, fays Montefquieu, are wil-" lingly borne, as the price of freedom; " under any other condition, men will not fupport them, unlefs they be compelled;" and if they be compelled, they cannot fupport them long. For why fhould they pay, when they receive no confideration in return; or how fhall they exert themfelves, when even victory fhall not K 2 leave

leave them free ? For what have people to fear, or to defend, who do not posses an inviolable right in their liberties and properties? As for wealth, the great article of contribution, it must flow from human industry; and will human industry be ever exerted, if the fruits of it be rendered precarious? And, in truth, if the cafe of these Colonists were as some persons have flated it, it would be in vain to expect either zeal for government, or attachment to acquifition amongst them. -What are they to be folicited to by this address? " You shall, as the prize of adventure, " and reward of industry, enjoy the Bri-" tifh birth-right of granting away as much " of your property, in free-will offerings, " as you pleafe; but others shall have the " right of taking away the remainder, or " fuch part as they shall think proper." Yet this is the import of feveral laborious compositions on this subject; which feem to me, as if they were framed but to weaken and distract the British empire. If the Americans were really under thefe circ unstances, what mockery would it be to remind them of the excellence of their constitution, or call on them to exert themfelves

[72]

felves in defence of their country? What have they in fuch a conflictution to admire, or, in fuch a country, to defend? It would be but to infult them with their fubjection, and call on them to affert their chains.

[73]

The author of The State of the Nation, whilft he imposes a tax of 200,000 l. per annum on the Colonists, admits that it is reafonable they fhould fend reprefentatives to parliament .-- Not by any means as neceffary to give the parliament a right to difpcfe of their property, their lives, or their liberty .- That the parliament have already power fo confummate, as to be capable of no augmentation by that acquifition : " But the prodigious extent of the " British dominions in America, the ra-" pid increase of the people there, and " the great value of their trade, all unite " in giving them fuch a degree of impor-" tance in the empire, as requires that " more attention should be paid to their " concerns by the fupreme legiflature, than " can be expected from it, fo long as the " Colonies do not elect any of the mem-" bers, of which the House of Commons " is composed." Here indeed the author states the very principle of legislation, among emong freemen, and the indifpenfability of reprefentation to legiflation, and more especially to taxation; for that is one of the most important of all concerns: And if, from the confiderations this author has mentioned, it is reasonable the Colomists should have representatives;—to tax them without such, would be unjust; and what is unjust no body of men have a right to do. Justice limits, (if I may use the expression,) even the omnipotence of the ommistion, but I am fure that the English parliament will decide these weighty matters, according to wisdom and justice.

4

1

4

51

1

T 74 1

I do not therefore mean to expatiate on the infinity of their powers, nor on conftitutional rights, which England may affert, and the colonifts deny .- These points of law and policy have already been flated to the public in a pamphlet, intitled " The Cafe of Great Britain and America," (2d. edition) with fuch weight, precision, and depth of thought, as must have convinced every unprejudiced man; the prejudiced nothing can convince. I only add on this part of the fubject, that no body of men, descended in a twentieth degree from Britons, will live contentedly under this, maxim of government " That perfons " diftant

" diftant from them a thoufand leagues, " are to tax them to what amount they " pleafe, without their confent.-Without " knowing them or their concerns,-with-" out any fympathy of affection or interest " towards them,-without even tharing " themfelves in the taxes they impofe.--" On the contrary, diminishing their own " burdens exactly in the degree in which " they encrease theirs." Power may enforce this doctrine, but the declarations of an oracle could not make it compatible with liberty .- Yet writers have been found to support it; and even the infirmity of human institutions, and the imperfection of the British representation, have been urged to prove that America should have no reprefentative at all.

[75]

But let them confider that imperfect as the reprefentation of that country may be; yet there is not a fpot in Britain, which is not within the pale and comprehension of reprefentation. The principal towns and cities fend their members, and the teffer towns and villages, not incorporated, are each a part of fome county which chuses reprefentatives. And there is not almost

almost in the whole kingdom one man fo inconfiderable, as not to have fome share. or influence in a general election; though the modes of election prefcribed by parliament may withhold him from the very act of voting .- But if representation in England be partial, does it follow from thence that America should have no representation. at all? And, as the above author obferves, if England have not the best constitution human invention could form, is it a reason that America should have the worst? And let the author of " The State of the Nation" confider, the declaration of the statute of James the Ist. which he quotes as a foundation of the power of the parliament. -" The whole body of the realm, and " every particular member thereof, either " in perfon, or by reprefentation by their " own free election, are by the laws of the " realm deemed to be prefent in the high " court of parliament." Can the people of America be fuppofed to be prefent in person, or by representation by their oven free election ? It would be an abfurdity to fay fo. And his quotation, in the fame note, as to the County Palatine of Chefter, imports

[76]

ports nothing more than this, that the parliament did, (without proving they had any right) in former times bind that country before it was reprefented. That, in the reign of Henry VI. in, probably, the very firft inftance wherein they had been taxed, they petitioned the king againft it; who did agree with them that it was a violation of their privileges: and though, perhaps, it was not immediately after, yet it has long fince been rejected, as unconflitutional; and at this day, in common with every other part of England, Chefhire fends members to reprefent her in parliament.

This author admits that the feveral Colonies fhould enjoy the privilege of adjufting the ways and means, by which they fhould raife their different proportions of the 200,000/per annum, which he, in the name of the British legislature, imposes on them in the gross. And why is this indulgence granted ? Undoubtedly, because they must be supposed best to know the conditions and resources of their respective countries.

And is not this a ftronger reafon why the quantity of this gift, as well as the mode of raifing it, fhould exclusively belong to L them? them? Otherwise this indulgence would amount to no more than that of first condemning a man to death, and afterwards leaving to his choice the mode of his execution.

But the author proceeds,

f

1

t

a

tł

A

W

fi

p

tł

ca

Ve

th

"Whilft eight millions of fubjects in-" habiting Great Britain are made to pay " four millions on account of a war, one " great object of which was the fafety " and prosperity of the Colonies; it furely " is not too much to require of the " two millions of fubjects refiding there, " 200,000/. per annum for the general fer-"vice." But if the doctrines with regard to the Colonies, laid down by this author, and feveral others, be admitted, this expostulation is rather infult than argument; for according to them, the fafety and profperity of the colonies, to which they contribute, is nothing more than " The li-" berty of procuring money by their in-" duftry, that it may be taken from them " at the diferetion of the state which pro-" tects them,"-who are they afraid shall take from them these valuable privileges ? Or is there a nation under heaven, to which the colonies could be united, which would

would not permit the inhabitants to labour for wealth, if they were to retain to themfelves the power of taking it from them without their confent.

The great object of the war should be flated, as it was .- It was to vindicate from France the colonies of America, and to make them the great fource of commerce, strength, and navigation to Great Britain. And a glorious object it was! Not to do merely a piece of courtefy, or kindnefs to the descendents of Britons who happened to be fettled in America, or to get a triffing tribute of 200,000 l. per annum from them. But for preventing that inexhaustible fund of strength and riches from falling into the hands of an enemy, and applying it to the everlafting power of Great Britain. And an everlafting fource of advantage will they prove, if her policy shall make friends of those, whom fortune has made fubjects. Let her wildom keep them dependent in every external relation, but let them experience internal liberty, and a fecurity in their acquisitions. And England can, by her superior power and incontroverted fuperintendency, ever provide that their property shall not be encreased, with-

L 2

out

out at the fame time encreasing the benefits they confer on the mother country.

The original formation of fociety was for the general advantage of all who compofe it; and conformity to its laws can only be maintained by a prefervation of those advantages. Tell the Colonists that you have spent seventy-five millions in a war, by which England is confirmed in the advantageous possession of the Colonies, and by which the Colonies have been refcued from flavery .- Tell them, that whilft you have enfured the returns of their industry to yourselves, you have made them fubjects of a state, in which to be a fubjest, is to be a freeman :- tell them this, and you will folicit their gratitude, and may rely on their co-operation; for then their interest and their duty, their obligations and affections, will be all engaged in support of their allegiance. Let them fee that they are freemen, and fhew them the advantages of being members of a free ftate, and then you will make them, though they had neither virtue nor gratitude, unalienable friends to the British government.

But

But if after all-after you had really conferred these benefits upon them, they should yet turn out factious or disobedient, (which is to the last degree improbable)be but once fure, but be very fure, that the constitution is on your fide,-that you erect not your standard against law and justice,-I fay in that cafe, with fuch a caufe and fuch an alliance, you may laugh at the opposition of America to the mother .country .- But it is a formidable thing to enforce by arms a violation of right, and draw the fword against the liberties of a people .- And I lay it down once for all as a maxim, which neither the fubtilty of genius, the authority of fenates, or the terror of the fword can overturn, " That " any people, whofe property is at the " diferetion of others, are in a flate of fla-" very,-and that the very idea of pro-" perty is destroyed, if it may be taken " without the confent of the owner.

This is a principle which I am fure is enthroned in the heart of the beft of kings, and will for ever be vindicated by the British parliament.—

On the late occasions of difagreement, the people of America may possibly have misbe-

milbehaved, and directed their opposition in fome particulars in a mode that was exceptionable: but if that be the cafe, it is little to be wondered at; for difobedience and anarchy ever have been, and ever will be, the fruits of opprefion.

Let those answer for this, who advised the first violation of *American liberty*, by imposing the *flamp-duties*.

This however the British parliament speedily redressed, not because the people resisted, but because the measure was repugnant to the *principles of the constitution*.

If it were not, it is to be prefumed their opposition had been ineffectual.—It must however be confessed that exertion difcovers to a people their strength, and injuries will ever produce that exertion.

I finile when I hear it faid " There "have been good accounts from America, " all things are quiet there"— The fact is, the people there feem to be fober and determined.—But no good news can ever come from America, except by the return of the fhip that carries them good news from England.—The colonifts at prefent are unable, in any confiderable degree to contribute to the regular establishment of Britain,—they are at present *unwilling* too, for both their abilities and their attachments depend on the good treatment they receive.—

Give them by your indulgence a capacity, and you will by that give them an *inclination* too.—The ftrength of all the colonies united, is weaknefs when oppofed to Great Britain : yet even Great Britain fhould tremble, if they were united againft her *in a just cause.*—

Let us not fay we do not feel the difcontent of America.—We do not feel it, 'tis true, in her opposition, or from her arms; but we feel it in the infults of our natural enemies; we feel it in our impotence or our fear to check the progress of their usurpation, and the extension of their empire;—we feel it in the facrifice of our generofity and of our glory,—we feel it in the wounds of an illustrious people, and the contempt of all Europe.

The fuperior power and legiflative preeminence of England, without violating a law of juffice, or reducing America to flavery, can for ever enforce her dependence; and raife on the Colonies whole-fale fupplies *fupplies* for the benefit of England; fupplies by which the giver would be enriched.—

Let England then cherifh the Colonies, let her make them happy and free, and they will be industrious and rich: and the nature of dependencies co-operating with the wifdom of parliament, fhall turn the tide of their acquifitions into the mothercountry.—Let them have a conflictution and they will love it,—give them a property and they will love it; give them freedom, and they will adhere to you; give them commerce, and they will enrich you.

It has been obferved by Montefquieu, that countries are not cultivated in proportion to their fertility, bul their liberty; the moft fruitful parts of the earth are defarts, when the moft barren are cultivated. This is an obfervation fuggefted by wifdom, and eftablifhed by experience. And we may be affured that as the only effectual method of taxing America is to make her rich.—The only method of making her rich, is to make her free.—For do not imagine you will be intitled to the gratitude of the Colonifts for defending them from the French, unlefs you make your government better than theirs; and it will not be better, if you take their money from them without their confent. Place not fuch reliance in the strength of armies, or the authority of affemblies, as to imagine they can alter the flated and immutable relations of things .- All the armies that formerly conquered the enemies of America, and now may be employed to conquer her friends, and all the councils that directed them, though they may enforce a temporary fubjection, are unable to make flavery the law of the land .- And whatever may be the efforts of interested declamation, or mercenary abilities, they never can overthrow the doctrines advanced in that conftitutional pamphlet intitled The State of Great Britain and America. And I with every line of it were engraved in the breast of the ministry; then should we fee the colonies restored to freedom, allegiance, and industry; and England reaping the fruits and returns of the benefits fhe has conferred.

This must be the conduct of Great Britain towards her dependencies.—And the most rapacious minister, if he were wife and permauent, would from avarice adopt M it. When the reflitution of their rights, and revival of their commerce shall make them wealthy, they will probably be able to support the whole expence of their defence; and certainly, if they be well treated, that expence will be diminished. But I am fure the minister, who begins his work by imposing a foreign taxation on them to the amount of 200,000 *l. per annum*, would render the colonies unable to become really useful to England, and thereby defeat the great object of the war:—And all this would be hazarded for a consideration fo ridiculously minute, that together with

the Irish contribution, if England were tottering, it could not prop that mighty fabrick for one day.—

Narrow exactness and official calculation may be fubservient, but should never be predominant in the English ministerial character. To keep the accounts of an office, and to regulate the government, the policies, and the commerce of a great empire, are indeed provinces of different extent.

The man who, to live a year longer of administration, would patch up a fupply by a little American plunder, and then tell tell the nation " That to fupport their own " dignity, they must affert this outrage,-" that fubordination and flavery are fyno-" minous,-that the omnipotence of par-" liament must be displayed in an act of " injuffice,-that they must be wicked, left "they appear to be weak."-Who for the fake of an expedient, would alienate the affections of two millions of loyal fubjects, and condemn to military execution all who should be found in rebellion of felf defence. Who, if from the fort duration of his authority, there yet remained one amongft the dependencies not actually alienated by publick oppreffion, would endeavour to difgust it by degrading, offensive, and unnecefiary declarations .- If fuch a man there be,-let him not offer his pernicious counfels to the best of kings ;- but rather let us remember, that one of the greatest of the Romans, Tiberius Graccus, called a prætor to publick judgment, because he had alienated from Rome the affections of the provinces !- If fuch a man there be,let him never be minister of England. For fuch an appointment would throw all the dependencies of Great Britain into de-M2 fpair :-

I have now concluded the courfe I intended to pursue :- happy, if what I have offered may tend to advance the interefts of any part of the empire; - and furely a knowledge of the circumstances of each, is neceffary to the government of the whole.-Happy, if I can for a moment recall the fentiments of the times from those pernicious doctrines, which have fpread discontent, if not disaffection, to the extremities of his Majesty's dominions; which have relaxed the bonds of union and brotherly love, that make the weak ftrong, and the strong invincible .- For we may be affured it is by the co-operation of interests and affections alone, that this ftupendous frabric can long be united and maintained .- And it is impoffible that its union can be permanent, unless all be flaves, or all be free; for if freedom be the principle of the empire, every member muft think it is his birth-right; and Britons can never call flaves their fellowsubjects .- Let not then the fundamental principles of the conftitution be on any account

account relaxed, or facrificed, to trifling expedients; nor fuffer a precedent of flavery to be eftablished even for England herfelf. — For if the time shall ever come in which British liberty shall be devoted, her disfolution will not begin in the center of the empire; but, (to use the words of a person of the first abilities) " She will " feel subjection like the coldness of death, " creeping upon her from all her extre-" mities."

Long may the remain at the head of the empire, fuperintending, reftraining, confolidating !—Which the may for ever do, without diffurbing a fingle thade of *internal liberty*. May the have every power neceffary to her profperity;—but it can never tend to her profperity, to make *flaves* of *fellow-fubjects*.—Commerce and virtue would accompany their freedom in her flight, and little would be the boaft of an idle territory.

If England be overburdened by taxes, let her at leaft begin with reducing fome of her unneceffary expences,—let her eftablish fome œconomy,—let her regulate her land tax,—which is in its di/po/ition the most

most unequal, and in it felf the most unexceptionable tax, for the policy of England. -Let not 180,0000 l. annually be raifed by lottery on the fubject, more than the ftate receives, nor other articles of fupply be warped to gratuities .- Let not the public treasure be perverted to private favours. or the public good betrayed to popular prejudices .- Let not the taxes on necessaries be transferred to superfluities, or at least fuffer not the habits of luxury to confound the two terms, as convertible or fynonimous ;-and, above all, establish agriculture on a regular and uniform exportation ; and that will produce not only plenty, but wealth .- If, however, after this, England should feel distress; let her dependencies, if they be able, affift her :- But the first ftep is, to make them fo. Let Ireland and the Colonies enjoy every degree of commerce, compatible with the trade of England .--- I with for no more : and their ac-quifitions, after a progrefs conferring benefits as they flow, will finally fettle in England .- This will refult from the natural course of things : if it did not, it might be

be to directed by the external fuperintendency and commercial policy of the British legislature.—And this is the utmost extent of taxation, that one people can exercise over another.

[91]

If there were any fuch minister in England as that great Sully, whom this author celebrates, he would feel the excellence of this reflection, " That the best means " of making the dependencies of the em-" pire *ufeful*, are to make them *happy*, and " the best way to tax them, is to confer " benefits upon them."

This is not a vain use of words, but it is good policy and national wisdom. And if ever the day shall come, in which these fentiments shall direct the British councils, then shall we see the Colonies look up to their mother country, not as to a parent who gave them *birtb*, only to defraud them of their *birtbright*; but as one intitled to their support in her infirmity, for she protected them in their *infancy*, and cultivated them in their *maturity*.—Then we shall see the trade, navigation, and prosperity of the empire flourish, and every one of his Majesty's subjects contending with whofe dominion is founded in the affec-

there were any fuch minifter in Engeas that preat fully, whom this author nates, he would not the 'excellence
