

C. ST. CHARLES TO SANDWICH B.

COAST OF LABRADOR
 Compiled chiefly from the Survey of Michael Lane 1771
 with corrections from the Observations and Surveys of
 Capt. H.W. Bayly R.N. 1835, Comdr. W. Chinn, R.N. 1867
 and other Officers of H.M. Navy
 All heights are expressed in feet above high water ordinary Springs
 in mud, s. rock, s. sand, sh. shells, at anchor.
 Magnetic Variation in 1872, nearly stationary
 SOUNDINGS IN FATHOMS

CAUTION.

The coast of Labrador is very imperfectly known. Many of the soundings made and islands are only approximately placed on this chart, and it is believed that many more are than are not shown. The prevalence of fog the whole of the summer season and under various conditions renders it necessary when near the shore.
