# THE <br> <br> I N T EREST <br> <br> I N T EREST OF 

## GREATBRITAIN With Regard to her COLONIES.

anuan wim HAVE perufed with no fmall pleafure the Letter $\$_{*}$ § §\$§ I $\oint * \$$ that letter. It is not merely from the beauty, $\oint^{*} \oint \quad \oint^{*} \oint$ the force and perficuity of expreffion, or Gonmonim the general elegance of manner confpicuous ontencitionion in both pamphlets, that my pleafure chiefly arifes; it is rather from this, that I have lived to fee fubjects of the greatef importance to this nation publickly difcuffed without party views, or party heat, with decency and politenefs, and with no other warmth than what a zeal for the honour and happinefs. of our king and country may infpire;---and this by writers whofe underftanding (however they may differ from each other) appears not unequal to their candour and the uprightnefs of their intention.

But, as great abilities have not always the beft information, there are, I apprehend, in the Remarks fome opinions not well founded, and fome miftakes of fo important a nature, as to render a few obfervations on them neceflary for the better information of the publick.

The auther of the Letter, who muft be every way beft able to fupport his own fentiments, will, Ihope, excufe me, if I feem officioufly to interfere; when he confiders, that the firitit of patriotifm, like other qualities good and bad, is catching; and that his long filence fince the Remarks appeared has made us defpair of feeing the fubject farther difcuffed by his mafterly hand. The ingenious and candid remarker, too, who muft have been minled himfelf before he employed his $\mathbb{f k i l l}$ and addrefs to miflead
lead others, will certainly, fince he declares he aims at no feduction, be difpofed to excufe even the weakeft effort to prevent it.

And furely if the general opinions that poffefs the minds of the people may poffibly be of confequence in publick affairs, it muft be fit to fet thofe opinions right. If there is danger, as the remarker fuppofes, that "extravagant expectations", may embarafs " a virtuous and able miniftry," and "render the nego"t tiation for peace a work of infinite difficulty;" there is no lefs danger that expectations too low, thro' want of proper information, may have a contrary effect, may make even a virtuous and able miniftry lefs anxious, and lefs attentive to the obtaining points in which the honour and intereft of the nation are effentially concerned; and the people lefs hearty in fupporting fuch a minittry and its meafures.

The people of this nation are indeed refpectable, not for their numbers only, but for their underfanding and their publick fipirit : they manifeft the firft, by their univerfal approbation of the late prudent and vigorous meafures, and the confidence they fo juftly repofe in a wife and good prince, and an honeft and ableadminiffration; the latter they have demonftrated by the immenfe fupplies granted in parliament unanimoufly, and paid through the whole kingdom with chearfulnefs. And fince to this fpirit and thefe fupplies our " victories and fucceffes" have in great meafure been owing, is it quite right, is it generous to fay, with the remarker, that the people " had no fhare in aquiring them?" The mere mob he cannot mean, even where he fpeaks of the madnefs of the people; for the madnefs of the mob muft be too feeble and impotent, arm'd as the government of this country at prefent is, to "over-rule," even in the flighteft inftances, the "virtue and moderation" of a firm and fteady miniftry.
While the war continues, its final event is quite uncertain. The Vittorious of this year may be the Vanquifh'd of the next. It may therefore be too early to fay, what advantages we ought abfolutely to infift on, and make the fine quibus non of a peace. If the neceffity of our affairs fhould oblige us to accept of terms lefs advantageous than our prefent fucceffes feem to promife us, an intelligent people as ours is, muft foe that neeefity, and will

## [5]

acquiefce. But as a peace, when it is made, may be made haftily; and as the unhappy continuance of the war affords us time to confider, among feveral advantages gain'd or to be gain'd, which of them may be moft for our intereft to retain, if fome and not all may paffible be retained; I do not blame the public difquifition of thefe points, as premature or ufelefs. Light often arifes from a collifion of opinions, as fire from flint and steel; and if we can obtain the benefit of the light, without danger from the beat fometimes produc'd by controverfy, why fhould we difcourage it?

Suppofing then, that heaven may fill continue to blefs his Majefty's arms, and that the event of this juft war may put it in our power to retain fome of our conqueits at the making of $a_{2}$ peace; let us confider whether we are to confine ourfelves to thofe poffeffions only that were " the objects for which we began the war.? This the remarker feems to think right, when the queftion relates to ' Canada properly fo called,' it having never been s mentioned as one of thofe objects in any of our memorials ' or declarations, or in any of our publick act whatfoever.' But the gentleman himfelf will probably agree, that if the ceffion of Canada would be a real advantage to us, we may demand it under his fecond head, as an " indemnification for the charges incurred" in recovering our juft rights ; otherwife, according to his own principles, the demand of Gaudaloupe can have no foundation.

That "s our claims before the war were large enough for poffeffion and for fecurity too," tho' it feems a clear point with the ingenious remarker, is, I own, not fo with me. I am rather of the contrary opinion, and fhall prefently give my reafons. But firft let me obferve, that we did not make thofe claims becaufe they were large enough for fecurity, but becaufe we could rightfully claim no more. Advantages gain'd in the courfe of this war, may increafe the extent of our rights. Our claims before the war contain'd fome fecurity; but that is no reafon why we fhould neglect acquiring more when the demand of more is become reafonable. It may be reafonable in the cafe of America to afk for the fecurity recommended by the author of the letter, the' it would be prepofterous to do it in many other cafes : his

## [6]

propos'd demand is founded on the little value of Canada to the French; the right we have to alk, and the power we may have to infift on an indemnification for our expences; the difficulty the French themfelves will be under of reftraining their reftefs fubjects in America from encroaching on our limits and difturb. ing our trade; and the difficulty on our parts of preventing encroachments that may pofibly exift many years without coming to our knowledge. But the remarker " does not fee why the " arguments employ'd concerning a fecurity for a peaceable be" haviour in Canada, would not be equally cogent for calling "for the fame fecurity in Europe." On a little farther reflection, he muft I think be fenfible, that the circumftances of the two cafes are widely different. Here we are feparated by the beft and cleareft of boundaries, the ocean, and we have people in or near every part of our territory. Any attempt to encroach upon us, by building a fort, even in the obfcureft corner of thefe iflands, muft therefore be known and prevented immediately. The aggrefiors alfo muft be known, and the nation they belong to would be accountable for their aggreffion. In Ameri$c a$ it is quite otherwife. A vaft wildernefs thinly or fcarce at all peopled, conceals with eafe the march of troops and workmen. Important paffes may be feiz'd within our limits and forts built in a month, at a fmall expence, that may coft us an age, and a million to remove. Dear experience has taught us this. But what is fill worfe, the wide extended forefts between our fettlements and theirs, are inhabited by barbarous tribes of favages that delight in war and take pride in murder, fubjects properly neither of the French nor Engli/b, but ftrongly attach'd to the former by the art and indefatigable induftry of priefts, fimilarity of fupertitions, and frequent family alliances. Thefe are eafily, and have been continually, infligated to fall upon and maffacre our planters, even in times of fuli peace between the two crowns, to the certain diminution of our people and the contraction of our fettlements.* And tho' itis known they are fupplyed by the

[^0]French, and carry their prifoners to them, we can by complaining obtain no redrefs, as the governors of Canada have a ready excufe, that the Indians are an independant people, over whom they have no power, and for whofe actions they are therefore not accountable. Surely circumftances fo widely different, may reafonably authorife different demands of fecurity in America, from fuch as are ufual or neceffary in Europe.

The remarker, however, thinks, that our real dependance for keeping "France or any other nation true to her engage" ments, muft not be in demanding fecurities which no nation " whilft independent can give, but on our own ftrength and our " own vigilance." No nation that has carried on a war with difadvantage, and is unable to continue it, can be faid, undet fuch circumftances, to be independent; and while either fide thinks itfelf in a condition to demand an indemnification, there is no man in his fenfes, but will, ceteris paribus, prefer an indemnification that is a cheaper and more effectual fecurity than any other he can think of. Nations in this fituation demand and cede countries by almoft every treaty of peace that is made. The French part of the ifland of St. Cbrifophers was added to Great-Britain in circumftances altogether fimilar to thofe in which a few months may probably place the country of Canada. Farther

- their public councils, to aets of hoftility againft the Englifh, even in time 6 of profound peace between the two crowns. Of this there are many unde-
- niable inftances: The war between the Indians and the colonies of the
- Malfacbufetts-Bay and New-Hampfire, in 1723, by which thofe colonies
- fuffered fo much damage, was begun by the inftigation of the French; their
- fupplies were from them, and thereare now original letters of feveral. Je-
- fuits to be produced, whereby it evidently appears, that they were continu-
* ally animating the Indians, when almoft tired with the war, to a farther

5 profecution of it. The French not only excited the Indians, and fupport-

- ed them, but joined their own forces with them in all the late hoftilities

E that have been committed within his Majelty's province of Nova Scotic.

- And from an intercepted letter this year from the Jefuit at Penobfrot, and
- from other information, it is certain that they have been ufing their ut-

8 moft endeavours to excite the Indians to new acts of hoftility againft his
Bajefty's colony of the Mafacbufetts-Bay, and fome bave been committed. - ward them for it, by bnying the Indians to acts of hoftility, but re-

6 fom

- given for a llave in thele cofterwards. T
- tence of refcuing the poor prifoners from the cruelties and barbarities of the
- Favages; but in reality to encourage them to coutinue their depredationg,
- as they can by this means get more by hunting the Englifh than by hunt-

6 ing wild bealts; and the Frencb at the fame time are thereby enabled to
"keep up a large body of andiansentirely at the expence of the Englifho:

## [ 8 ]

Farther fecurity has always been deemed a motive with a coni queror to be lefs moderate; and even the vanquifh'd infift upori fecurity as a reafon for demanding what they acknowledge they could not otherwife properly afk. The fecurity of the frontier of France on the fide of the Netherlands, was always confidered in the negotiation that began at Gertruydenburgh, and ended with that war. For the fame reafon they demanded and had Cape Breton. But a war concluded to the advantage of France has always added fomething to the power, either of France or the houfe of Bourbon. Even that of 1733 , which fhe commenced with declarations of her having no ambitious views, and which finifhed by a treaty at which the minifters of France repeatedly declared that the defired nothing for herfelf, in effect gained for her Lorrain, an indemnification ten times the value of all her North American poffeffions.

In fhort, fecurity and quiet of princes and flates have ever been deemed fufficient reafons, when fupported by power, for difpofing of rights ; and fuch difpofition has never been looked on as want of moderation. It has always been the foundation of the moft general treaties. The fecurity of Germany was the argument for yielding confiderable poffeffions there to the Swedes: and the fecurity of Europe divided the Spanijb monarchy, by the partition treaty, made between powers who had no other right to difpofe of any part of it. There can be no ceffion that is not fuppofed at leaft, to encreafe the poiver of the party to whom it is made. It is enough that he has a right to afk it, and that he does it not merely to ferve the purpofes of a dangerous ambition. Canada in the hands of Britain, will endanger the kingdom of France as little as any other ceffion; and from its fituation and circumftances cannot be hurtful to any other fate. Rather, if peace be an advantage, this ceffion may be fuch to all Europe. The prefent war teaches us, that difputes arifing in America, may be an occafion of embroiling nations who have no concerns there. If the French remain in Canada and Louifiana, fix the boundaries as you will between us and them, we muft border on each other for more than 1500 miles. The people that inhabit the frontiers, are generally the refure of both nations, often of the woft mopals and the leatt difcretion;
remote from the cye, the prudence, and the reftraint of government. Injuries are therefore frequently, in fome part or other of folong a frontier, committed on both fides, refentment provoked, the colonies firt engaged, and then the mother countries. And two great nations can fcarce be at war in Europe; but fome other prince or flate thinks it a convenient opportunity, to revive fome ancient claim, feize fome advantage, obtain fome territory; or enlarge fome power at the expence of a neighbour. The flames of war once kindled, often fpread far and wide, and the mifchief is infinite. Happy it prov'd to both nations, that the Dutch were prevailed on finally to cede the New Netherlands (now the province of New-Tork) to us at the peace of 1674 ; a peace that has ever fince continued between us, but muft have been frequently difturbed, if they had retained the poffeffion of that country, bordering feveral hundred miles on our colonies of Pennfyloania weftward, Conne8ticut and the Mafacbufetts eaftwardo Nor is it to be wondered at that people of different language, religion, and manners, fhould in thofe remote parts engage in frequent quarrels, when we find, that even the people of our own colonies have frequently been fo exafperated againfeach other in their difputes about boundaries, as to proceed to open violence and bloodithed.

But the remarker thinks we fiall be fufficiently fecure in America, if we 'raife Englifh forts at fuch paffes as may at once make ' us refpeciable to the French and to the Indian nations.' The fecurity defirable in America, may be confidered as of three kinds ; 1. A fecurity of poffeffion, that the French fhall not drive us out of the country. 2. A fecurity of our planters from the inroads of favages, and the murders committed by them. 3. A fecurity that the Britij乃 nation fhall not be oblig'd on every new war to repeat the immefe expence occafion'd by this, to defend its pofferfions in America. Forts in the moft impotant pafies, may, I acknowledge, be of ufe to obtain the firft kind of fecurity: but as thofe fituations are far advanc'd beyond the inhabitants; the expence of maintaining and fupplying the garrifons, will be very great even in time of full peace, and immenfe on every interruption of it; as it is eafy for fkulking parties of the enemy in fuch

1ong roads thro' the woods, to intercept and cut off our convoys; unlefs guarded continually by great bodies of men. The fecond kind of fecurity, will not be obtained by fuch forts, unlefs they were connected by a wall like that of Cbina, from one end of our fettlements to the other. If the Indians when at war, march'd like the Europeans, with great armies, heavy cannon, baggage and carriages, the pafies thro' which alone fuch armies could penetrate our country or receive their fupplies, being fecurd, all might be fufficiently fecure ; but the cafe is widely different. They go to war, as they call it, in fmail parties, from fifty men down to five. Their hunting life has made them acquainted with the whole country, and fcarce any part of it is impracticable to fuch a party. They can travel thro' the woods even by night, and know how to conceal their tracks. They pafs eafily between your forts undifcover'd; and privately approach the fettlements of your frontier inhabitants. They need no convoys of provifions to follow them; for whether they are fiifting from place to place in the woods, or lying in wait for an opportunity to frike a blow, every thicket and every ftream furnifhes fo fmall a number with fufficient fubfiftence. When they have furpriz'd feperately, and murder'd and fcalp'd a dozen families, they are gone with inconceivable expedition thro' unknown ways, and 'tis very rare that purfuers have any chance of coming up with them.* In fhort, long experience has taught our pianters, that

[^1]they cannot rely upon forts ás a fecurity againf Indians: The inhabitants of Hackzey might as well rely upon the tower of London to fecure them againft highwaymen and houfebreakers. As to the third kind of fecurity, that we fhall not in a few years, have all we have now done to do over again in Anerica; and be oblig'd to employ the fame number of troops, and fhips, at the fame immenfe expence to defend our pofiefions there, while we are in proportion weaken'd here : fuch forts I think cannot prevent this. During a peace, it is not to be doubted the French, who are adroit at fortifying, will likewife ereet forts in the moft advantageous places of the country we leave them, which will make it more difficult than ever to be reduc'd in cafe of another war. We know by the experience of this war, how extremely
${ }^{3}$ retire and either go home by the fame or fome different rout, as they think

- fafeft; or go to fome other place at a diftance to renew their ftroke. If
- a fufficient party fhould happily be ready to purfue them, it is a great chance
s whether in a country confifting of woods and fwamps which the Englifn
6 are not acquainted with, the enemy do not lie in ambufh for them in fome
- convenient place, and from thence deftroy them. If this fhould not be

6 the cafe, but the Engliff fhould purfue them, as foon as they have gained

- the rivers, by means of their canoes, to the ule of which they are brought
- up from theirinfancy, they piefently get out of their reach : furhter, if a

6 body of men were to ma:ch into their country to the place where they are

- Settled, they can, upon the leaft notice, without great difadvantage, quit
'their prefent habitations, and betake themfelves to new ones.' Clark's
Obfervations, p. 13.
- It has been already remarked, that the tribes of the Indians living upon

6 the lakesand riversthat run upon the back of the Ergifily fettlements in
6 North America, are very numerous, and can furnifh a great number of fight-

- ing men, all perfeflly well acquainted with the ufe of arms as ioon as capa-
- ble of carrying them, as they get the whole of their fubffitence from huos-
- ing; and that this army, large as it may be, can be maintained by the French
- without any expence. From their numbers, theis fituation, and the rivers

6 that run into the Englijp fettlements, it is eafy toconceive that they can at
6 any time make an attack upon, and conftantly annoy as many of the expofed

- Englifh fettlements as they pleale, and thofe at any diftance from each other.
- The effects of fuch incurfions have been too feverely felt by many of the
${ }^{6}$ Britifh colonies, not to be very well known. The entire breaking up of
- places that had been for a confiverable time feuled ar a great expence, both
't of lahour and money; burning the houles. deftroying the ftock, killing and
' making prifuners great numbers of the inhabitans, with atl the cruel ulage
' they meet with in their captivity, is only a part of the liene. All other
- placesthatare expofed are kept in continual terror; the lands lie wafte
- and uncultivated from the danger that attends theie that thall pre inne to
' work upon them : befidesthe immenfe charge the governments muft be at
6 in a very incffectual manncr to defend their extended frontiers; and all
© this from the influence the French have had over. bnt comparatively, a
- few of the Indians. To the fome or greater evils fill will every one of the - colonies be expofed, whenever the fame influence fhall be extended to the § whele body of them.'

Ibid. p. 20.
extremely difficult it is to march an anny thro' the American woods, with its neceffary cannon and fopres, fufficient to reduce a very flight fort. The accounts at the treafury will tell you what amazing fums we have neceffarily fpent in the expeditions againft two very trifing forts, Duquefne and Crown Pcinns. While the French retain their influence over the Indians, they can eafily keep our long extended frontier in continual alarm, by a very few of thofe people; and with a fmall number of regulars and militia, in fuch a country, we find they can keep an army of ours in full employ for feveral years. We therefore fhall not need to be told by our colonies, that if we leave Canadn, however circumfcrib'd, to the French, "we bave done nothing;" we fhall foon be made fenfible ourfelves of this truth, and to our coft.
I would not be underftood to deny that even if we fubdue, and retain Canada, fome few forts may be of ufe to fecure the goods of the traders, and protect the commerce, in cafe of any fudden mifunderftanding with any tribe of Indians: but thefe forts will be beft under the care of the colonies interefted in the Indian trade, and garrifon'd by their provincial forces, and at their own expence. Their own intereft will then induce the American governments to take care of fuch forts in proportion to their importance; and fee that the officers keep their corps full and mind their duty. But any troops of ours plac'd there and accounntable here, would, in fuch remote and obfcure places and at fo great a diftance from the eye and infpection of fuperiors, foon become of little confequence, even tho' the Frencb were left in poffeffion of Canada. If the four independent companies maintained by the crown in Nerv York more than forty years, at a great expence, confifted, for moit part of the time, of faggots chiefly; if their officers enjoy'd their places as fine cures, and were only, as a writer * of the country files them, a kind of military monks; if this was the fate of troops pofted in a populous country, where the impofition could not be fo well conceal'd; what may we expect will be the cafe of thofe that fhall be pofted two, three or four hundred miles from the inhabitants,

[^2]in fuch obfcure and remote places as Ciorwn Pcint, Offwego, Duquefne or Niagara? they would fcarce be even faggots; they would dwindle to mere names upon paper, and appear nowhere but upon the mufter rolls.

Now all the kinds of fecurity we have mention'd are obtain'd by fubduing and retaining Canada. Our prefent poffefions in America, are fecur'd; our planters will no longer be maffacred by the Indians, who depending abfolutely on us for what are now become the neceflaries of iife to them, guns, powder, hatchets, knives, and cloathing; and having no other Europeans near, that can either fupply them, or infligate them againt us ; there is no dqubt of their being always difpos'd, if we treat them with common juftice, to live in perpetual peace with us. And with regard to France, fhe cannot in cafe of another war, put us to the immenfe expence of defending that long extended frontier; we fhall then, as it were have our backs againft a wall in America, the fea-coaft will be eafily protected by our fuperior naval power; and here " our own watchfulnefs and our ftrength" will be properly, and cannot but be fuccefffully employed. In this fituation the force now employed in that part of the world, may be fpar'd for any other fervice here or elfewhere; fo that both the offenfive and defenfive ftrength of the Britifo empire ont the whole will be greatly increafed.

But to leave the French in poffeffion of Canada when it is in our power to remove them, and depend, as the remarker propofes, on our own "Arength and watcbjulness" to prevent the mifchiefs that may attend it, feems neither fafe nor prudent. Happy as we now are, under the beft of kings, and in the profpect of a fucceffion promifing every felicity a nation was ever blefs'd with : happy too in the wifdom and vigour of every pare of the adminiftration, farticularly that part whofe peculiar province is the Britijh plantations, a province every true Englijbman fees with pleafure under the principal direction of a nobleman, as much diffinguifh'd by his great capacity, as by his unweried and difinterefted application to this important department ; we cannot, we ought not to promife ourfelves the uninterrupted continuance of thofe bleffings. The fafety of a confiderable part of the ftate, and the interelt of the whole are not to be trufted to the

## [ 14 ]

wifdom and vigour of future adminiftrations, when a fecurity is to be had more effectual, more confant, and much lefs expenfive. They who can be moved by the apprehenfion of dangers fo remote as that of a future independence of our colonies (a point I fhall hereafter confider) feem fcarcely confiftent with themfelves when they fuppofe we may rely on the wifdom and vigout of an adminiftration for their fafery.
I fhould indeed think it lefs material whether Canada were eeded to us or not, if I had in view only the fecurity of $\hat{P}$ offeficn in our colonies. I entirely agree with the Remarker, that we are in North America " a far greater continental as well as naval " power;" and that only cowardice or ignorance can fubject our colonies there to a French conqueft. But for the fame reafon I difagree with him widely upon another point. I do not think that our " blood and treafure has been expended," as he intimates, " in the carye of the colonies," and that we are " making con"quefts for them:" yet I believe this is too common an error. I do not fay they are altogether unconcerned in the event. The inhabitants of them are, in common with the other fubjects of Great Britain, anxious for the glory of her crown, and extent of her power and commerce, the welfare and future repofe of the whole Britilh people. They could not therefore but take a large fhare in the affronts offered to Britain, and have been animated with a truely Britifb Spirit to exert themfelves beyond their ftrength, and againft their evident intereft. Yet fo unfortunate have they been, that their virtue has made againit them; for upon no better foundation than this, have they been fuppofed the authors of a war carried on for their advantage only. It is a great miftake to imagine that the American country in queftion between Great Britain and France, is claimed as the property of any individuals or publick body in America, or that the poffeffion of it by Great Britain, is likely, in any lucrative view, to redoundat all to the advantage of any perfon there. On the other hand, the bulk of the inhabitants of North America are landowners, whofe lands are inferior in value to thofe of Britain, only by the want of an equal number of people. It is true the acceffion of the large territory claimed before the war began, efpecially if that be fecured by the poffiefion of Genoda, will tend
to the increafe of the Britijb fubjects fafter than if they had been confined within the mountains: yet the increafe within the moun$t_{\text {ains only }}$, would evidently make the comparitive population equal to that of Great Britain much fooner than it can be expected when our people are fpread over a country fix times as large. I think this is the only point of light in which this queftion is to be viewed, and is the only one in which aty of the colonies are concerned. No colony, no poffefior of lands in any colony, therefore wifhes for conquefts, or can be benefited by them, otherwife than as they may be a means of fecuring peace on their borders: No confiderable advantage has refulted to the colonies by the conquefts of this war, or can refult fromi confirming them by the peace, but what they muft enjoy in common with the reft of the Britith people; with this evident drawback from their fhare of thefe advantages, that they will neceffarily lefien, or at leaft prevent the increafe of the value of what makes the principal part of their private property. A people fpread thro' the whole tract of country on this fide the Mififipi, and fecured by Canada in our hands, would probably for fome centuries find employment in agriculture, and thereby free us at home effectually from our fears of American manufactures. Unprejudic'd men well know that all the penal and prohibitory laws that ever were thought on, will not be fufficient to prevent manufactures in a country whofe inhabitants furpafs the number that can fubfift by the hufbandry of it. That this will be the cafe in America foon, if our people remain confined within the mountains, and almoft as foon fhould it be unfafe for them to live beyond, tho' the country be ceded to us, no man acquainted with political and commercial hiftory candoubt. Manufactures are founded in poverty. It is the multitude of poor without land in a country, and who muft work for others at low wages or farve, that enables undertakers to carry on a manufacture, and afford it cheap enough to prevent the importation of the fame kind from abroad, and to bear the expence of its own exportation. But no man who can have a peice of land of his own, fufficient by his labour to fubfift his family in plenty, is poor enough to be a manufacturer and work for a mafler. Hence while there is land enough in America for our people, there can never be manufactures to any amount or value. It is a furking obfervation
obfervation of a very ablepen, that the natural livelihood of the thin inhabitants of a foreft country, is hunting; that of a greatef number, pafturage; that of a middling population, agriculture; and that of the greateft, manufactures; which laft muft fubfift the bulk of the people in a full country, or they muft be fubfirted by charity, or periff. The extended population, therefore, that is moft advantageous to Great Britain, will be beft effected, becaufe only effectually fecur'd by our poffeffion of Canada. So far as the being of our prefent colonies in North America is concerned, I think indeed with the remarker, that the French there are not " an enemy to be apprebended," but the expreffion is too vague to be applicable to the prefent, or indeed to any other cafe. Algiers, Tumis and $\boldsymbol{q}_{\text {ripoli, }}$ unequal as they are to this nation in power and numbers of people, are enemies to be fill apprehended; and the Higblanders of Scotland have been fo for many ages by the greateft princes of Scotlandand Britain. The wild Irija were able to give a great deal of difturbance even to Queen Eli: $\approx a b e t b$, and coft her more blood and treafure than her war with Spain. Canada in the hands of France has always ftinted the growth of our colonies : In the courfe of this war, and indeed before it, has difturb'd and vex'd even the beft and ftrongeft of them, has found means to murder thoufands of their people and unfettle a great part of their country. Much more able will it be to ftarve the growth of an infant fettlement. Canada has alfo found means to make this nation to fpend two or three millions a year in America; and a people, how fmall foever, that in their prefent fituation, can do this as often as we have a war with them, is, methinks, " an enenyy to be apprebended."

Our North American colonies are to be confidered as the frontier of the Britibs empire on that fide. The frontier of any dominion being attack'd, it becomes not merely "the carufe" of the people immediately affected, (the inhabitants of that frontier) but properly "the canfe" of the whole body. Where the frontier people owe and pay obedience, there they have a right tolook for protection. No political propofition is better eftablifhed than this. It is therefore invidious to reprefent the " blood and treafure" fpent in this war, as fpent in "the caufe of the colo" nies" only, and that they are " abfurd and ungrateful" if

## [ 17 ]

they think we have done nothing unlefs we " make conquefts for "' them," and reduce Canada to gratify their " vain ambiti"o on," $E_{c}$. It will not be a conqueft for them, nor gratify any vain ambition of theirs. It will be a conqueft for the whole, and all our people will, in the increafe of trade and the eafe of taxes, find the advantage of it. Should we be obliged at any time to make a war for the protection of our commerce, and to fecure the exportation of our manufactures, would it be fair to reprefent fuch a war merely as blood and treafure fpent in the caufe of the weavers of Yorkfoire, Norwich, of the Weft, the cutlers of Sheffield, or the button-makers of Birmingham? I hope it will appear 'before $I$ end thefe fheets, that if ever there was a national war, this is truly fuch a one : a war in which the intereft of the rubole nation is directly and fundamentally concerned.

Thofe who would be thought deeply fkilled in human nature effect to difcover felf-interefted views every where at the bottom of the faireft; the moft generous conduct. Sufpicions and charges of this kind, meet with ready reception and beleif in the minds even of the multitude; and therefore lefs acutenefs and addrefs than the remarker is poffeffed of, would be fufficient to perfuade the nation generally, that all the zeal and fpirit manifefted and exerted by the colonies in this war, was only in "their own caufe" to " make conquefts for themfelves," to engage us to make more for them, to gratify their " own vain "ambition." But fhould they now humbly addrefs the mother country in the terms and fentiments of the remarker, return het their grateful acknowledgments for the blood and treafure fhe had fpent in "their caufe," confefs that enough had been done "for them;", allow that "Englijh forts raifed in proper paffes; "will, with the wifdom and vigour of her adminiffration" be a fufficient future protection; exprefs their defires that their people may be confined within the mountains, left if they are fuffered to fpread and extend themfelves in the fertile and pleafant country on the other fide, they fhould "increafe infinitely from all "caufes," "live wholly on their own labour" and become independent; beg therefore that the French may be furered to remain in poffeffion of Canada, as their neighbourhood may loe ufeful to prevent our increafe; and the removing them
may " in its confequences be even dangerous." I fay, fhould fuch an addrefs from the colonies, make its appearance here, though, according to the remarker, it would be a moft juft and seafonable one; would it not; might it not with more juffice be anfwered; We underfand you, gentlemen, perfectly well: you have only your own intereft in view: you want to have the people confined within your prefent limits, that in a few years the lands you are poffeffed of may increafe tenfold in value! yoi want to reduce the price of labour by increafing numbers on the fame territory, that you may be able to fet up manufactures and vie with your mother country! you would have your people kept in a body, that you may be more able to difpute the commands of the crown, and obtain an independancy. You would have the Frencb left in Canada, to exercife your military virtue, and make you a warlike people, that you may have more confidence to embark in fchemes of difobedience, and greater ability to fupport them! You have tafted too, the fweets of two or threz millions Sterling per annum fpent among you by our fleets and forces, and you are unwilling to be without a pretence for kindling up another war, and thereby occafioning a repetition of the fame delightful dofes! But gentlemen, allow us to underfand our intereft a little likewife: we fhall remove the Frencb from Canada that you may live in peace, and we be no more drained by your quarrels. You fhall have land enough to cultivate, that you may have neither neceffity nor inclination to go into manus factures, and we will manufacture for you and govern you.

A reader of the remarks may be apt to fay; if this writer would have us reftore Canada on principles, of moderation, how can we confiftent with thofe principles, retain Gaudaloup, which he reprefents of fo much greater value! I will endeavour to explain this, becaufe by doing it I fhall have an opportunity of Jhowing the truth and good fenfe of the anfwer to the interefted application I have juft fuppofed. The author then is only apparantly and not really inconfiftent with himfelf. If we can obtain the credit of moderation by reftoring Canada, it is well: but we fhould, however, reftore it at all events; becaufe it would not only be of no ufe to us, but " the poffefion of it (in es his opinion) mayin its confequence be dangerous." As how?

## [19]

Why, plainly, (at length it comes out) if the French are not left there to check the growth of our colonies, "they will extend " themfelves almoft without bounds into the in-land parts, and " increafe infinitely from all caufes;--- becoming a numerous, " hardy, independent people, poffeffied of a ftrong country, com" municating little or not at all with England, living wholly on " their own labour, and in procefs of time knowing little and " enquiring little about the mother country." In fhort, according to this writer, our prefent colonies are large enough and numerous enough, and the French ought to be left in North America to prevent their increafe, left they become not only ufele/s but dangerous to Britain.
I agree with the gentleman, that with Canada in our poffeffion, our people in America will increafe amazingly. I know that that their common rate of increafe, where they are not molefted by the enemy, is doubling their numbers every twenty five years by natural generation only, exclufive of the acceffion of foreigners. $\dagger$ I think this increafe continuing, would probably in a century more, make the number of Britijb fubjects on that fide the water more numerous than they now are on this; but I am far from entertaining on that account, any fears of their becoming either ufeless or dangerous to us; and I look on thofe fears, to be merely imaginary and without any probable foundation, The remarker is referv'd in giving his reafons, as in his opinion this "is not a fit fubject for difcuffion." I fhall give mine, becaufe I conceive it a fubject neceffary to be difcufs'd; and the rather, as thofe fears how groundlefs and chimercial foever, may by poffeffing the multitude, poffibly induce the ableft miniftry to conform to them againft their own judgment, and thereby prevent the affuring to the

[^3]the Britifs name and nation a fability and permanency that no man acquainted with hiftory durtt have hoped for, 'till our American poffeffions opened the pleafing profpect.

The remarker thinks that our people in America, "finding " no check from Canada would extend themfelves almoft with, "out bounds into the inland parts, and increafe infinitely from " all caufes." The very reafon he affigns for their fo extending, and which is indeed the true one, their being " invited to it by "the pleafantnefs, fertility and plenty of the country," may fatisfy us, that this extenfion will continue to proceed as long as there remans any pleafant fertile country within their reach. And if we even fuppofe them confined by the waters of the Miffisipi weftward, and by thofe of St. Laurence and the lakes to the northward, yet fill we fhall leave them room enough to increafe even in the /parfe manner of fettling now practis'd there, till they amount to prehaps a hundred millions of fouls. This muft take fome centuries to fulfil, and in the mean time, this nation muft neceflarily fupply them with the manufactures they confume, becaufe the new fettlers will be employ'd in agriculture, and the new fettlements will fo continually draw off the fpare hands from the, old, that our prefent colonies will not, during the period we have mention'd, find themfelves in a condition to manufacture even for their own inhabitants, to any confiderable degree, much lefs for thofe whoare fettling behind them. Thus our trade muft, till that country becomes as fully peopled as England, that is for centuries to come, be continually increafing, and with it our naval power ; becaufe the ocean is between us and them, and our fhips and feamen muft increafe as that trade increafes.

The human body and the political differ in this, that the frift is limited by nature to a certain fature, which, when attain'd it cannot, ordinarily, exceed ; the other by better government and more prudent police, as well as by change of manners and other circumftances, often takes frefh ftarts of growth, after being long at a fand ; and may add ten fold to the dimenfions it had for ages been confined to. The mother being of full flature, is in a few years equal'd by a growing daughter : but in the cafe of a mother country and her colonies, it is quite different. The

## [21]

growth of the children tends to encreafe the growth of the mother, and fo the difference and fuperiority is longer preferv'd.

Were the inhabitants of this inland limited to their prefent number by any thing in nature, or by unchangeable circumftances, the equallity of population between the two countries might indeed fooner come to pafs : but fure experiencein thofe parts of the ifland where manufactures have been introduc'd, teaches us, that people increafe and multiply in proportion as the means and facility of gaining a livelihoodincreafe; and that this ifland, if they could be employed, is capable of fupporting ten times its prefent number of people. In proportion therefore, as the demand increafes for the manufactures of Britain, by the increafe of people in her colonies, the numbers of her people at home will increafe, and with them the ftrength as well as the wealth of the nation. For fatisfaction in this point let the reader compare in his mind the number and force of our prefent fleets, with our fleet in Queen Elizabeth's time* before we had colonies. Let him compare the ancient with the prefent flate of our towns and ports on our weftern coaft, Manchefer, Liverpool, Kendal, Lancafter, Glafgow, and the countries round them, that trade with and manufacture for our colonies, not to mention Leeds, Halifax, Shefield and Birmingham, and confider what a difference there is in the numbers of people, buildings, rents, and the value of land and of the produce of land, even if he goes back no farther than is within man's memory. Let him compare thofe countries with others on this fame ifland, where manufactures have not yet extended themfelves, obferve the prefent difference, and refiect how much greater our ftrength may be, if numbers give ftrength, when our manufacturers fhall occupy every part of the ifland where they can poffibly be fubfifted.

But, fay the objectors, " there is a certain diftance from the fea, in America, beyond which the expence of carriage will put a ftop to the fale and confumption of your manufactures; and this, with the difficulty of making returns for them, will oblige the inhabitants to manufacture for themfelves; of courfe, if you $f^{\text {uffer }}$ your people to extend their fettlements beyond that dif-
tance, your people become ufelefs to you:" and this diftance is limited by fome to 200 miles, by others to the Apalachizn mountains. Not to infift on a very plain truth, that no part of a dominion, from whence a government may on occafion draw fupplies and aids both of men and money, tho' at too great a diftance to be fupply'd with manufactures from fome other part, is therefore to be deem'd ufelefs to the whole; I fhall endeavour to fhow that thefe imaginary limits of utillity, even in point of commerce are much too narrow.

The inland parts of the continent of Europe are much farther from the fea than the limits of fettlement propofed for America, Germany is full of tradefmen and artificers of all kinds, and the governments there, are not all of them always favourable to the commerce of Britain, yet it is a well-known fact, that our manufactures find their way even into the heart of Germany. Aik the great manufacturers and merchants of the Leeds, Sheffield, Bir, mingham, Manchefter and Norwich goods, and they will tell you, that fome of them fend their riders frequently thro' France or Spain and Italy, up to Vienna and back thro' the middle and nothern parts of Germany, to fhow famples of their wares and collect orders, which they receive by aln moft every mail, to a vaft amount. Whatever charges arife on the carriage of goods, are added to the value, and all paid by the confumer. If thefe nations over whom we have no government, over whofe confumption we can have no influence, but what arifes from the cheapnefs and goodnefs of our wares; whofe trade, manufactures, or commercial connections are not fubject to the controul of our laws, as thofe of our colonies certainly are in fome degree: I fay, if thefe nations purchafe and confume fuch quantities of our goods, notwithftanding the remotenefs of their fituation from the fea; how much lefs likely is it that the fettlers in America, who muft for ages be employ'd in agriculture chiefly, fhould make cheaper for themfelves the goods our manufacturers at prefent fupply them with; even if we fuppofe the carriage five, fix or feven hundred miles from the fea as difficult and expenfive as the like diftance into Germany : whereas in the latter, the natural diftances are frequently doubled by political obftructions, I mean the intermix'd territories and clafhing in-
terefts of princes. But when we confider that the inland parts of America are penetrated by great navigable rivers; that there are a number of great lakes, communicating with each other, with thofe rivers and with the fea, very fmall portages here and there excepted;* that the fea coafts (ifone may be allow'd the expreffion) of thofelakes only, amount at leaft to 2700 miles exclufive of the rivers running into them; many of which are navigable to a great extent for boats and canoes, thro' vaft traets of country; how little likely is it that the expence on the carriage of our goods into thofe countries, fhould prevent the ufe of them. If the poor Irdians in thofe remote parts are now able to pay for the linnen, woolen and iron wares they are at prefent furniflid with by the French and Englif乃 traders, tho' Indians have nothing but what they get by hunting, and the goods are loaded with all the impofitions fraud and knavery can contrive to inhance their value; will not induftrious Engli/b farmers, hereafter fettled in thofe countries, be much better able to pay for what fhall be brought them in the way of fair commerce?

If it is alked, what can fuch farmers raife, wherewith to pay for the manufactures they may want from us? I anfwer, that the inland parts of America in queftion are well known to be fitted for the production of hemp, flax, potafh, and above all filk ; the fouthern parts, may produce olive oil, raifons, currans, indigo, and cochineal. Not to mention horfes and black cattle, which may eafily be driven to the maritime markets, and at the fame time affift in convoying other commodities. That the commodities firt mentioned, may eafily by water or land carriage be brought to the fea ports from interior America, will not feem incredible, when we reflect, that hemp formetly came from the Ukraine and moft fouthern parts of Ṙufia to Wologda, and down the Dwina to Archangel, and thence by a perilous navigation round the Nortb Cape to England and other parts of Europe

[^4]
## [ 24 ]

Europe. It now comes from the fame country up the Drieper and down the Duna with much land carriage. Great part of the Ruffia iron, no high priced commodity, is brought 3000 miles by land and water from the heart of Siberia. Furs, [the produce too of America] are brought to Amferdam from all parts of Siberia, even the moft remote, Kamfchat/ka. The fame country furnifhes me with another inftance of extended inland commerce. It is found worth while to keep up a mercantile communication between Peking in China and Peterfourgb. And none of thefe inftances of inland commerce exceed thofe of the courfes by which, at feveral periods, the whole trade of the Eaff was carried on. Before the profperity of the Mamaluke dominion in $E_{g y p t}$ fixed the faple for the riches of the Eaftat Cairo and Alexandria, whither they were brought from the Red Sea, great part of thofe commodities were carried to the cities of Ca/boar and Balk. This gave birth to thofe towns, that ftill fubfift upon the remains of their ancient opulence; amidft a people and country equally wild. From thence thofe goods were carried down the Amû, the ancient Oxus, to the Cajpian Sea, and up the Wolga to Afracban, from whence they were carried over to, and down the Don to the mouth of that river, and thence again the Venetians directly, and the Genoefe and Venetians indirectly by way of Kaffa and r rebijonde, dirpers'd them thro' the $^{\text {a }}$ Mediterranean and fome other parts of Europe. Another part of thofe goods was carried over land from the Wolga to the rivers Duria and Neva; from both they were carried to the city of Wifbuy in the Baltick, fo eminent for its fea-laws; and from the city of Ladoga on the Neva, we are told they were even carried by the Dwina to Archangel, and from thence round the Nortb Cape.

If iron and hemp will bear the charge of carriage from this inland country, other metals will as well as iron, and certainly filk, fince 3 d . per $l b$. is not not above 1 per cent. on the value, and amounts to $£ .28$ per ton.

If the growths of a country find their way out of it, the manufactures of the countries where they go wili infallibly find their way into it. They who underftand the œeconnomy and principles of manufactures, know, that it is impofible to eftablifh them in places not populous ; and even in thofe that are populous, hardly pofible to eftablifh them to the prejudice of the

## [25]

places already in poffefion of them. Several attempts have been made in France and Spain, countenanced by the government; to draiv from us and eftablifh in thofe countries, our hard-ware and woolen manufactures; but without fuccefs. The reafons are various. A manufacture is part of a great fyftem of commerce, which takes in conveniencies of various kinds, methods of providing materials of all forts, machines for expediting and facilitating labour, all the channels of correfpondence for vending the wares, the credit and confidence neceffary to found and fupport this correfpondence, the mutual aid of different artizans, and a thoufand other particulars, which time and long experience have gradually eftablifhed: A part of fuch a fyttem cannot fupport itfelf without the whole, and before the whole can be obtained the part perihes. Manufactures where they are in perfection, are carried on by a multiplicity of hands; each of which is expert only in his own part, no one of them a mafter of the whole ; and if by any means fpirited away to a foreign country, he is loft without his fellows. Then it is a matter of the extremeft difficulty to perfuade a compleat fet of workmen, fkilled in all parts of a manufactory to leave their country together and fettle in a foreign land. Some of the idle and drunken may be enticed away, but thefe only difappoint their employers, and ferve to difcourage the undertaking. If by royal munificence, and an expence that the profits of the trade alone would not bear, a compleat fet of good and fikiffel hands are collected and carried over, they find fo much of the fyttem imperfect, fo many things wanting to carry on the trade to advantage, fo many difficulties to overcome, and the knot of hands fo eafily broken, by death, diffatisfaction and defertion, that they and their employers are difcouraged together, and the project vanifhes into fmoke. Hence it happens, that eftablifhed manufactures are hardly ever loft, but by forreign conqueft, or by fome eminent interior fault in manners or government; a bad police oppreffing and difcouraging the workmen, or religious perfecutions driving the fober and induftrious out of the country. There is in fhort, fcarce a fingle inftance in hiftory of the contrary, where manufactures have once taken firm root. They fometimes ftart up in a new place, but are generally fupported like exotic plants at more expence than they are worth for any thing but curiofity, until thefe new feats become
the refuge of the manufacturers driven from the old ones. The conqueft of Conftantinople and final reduction of the Greek empire, difperfed many curious manufacturers into different parts of Cbrifendom. The former conquefts of its provinces had before done the fame. The lofs of liberty in Verona, Milan, Florence, Pifa, Pifoia, and other great cities of Italy, drove the manufacturers of woolen cloth into Spain and Flanders. The latter firft loft their trade and manufacturers to Antwerp and the cities of Brabant; from whence by perfecution for religion they were fent into Holland and England. The civil wars during the minority of Cbarles the firt of Spain, which ended in the lofs of the liberty of their great towns, ended too in the lofs of the manufactures of Toleda, Segovia, Salamanca, Medina del campo, $\xi^{\circ}$. The revocation of the ediet of Nantes, communicated, to all the Proteftant parts of Europe, the paper, filk, and other valuable manufactures of France, almoft peculiar at that time to that country, and till then in vain attempted elfewhere.

To be convinc'd that it is not foil and climate, or even freedom from taxes, that determines the refidence of manufacturers, we need only turn our eyes on Holland, where a multitude of manufactures are fill carried on (perhaps more than on the fame extent of territory any where in Europe) and fold on terms upon which they cannot be had in any other part of the world. And this too is true of thofe growths, which by their nature and the labour required to raife them, come the neareft to manufactures.

As to the common-place objection to the Nortb American fettlements, that they are in the fame climate and their produce the fame as that of England; in the firt place it is not true; it is particularly not fo of the countries now likely to be added to our fettlements; and of our prefent colonies, the products, lumber, tobacco, rice and indigo, great articles of commerce do not interfere with the products of England: in the next place, a man muft know very little of the trade of the world, who does not know, that the greater part of it is carried en between countries whofe climate differs very little. Even the trade between the different parts of thefe Britifb iflands, is greatly fuperior to that between England and all the Wef Indic iflands put together.

## [27]

If I have been fuccelsfull in proving that a confiderable commerce may and will fubfift between us and our future moft in. land fettlements in North America, notwithftanding their diftance, I have more than half proved no other inconveniency will arife from their diftance. Many men in fuch a country, muft "know," muft "tbink," and muft "care" about the country they chiefly trade with. Thejuridicial and other connections of government are yet a fafter hold than even commercial ties, and fpread directly and indirectly far and wide. Bufinefs to be follicited and caufes depending, create a great intercourfe even where private property is not divided in different countries, yet this divifion will always fubfift where different countries are ruled by the fame government. Where a man has landed property both in the mother country and a province, he will almoft always live in the mother country: this, though there were no trade, is fingly a fufficient gain. It is faid, that Ireland pays near a million Sterling annually to its abfentees in England: The ballance of trade from Spain or even Portugal is fcarcely equal to this.

Let it not be faid we have no abfentees from North America, There are many to the writer's knowledge; and if there are at prefent but few of them that diftinguif themfelves here by great expence, it is owing to the mediocrity of fortune among the inhabitants of the Northern Colonies; and a more equal divifion of landed property, than in the Wef India iflands, fo that there are as yet but few large eftates. But if thofe who have fuch eftates refides upon and take care of them themfelves, are they worfe fubjeets than they would be if they lived idly in England? Great merit is affumed for the gentlemen of the Weft Indies, on the fcore of their refiding and fpending their money in England. I would not depreciate that merit ; it is confiderable, for they might, if they pleafed fend their money in France: but the difference between their fpending it bere and at bome is not fo great. What do they fpend it in when they are here, but the produce and manufactures of this country; and would they not do the fame if they were at home ? is it of any great importance to the Englijh farmer, whether the Wiff India gentleman comes to London and eats his beef, pork, and tongues, frefh, or has them brought to him in the $W_{e} \ell$ Indies falted: whether he eats his Englifb cheefe and butter or drinks his Englifb ale at London or in Barbades? Is the clothier's,
or the mercer's, or the cutler's, or the toy-man's, profit lefs, for their goods being worn and confumed by the fame perfons refiding on the other fide of the ocean? Would not the profits of the merchant and mariner be rather greater, and fome addition made to our navigation, fhips and feamen ? If the North American gentleman ftays in hisown country, and lives there in that degree of luxury and expence with regard to the ufe of Britila manufactures, that his fortune entitles him to; may not his example (from the imitation of fuperiors fo natural to mankind) fpread the ufe of thofe manufactures among hundreds of families around him, and occafion a much greater demand for them, than it would do if he fhould remove and live in London?

However this may be, if in our views of immediate advantage, it feems preferable that the gentlemen of large fortunes in North America fhould refide much in England, 'tis what may furely be expected as faft as fuch fortunes are acquired there. Their having " colleges of their own for the education of their youth," will not prevent it: A little knowledge and learning acquired, increafes the appetite for more, and will make the converfation of the learned on this fide the water more ftrongly defired. Ireland has its univerfity likewife; yet this does not prevent the immenfe pecuniary benefit we receive from that kingdom. And there will always be in the conveniencies of life, the politenefs, the pleafures, the magnificence of the reigning country, many other attractions befides thofe of learning, to draw men of fubftance there, where thay can, apparently at leatt, have the beft bargain of happinefs for their money.

Our trade to the $W_{f} f$ India iflands is undoubtedly a valuable one : but whatever is the amount of it, it has long been at a ftand. Limited as our fugar planters are by the fcantinefs of territory, they cannot increafe much beyond their prefent number; and this is an evil, as I thall fhew hereafter, that will be little helped, by our keeping Guadaloupe. The srade to our Northerne Colonies, is not only greater, but yearly increating with the increare of people : and even in a greater proportion, as the people increare in wealth and the ability of fpending as well as in numbers. I have already faid, that our people in the Northern Colonies double in about 25 years, exclufive of the acceffion of fraangers. That I fpeak within bounds, I appeal to the authenLic accounts frequently required by the board of trade, and tranfmitted

## [ 29 ]

tranfmitted to that board by the refpective governors; of which accounts I fhall felect one as a fample, being that from the colony of Rbode Ifland*; a colony that of all the others receives the leaft addition from ftrangers. For the increafe of our trade to thofe colonies, I refer to the accounts frequently laid before Parliament, by the officers of the cultoms, and to the cuftom-houfe books: from which I have alfo felected one account, thatof the trade from England (exclufive of Scotland) to Penfylvaniat; a colony moft remarkable for the plain frugal manner of living of its inhabitants, and the moft fufpected of carrying on manufactures on account of the number of German artizans, who are known to have tranfplanted themfelves into that country, tho' even thefe, in truth when they come there, generally apply themfelves to agriculture as the fureft fupport and moft advantageous employment. By this account it appears, that the exports to that province have in 28 years, in creafed nearly in the proportion of 17 to 1 ; whereas the people themfelves, who by other authentic accounts appear to double their numbers (the ftrangers who fetttled there included) in about

## *Copy of the Report of Governor Hopkins to the Board of Trade, on the Numbers of People in Rbode Ifand. <br> In obedience to your lordfhips' commands. I have caufed the within ac-

 count to te taken by officers under oath By it chere appearsto be in this colony, at thistime 35,939 white perfons, and 4697 blacks, chiefly negroes. In the year 1730, by order of the then lords commiffioners of trade and plantations, an account was taken of the number of people in this colony and then there appeared to be 15,302 white perfons, and 2633 blacks.Again in the year 1748, by like order, an account was taken of the number of people in this colony, by which it appears there were at that time 29,755 white perfons, and 4373 blacks.

STEPHEN HOPKINS.

N. B. The accounts for 1758 and 1759 are not yet compleated; but thole acquainted with the North American trade, know, that the increafe in thofe two years, has been in a ftill greater proportion ; the laft year being fuppofed to exceed any former year by a chird; and thisowing to the increafed ability of the people to fpend, from the greater quantities of money circulating among them by the war.

## [30]

16 years, cannot in the 28 years have increafed in a greater proportion than as 4 to 1 : the additional demand then, and confumption of goods from England, of 13 partsin 17 more than the additional number would require, muft be owing to this, that the people having by their induftry mended their circumftances, are enabled to in dulge themfelves in finer cloaths, better furniture, and a more general ufe of all our manufactures than heretofore. In fact, the occafion for Englifh goods in North America, and the inclination to have and ufe them, is and muit be for ages to come, much greater than the ability of the people to pay for them; they muft therefore, as they now do, deny themfelves many things they would otherwife chufe to have, or increafe their induftry to obtain them; and thus, if they fhould at any time manufacture fome coarfe article, which on account of its bulk or fome other circumftance, cannot fo well be brought to them from Britain, it only enables them the better to pay for finer goods that otherwife they could not indulge themfelves in : So that the exports thither are not diminifhed by fuch manufacture but rather increafed. The fingle article of manufacture in thefe colonies mentioned by the remarker, is bats made in New England. It is true there have been ever fince the firft fettlement of that country, a few hatters there, drawn thither probably at firft by the facility of getting beaver, while the woods were but little clear'd, and there was plenty of thofe animals. The cafe is greatly alter'd now. The beaver fkins are not now to be had in New England, but from very remote places and at great prices. The trade is accordingly declining, there, fo that, far from being able to make hats in any quantity for exportation, they cannot fupply their home demand ; and it is well known that fome thoufand dozens are fent thither yearly from London, and fold there cheaper than the inhabitants can make them of equal goodnefs. In fact, the colonies are fo little fuited for eftablifhing of manufactures, that they are continually lofing the few branches they accidentally gain. The working brafiers, cutters, and pewterers, as well as hatters, who have happened to go over from time to time and fettle in the colonies, gradually drop the working part of their bufinefs, and import their refpective goods from England, whence they can have them cheaper and better than they can make them. They continue their fhops indeed, in the fame way of dealing, but be-
come fellers of brafiery, cutlery, pewter, hats, $\mathcal{V}^{\circ}$. brought from England, inftead of being makers of thofe goods.

Thus much as to the apprehenfion of our colonies becoming: afelefs to us. I fhall next confider the other fuppofition, that their growth may render them dangerous. Of this I own, I have not the leaft conception, when I confider that we have already fourteen feperate governments on the maritime coaft of the continent, and if we extend our fettlements fhall probably have as many more behind them on the inland fide. Thofe we now have, are not only under different governors, but have different forms of government, different laws, different interefts, and fome of them different religious perfuafions and different manners. Their jealoufy of each other is fo great that however neceffary an urion of the colonies has long been, for their common defence and fecurity againft their enemies, and how fenfible foever each colony has been of that neceflity, yet they have never been able to effeet fuch an union among themfelves, nor even to agree in requefting the mother country to eftablifh it for them. Nothing but the immediate command of the crown has been able to produce even the imperfect union but lately feen there, of the forces of fome colonies. If they could not agree to unite for their defence againift the French and Indians, who were perpetually haraffing their fettlements, burning their villages, and murdering their people; can it reafonably be fuppofed there is any danger of their uniting againft theirown nation, which protects and encourages them, with which they have fomany connections and ties of blood, intereft and affection, and which 'tis well known they all love much more than they love one another? In fhort, there are fo many caufes that muft operate to prevent it, that I will venture to fay, an union amongft them for fuch a purpofe is not merely improbable, it is impoffible; and if the union of the whole is impoffible, the attempt of a part muft be madnefs: as thofe colonies that did not join the rebellion, would join the mother country in fuppreffing it.

When I fay fuch an union is impofible, I mean without the moft grievous tyranny and oppreffion. People who have property in a country which they may lofe, and privileges which they may endanger ; are generally difpofed to be quiet; and even to bear much, rather than hazard all. While the government is mild and juft, while important civil and religious rights are fecure, fuch fubjects will be dutiful and obedient. The waves
donot rife, but when the winds blow. What fuch an adminiftration as the Duke of Alva's in the Netherlands, might produce, I know not; but this I think I have a right to deem impoffible. And yet there were two very manifeft differences between that cafe, and ours, and both are in our favour. The firft, that Spain had already united the feventeen provinces under one vifible government, tho' the fates continuedindependant : The fecond; that the inhabitants of thofe provinces were of a nation, not only different from, but utterly unlike the Spaniards. Had the Netherlands been peopled from Spain, the worft of opprefiion had probably not provoked them to wifh a feparation of government. It might and probably would have ruined the country, but would never have produced an independant fovereignity. In fact, neither the very wortt of governments, the worit of politicks in the laft century, nor the total abolition of their remaining liberty, in the provinces of Spain itfelf, in the prefent, have produced any independency that could be fupparted. The fame may be obferved of France. And let it not be faid that the neighbourhood of thefe to the feat of government has prevented a feparation. While ourftrength at fea continues, the banks of the Obio, (in point of eafy and expeditious conveyance of troops) are nearer to London, than the remote parts of France and Spain to their refpective capitals ; and much nearer than Connaugbt and UIfer were in the days of Queen Elizabeth. No body foretels the diffolution of the Ruffian monarchy from its extent, yet I will venture to fay, the eaftern parts of it are already much more inacceffable from Peterfourgb than the country on the $M i \int_{i} \int_{i} p i$ is from London; I mean more men, in lefs time; might be conveyed the latter than the former diftance. The rivers Oby, Fenefea and Lena, do not facilitate the communication half fo well by their courfe, nor are they half fo practicable as the American rivers. To this I fhall only add the obfervation of Macbiavel, in his Prince, that a government feldom long preferves its dominon over thofe who are foreigners to it; who on the other hand fall with great eafe, and continue infeperably annex'd to the government of theirown nation, which he proves by the fate of the Englifb conquefts in France.

Yet with all thefe difadvantages, fodifficult is it to overturn an eftablifhed government, that it was not without the affiftance of France and England that the United Provinces fupported themfelves: which teaches us, that if the vifionary danger of indeperidence in
our colonies is to be feared, nothing is more likely to render it fubftantial than the neighbourhood of foreigners at enmity with the fovereign government, capable of giving either aid or an afylum, as the event fhall require. Yet againft even thefe difadvantages; did Spain preferve almof ten provinces, merely thro' their want of union, which indeed could never have taken place among the others, but for caufes, fome of which are in our cafe impoffible, and others it is impious to fuppofe poffible.

The Romans well undertood that policy which teaches the fecurity arifing to the chief government from feperate fates among the governed, when they reffored the liberties of the flates of Grecee, (oppreffed but united under Macelorin,) by an edict that every fate fhould live under its own laws.* They did not even name a governor. Independence of each otber, and Jeparaite interefis, tho' among a people united by common manners, language, and I may fay religion, inferior neither in wifdom, bravery, nor their love of liberty, to the Romans themfelves, was all the fecurity the fovereigns wifhed for their fovereignty. It is true; they did not call themfelves fovereigns; they fet no value on the title; they were contented with poffeffing the thing; and poffers it they did, even without a ftanding army. What can be a ftronger proof of the fecurity of their pofleflion ? And yet by a policy fimilar to this throughout, was the Romian world fubdued and held: a world compofed of above an hundred languages and fets of manners different from thofe of their mafters. t Yet this dominion was unfhakeable, till the lofs of liberty and corruption of manners over turned it.

E But

[^5]$\dagger$ When the Romans bad fubdu'd Macedon and Illyricum, they were both Form'd into republicks ty a decree of the fenate, and Maceion was thought Safe from the danger of a revolution, by being divided, into a divifion coms. mon among the Romans, as we learn from the tetrarchs in fcripture. Omnium primum liberos effe placebot Macedonas atque Illyrios; ut omnibus gentibus appareret, arma popsli Romani non liberis fervitutem, fed contra forvientibus libortatem afferre. Ut \& in libertategentes quece fent, tutain eam fibi perpetuamque fub tutela populi Romani effe: do que fub regibus viverent, ©' in prefens tempus mitiores cos juffiorefque re/pellu populi Romani habere e $\int_{e}$; \& $\sqrt{i}$ quando bellum cum populo Romano regibus fuifet fuis, exitum ejus vifforiam Romanis, fibi libertatcna allaturum crederent.----In quatuor regiones dejcribi Macedoniam, ut fuum quisque concilium haberet, placuit : © dimidium tributi quam quod regibus ferre folitierant; fopulo Romanopendere. Similia his \& in Illyricum mandaca.
Liv. lib, 45. c. 18 ,

But what is the prudent policy inculcated by the remarker, to obtain this end, fecurity of dominion over our colonies: It is, to leave the French in Canada, to "check" their growth, for otherwife our people may " increafe infinitely from all caufes." We have already feen in what manner the French and their Indians check the growth of our colonies. 'Tis a modeft word, this, check, for maffacreing men, women and children. The writer would if he could, hide from himfelf as well as from the public, the horror arifing from fuch a propofal, by couching it in general terms : 'tis no wonder he thought it a " fubject not fit for dif"cufion" in his letter, tho' he recommends it as " a point that " fhould be the conftant object of the minifters attention !---. But if Canada is reftored on this principle, will not Britain be guilty of all the blood to be fhed, all the murders to be come mitted in order to check this dreaded growth of our own people? Will not this be telling the Freneb in plain terms, that the horrid barbarities they perpetrate with their Indians on our colonifts are agreeable to us ; and that they need not apprehend the refentment of a government with whofe views they fo happily concur? Will not the colonies view it in this light? Will they have reafon to confider themfelves any longer as fubjects and children, when they find their cruel enemies halloo'd upon them by the country from whence they fprung, the government that owes them protection as it requires their obedience ? Is not this the mof likely means of driving them into the arms of the French, who can invite them by an offer of that fecurity their own government chufes not to afford them ? I would not be thought to infinuate that the remarker wants humanity. I know how little many good natured perfons are affected by the diftreffes of people at a diffance and whom they do not know. There are even thofe, who, being prefent, can fympathize fincerely with the grief of a lady on the fudden death of her favourite bird, and yet can read of the finking of a city in Syria with very little concern. If it be; after all, thought necelfary to check the growth of our colonies, give me leave to propofe a method lefs cruel. It is a method of which we have an example in fcripture. The murder of hufbands, of wives, of brothers, fifters, and children whofe pleafing fociety has been for fome time enjoyed, affects deeply the refpective furviving relations: but grief for the death of a child juft born
is fhort and eafily fupported. The method I mean is that which was dictated by the Egyptian policy, when the "infinite increafe" of the children of Ifrael wgs apprehended as dangerous to the fate.* Let an act of parliament, than be made, enjoining the colony midwives to flife in the birth every third or foarth child. By this means you may keep the colonies to their prefent.fize. And if they were under the hard alternative of fubmitting to one or the other of thele fchemes for checking their growth, I dare anfwer for them, they would prefer the latter.

But all this debate about the propriety or impropriety of keeping or reftoring Canada, is pofibly too early. We have taken the capital indeed, but the country is yet far from being in our poffeffion ; and perhaps never will be: for if our M--------rs are perfuaded by fuch counfellors as the remarker, that the French there are " not the wortt of neighbours," and that if we had conquered Canada, we ought for our own fakes to reftore it, as a check to the growth of our colonies, I am then afraid we fhall never take it. For there are many ways of avoiding the completion of the conqueft, that will be lefs exceptionable and lefs odious than the giving it up.

The objection I have often heard, that if we had Canada, we could not people it, without draining Britain of its inhabitants, is founded on ignorance of the nature of population in new countries. When we firft began to colonize in America, it was neceffary to fend people, and to fend feed-corn; but it is notnow neceffary that we fhould furnifh, for a new colony, either one or the other. Theannual increment alone of our prefent colonies, without diminifhing their numbers, or requiring a man from hence, is fufficient in ten years to fill Canada with double the number of Engli/b that it now has of French inhabitants§. Thofe who are proteftants among the French, will probably chufe to remain under the Englifh government; many will chufe to

[^6]
## [ 36 ]

remove if they can be allowed to fell their land, improvements and effects : the reft in that thinfettled country, will in lefs than half a century, from the crowds of Englifs fettling round and among them, be blended and incorporated with our people both in language and manners.

In Gaudaloupe the cafe is fomewhat different; and though $I$ am far from thinking we have fugar land enough*, I cannot think Goudaloupe is fodefirable an increafe of it, as other objects the enemy would probably be infinitely more ready topart with. A country fully inbabited by any nation is no proper poffeffion for another of different language, manners and religion. It is hardly ever tenable at lefs, expence than it is worth...-But the ifle of Cayenne, and its appendix Equinoctial-France, would indeed be an acquifition every way fuitable to our fituation and defires. This would hold all that migrate from Barbadoes, the Leervard-IJands or Famaica. It would certainly recal into an Engli/b government (in which there would be room for millions) all who have before fettled or purchafed in Martinico, Gaudaloupe, Santa-Cruz or St. Fohn's, except fuch as know not the value of an Englifs government, and fuch $I$ am fure are not worth recalling.

But fhould we keep Gaudaloupe, we are told it would enable us to export $£ \cdot 300,000$ in fugars. Admit it to be true, though perhaps the amazing increafe of Englijb confumption might ftop moft of it here, to whofe profit is this to redound? to the profit of the French inhabitants of the ifland: except a fmall part that fhould fall to the fhare of the Englifh purchafers, but whofe whole purchare money muft firft be added to the wealth and circulation of France.
I grant, however, much of this $£ \cdot 300,000$ would be expended in Britifs manufactures. Perhaps, too, a few of the landowners of Gaudaloupe might dwell and fpend their fortunes in Britain, (though probably much fewer than of the inhabitants of Nortb America). I admit the advantage arifing to us from thefe circumftances, (as far as they go) in the cafe of Gaudaloupe, as

## well

* It is often faid we have plenty of fugar-land fill unemployed in famaica: but thofe who are well acquainted with that infand, know, that the remaining vacant land in it is generally fituated among mountains, rocks and gullies, that make carriage impracticable, fo that no profitable ule can be made of it, unlefs the price of fugars thould fo greatly increafe as to enable the planter to make very expenfive roads, by blowing up rocks, erecting bridges, dow. every.
2 or 300 yards.
well as in that of our other Wef India fettlements. Yet even this confumption is little better than that of an allied nation would be, who fhould take our manufactures and fupply us with fugar, and put us to no expence in defending the place of growth.

But though our own colonies expend among us almof the whole produce of our fugar, can we or ought we to promife ourfelves this will be the cafe of Gaudaloupe. One $100,000 \mathrm{f}$. will fupply them with Briti/b manufactures; and fuppofing we can effectually prevent the introduction of thefe of France, (which is morally impofible in a country ufed to them) the other 200,000 will fill be fpent in France, in the education of their children and fupport of themfelves; or elfe be laid up there, where they will always think their home to be.

Befides this confumption of Britil/ manufactures, much is faid of the benefit we fhall have from the fituation of Guadaloupe, and we are told of a trade to the Carraccas and Spaniß Main. In what refpect Gaudaloupe is better fituated for this trade than $\mathcal{F} a$ maica, or even any of our other iflands, I am at a lofs to guefs. I believe it to be not fo well fituated for that of the windward coaft, as Tobago and St. Lucia, which in this as well as other refpects, would be more valuable poffeffions, and which, I doubt not, the peace will fecure to us. Nor is it nearly fo well fituated for that of the reft of the Spanikk Main as Jamaica. As to the greater fafety of our trade by the poffeffion of Gaudaloupe, experience has convinced us that in reducing a fingle ifland, or even more, we ftop the privateering bufinefs but little. Privateers ftill fubfift, in equal if not greater numbers, and carry the veffels into Martinico which before it was more convenient to carry into Guadaloupe. Had we all the Caribbecs, it is true, they would in thofe parts be without fhelter. Yet upon the whole I fuppofe it to be a doubtful point and well worth confideration, whether our obtaining poffeffion of ail the Caribbees, would be more than a temporary benefit, as it would neceflarily foon fill the French. part of Hifpaniola with French inhabitants, and thereby render it five times more valuable in time of peace, and little lefs than impregnable intime of war; and would probably end in a few years in the uniting the whole of that great and fertile iffand under a French government. It is agreed on all hands, that our conqueft of St. Cbriftophers, and driving the French from thence, firt furnifh'd

## [ $3^{8}$ ]

nifh'd Hi/paniola with frilful and fubftantial planters, and was confequently the firt occafion of its prefent opulence. On the other hand, I will hazard an opinion, that valuable as the French poffeffions in the Weft Indies are, and undeniable the advantages they derive from them, there is fomewhat to be weighed in the oppofite fcale. They cannot at prefent make war with England, without expofing thofe advantages while divided among the numerous iflands they now have, much more than they would, were they poffeffed of St. Domingo only; there own fhare of which would, if well cultivated, grow more fugar, than is now grown in all their $W_{\text {eft }}$ India iflands.

I have before faid I do not deny the utility of the conqueft, or even of our future poffeffion of Gaudaloupe, if not bought too dear. The trade of the Weft Indies is one of our moft valuable trades. Our poffeffions there deferve our greateft care and attention. So do thofe of North America. I fhall not enter into the invidious talk of comparing their due eftimation. It would be a very long and a very difagreeable one, to run thro' every thing material on this head. It is enough to our prefent point, if I have fhown, that the value of North America is capable of an immenfe increafe, by an acquifition and meafures, that muit neceffarily have an effect the direct contrary of what we have been induftrioufly taught to fear; and that Gaudaloupe is, in point of advantage, but a very fmall addition to our $W_{e} /$ India poffefions, rendered many ways lefs valuable to us than it is to the French, who will probably fet more value upon it than upon a country that is much more valuable to us than to them.

There is a great deal more to be faid on all the parts of thefe fubjects; but as it would carry me into a detail that Ifearwould tire the patience of my readers, and which $I$ am not without apprehenfions I have done already, I fhall referve what remans till I dare venture again on the indulgence of the publick.

In Confirmation of the Writer's Opinion concerning Population, Manufactures,' $\xi^{\circ}$. he has thought it not amifs to add an Extract from a Piece written fome Years fince in America, where the Facts muft be well known, on which the Reafonings are founded. It is intitled

## OBSERVATIONS

## CONCERNING THE

## Increase of MANKIND,

## Peopling of Countries; $E^{2} c$.

## Written in Pensilvania, 175 I .

1. TABLES of the proportion of marriages to births, of deaths to births, of marriages to the numbers of inhabitants, $\xi^{\circ}$. formed on obfervations made uponthe bills of mortality, chriftenings, $\xi^{\circ}$ c. of populous cities, will not fuit countries; nor will tables formed on obfervations made on full fettled old countries, as Europe, fuit new countries, as America.
2. For people increafe in proportion to the number of marriages, and that is greater in proportion to the eafe and convenience of fupporting a family. When families can be eafily fupported, more perfons marry, and earlier in life.
3. In cities, where all trades, occupations and offices are full, many delay marrying, till they can fee how to bear the charges of a family ; which charges are greater in cities, as luxury is more common; many live fingle during life, and continue fervants to families, journeymen to trades, $\mathcal{E}^{\circ}$. hence cities do not by natural generation fupply themfelves with inhabitants; the deaths are more than the births.
4. In countries full fettled, the cafe mul be nearly the fame;
all lands being occupied and improved to the heighth ; thofe who cannot get land, muft labour for others that have it; when labourers are plenty, their wages will be low; by low wages a family is fupported with difficulty; this difficulty deters many from marriage, who therefore long continue fervants and fingle. ---------Only as the cities takes fupplies of people from the country, and thereby make a little moreroom in the country, marriage is a little more encouraged there; and the births exceed the deaths.
5. Great part of Europe is full fettled with hufbandmen, manufacturers, $\mathcal{E}^{\circ}$ c. and therefore cannot now much increare in people: America is chiefly occupied by Indians, who fubfift mofly by hunting.-------But as the hunter, of all men, requires the greateft quantity of land from whence to draw his fubfiftance, (the huibandman fubfifting on much lefs, the gardener on fill lefs; and the manufacturer requiring leaft of all) the Europeans found Anerica as fully fettled as it well could be by hinters; yet thefe having large tracts, were eafily prevailed on to part with portions of territory to the new comers, who did not much interfere with the natives in hunting, and furnifhed them with many things they wanted.
6. Land being thus plenty in America, and fo cheap as that a labouring man, that underftands hufbandry, can in a fhort time fave money enough to purcharea piece of new land fufficient for a plantation, whereon he may fubfift a family; fuch are not afraid to marry; for if they even look far enough forward to confider how their children when grown up are to be provided for, they fee that more land is to be had at rates equally cafy, all circumftances confidered.
7. Hence marriages in America are more general, and more generally early, than in Europe. And ifit is reckoned there, that there is but one marriage per annum among 100 perfons, perhaps we may here reckon two; and if in Europe they have but four births to a marriage (many of their marriages being late) we may here reckon eight; of which if one half grow up, and our marriages are made, reckoning one with another, at twenty years of age our people muft at leaft be doubled every twenty years.
8. But notwithftanding this increafe, fo vaft is the territory of North Ameaica, that it will require many ages to fettle it fully;
and till it is fully fettled labour will never be cheap here, where ho man continues long a labourer for others; but gets a plantation of his own ; no man continues long a journeyman to a trade, but goes among thofe new fettlers; and fets up for himfelf; E૭c. Hence labour is no cheaper now, in Penfilvania, than it was thirty years ago, tho' fo many thoufand labouring people have been imported from Germany and Ireland.
9. The danger therefore of thefe colonies interfering with their mother country in trades that depend on labour, manufactures, $E^{\circ} c$. is too remote to require the attention of Great Britain:
10. But in proportion to the increafe of the colonies, a vaft demand is growing for Britifb manufactures; a glorious market wholly in the power of Britain, in which foreigners cannot interfere, which will increafe in a fhort time even beyond her power of fupplying, tho' her whole trade fiould be to her colonies.
11. 'Tis an ill-grounded opinion that by the labour of flaves, America may poffibly vie in cheapnefs of manufactures with $B_{i}=$ zain. The labour of flaves can never be fo cheap here as the labour of working men is in Britain. Any one may compute it: Intereft of money is in the colonies from 6 to to per Cent. Slaves one with another coft $30 \%$. Sterling per head. Reckon then the Intereft of the firft purchafe of a flave, the infurance or rifque on his life, his cloathing and diet, expences in his ficknefs and lofs of time, lofs by his neglect of bufinefs (neglect is natural to the man who is not to be benefited by his own care or diligence) expence of a driver to keep him at work, and his pilfering from time totime, almoftevery flave being from the nature of flavery a thief, and compare the whole amount with the wages of a manufacturer of iron or wool in England, you will fee that labour is much cheaper there than it ever can be by negroes here. Why then will Americans purchafe flaves? Becaufe flaves may be kept as long as a man pleafes, or has occafion for their labour; while hired men are continually leaving their mafter (often in the midft of his bufinefs) and fetting up for themfelves. § 8.
12. As the increafe of people depends on the encouragement of marriages, the following things muft diminifh a nation, viz: 1. The being conquered; for the conquerors will engrofs as ma-
ny offices, and exact as much tribute or profit on the labour of the conquered, as will maintain them in their new eftablifhment; and this diminifing the fubfiftence of the natives, difcourages their marriages, and fo gradually diminifhes them, while the foreigners increafe. 2. Lofs of territory. Thus the Britons being driven into $W$ ales, and crouded together in a barren country infufficient to fupport fuch great numbers, diminifhed till the people bore a proportion to the produce, while the Saxons increafed on their abandoned lands, 'till the ifland became full of Englifo. And were the Englifb now driven into Wales by fome foreign nation, there would in a few years be no more Englifomen in Britain, than there are now people in Wales. 3. Lofs of trade. Manufactures exported, draw fubfiftence from foreign countries for numbers; who are thereby enabled to marry and raife families. If the nation be deprived of any branch of trade, and no new employment is found for the people occupy'd in that branch, it will foom be deprived of fo many people. 4. Lofs of food. Suppofe a nation has a fifhery, which not only employs great numbers, but makes the food and fubfiftence of the people cheaper : if another nation becomes mafter of the feas, and prevents the fifhery, the people will diminifh in proportion as the lofs of employ, and dearnefs of provifion makes it more difficult to fubfirt a family. 5. Bad government and infecure property. People not only leave fuch a country, and fettling abroad incorporate with other nations, lofe their native language, and become foreigners; but the induftry of thofe that remain being difcouraged, the quantity of fubfiftence in the country is leffened, and the fupport of a family becomes more difficult. So heavy taxes tend to diminifh a people. 6. The introduction of flaves. The negroes brought into the Engli/b fugar iflands, have greatly diminifhed the whites there; the poor are by this means deprived of employment, while afew families acquire valt eftates, which they fpend on foreign luxuries, and educating their children in the habit of thofe luxuries; the fame income is needed for the fupport of one, that might have maintained one hundred. The whites who have flaves not labouring, are enfeebled, and therefore not fo generally prolific; the flaves being worked too hard, and ill fed, their conflitutions are broken, and the deaths among them are more

## [43]

than the births; fo that a continual fupply is needed from Africa. The nothern colonies having few flaves, encreafe in whites. Slaves alfo pejorate the families that ufe them; the white chil, dren become proud, difgufed with labour, and being educated in idlenefs, are rendered unfit to get a living by induftry.
14. Hence the prince that acquires new territory, if he finds it vacant, or removes the natives to give his own people room; the legiflator that makes effectual laws for promoting of trade, increafing employment, improving land by more or better tillage, providing more food by fifheries, fecuring property, $\mathcal{E}^{\circ} c$. and the man thatinvents new trades, arts or manufactures, or new improve_ ments in hufbandry, may be properly called Fathers of their Nation, as they are the caufe of the generation of multitudes, by the encouragement they afford to marriage.

15 As to privileges granted to the married, (fuch as the jus trium liberorum among the Romans) they may haiten the filling of a country that has been thinned by war or peifilence, or that has otherwife vacant territory, but cannot increafe a people beyond the means provided for their fubfifence.
16. Foreign luxaries and needlefs manufactures imported and ufed in a nation, do, by the fame reafoning, increafe the people of the nation that furnifhes them, and diminifh the people of the. nation that ufes them.----Laws therefore that prevent fuch importations, and on the contrary promote the exportation of manufactures to be confumed in foreign countries, may be called (with refpect to the people that make them) generative laws, as by increafing fubfiftence they encourage marriage. Such laws likewife ftrengthen a country doubly, by increafing its own people and diminifing its neighbours.
17. Some European nations prudently refufe to confume the manufactures of Eaff-India :---They fhould likewife forbid ther to their colonies; for the gain to the merchant is not to be compared with the lofs by this means of people to the nation.
18. Home luxury in the great increafes the nation's mandfacturers employed by it, who are many, and only tends to diminifh the families that indulge in it, who are few. The greater the common fafhionable expence of any rank of people, the more cautious they are of marriage. Therefore luxury fhould never be fuffered to become common.
19. $T^{c}{ }^{c}$
19. The great increafe ofoffspring in particular families, is not always owing to greater fecundity of nature, but fometimes to examples of induftry in the heads, and induftrious education; by which the children are enabled to provide better for themfelves, and their marrying early is encouraged from the profpect of good fubfiftence.
20. If there be a fect therefore, in our nation, that regard frugality and induftry as religious duties, and educate their children therein, more than others commonly do; fuch feet muft confequently increafe more by natural generation, than any other fect in Britain.---
21. The importation of foreigners into a country that has as many inhabitants as the prefent employments and provifions for fubfiftence will bear, will be in the end noincreafe of people, unlefs the new-comers have more induftry and frugality than the natives, and then they will provide more fubfiftence and increafe in the country; but they will gradually eat the natives out.-Nor is it neceffary to bring in foreigners to fill up any occafional vacancy in a country; for fuch vacancy (if the laws are good, § 14, 16) will foon be filled by natural generation. Who can now find the vacancy made in Sweden, France, or other warlike nations, by the plague of heroifm 40 years ago ; in France, by the expulfion of the proteftants; in England, by the fettlement of her colonies; or in Guinea, by 100 years exportation of flaves that has blackoned half America? ----The thinnefs of the inhabitants in Spain, is owing to national pride andidlenefs, and other caufes, rather than to the expulfion of the Moors, or to the making of new fettlements.
22. There is in fhort no bound to the prolific nature of plants or animals, but what is made by their crowding and interfering with each other's means of fubfiffence. Was the face of the earth vacant of other plants, it might be gradually fowed and over$f_{\text {pread with one kind only; as for inflance, with Fennel; and were }}$ it empty of other inhabitants, it might in a fewages be replenifhed from one nation only; as for inflance, with Englifomen. Thus there are fuppofed to be now upwards of one Million Engliff fouls In North America, (tho' 'tis thought fcarce 80,000 have been brought over fea) and yet perhaps there is not one the fewer in Britain, but rather many more, on account of the employment the colonies afford to manufacture at home. This million doub-

## [ 45 ]

ling, fuppofe but once in 25 years, will in another century be more than the people of England, and the greateft number of Englifbmen will be on this fide the water. What an acceffion of power to the Britij/b empire by fea as well as land! What increafe of trade and navigation! What numbers of fhips and feamen! We have been here but little more than 100 years, and yet the force of our privateers in the late war, united, was greater, both in men and guns, than that of the whole Briti/h navy in queen Elizabeth's time.-----How important an affair then to Britain, is the prefent treaty* for fettling the bounds between her colonies and the French, and how careful fhould fhe be to fecure room enough, fince on the room depends fo much the increafe of her people?
23. In fine, a nation well regulated is like a polypus§; takeaway a limb, its place is foon fupply'd ; cut it in two, antd each deficient part fhall fpeedily grow out of the part remaining. Thusif you have room and fubfiftence enough, as you may by dividing, make ten polypufes out of one, you may of one make ten nations, equally populous and powerful; or rather, increafe a nation ten fold in numbers and ftrength.

[^7]

## [ 46 ]

CINCE the foregoing fheets were printed off, the writer has
obtained accounts of the Exports to North America, and the Weft India Iflands, by which it appears, that there has been fome increafe of trade to thofe IRands as well as to Nortb America, though in a much lefs degree. The following extract from thefe accounts will fhow the reader at one view the amount of the exports to each, in two different terms of five years; the terms taken at ten years diftance from each other, to fhow the increafe, viz.

Firf Term, from 1744 to 1748 , inclufive.

Second Term, from 1754 to 1758 , inclufive.

By thefe accounts it appears, that the Exports to the Weff India Iflands, and to the Nortbern Colonies, were in the firtt term

## $47]$

nearly equal; the difference being only $122,936 l$. 10s. $4 d$. and in the fecond term, the Exports to thofe iflands had only increafed $404,504 \mathrm{l}$. 2 s . 1 d. --- -Whereas the increafe to the Northern Colonies is $3,927,78 \mathrm{gl}$. 3 s . 1 d . almoft Four Milhions.
Some part of this increafed demand for Englif/ goods, may be afcribed to the armies and fleets we have had both in North America and the WefI Indies; not fo much for what is confumed by the foldiery; their clothing, ftores, ammunition, $\mathcal{E}_{c}$. fent from hence on account of the government, being (as is fuppofed) not included in thefe accounts of merchandize exported; but as the war has occafioned a great plenty of money in America, many of the inhabitants have increafed their expence.

Thefe accounts do not include any Exports from Scotland to America, which are doubtlefs proportionably confiderable; nor the Exports from Ireland.

THE END.

[^0]:    * A very intelligent writer of that country, Dr. Clark, in his Ob fervations os the late and prefent Condulf of the Fren b, \&c. printed at Bofton 1755, \{ays,
    - The Indians in the French intereft are, upon all proper opportunities,

    6 inftigated by their priefts, who have generally the chief management of

[^1]:    * ' Although the Indians live fcattered, as a hunter's life requires, they
    ' may be collected together from almoft any diftance, as they can find their
    s fubfiftence from their gun in their travelling. But let the number of the I/r-
    s dians, be what it will, they are not fomidable merely on account of
    ' their numbers ; there are many other circumftances that give them a great
    ' advantage over the Englifh. The Engliß inhabitants, though numerous,
    ${ }^{6}$ are extended over a large tract of land, 500 leagues in length on the fea-
    6 fhore; and although fonfe of their trading towns are thick fettled, their
    - Cetclements in the country towns muft beat a diftance from each other't
    - befides, that in a new country where lands are cheap, people are fond of
    - acquiring large tracts to themfelves; and therefore in the out fettlements
    f they muflbe more remote: and as the people that move nut are generaliy
    'poor, they fit down either where they can eafieft procire land, or fooneit
    - raife a fubfiftence. Add to this, that the Englifis have fixed fettled habita-
    - ions, the eafieft and Chorteft paffages to w bich the Indians, by conftantly

    6 humting in the woods, are petfectiy well acquainted with; whereas the E\%${ }^{6}$ glifb know lictle or nothing of the I Idian country, nor of the paffages thro" ${ }^{6}$ the woods that le d to it. The I, dian way of making war is by fudden at$\therefore$ tacks unon expofed pheces; and as foon as they haye done mifchief, they
    $\therefore$ retire
